REPORT.

DEPARTMENT OF THE INTERIOR, BUREAU OF EDUCATION,
Washington, D. C., November, 1876.

SIR: I have the honor to submit my seventh annual report.

The year has been one of special historical activity in connection with education. Much has been done to record the lessons of the past for the use of the future.

The continued depression in business has not only induced economy more and more in matters of education, but has sometimes caused reductions which have been injurious to efficiency. Great and wide-spread necessities have led, here and there, to the most serious questioning of various phases of the systems of public instruction. Wealth has clamored against being taxed for the education of the sons of the poor, while the evils of ignorance have illustrated anew its incompatibility with our system of government. The profits of capital have decreased, and the idleness of labor has increased, adding, it is true, no new bonds of mutual attachment, but yet resulting in no general explosion. Verily we may congratulate ourselves that the past century of the Republic has closed unmarred by those bloody conflicts between the representatives of capital and labor that have so often occurred under the various forms of monarchical government.

It cannot be doubted that the great liberty guaranteed to all among us has much to do with the good will that prevails in American society, while the latter is specially promoted by systems of education in which the children of all classes meet on common ground, rise by their own merit, acquire notions of each other, and form attachments fitted ever after to lessen the differences that separate interests and fierce competition are calculated to generate. The American teacher cannot with safety fix his eyes upon his text book and pupil to the neglect of these broad views. He works where all these antagonistic forces converge, and where they must first be harmonized. He must inculcate the sentiment and encourage the customs which are to be the surest safeguards against the destructive conflicts arising between the two forces, capital and labor. Nor can he perform the task alone. These great interests must intelligently foresee the coming danger, and provide the means by which the whole power of education in the family, the school, and society can be arrayed against social earthquakes. In no sphere is the law of prevention more applicable. Instead of understanding and acting intelligently in view of the facts which bear at this point, the capitalist has in not a few instances sought retrenchment first in the reduction of teacher's wages and the consequent circumscribing of his opportunities to ward off impending danger, and in some instances he has found the hands of labor willing to do his bidding by dropping the ballots through which his purpose has been accomplished. Teachers must not only have the means to do their work well for those who come to the school now, but their numbers must be increased, and they must be sent abroad among those who are as yet entirely unreached by instruction. The security and perpetuity of our institutions rest so exclusively on the individual choice, that reason, conscience, and the high sentiments of every soul should be brought into play and properly informed; that, so far as these influences may go, every person in the land may not only know what is the better part, but choose it and be prepared to sacrifice himself to defend it. In such a universal sway of intelligent reason and enlightened conscience the questions of capital and labor, as they necessarily arise in the progress of human society, will find the most peaceful solution. So also of those questions which arise between races, between

political parties, and between religious sects. In each case the issue is relieved of embarrassment just so far as ignorance and prejudice are eliminated, and the mass of minds called into action are amenable to the influences of right reason. We shall be fortunate as a people if we can see in season that all laws, indeed that all schemes which leave out of view the single idea of training up a child in the way he should go, will prove inadequate—mere makeshifts, in dealing with the evils of great social catastrophes.

Too often educators recognize their responsibility only with reference to those on the rolls of the school; rather should they be possessed of the spirit of the fathers, who did not allow a single child to grow up without the knowledge of letters. Education should not only be sufficient in amount and good in quality, but it should be universal. No child ought to be permitted to grow up without its benefits. It is the single cesspool, the single case of the contagious disease, that, neglected by sanitary customs, may imperil the whole city. So, under the operation of the social and moral nature of man, the children or the single child not subjected to well directed instruction, may become the origin of evil which shall imperil every dollar of property, every life, and the character of every individual in the community.* Educators must contemplate the whole body politic. Occasionally a school officer or teacher may have no personal knowledge of neglected or perverted child-life. Indeed, in the view of any one, the amount of neglect may appear small; but let him gather the total in any county in the country, and add to that the rest in the State to which it belongs, and increase this by the neglected child-life in the remainder of the nation, and he will have before him an accumulation of the possibilities of evil that should rouse the attention of the most selfish and indifferent. We have no measures that can give us a just and adequate conception of these possibilities. All illustrations are inadequate. Even our standards of intelligence are imperfect; but taking that of reading and writing, as I have before had occasion to say in pointing to these perils: "Three hundred thousand votes are a large majority in any election for President of the United States. The determination of the election, therefore, is practically in the control of less than 300,000 voters, or less than one-sixth of the practical illiterate voting population." How often are we told brain power or intelligence directs the multitude! A mass of ignorance is always a temptation to the designing and evil. They appeal to the passions and prejudices of the ignorant. The more intelligent and virtuous a people, the more they judge for themselves, and the less are they subject to leadership. Suppose the illiterate voters should combine, or that designing leaders should succeed in appealing to their blind prejudices and draw them into associated action, so as uniformly to throw them upon the same side in any of the great issues in the nation or in the several States where they constitute a large force, how readily they could determine any question at their pleasure! In several States the illiterate voters are clearly in the majority, according to the census of 1870. The evils that may arise from the ignorance actually in our midst no one can exactly describe. Their premonitions are every now and then manifest. There is no greater source of social and civil disorder than ignorance. Writers of every age have used the strongest terms at their command to characterize it. Adam Smith likened ignorance, spread through the lower classes and neglected by the state, to a leprosy, and says, "Where the duty of education is neglected, the state is in danger of falling into terrible disorder." His declaration was speedily illustrated by the English riots of 1780. Macaulay graphically describes what occurred: Without any shadow of a grievance, at the summons of a madman, a hundred thousand people rising in insurrection; a week of anarchy; Parliament besieged; * * * the lords pulled out of their coaches; the bishops flying over the tiles; thirty-six fires blazing at once in London; the house of the chief justice demolished; the children of the prime minister taken out of their beds in their night-clothes and laid on the table of the Horse Guards; and the cause of this calamity

*See the history of the Juke family, Report of the Commissioner of Education for 1874, pp. cxix, cxx.

was the "ignorance of a population which had been suffered, in the neighborhood of palaces, theatres, temples, to grow up as rude and stupid as any tribe of tattooed cannibals in New Zealand, I might say as any drove of beasts in Smithfield market." But we need not go abroad for such scenes of horror and their lessons. We have seen the police of the city and the authority of the State powerless before the mob during the anti-negro riots in New York, Memphis, and New Orleans, and peace and security enforced only by the presence of national bayonets.

Should anywhere a local majority become, as we conceive it may, hostile to law, and disregard its demands, we readily understand the effect upon those in any such community who obey and support law; they are in antagonism to the lawless; their property and lives are at the mercy of the passions of the madmen around them; incendiary fires consume their dwellings; thieves steal their herds; marauders gather their crops; and submission is the only and at best but an uncertain chance of escaping the assassin's knife or bullet, or the halter of the midnight band. All local law trampled under foot, where can they, where will they, look but to the central government? The more this condition is extended, the greater the call for the enforcement of the nation's laws or the exercise of its military force. The rule of law must prevail; if it does not by local sentiment, both local and general interest will demand national action. Centralization is less likely to occur in a republic through the assumption of authority by the ambitious, than to be produced by a condition of civil evils which suggest it as a cure. Dr. Draper affirms that the Roman Empire was produced out of the republic less by the ambition of the emperors than by the evils from which the empire was supposed to be a relief. Our statesmen should be too observant of these dangers to allow themselves to be overtaken by them. They must foresee the evil for us, and enable us to avoid it. The citizen owes allegiance to the National Government; and the nation, if local lawlessness imperils his property and life, must protect him.

Take away education, and what means remain? As Macaulay observes: "Military force, prisons, solitary cells, penal colonies, gibbets—all the other apparatus of penal laws. If, then, there be an end to which government is bound to attain, if there are only two ways of attaining it, if one of those ways is by elevating the moral and intellectual character of the people, and if the other way is by inflicting pain, who can doubt which way every government ought to take?"

Ours is preëminently a government of reason and right. Adopting the language of Guizot, "Suppose now that the truth, which ought to decide upon the affair, being found and proclaimed, all understandings should be at once convinced, all wills at once determined, suppose all should acknowledge the government right, and obey it spontaneously. There is here nothing of compulsion, no occasion for the employment of force. Does it follow, then, that a government does not exist? Is there nothing of government in all this? To be sure there is, and it has accomplished its task."

AUTHORITATIVE OPINIONS.

In this connection I cannot forbear presenting the following profoundly suggestive extract from Professor Huxley's address before the Johns Hopkins University. One cannot help desiring that more Americans and more Englishmen were equally just and generous toward the respective countries:

I constantly hear Americans speak of the charm which our old mother country has for them, of the delight with which they wander through the streets of ancient towns, or climb the battlements of mediæval strongholds, the names of which are indissolubly associated with the great epochs of that noble literature which is our common inheritance, or with the blood-stained steps of that secular progress by which the descendants of the savage Britons and of the wild pirates of the North Sea have become converted into warriors of order and champions of peaceful freedom, exhausting what still remains of the old Berserker spirit in subduing nature and turning the wilderness into a garden. But anticipation has no less charm than retrospect; and to an Englishman landing upon your shores for the first time, travelling for hundreds of miles through strings of great and well ordered cities, seeing your enormous actual, and almost infinite potential, wealth in all commodities, and in the energy and ability which turn wealth to account, there is something sublime in the vista of the future. Do not sup-

pose that I am pandering to what is commonly understood by national pride. I cannot say that I am in the slightest degree impressed by your bigness, or your material resources as such. Size is not grandeur, and territory does not make a nation. The great issue, about which hangs a true sublimity and the terror of overhanging fate, is, what are you going to do with all these things? What is to be the end to which these are to be the means? You are making a novel experiment in politics on the greatest scale which the world has yet seen. Forty millions at your first centenary? It is reasonably to be expected that at the second, these States will be occupied by two hundred millions of English speaking people, spread over an area as large as that of Europe, and with climates and interests as diverse as those of Spain and Scandinavia, England and Russia. You and your descendants have to ascertain whether this great mass will hold together under the forms of a republic, and the despotic reality of universal suffrage; whether State rights will hold out against centralization without separation; whether centralization will get the better without actual or disguised monarchy; whether shifting corruption is better than a permanent bureaucracy; and as population thickens in your cities, and the pressure of want is felt, the gaunt spectre of pauperism will stalk among you, and communism and socialism will claim to be heard. Truly America has a great future before her; great in toil, in care and in responsibility; great in true glory if she be guided in wisdom and righteousness; great in shame if she fail. I cannot understand why other nations should envy you, or be blind to the fact that it is for the highest interest of mankind that you should succeed; but the one condition of success, your sole safeguard, is the moral worth and intellectual clearness of the individual citizen. Education cannot give these, but it may cherish them and bring them to the front in whatever station of society they are to be found, and the universities ought to be and may be the fortresses of the higher life of the nation.

May the university which commences its practical activity to-morrow abundantly fulfil its high purposes; may its renown as a seat of true learning, a centre of free inquiry, a focus of intellectual light, increase year by year, until men wander hither from all parts of the earth, as of old they sought Bologna or Paris or Oxford; and it is pleasant to me to fancy that among the English students who are drawn to you at that time there may linger a dim tradition that a countryman of theirs was permitted to address you as he has done to-day, and to feel as if your hopes were his hopes and your success his joy.

In 1851 a series of inquiries was addressed to several eminent Americans by Hon. Edward Twisleton, formerly commissioner of poor laws in Ireland.

The Hon. Daniel Webster, to the fifth of these inquiries, "Do you approve, or do you disapprove, of that system (the New England common schools); and what are the main grounds on which your approbation or disapprobation of it is founded?" replied:

I have been familiar with the New England system of free schools for above 50 years, and I heartily approve of it. I owe to it my own early training. In my own recollection of these schools there exists, to this moment, a fresh feeling of the sobriety of the teachers, the good order of the school, the reverence with which the Scriptures were read, and the strictness with which all moral duties were enjoined and enforced. In these schools, or it may be partly by my mother's care, I was taught the elements of letters so early that I never have been able to remember a time when I could not read the New Testament and did not read it. Many moral tales and instructive and well contrived fables, always so alluring to childhood, learned by heart in these schools, are still perfectly preserved in my memory. And, in my own case, I can say that without these early means of instruction, ordained by law and brought home to the small villages and hamlets for the use of all their children equally, I do not now see how I should have been able to become so far instructed in the elements of knowledge as to be fit for higher schools.

In my opinion, the instruction communicated in the free schools of New England has a direct effect for good on the morals of youth. It represses vicious inclinations, it inspires love of character, and it awakens honorable aspirations. In short, I have no conception of any manner in which the popular republican institutions under which we live could possibly be preserved, if early education were not freely furnished to all, by public law, in such forms that all shall gladly avail themselves of it. Although a little beside the immediate object of these inquiries, I may be permitted to add that, in my judgment, as the present tendency of things almost everywhere is to extend popular power, the peace and well being of society require, at the same time, a corresponding extension of popular knowledge.

DISTRIBUTION OF RESPONSIBILITY.

The great evils to be prevented, the great good to be secured, on so vast a scale, naturally lead to an inquiry into the distribution of the responsibility. All considerations of the subject find these responsibilities finally resting upon individuals. The more persons there are who meet them intelligently and conscientiously, the greater the

good, the less the evil, connected with any issue. But when we pass from the relation of the individual to other responsible units, we encounter a great variety of organizations or combinations—the family, society, the church; and organizations of a social character are almost without number. Besides these, there are those of a civil character which may be termed civil units; the smallest or primary that of the district, borough, parish, then the municipality, the county, the State, the nation. The harmonious action of these several units, each bearing its own proper burden, performing its own functions, so that it is neither overweighted nor allowed to interfere with any other, is one of the marvels of the system of government devised by the fathers. Every year's experience adds proof of their wisdom. Each grade of civil organization proclaims in its administration not alone the spirit of harmony with all others, but the fact that its own existence, nay, that the existence of the entire machinery of our government is not for the exclusive benefit of any class, but is established and continued for the supreme purpose of assuring to each individual the best opportunity of working out his own destiny. Any act of nation, of State, of county, of municipality, or district, calculated to infringe these personal rights is of fatal tendency and inadmissible.

Education seeks to fit the individual for this large liberty and great responsibility. Much of this education is left to the spontaneous action of himself and of the agencies surrounding him. In no country, perhaps, are his privileges or those of his family or those of his church in respect to his education given larger liberty and more carefully guarded. But the fact so generally admitted, that upon the individual intelligence and virtue of citizens rests the entire fabric of our institutions, has led to a universal sentiment in favor of some measure of civil action in behalf of their education as the only sure safeguard against a prevalence of ignorance, fatal to civil liberty and its attendant blessings. The great burden of this responsibility for civil action with respect to education has been wisely imposed upon the smallest civil unit, town or township, borough or parish; while the power of legislation regulating alike the action of the State and the municipality has properly been vested exclusively in the State. This removal of education from all legislative or administrative interference on the part of the National Government did not, in the minds of the fathers, relieve national statesmanship from all responsibility with reference to education. The more profound their patriotism, the more profoundly they acknowledged their obligation in this matter, alike in their capacity as persons and officials. No personal or official act of theirs could promote ignorance. Their example and their words favored universal intelligence. The more delicate the national relation to education, the more assiduous were they that their full responsibility should be discharged.*

---

*Mr. Matthew Arnold, one of the inspectors of Her Majesty's schools, in his "Higher Schools and Universities in Germany," has said some things for the benefit of the English people that we can appropriate with the slightest possible modification.

"The study of continental education will show our educated and intelligent classes that many things which they wish for cannot be done as isolated operations, but must, if they are to be done at all, come in as parts of a regularly designed whole. * * * * *

* * * * * Our educated and intelligent classes, in their solicitude for our backward working class, and their alarm for our industrial preëminence, are beginning to cry out for technical schools for our artisans. Well informed and distinguished people seem to think it is only necessary to have special schools of arts and trades, as they have abroad, and then we may take a clever boy from our elementary schools * * * and put him at once into a special school. A study of the best continental experience will show them that the special school is the crown of a long co-ordered series, designed and graduated by the best heads in the country. * *

* * * * * These foreign governments, which we think so offensively arbitrary, do at least take, when they administer education, the best educational opinion of the country into their counsels, and we do not. This comes partly from our disbelief in government, partly from our belief in machinery. Our disbelief in government makes us slow to organize government perfectly for any matter; our belief in machinery makes us think that when we have organized a department, however imperfectly, it must prove efficacious and self-acting. The result is that while, on the continent, through boards and councils, the best educational opinion of the country * * * necessarily reaches the government and influences its action; in this country there are no organized means for its ever reaching our government at all. The most important questions of educational

NATIONAL AID TO EDUCATION.

Grants of public land.—The policy of extending aid to education by grants from the General Government dates from a period anterior to the adoption of the Federal Constitution.

In 1785 Congress established "An ordinance for disposing of the lands in the Western Territory," which contained the following provision: "There shall be reserved the lot No. 16 of every township for the maintenance of public schools within the said township."

The "Ordinance for the government of the territory of the United States northwest of the river Ohio," was adopted July 13, 1787. Article 3 contains the following clause: "Religion, morality, and knowledge being necessary to good government and the happiness of mankind, schools and the means of education shall be forever encouraged." What Congress meant by this clause is clearly defined in the act dated the twenty-third of the same month, empowering "the board of treasury to contract for the sale of western territory." Referring to the ordinance of 1785, it continues: "The lot No. 16 in each township, or fractional part of a township, to be given perpetually for the purposes contained in the said ordinance; * * * not more than two complete townships to be given perpetually for the purposes of an university, to be laid off by the purchaser or purchasers, as near the centre as may be, so that the same shall be of good land, to be applied to the intended object by the legislature of the State." In the same year contracts which contained the above conditions were made under the above act for the sale to the Ohio Company and to John C. Symes of large tracts of land within the limits of the present State of Ohio.

The policy thus inaugurated was not confined to the Northwest Territory. In the act approved March 3, 1803, providing for the disposal of lands belonging to the United States south of Tennessee, the reservation was made of lot No. 16 of each township and of an entire township for purposes of common school and university education.

From that time until 1848, on the organization of each new Territory, similar provisions were made for public education. In that year, on the organization of the Territory of Oregon, the quantity of land reserved for the benefit of common schools was doubled; and to each new Territory organized and State admitted since, except West Virginia, the sixteenth and thirty-sixth sections of every township, one-eighteenth of the entire area, have been granted for common schools.

To each State admitted into the Union since the year 1800, except Maine, Texas, and West Virginia, and to the Territories of New Mexico, Utah, and Washington, have been granted two or more townships of land, to endow a university. The States that received more than two townships, or 46,080 acres, are Ohio, 69,120 acres, Florida and Wisconsin, 92,120 acres each, and Minnesota, 82,640 acres.

In 1862 the law granting lands to each State to endow colleges of agriculture and the mechanic arts was enacted. The lands granted to the several States under this act aggregate 9,600,000 acres.

---

policy may be settled without such [opinions] being even heard. A number of grave matters affecting public instruction in this country—our system of competitive examinations, our regulation of studies, our whole school legislation—are at the present moment settled, one hardly knows how, certainly without any care for the best counsel attainable being first taken on them. On the continent it is not so; and the more our government is likely, in England, to have to interfere in educational matters, the more does the continental practice, in this particular, invite and require our attention. * * * * * * * * * There are two chief obstacles, as it seems to me which oppose themselves to our consulting foreign experience with profit. One is, our notion of the state as an alien intrusive power in the community, not summing up and representing the action of individuals, but thwarting it. * * * * * * * * The other obstacle is our high opinion of our own energy and prosperity. This opinion is just; but it is possible to rely on it too long and to strain our energy and our prosperity too hard. At any rate, our energy and our prosperity will be more fruitful and safer, the more we add intelligence to them; and here, if anywhere, is an occasion for applying the words of the wise man: 'If the iron be blunt, and a man do not whet the edge, then must he put forth more strength; but wisdom is profitable to direct.'"

The State of Texas, on her admission into the Union, retained the title to her public land, and is consequently excepted from the grants to endow common schools and universities; but she shared the benefits of the act endowing colleges of agriculture, receiving as her share land scrip representing 180,000 acres.

Besides the general grants there have been special grants of land and buildings to institutions of learning in several States and Territories, as follows:

	Acres.
Alabama.—Lafayette Academy	480
Connecticut.—Asylum for the education of the deaf and dumb	23,040
Dakota.—Holy Cross Mission	160
Florida.—Chattahoochee arsenal, buildings, land, etc., to State	
Georgia.—Dahlonega arsenal, grounds, buildings, etc., for agricultural college.	10
Kentucky.—Asylum for the education of the deaf and dumb; benefit transferred to Centre College.	22,400
Louisiana.—Pine Grove Academy, (quitclaim by United States)	4,040
Michigan.—Public schools, Sault de Ste. Marie	1.26
Public schools, Mackinac, lot and building	
Minnesota.—Domestic and Foreign Missionary Society of the Protestant Episcopal Church.	80
Mississippi.—Jefferson College, outlot at Natchez	30
Tennessee.—Fisk University, Nashville, land and buildings	3.25
West Virginia.—Storer College, four lots and buildings at Harper's Ferry	
Missouri.—Under acts of June 13, 1812, May 26, 1824, and January 27, 1831, confirming to inhabitants of certain towns certain outlots, commons, &c., for purposes of education, as follows:	
Portage des Sioux	298.38
Saint Charles	68.79
Saint Louis	394.86
Saint Ferdinand	33.30
Villa A. Robert	12.39
Carondelet	37.10
Sainte Geneviève	561.68

The quantity of land thus granted, aside from lots the area of which is unknown, is 51,651.01 acres.

By an act of September 4, 1841, 500,000 acres of land were granted to each of the following States, for the purpose of internal improvement, viz: Alabama, Arkansas, Illinois, Indiana, Louisiana, Michigan, Mississippi, and Missouri; and the same grant has been made to each State since admitted into the Union, except Texas and West Virginia. The quantity of land thus granted is 9,000,000 acres. Six of the States since admitted into the Union—California, Iowa, Kansas, Oregon, Nevada, and Wisconsin—have set apart the proceeds of the sales of these lands, by provisions in their respective constitutions, for the benefit of free schools.

By an act dated April 18, 1806, the following grants of land for educational purposes were made to the State of Tennessee:

1. For two colleges, one to be established in East and one in West Tennessee, 100,000 acres. 2. For academies, one in each county, 100,000 acres.

It was provided that one-thirty-sixth of the above grants should be reserved for the purposes of common schools in the limits of the reserved tracts.

Grants in aid of education from proceeds of sales of public lands.—At an early period Congress inaugurated the policy of granting a portion of the net proceeds of the sales of public lands to the several States in which they were situated. Thus, in 1803 an act was passed granting three per cent. of such net proceeds to the State of Ohio for "laying out, opening, and making roads, within the said State, and to no other purpose whatever; and an annual account of the application of the same shall be transmitted to the Secretary of the Treasury." Similar grants (in some cases of three and in others

of five per cent.) have been made to the States admitted into the Union since Ohio, except to Maine, Texas, and West Virginia, in none of which did the General Government possess any public land. In some States the grants were dedicated to purposes of internal improvement, in others to education. The terms of the grant to Illinois are as follows:

SEC. 1. *Be it enacted, &c.,* That the Secretary of the Treasury shall, from time to time, and whenever the quarterly accounts of public moneys of the several land offices shall be settled, pay three per cent. of the net proceeds of the lands of the United States lying within the State of Illinois which, since the first day of January, one thousand eight hundred and nineteen, have been or hereafter may be sold by the United States, after deducting all expenses incidental to the same, to such person or persons as may be authorized by the legislature of the said State to receive the same; which sums, thus paid, shall be applied to the encouragement of learning within said State, in conformity to the provisions on this subject contained in the act entitled "An act to enable the people of the Illinois Territory to form a constitution and State government, and for the admission of such State into the Union on an equal footing with the original States," approved April eighteenth, one thousand eight hundred and eighteen, and to no other purpose; *and an annual account of the application of the same shall be transmitted to the Secretary of the Treasury by such officer of the State as the legislature thereof shall direct; and, in default of such return being made, the Secretary of the Treasury is hereby required to withhold the payment of any sums that may then be due, or which may thereafter become due, until a return shall be made as herein required.*

Approved, December 12, 1820.

By the act of April 18, 1818, it was provided that one-sixth of the sums derived from the three per cent. of net proceeds of public land sales should "be exclusively bestowed on a college or university."

From 1821 to 1869, Illinois received under this law $713,495.45.

The whole amount paid to the several States as percentages on the net proceeds of sales of public lands was $6,508,819.11. How much of this sum has been devoted to educational purposes has not yet been ascertained; but the States named below have received the amounts named, respectively, which (either by the terms of the grant by Congress or by State constitutional enactment) are to be applied for the benefit of public education:

Illinois, from 1821 to 1869	$713,495 45
Florida, from 1847 to 1872	28,098 07
Wisconsin, from 1850 to 1875	195,423 98
Iowa, from 1849 to 1874	630,627 38
Oregon, from 1866 to 1876	25,927 60
Kansas, from 1868 to 1876	53,626 15
Nebraska, from 1869 to 1876	113,591 90
Nevada, from 1872 to 1874	3,648 81
Making a total of	1,764,439 34

Besides this, the State of Arkansas has received from the same source $224,473.15, which sum, by a provision of the State constitution adopted in 1868, was to be devoted to education, but respecting which the later constitution of 1875 is silent. Missouri has in like manner received under two acts, dated respectively March 6, 1820, and February 28, 1859, the sum of $1,008,321.86. The constitution of Missouri adopted in 1875 establishes a school fund, one of the components of which is, in the words of a clause in section 6: "Also any proceeds of the sales of public lands which may have been, or may hereafter be, paid over to this State, (if Congress will consent to such appropriation.)"

Several of the States have devoted the net proceeds of the sales of swamp and saline lands to public education, but the amounts derived from these sources have not been generally ascertained.

In Ohio the amount realized from the sale of the saline grants and added to the common school fund was reported in 1850 at $41,024; in Indiana the State school fund realized from the same source $85,000.

The constitutions of the States of Louisiana, Mississippi, (with some unimportant reservations,) and Indiana contain provisions requiring that the net proceeds of the sales of swamp lands shall be used for the benefit of public education; and in several other States, as, for example, Missouri, Ohio, and Wisconsin, the same disposition has been made under general laws, without a specific constitutional enactment.* The constitution of Alabama once contained this provision; the amendment of 1875 abrogated it. It appears from the report of the State superintendent of public instruction for 1875 that up to that date the sum of $27,340.31 had been received into the State treasury on account of sales of swamp land, but it does not appear that this amount or the income thereof had ever been used for the benefit of public education.

The amount of swamp lands granted and patented to each of the States, from the date of the first grant to June 30, 1876, is as follows:

	Acres.
Ohio	25,640.71
Indiana	1,256,631.96
Illinois	1,453,611.67
Missouri	3,185,479.44
Alabama	392,719.61
Mississippi	2,681,383.16
Louisiana	8,468,964.93
Michigan	5,864,669.55
Arkansas	7,059,827.68
Florida	10,735,403.21
Wisconsin	3,059,572.62
Iowa	1,166,917.34
California	1,308,295,65
Minnesota	1,143,153.63
Total	47,802,271.16

Official reports of the amounts received from sales of these lands and of the distribution of the proceeds are not easily accessible, and it is impracticable to present at this time any statement on these heads.

Other aid to public education by the General Government.—In 1836 there was a large sum in the Treasury of the United States, largely derived from the sales of public lands, which was not needed for the current expenses of the General Government, and a law was approved on June 23 which provided for a distribution of the surplus among the twenty-five States of the Union on the basis of their respective representation in Congress. Afterward, the benefit of the act was extended to Michigan, which had just been admitted into the Union. This fund, amounting to $28,101,644.91, has since been held by the several States admitted into the Union prior to 1837, subject to call by the General Government. Several of them have devoted a part or the whole of the income realized from this fund to public education.

The State of New York received as her allotment in the distribution the sum of $4,014,520.71. The entire income of this fund, amounting to about $236,000 yearly, has been bestowed on education. By a provision in the State constitution of 1846, after adding $25,000 to the capital of the common school fund each year, the remainder of the income is expended for the benefit of common schools and academies, apportioned as follows:

Support of common schools	$165,000
Dividend to academies	28,000
Teachers' classes in academies	18,000

The average yearly income of the common school fund of New York exceeds five per cent. of the principal, so that there have been realized from that portion of the fund derived from the income of the surplus revenue fund about $600,000 in thirty-one years,

*Report of the Commissioner of the General Land Office, 1876.

and the present capital of the common school fund is partly composed of the yearly sums set apart from the income of the revenue fund, which sums amount to $775,000. Thus it appears that, from this fund of about $4,000,000 set apart by the United States for the benefit of the single State of New York, that State has been able to realize for the benefit of public education the munificent sum of about $7,916,000, of which more than three-quarters of a million form a permanent capital, bearing interest.

Aid to colored schools.—The General Government, on the organization of the Bureau of Refugees and Freedmen in 1865, began to aid schools for the education of colored children. This aid amounted, so far as can be ascertained, to $3,711,225.47. But this sum, large as it appears, does not include all, as some thousands of dollars paid out for the transportation of teachers and for other expenses connected with the schools cannot be separated from other items with which they are charged.

Libraries, publications, and promotion of science.—The amount expended and separately reported by the General Government for libraries up to and including the year 1874, was $1,573,948.03. Besides this, large sums have been expended from time to time from general appropriations, the amount of which cannot be determined.

It is still less possible to show the much greater amounts that have been expended in conducting scientific explorations and surveys, and publishing the results, and in collecting and publishing other material covering a wide range of subjects. The amount, so far as ascertained for the period above mentioned, was $1,752,549.67, but this is but a small fraction compared with the aggregate.

Aid to Indian schools. The first appropriations to aid Indian schools by the United States were made under the government of the Continental Congress in 1776. In 1819 a law was enacted granting $10,000 a year for the purpose of maintaining Indian schools and other agencies of civilization. This law was repealed in 1873. There was expended under its provisions while it remained in force, including an extra appropriation for the years 1856, 1857, and 1858, the sum of $561,027.15.

This amount represents but a small fraction of the whole sum expended for Indian education since the policy of making treaties with the Indian tribes was inaugurated; but these expenditures are not included here, for the reason that, with other sums paid to the Indians under treaty stipulations, they formed the consideration given for certain concessions granted by the Indians, and not a gratuity to them.

Cost of military and naval schools.— As an item of interest in this connection, the following statement of the cost of maintaining the Military Academy at West Point to June 30, 1871, and the Naval Academy at Annapolis up to June 30, 1876, is included. The amounts cover all the expenditures from the date of organization, including buildings, libraries, instruments, instruction, &c. They are as follows:

United States Military Academy, West Point	$6,801,482 73
United States Naval Academy, Annapolis	3,518,880 63

RECAPITULATION.

I.—*Land grants.*

	Acres.
Sixteenth and thirty-sixth sections for common schools	67,983,914
Seminary lands	1,082,880
Colleges of agriculture and the mechanic arts *	9,600,000
Special grants	51,651
Internal improvement grants, devoted to education in six States	3,000,000
For common schools and academies in Tennessee, act April 18, 1806	200,000
Swamp and overflowed lands bestowed on education by State action, so far as known.	13,784,710
For Indian schools in Mississippi †	34,560
Total	95,737,714

*Not including any grant to Colorado, which, under the rule adopted in the cases of West Virginia, Nevada, and Nebraska, is entitled to 90,000 acres.

Total	47,785,197 93

CORRESPONDENTS OF THE OFFICE.

Any one familiar with these reports will observe that the correspondents of the Office are, as a rule, administrative heads of educational systems or institutions. This limitation is simply on account of the lack of working force to carry on this correspondence more in detail, and is on the supposition that what is done by the head includes the several subordinates. The misfortune of having only a single report to send to a school system in which many able men are active as officers and teachers, each desiring a copy of our several publications to aid him in the discharge of his duties, is keenly felt; but the remedy is with Congress.

Statement of educational systems and institutions in correspondence with the Bureau of Education in the years named.

There can be at present carried into such a general summary no indication in detail of the systems or institutions that arise or pass out of existence in the year concluded.

*I am greatly indebted to the Department of the Treasury, and especially to Capt. R. A. Bayley, of the warrant division, for much of the information embodied in this statement of educational grants.

The curiosities of this correspondence are in themselves instructive: the capricious ups and downs of officers and institutions, the letters written and the catalogues and reports published with so little data that it is impossible to ascertain from anything in themselves from which of the several States they have been sent. It is gratifying to see these imperfections year by year diminishing.

Statistical summary of institutions, instructors, and students, as collected by the United States Bureau of Education, for 1870, 1871, *and* 1872.

a In 177 cities. *b* In 192 cities. *c* From 1870–'72 inclusive, this class of schools was included in the table of institutions for secondary instruction.

The above table presents at a glance a test of the condition and progress of the work prosecuted by this Bureau, and by the educators coöperating with it, to perfect the educational statistics of the country.

It should always be borne in mind that this is not exclusively the work of this Bureau, and yet without an agency of this character conducted by the General Government such information could not be obtained in their individual capacity by the thousands of educators who furnish it to this Office as heads of their several institutions. The greatest freedom of suggestion is desired from every one interested. The more nearly all peculiarities and details are in view as the averages are made and plans formed, the more nearly each can be accommodated, and go either into the table of particulars or be included in the general summaries.

Table showing the ages embraced in the school population of the several States and Territories.

States and Territories.	School age.	States and Territories.	School age.
Connecticut	4-16	Virginia	5-21
Oregon	4-20	Dakota	5-21
Wisconsin	4-20	South Carolina	6-16
Washington	4-20	Utah	6-16
Florida	4-21	District of Columbia	6-17
Maine	4-21	Georgia	6-18
New Hampshire	4-21	Nevada	6-18
Montana	4-21	Tennessee	6-18
Massachusetts	5-15	Texas	6-18
Rhode Island	5-15	Kentucky	a6-20
California	5-17	Missouri	6-20
New Jersey	5-18	Choctaws, (Indian Ter.)	6-20
Idaho	5-18	Arkansas	6-21
Maryland	5-20	Colorado	6-21
Michigan	5-20	Illinois	6-21
Vermont	5-20	Indiana	6-21
Wyoming	5-20	Louisiana	6-21
Alabama	5-21	North Carolina	6-21
Delaware	5-21	Ohio	6-21
Iowa	5-21	Pennsylvania	6-21
Kansas	5-21	West Virginia	6-21
Minnesota	5-21	Arizona	6-21
Mississippi	5-21	New Mexico	7-18
Nebraska	5-21	Cherokees, (Indian Ter.)	7-21
New York	5-21	Creeks, (Indian Ter.)	10-18

a For the colored population the school age is 6 to 16.

The above table should not be forgotten in any study of the statistics which follow relating to the population of school age. In one State it is 4–16; in three, 4–20; in four, 4–21; in two, 5–15; in one, 5–17; in two, 5–18; in four, 5–20; in ten, 5–21; in two, 6–16; in one instance, (the District of Columbia,) 6–17; in four States, 6–18; in three, 6–20; in ten, 6–21; in New Mexico, 7–18; among the Cherokees, 7–21; among the Creeks, 10–18. In eight instances the age of admission is 4; in nineteen instances it is 5; in twenty it is 6; in two it is 7; in one, 10; or five different ages. The school period terminates at six different ages. However much the student of statistices may be embarrassed by these differences, he should remember that they may be justified by local considerations, and that all he needs for the purposes of comparison is that, in addition to these local differences, there should be given some uniform age with which to begin and end the comparison. Many educators have, from their intercourse with foreigners during the past year, felt anew the importance of some uniform means of comparison.

TABLE I.—PART 1.—*Summary* (A) *of school age, population, enrolment, attendance, &c.*

* Estimated by the Bureau. *a* United States census of 1870.

Here at a glance is seen as full and accurate a statement of the public school work of the country as it is possible for the several States and Territories to give with their present methods of collecting statistics. No one not actually engaged in the work of collecting these facts can understand the difficulties encountered. The State school superintendents find it still true that there are occasionally local school officers not competent to make the reports required by their State laws. Yet it should be borne in mind that the States cannot give in regard to any other phase of administration statements so complete and full of details as the reports of education from which these summaries are made. A column showing the estimated number between 6 and 16 in the several States and Territories in the year 1876 is introduced for two purposes: First, to illustrate the advantages of such facts in the general work of comparison; and, secondly, to afford foreign students data by means of which they may more nearly do justice in comparisons between their own countries and ours. It should be observed that the estimates are made on the basis of percentage carefully tested. It will be noticed that a considerable number of the States still have no other enumeration than that of the United States census, and rely upon the figures for 1870 for the data in regard to their school population. In all of these States no increase is indicated. To make any comparison between the school population and enrolment precise, there should be an enumeration taken the same year as the enrolment. It will be observed that the total school population in the States alone, according to the reports received, is 14,169,381 in 1876 against 13,889,837 for 1875, and an enrolment of 8,755,010 for 1876 against 8,678,737 for 1875. The column of estimates of school population for 1876, between 6 and 16, gives a total of 10,735,773 against a total in the same column of 10,463,854 for 1875. It will be observed that Colorado, a Territory in 1875, is a State in 1876. The total school population reported in 1876 in the Territories and the District of Columbia is 136,777 against 117,685 for 1875, and the total estimates of school population for 1876 in the Territories is 117,617 against 93,384 in the similar column of estimates for 1875. The enrolment in the Territories for 1876 is 70,175 against 77,922 for 1875. The total school population in States and Territories for 1876 is 14,306,158 against 14,007,522 for 1875.

The total enrolment for 1876 was 8,825,185 against 8,756,659 for 1875. The column of average daily attendance is a severe test of these statistics in the several States. A considerable number of States and Territories it will be seen are able to give this important item with accuracy. It will be observed that there are over five and a half millions of the population of school age in the country, or considerably more than one-third, not enrolled for instruction during the year; but as there is such a variety of ages included in the legal school age in the different States, and moreover, as in some instances several years are included during which persons may be absent from instruction, and yet have acquired a good degree of elementary knowledge, I do not press the comparisons possible at this point, but taking from the 10,853,390 estimated to be between 6 and 16, the 8,825,185 actually enrolled, we still have 2,028,205, receiving no instruction during the year. After all the possible errors and imperfections in these figures as a basis of consideration have been eliminated, it is clear that not far from one-fifth of our youth who should be under instruction are continuously without it. How little benefit some may derive who are included among the enrolled will be seen when it is remembered that in some cases those are reported who have been in the school a single day, and that as a rule none are stricken from the enrolment who have been in school a single week; and further, looking into the column of the average duration of school in days in the several States, and the column of average attendance in those States able to report, our estimate of the culture attained is further reduced. Here is a subject for the reflection of those who believe that educators are overzealous and are urging public education to a point beyond the demands of the country. Let them take this margin of two millions of untutored school population in country and city, and following its several members through life observe how large a share of the idle, pauper, vicious, and criminal classes are recruited from it, or from among the number of children who make the great difference between the total enrolment and the average attendance in the several States. Here is ample room for illiterate adults, men and women, in all the pursuits of life: hence come the illiterate laborer, artisan, and the agriculturist of unproductive industry; hence come the illiterate voters, to invite the tricks of demagogues and imperil our liberties; hence illiterate jurors and witnesses to corrupt the administration of justice; while too often in our cities they furnish the inhabitants of the hovels where fester diseases, physical and moral, that endanger all surrounding life.

TABLE I.—PART 1.—*Summary* (B) *of the number of teachers employed in the public schools, and the average salary of teachers per month, in the respective States and Territories.*

States and Territories.	Number of teachers employed in public schools.		Average salary of teachers per month.

a 24 counties not reported. *b* Estimated. *c* In the country; in the cities the average salaries are: male, $105.10; female, $37.20.

It is gratifying that so many of the States are able to give this summary so accurately; and yet it is a matter for regret that any State or Territory does not know these items, so intimately connected with the administration of its school system. Arkansas gives the total number of teachers, but cannot tell how many are male and how many female, nor their pay. Florida gives the number of teachers, male and female, but can give the pay of neither. The same is true of Kentucky, New York, and the Territories of Dakota, New Mexico, and Wyoming. Georgia and Idaho can neither give the number of teachers nor their pay. Texas estimates the number of teachers and gives the pay. Any one who should examine the column of the average salaries paid, would not from the nature of the case expect the compensation of teachers to be the first point of attack in the efforts to retrench public expenses.*

Statement showing monthly compensation of teachers in public schools.

*Thus reported by the territorial superintendent.

It should be noted in this grading of salaries that the District of Columbia is a small territorial unit with dense population, and that the pay per month may only be properly compared with that of the several cities of the country.

*Incompetent persons delight in finding fault with those who, by reason of ability or culture, are more successful than themselves; hence the continual warfare against all who receive salaries for skilled labor of every description. The talking economist of the present day commences his labors by asserting what he could accomplish if placed in proper position. Passing by the possibility of extravagance and actual waste by mismanagement of the several departments in furnishing labor and materials, in methods of doing work, in neglecting for a week what ought to be done to-day, in failing to take action in such matters as providing a better plan for heating the high school building, whereby at least seventy-five tons of coal might be saved annually, to which your attention was called a year ago, he commences a raid on the school department by declaring that the salaries paid to teachers are too high, and ought to be reduced at least ten per cent. When met by argument upon this point, showing conclusively that a large majority of the teachers are receiving a salary not large enough to attract him from the arena of absolute idleness, for which they are spending their time, energies, and sympathy in a work most clearly detrimental to health, as the new-made graves of some of our best teachers will sadly attest, to give his child an education substantially free from cost to him, he then directs his attention to the superintendent, or the principal of the high school, both of whom he claims receive too much pay, and states that their places can be readily filled for $1,500 per annum.—(Address of Mayor Jillson, of Worcester, Mass.)

a Value of school-houses.

b The total here given is prepared from the table; subsequently to the completion of the latter, additional returns were received from the Chickasaw Nation. These sums being included, the columns of annual income and expenditure would each be increased by $43,000; that of expenditures for teachers' salaries by $4,500; that of miscellaneous expenditures by $13,500, and that of estimated value of sites, buildings, &c., by $50,000.

The above summary presents the financial balance sheet of the public school systems in all the States and Territories as far as they are able to report. Every State and Territory is able to report income excepting Wyoming, making a total of $87,349,528 against $88,648,950 reported in 1875. Alabama, Delaware, Georgia, Illinois, Kentucky, Massachusetts, Minnesota, Mississippi, Missouri, North Carolina,* Vermont, and the Territories of Arizona, Dakota, Idaho, New Mexico, Washington, Wyoming, and the Creek, Choctaw and Seminole Nations are unable to report expenditures for sites, buildings, furniture, libraries, and apparatus for the past year. Arkansas, Delaware, Georgia, Illinois, Iowa, Michigan, Mississippi, Missouri, Nevada, New Hampshire, North Carolina, South Carolina, Vermont, and the Territories of Dakota, Idaho, New Mexico, Wy-

*After the tables in the appendix were in type, a valuable statement of statistics came from North Carolina, and items have been added or inserted as specified in different cases in these summaries and in the abstract for that State.

The population between the ages of 6 and 21 years, for the school year ending June 30, 1876, was 394,489. Of these, about 198,760 are enrolled in schools; or about one-half of the white and rather more than one-half of the colored school population. The total number of teachers was 2,894; males, 1,294 white and 529 colored; females, 783 white and 288 colored. The average salary of teachers is $40 per month in the first grade, $30 in the second, and $20 in the third. There are 2,702 white and 1,372 colored school districts: 1,934 public and 545 private school-houses for white children; 1,371 public and 140 private school-houses for colored children; making 3,990 school-houses in the State. There are also 169 academies and 22 colleges for white pupils and 5 academies and 2 colleges for colored pupils. The income for school purposes for the year was $501,007.78, the total expenditure $335,663.14; of which $319,277.95 were for teachers' salaries. The permanent fund was increased during the year by $45,910,94.

oming, and the Creek, Choctaw, and Chickasaw Nations are unable to report the total expenditures for salaries for superintendents. Georgia, Massachusetts, Mississippi, Missouri, Vermont, and Dakota Territory are unable to report the amount paid teachers. Georgia and Vermont are unable to report the total expenditures for education for the year. The rest of the States and Territories show an expenditure of $84,005,333. New York, Pennsylvania, Ohio, Illinois, Massachusetts, Iowa, Indiana and Michigan exhibit the largest school income in the order named. New York, Pennsylvania, Ohio, Illinois, Massachusetts, Indiana, Iowa and Michigan show the largest expenditure, and in the order named. Alabama, Connecticut, Delaware, Florida, Georgia, Maryland, Mississippi, Missouri, North Carolina, South Carolina, Texas and Vermont, and the Territories of Idaho, New Mexico and Washington are unable to present the estimated or real value of sites, buildings, and other school property. New York, Massachusetts, Pennsylvania, Ohio, Illinois, Indiana, Iowa, Michigan, New Jersey, California, Wisconsin and Kansas, of those reporting, have the largest amount of this property, and in the order named.

Special attention is invited to the increase in value of school property reported; also to the greater fulness of the statistics from the nations occupying the Indian Territory.

TABLE I.—PART 2.—*Summary* (B) *of per capita expenditure.*

States and Territories.	Expenditure in the year per capita of the school population.	Expenditure in the year per capita of pupils enrolled in public schools.	Expenditure in the year per capita of average attendance in public schools.	Expenditure in the year per capita of population between 6 and 16.	Expenditure in the year per capita of population between 6 and 16, including interest on the value of all school property.

	1876	30	2	97,227,909	1,526,961

The above summary by years and by topics, without reference to the names of the States and Territories, enables one at a single glance to gather material for most valuable reflections. By no means of the least consequence are the columns showing the number of States and Territories able to report year by year. Only 14 States and 3 Territories for the past year are able to report the number of pupils in private schools. Until these facts are included in our educational summaries, no one can tell accurately how large a population is growing up untaught. Indeed, the main value of the generalization is to show topically where there is completeness and what it is, and to stimulate the necessary efforts in other quarters.

EDUCATIONAL CONDITION OF THE UNITED STATES.

In the summary here given, the comparisons made are, as a rule, between the years 1874–'75 and 1875–'76.

MAINE.

Maine in 1876, as in 1875, exhibits a decline in school population and enrolment, the former being 2,987 less than in the preceding year, and the latter 1,175 less. But better schools or better discipline have given her, even in these adverse circumstances, 1,810 more scholars in average daily attendance. In other things there is an alternation of increase and decrease, her male teachers being more numerous by 167, her female ones less so by 191, the wages of both showing a falling off. With 19 more school districts, she has 18 fewer parts of districts; with 81 more school-houses, 18 fewer built during the year; and with the greater number of the houses, a diminished valuation of school property; $17,082 larger receipts from State and local funds, $239,940 less from State and local tax; a greater expenditure by $85,169 upon her school-houses and the supervision of her schools, a lessened one by $149,710 on the teachers employed in them. Her normal schools gave her 55 more teachers in the year. Her high schools had in them 13,469 students, and 28 deaf-mute pupils were under instruction in Connecticut through her aid. In her State agricultural college 93 students were reported.

NEW HAMPSHIRE.

New Hampshire, like her neighbor, reports fewer children of school age and an enrolment 2,052 less than in 1875, but a larger average attendance, (569;) 55 more graded schools, the others remaining about the same; 50 more men teaching, and 59 fewer women; 14 more school-houses, the number without blackboards being 22 less, and the number with globes or outline maps 207 greater; an increase of $190,911 in the estimated value of buildings and apparatus; receipts for schools $31,065 greater, and the expenditures $74,808 less. Her normal school sent out 35 graduates in the year. The high schools trained about 2,700 pupils, while 28 special scholars were under instruction for her in another State. Her State agricultural college had in it 24 students.

VERMONT.

Vermont, unlike the two preceding States, has enlarged by 5,126 the number of her youth of school age, (5–20,) but reports 3,080 fewer of this age in public schools, and 4,243 less in average daily attendance, the number of her schools 26 less, the average cost of them 26 cents a week less; and so, the receipts for them having been diminished $36,094, she has been able to meet this with a correspondingly decreased expenditure. The number of graduates from her normal schools has been 188 for the years covered by the State report, 1875 and 1876; those from 9 of her 33 reporting graded schools, 37 in 1876. Her one State special school had in it 138 inmates, and 25 deaf-mutes and blind were in another State trained through her means. The agricultural department of the University of Vermont numbered 24 students.

MASSACHUSETTS.

Massachusetts, as usual, leads the States above mentioned, but like them shows some of the influences of an extremely trying year, the number of her children of school age (5–15) being 6,126 more than that of 1874–'75, the children of all ages in public schools 3,658 more, and the average attendance 2,042 more; this, too, notwithstanding a falling off of 6,072 in the attendance of those over and under the legal age. With 32 additional male teachers, she reports 397 fewer females, while the number of those trained in normal schools is 512 less;* and while she has sustained 15 more evening schools, the attendance on evening schools has decreased 7,031. Her public day schools were 9 less than in the preceding year; her public high schools 4 more, making 212 in all, with 15,826 pupils; her receipts for schools, largely from a falling off in taxation and interest on permanent fund, were $304,978 smaller; her expenditure on them, mainly from a saving in the line of erecting and repairing school-houses, smaller by $266,269. In 4 special schools she had 383 pupils, and sustained 83 others in another State. There were 69 students in the State agricultural college.

*Her normal schools, however, gave her 203 graduates during the year, to aid in making up this deficiency.

RHODE ISLAND.

Rhode Island, in proportion to her smaller size and population, stands well up to Massachusetts in her record for the year, reporting an enrolment 774 larger than in 1874–'75, and an average attendance greater by 858. Her number of schools was 20 more than in the preceding year, 30 more of them being graded schools and 14 being high schools. Her men teaching were 16 more; her women teaching, 8 more. The teachers in evening schools, however, were 42 fewer than previously reported, the number of evening schools 11 less, the enrolment in them 1,421 less, and the average attendance on them 671 less. The average monthly pay of male teachers fell off $3.69; that of women increased 56 cents. The value of school property was rated at $96,657 in advance of 1875, while both income and expenditure for schools showed the pressure of the hard times, the former decreasing $27,681 and the latter $55,176. Her normal school, in which the requirements for graduation have been considerably increased, had 144 pupils during the year, of whom 13 were teachers fitting themselves for higher work. The one special school within her borders had 218 inmates in the year, and 8 deaf-mutes were instructed upon her account in an institution in a neighboring State. Of the number of pupils in her 14 high schools we have no note. In the State agricultural department of Brown University there were 32 students.

CONNECTICUT.

Connecticut holds her own in nearly like proportion at most points, her school population (age 4–16) increasing 1,448; the different scholars in her public schools, 191; the average attendance in winter, 502, and in summer, 2,199; the number of winter teachers, 30; of summer teachers, 35; and of those continued in the same school, 78. The average monthly pay of male teachers fell off as in Rhode Island, but here only $1.43. That of female teachers advanced 68 cents, somewhat more than there. The number of public schools was only 8 more; but the number of departments in them 41 more, showing better grading; the whole number of graded schools 4 more, making 264. The new school-houses built were 19 less than in the previous year, but the general condition of the houses apparently nearly the same. Receipts for schools from State school fund and State tax increased, but those from local funds and local tax decreased considerably, the whole receipts for the year being $20,089 less than last year, and the total expenditures for school purposes $144,990 less. The State normal school, mainly designed to train teachers for higher efficiency in their profession, had 180 pupils during the year ending April 1, 1876, graduating 43. How many high school pupils were in her 264 graded schools we are not informed, but 1,017 appear in reports of the high schools of her two chief cities. In 2 special schools were 91. The State students in the Sheffield Scientific School cannot be separated from the others.

NEW YORK.

In New York, always a leading State, the influence of the numerous cities is seen in improvement of the schools; that of the hard times, in a falling off of means for the support of them. With an increase of only 2,537 in the number of youth of school age, (5–21) we yet find 7,961 more enrolled in public schools, and 9,775 more in average attendance; 259 more men teaching, and 63 fewer women; 36 more school-houses, and an estimated increase of $1,089,278 in the value of school property; an increase of $185,997 in receipts from State tax and unspecified sources, and a sad decline of $427,092 in receipts from local taxes; an augmentation of $116,137 in the expenditure for teachers' salaries, but a diminution of $278,467 in that for building, furnishing, and improving school-houses.

The study of drawing has been introduced by law into the schools of cities, and union schools in towns, and efforts have been made, with some success, to give practical efficacy to the provisions of the "act to secure to children the benefits of elementary education."

The 8 normal schools of the State still flourish, and, with the girls' Normal College of the city of New York, have had 4,257 normal students under instruction for the

year, and have graduated 514. In her academies and union schools were 30,175 pupils; in 9 special schools reporting, 1,697; in the agricultural and mechanical department of Cornell University, 225.

NEW JERSEY.

New Jersey, with only one-fifth of the school population of New York, has done proportionately much better than her great neighbor, increasing her enrolment of public school pupils by 4,521, and the average attendance of the enrolled by 5,431, diminishing by 2,435 the number of those attending no school. The percentage of those attending public schools has risen from 62 to 70 during the year, while the percentage of those attending no school has dropped from 25 to 21. She has increased by 98 the number of school departments, by 57 the number of higher class school buildings, by $162,249 the valuation of school property, and by 32 the number of male teachers in her schools, shortening by only one name the list of females teaching. In the receipts for schools we see the effects of the hard times, as elsewhere, the income from the permanent fund alone increasing $38,755, while that from State tax, local tax, and other sources has decreased $195,804. To balance this diminution of receipts, she has not only saved $141,101 in the line of expenditure for school-houses, but has cut off $220,115 from the always small enough salaries paid teachers. In her high schools she has had about 1,700 pupils under training; in her one excellently managed normal school 256, graduating 39 of these; in 2 reported special schools, 244; in the Rutgers Scientific School, 44.

PENNSYLVANIA.

Pennsylvania stands well forward, increasing by 12,372 names the enrolment in her public schools, by 26,870 the list of those in average attendance, by 16 the per cent. of daily attendance on enrolment, by 406 the number of public schools, by 332 the number of graded ones among these, by 288 those in which higher branches are taught, by 312 the teachers in the schools, and by $727,732 the receipts for them from taxation. Her expenditures show an effort to meet anticipated financial pressure by a cutting down of $410,012 in the line of sites, buildings, furniture, and miscellaneous expenses for the schools, and of $20,325 in the line of cost of supervision; while for pay of teachers there are reported $110,013 more than the preceding year, although the salaries of men had been diminished on an average $1.31 a month, and those of women 49 cents a month.

The 9 State normal schools reported for 1875–'76 an attendance of 2,999 students in normal departments, with 191 graduates, making, with the girls' normal school of Philadelphia, 3,776 normal students and 347 graduates. Of high school students proper, we have distinct report of only 1,646, though the State superintendent indicates 1,889 as the number of schools in which some of the higher branches were taught. In 16 soldiers' orphan schools, 2 reform schools, 2 for deaf and dumb pupils, 1 for the blind, and 1 for the feeble-minded were 3,971 pupils, about 100 of them from other States; in the State college of agriculture and the mechanic arts, 149.

DELAWARE.

Delaware, presenting the first annual report of the workings of her school system under State supervision, shows an enrolment of 21,587 pupils, in 370 public schools, with 430 teachers, receipts of $216,225 for the schools, and an expenditure of $216,226 on them. Of normal and high school pupils in the State schools there is no information, but in Wilmington appear 99 of the latter. Fourteen special pupils were instructed by the State outside of her own bounds. Her State college had 41 students in its classical department, and 34 in the scientific.

MARYLAND.

Maryland, without change in the reported number of persons of school age, (5–20,) had 3,206 more enrolled in her State schools, 3,810 more in average daily attendance,

26 more schools, 127 more teachers, and $257,444 more receipts for public schools; she decreased her expenditure for sites, buildings, and furniture $42,077, but increased it $24,379 on superintendence, teaching, and miscellaneous matters. Her available school fund was $555,859 greater in 1875–'76 than in the year before. The State normal school, for whites, had 206 enrolled pupils, in an excellent new building, and graduated 21; a normal school for colored teachers, 40 pupils, with 4 graduates; while a normal class for the Baltimore City teachers includes most of them. Of high school pupils there were in Baltimore 1,164, without report of others elsewhere. Special students reported in 3 State schools for blind, and deaf and dumb, 158; students in the State agricultural college, 57.

VIRGINIA.

Virginia, also without indication of change in the number of youth of school age, (5–21,) has had 15,370 more in public schools, 11,316 more in average daily attendance; 140 more pupils over 21; 588 more pupils studying higher branches; 358 more teachers, at an increased salary for both men and women; 353 more public schools, with 6 additions to her list of graded ones; 1,264 more school-houses in use, 1,074 more with good furniture, and 41 more built during the year than in the preceding year; an increase of $94,550 in the value of her school property; only $29 decrease in her total receipts for school purposes, and a total increase of $46,283 in expenditures for these, the largest item of increase being for teachers' salaries. There is as yet no State normal school. The State report gives 7,382 as the number of public school pupils studying higher branches; while in the State agricultural and mechanical college were 255 students, and in the agricultural department of the Hampton Institute 44 on State foundations. In the State special school for deaf-mute and blind pupils at Staunton were 96 deaf-mutes and 37 blind.

NORTH CAROLINA.

North Carolina, having made no report for 1874–'75, can only be compared with herself in 1873–'74, presenting in two years an increase of 24,529 youth of school age, (6–21,) of 24,677 in enrolment in public schools, of $4,603 in receipts for schools, and of $38,068 in expenditure upon them. No State normal schools yet, and no report from the 34 high schools; 61 students in the agricultural department of the State university, and 148 in the State special school for deaf-mutes and blind.

SOUTH CAROLINA.

South Carolina reports 1,293 fewer persons of school age, (6-16,) but 12,669 more attending school; an increase of 213 teachers, of 196 in the number of public schools, and of 118 in the number of school-houses, the value of school property advancing $12,773. The receipts for school purposes show a falling off of $37,338 in State appropriation, of $1,193 in poll tax, and of $13,374 in the income from unspecified sources; but an increase of $15,773 in that from local taxes and of $3,850 from the Peabody fund. For teachers' salaries, notwithstanding a diminution of average monthly pay, the expenditure was $8,235 greater than in 1874–'75; for building and repairing school-houses, $1,643 greater; for other purposes, $12,470 less. Of the pupils in the one State normal school there is no report. In high schools there were 3,138 in higher branches, 353 of these being in Charleston. In the State Agricultural College and Mechanics' Institute were 100 students; in the State university, 89 collegiate ones; in the one State special school, (for deaf-mutes and blind,) 25.

GEORGIA.

In Georgia* comparison of the returns for 1874–'75 and 1875–'76 is difficult from the fact that in the former year those from 13 counties were not received. Making allowance for this deficiency, there would seem to be, instead of an increase of 12,925, as shown by

* One of the most useful efforts made in behalf of education in the State during the year was the visiting and lecturing trip of State superintendent Orr, (his expenses being paid by the Peabody fund,) during which he delivered forty-four addresses. The railroads of the State had the good sense to coöperate in this effort by furnishing the superintendent free transportation.

the printed figures, a diminution of 14,173 in the public school enrolment, and probably a considerably greater decrease in average attendance than the 7,770 shown. The other figures might be similarly affected, but, as they stand, they indicate an increase of 563 in the number of public schools, a decrease of 23 cents in the average monthly cost of tuition for each pupil, and an amount of receipts and expenditures for schools not very different for the two years. No State normal schools have been established, but an appropriation of $8,000 to Atlanta University has enabled it to train normal students for the schools. In 5 chief high schools out of 13 referred to there were 568 pupils for the year 1875–'76; in the two State agricultural colleges, 338 students;* in the State university, not yet fully linked with the public school system, 110; in the 2 State special schools, 106.

FLORIDA.

In Florida, the statistics tell of decrease and retrogression: 19,694 fewer reported children of school age, though that age has had 2 years added to it; 6,319 fewer enrolled in public schools; 11,586 fewer in average attendance; 239 fewer teachers, and $94,848 smaller receipts for schools; no State normal schools, no report of pupils in the 12 or 14 high schools, and no indication of advance except in the number of reported schools and the apparently final establishment at Eau Gallie of the State agricultural college.

ALABAMA.

Alabama, too, presents the painful spectacle of like decrease, of 1,044 in school population, of 20,447 in enrolment of pupils, of 810 in the number of reported schools, of 6 days in the annual duration of the schools, of 190 in the number of teachers, of $5.20 in the average monthly pay of these,† of $259,889 in receipts from State appropriation, and of $69,810 in the income from permanent school fund. The former of these last two diminutions results from a change in the State constitution which substitutes an uncertain annual appropriation for the former definite one of one-fifth of the State revenue. The latter one comes from a reduction by the legislature of the rate of interest payable on the school fund from 8 to 4 per cent.

In 3 State normal schools, 2 of them for colored students, there were reported 206 normal pupils for the year; in the 166 public high schools there could hardly have been less than 5,000 on the rolls; in the State agricultural college were 104; in the State university, 160; in the State institution for instruction of deaf-mutes and blind, 49.

* Hon. W. P. Price, a member of the Forty-second Congress, writes as follows: "The North Georgia Agricultural College is doing an immense work in the direction of furnishing teachers. * * * An important feature of this college is the scheme devised to furnish remote, isolated districts with competent teachers. One great objection to all our common school systems has been that, no matter how well the general system may be devised for the great body of the children, still no provision has ever been made that is plausible or practicable for reaching the obscure communities and districts which have always been shunned by the schoolmaster on account of the poverty of the people and lack of cultivated society. * * * It is always from these remote districts that we hear clamors for a change in our school laws, and no matter how often these are changed they still receive but few of the blessings. To remedy this evil and this neglect we have introduced a *scheme* into this college, whereby we are enabled to send teachers to these untaught children. * * * The college by various means enables young men and young women to prosecute their studies, and assures them degrees and honors upon their graduation; but in the mean time, during the fall months, they are required to teach in neglected portions of the State, going to such places as may be selected by the trustees beforehand. In this way the blessings of education will descend from the higher schools, and instead of the college becoming (as in many instances such institutions do) the object of hatred and contempt of the poorer classes, they will regard it as the source of the highest temporal blessing to them. The objection to 'college men' and 'bookmen' is fast going out in this section, and parents, deprived of education and of learning themselves, are making unheard-of sacrifices to educate their boys and girls. At the same time I know of many instances of heroism and self-denial on the part of our young people to gain knowledge. Two instances are now before me where young men have hired their time—one from an unfeeling stepfather, the other from a father who feels that he cannot get along without his son's help on the farm—each paying about $50 per annum, either in labor or money, after they get through their studies, or by extra work during vacation."

†The above returns are, indeed, from only 51 counties out of 65, but something of the same imperfection belonged to those of the preceding year.

MISSISSIPPI.

Mississippi, as to her school system, presents a record no more encouraging than the two last, upon the whole. The returns, which are, however, from only 50 counties out of 74, show an increase of 37,460 in the number of youth of school age, (5–21,) but a decrease of 2,013 in the number attending school, of 1,990 in the teachers employed, of $15.60 in the average monthly pay, and of 40 days in the average length of schools; while the receipts for public school purposes fell off $668,826, and the expenditures for these purposes, $622,840. In the State normal school at Holly Springs, 88 students were under preparation for teaching; in that at Tougaloo, also aided by the State, were 61 during the year; but of the students in the public high schools there is no report. The agricultural and mechanical department of Alcorn University had 41 students; the kindred school in the State university reported none; the university, 46 preparatory and 85 collegiate.

LOUISIANA.

Louisiana, although torn by political dissensions during 1876, shows less of the depressing influences of these on her school system than might well have been feared. The return for 1875–'76 indicates only a diminution of 539 in her total public school enrolment, which was 74,307; the average daily attendance, 52,315, standing in fair proportion to this. In the number of teachers there was an increase of 58; in average pay of these per month a decrease of $6, and in the estimated value of school property a decrease of $93,038. But in the total receipts for school purposes there was, instead of the falling off which was anticipated, a greater sum by $76,344 than in the previous year, and in the expenditure upon them a like increase. There is no State normal school and no report of pupils in the high schools. In the State agricultural college 176 students were reported; in the State university, 20 preparatory and only 3 collegiate students. In the 2 State special schools for the blind and for the deaf and dumb, 57 pupils were under training in 1875–'76.

TEXAS.

From Texas there was no statistical report of public school affairs for the year 1875–'76 because of a complete change in the school system under the new constitution of 1875, and the law passed in 1876, which dropped the State superintendency, county superintendency, and county boards of directors, and put all public school matters under the control of a State board of education and of voluntary school communities to be organized throughout the State. No provision being made for the payment of teachers engaged under the old system, these generally ceased to teach in the early part of 1876, and from that time until the autumn there were no public schools and no county officers to make report of anything relating to them. No State normal school is yet in existence, and no report of high schools under the State system comes to hand. In a special return from the State agricultural and mechanical college, 90 students were said to be in attendance; in reports from 2 special schools for instruction of the deaf and dumb and of the blind, there appear 107 inmates for the year 1875–'76.*

ARKANSAS.

From Arkansas the reports for two years show an increase of 4,438 in the number of youth of school age, (6–21,) but a decrease of 57,988 in the enrolment of the public schools, a decrease of 3,538 in the number of public school teachers, and (what sufficiently explains both these) a falling off in receipts for schools of $445,462; in expenditures upon them of $630,597. A sadder statement for a single year could not easily be penned. Normal training is offered, in the State industrial university, to 238 pupils who in good faith mean to make teaching a profession, but the pay for teaching has been long so low and so uncertain that only 51 such students appear upon the rolls for 1875–'76, additional to 153 preparatory students and 67 collegiate. The two State schools for deaf-mutes and for the blind, at Little Rock, reported for 1875–'76 a total of 74 pupils.

*The splendid endowment of 50 leagues of land (221,400 acres) and $100,000, set apart by law in 1858 for "The University of Texas," does not seem to have yet stimulated to the effective establishment of such an institution.

TENNESSEE.

Tennessee gives a record less discouraging, her children of school age increasing 7,519, her public schools numbering 45 more than in 1874–'75, her consolidated schools (private and public ones combined) 18 less, and the receipts for public schools reaching $98,419 more. But in the face of the increase of school population there was a decrease of 4,878 in the enrolment in public schools; of 10,897 in the average daily attendance on these; and of $22,519 in the expenditure for them. Her new State normal college enrolled 60 students in its first year;* of those taught in her high schools, only 461 in her 2 chief cities are reported; in her agricultural college, 300 for the year; in her two special schools for the deaf and dumb and the blind, 373.

KENTUCKY.†

In Kentucky there has been the usual difficulty about getting full returns from districts, making the statistics less trustworthy than could be wished. However, there appears to be an increase of 11,042 in the number of white children of school age, (6–20,) besides an addition of 50,602 colored children, now included in the State school system, and to be taught in schools sustained with the taxes, fines, and forfeitures collected from the colored citizens. With this large increase of school children, the white enrolment in public schools is set down in the same figures as the year before, but the average daily attendance is given as 3,000 less. The number of teachers reported is 368 less; the number of school rooms 716 greater; the average duration of schools 10 days more. The estimated value of public school property is set at $346,000 more; the receipts for public schools at $75,643 more; the expenditures for them at $68,452 less. No statistics of the colored people's schools are yet presented, they not having generally been in existence for a year at the date of the last report. Except a training school at Louisville with 45 pupils, there is yet no normal school connected with the State system; but about 272 were under training for the work of teaching in 3 independent schools, besides normal classes in the university and 2 colleges. Of the public high schools in 9 cities, only 3 report the number of pupils, the total for the 3 reaching 814. The students in the agricultural and mechanical department of the university numbered 105 in 1876; the collegiate ones in the university itself, 80; the special students in the State institutions, 95 blind, 111 deaf and dumb, and 117 feeble-minded.

GENERAL REMARK.

The retrogressive tendencies in educational affairs lately noticeable in some of the States in which slavery has been more recently abolished, are calculated to produce great fear in many minds respecting the perpetuity of our institutions. But after a careful review of these facts and an attentive consideration of them in their several relations, and with full recognition also of the same backward tendency in certain other localities, I am increasingly convinced that their local public sentiment will not

*As auxiliary to the work of the State normal college, district institutes were organized by the State superintendent of public instruction, who issued the following circular to county superintendents: "With a view to systematize and stimulate the holding of general institutes and conferences of teachers throughout the State during the next year, and thereby arouse school officers, teachers, and the friends of free schools to the importance of improving and elevating the standard of public instruction in every part of the State, I have determined to establish ten general institute districts, corresponding to the ten congressional districts of the State. At some suitable point or points within these districts at least one institute or conference will be held once or more during the year, which all public and private school teachers, superintendents, and directors will be urged to attend. It is particularly desired that each county superintendent within the district shall certainly be present. There can be no better method by which he can increase his own efficiency, upon which, in a great measure, will depend his success in systematizing and improving school work within his own county. * * * I find, by experience, that the institutes heretofore held have achieved great good; but their diffusion throughout every portion of the State has not been general and systematic enough. I desire that this influence and inspiration, which is great and wonderful, should reach every county and every school district in the State, however remote and obscure."

†The figures of Table I of the appendix are used here for comparison, instead of those in the abstract for Kentucky, where a return for another year has been erroneously used.

tolerate any further retrogression in these States; and that the friends of education may, on the whole, anticipate for their efforts increasing public favor.

OHIO.

Ohio reports for 1875–'76 an increase of 7,909 in the number of children of school age, (6–21,) of 10,834 enrolled in public schools, and of 11,790 in average daily attendance. There was a decrease of 1,813 in the number of men teaching, and an increase of 2,167 in that of women. The average duration of schools was 15 days greater than in 1875; the number of school buildings 46 greater; and that of school districts 21 greater; with an increase of $1,093,053 in the estimated value of school property. In school revenues from State taxes an increase is reported of $60,174, and of $345,443 from other sources, while in funds received from local tax there was a decrease of $17,205, and of $5,282 from permanent fund. The total expenditure for public schools was $810,801 more than that for the previous year. Ten normal schools, reporting an attendance of 2,159 students, do not belong to the public school system; but training schools, connected with the systems of 4 cities, gave normal instruction to 160 students, of whom 81 were graduated. There were enrolled in public high schools 24,000 pupils, and in the Ohio Agricultural and Mechanical College, 149. The State institution for the education of the deaf and dumb had 490; that for the blind, 156; and that for idiots, (not noticed in the abstract,) 414 pupils.

MICHIGAN.

In Michigan there was an increase during the year 1875–'76 of 10,666 in the number of children of school age (5–20) and of 1,025 in enrolment in public schools, while the average daily attendance remained the same as for the previous year. The number of teachers increased 356; the average duration of schools, 18 days; and the value of school property, $384,646; the total expenditures for all school purposes decreasing $88,755. There were 722 students in the State normal school and 79 graduates. In respect to public high schools and departments, of which there were 85 reported in 1875, with 16,722 pupils, full statistics for 1876 are not given. The University of Michigan reports 355 undergraduate and 15 graduate students; the State agricultural college, 166; the State public school at Coldwater, an average attendance of 160 pupils; the State reform school, 230, and the State institution for the education of the deaf and dumb, 212.

INDIANA.

Indiana reports an increase of 11,494 youth of school age, (6–21,) of 13,908 in enrolment, and of 13,425 in average daily attendance; also 278 more teachers than in 1875, and 9 more days in the average length of public schools. The valuation of school property was $678,655 greater; the income for school purposes $41,810 greater, and the total expenditures $390,881 more than the previous year. The State normal school reports an attendance of 404 in normal studies. Public high schools in 45 cities and towns had 3,145 pupils; the State university 134 students in its collegiate department, and Purdue University, 67. The State institution for the education of the deaf and dumb had 349 pupils under instruction, that for the blind 107, and at the Soldiers' Orphans' Home 250 children were provided for and educated at the expense of the State.

ILLINOIS.

Illinois reports an increase of 15,586 in school population, (6–21,) and a decrease of 18,230 in number enrolled; 242 more school-houses, 37 more graded schools, and 503 more teachers. The total income for public school purposes was $587,913 more than for the previous year, and the expenditures $779,330 more. Five normal schools connected with the public school system had an aggregate of 1,052 normal students and 99 graduates. There are 110 high schools reported, against 133 in 1875; number of pupils not given. The Illinois Industrial University reports an attendance of 386 students; the State institution for the education of the deaf and dumb and the Chicago day school for deaf-mutes an aggregate of 445 pupils, and the institution for the blind and that for feeble-minded children, each 86.

WISCONSIN.

In Wisconsin, there was an increase of 12,982 in the school population (age, 4–20); of 2,269 in enrolment of children of school age, and of 2,332 in the total enrolment; a decrease of 721 in the number of teachers; an increase of $104,551 in the value of school property; of $19,507 in school income, and of $112,484 in expenditures. Four State normal schools had an enrolment of 980 students; 23 free high schools had 1,284; the State university 227; the institute for the education of the deaf and dumb 190; the school for the blind 86, and the industrial school for boys 415.

MINNESOTA.

Minnesota reports an increase of 17,812 in school population (age 5–21) and of 21,586 in enrolment, with a decrease of 5,908, in average daily attendance; 1,440 more teachers, and 244 more school-rooms for study; a decrease of 20 days in the average length of schools, and of $37,648 in the estimated value of school property. Receipts for schools diminished; expenditure apparently increased. The 3 normal schools report an attendance of 765 normal students; the State university 267, of whom 123 were in collegiate classes; the institution for the education of the deaf and dumb and the blind, 121.

MISSOURI.

In Missouri, the school age having been changed from 5–21 to 6–20, there is naturally some apparent diminution (12,703) of persons of this age from those under 6 and over 20 ceasing to be reckoned. But this does not quite explain the seemingly small increase, only 68, in the number attending public schools, and still less the apparent decrease (11,472) in the average daily attendance. The number of teachers is reported the same as in 1874–'75, the average monthly pay of these not very different from what it was; but the number of public schools for whites is said to have increased by 196, those for colored children by 12. The average duration of schools has come down from 99 to 60 days, a thing at once explained when we find that the receipts for them have diminished by more than $1,000,000, though the expenditures have been considerably beyond the reported receipts. No doubt much of this derangement of school affairs may be reasonably traced to the peculiar financial trials of these times, but doubtless also much of it may be due to the present lack of county superintendency, an agency invaluable for urging teachers and trustees to duty, for keeping up the good quality of schools, and for looking after both the receipt and the expenditure of the school money.

The 3 State normal schools and St. Louis City normal school had in them in the year 1,613 students, graduating 192, while in the Lincoln Institute for Colored Teachers were 118, resulting in 11 graduates. In the high schools of St. Louis and of Kansas City 1,583 pupils were reported; in the university and State scientific schools connected with it, 153 preparatory and 189 collegiate students; in the State special schools for deaf-mutes and the blind, 224 deaf mutes and 110 blind.

KANSAS.

Kansas, with 12,991 more children of school age, (5-21,) reports an increase of 4,618 in enrolment, and an average attendance larger by 4,316; more women teaching by 275, but 82 fewer men; a small diminution in the monthly salary of both these; an increase of 166 school-houses, of $71,421 in the value of them, and of 204 in the number of graded schools with course of study; $202,390 larger receipts for schools, and $178,336 larger expenditure upon them; the available school fund diminished $41,750, but the estimated value of all school property increased $460,169. From want of legislative appropriation for them 2 of the 3 State normal schools were closed in 1876, and the third only continued on the pay system. In this and in the normal department of the State university 198 pupils were in training for the latter portion of the year, 19 graduating. A link of connection between the high schools and university has been established, and those adopting a certain course are to become preparatory schools for it, graduates therefrom entering its freshman class without reëxamination; but statistics of the high schools are still too imperfect for report. In the State agricultural col-

lege 303 students are reported; in the State university 306 preparatory and 99 collegiate; in the State school for the blind at Wyandotte 54 of this class, in that for the deaf and dumb at Olathe 115 deaf-mutes.

NEBRASKA.

Nebraska, like Kansas, recovering partially from her depression, shows signs of vigorous returning life; 6,069 more persons of school age, (5–21;) 4,543 more enrolled in public schools; 170 more school-houses; 36 fewer men teaching, it is true, but 306 more women; receipts for schools apparently considerably enlarged and expenditures upon them obviously not diminished; 192 students in the State normal school; number in the 6 or more high schools, not reported; in the State university and its industrial college 199 preparatory and 88 collegiate; in the State institution for the deaf and dumb 48 deaf-mutes.

IOWA.

Iowa, still steadily advancing, has added 20,017 to her youth of school age, (5–21;) 14,813 to the enrolment in her public schools; 3,900 to the average daily attendance; 907 to the number of her teachers; and $10.59 to the average monthly pay of males; $898,769 to the value of school property, and $352,026 to the receipts for public schools. Her expenditures on them have been reduced $317,167, but this sum has been for school buildings, furnishing and repairs, and has not prevented the addition of $185,659 to the item "for the pay of superintendents and teachers." The State normal school at Cedar Falls, organized in 1876, had on its list in that year 96 normal students. In her university there is also an optional course in didactics for such academical seniors as propose to teach and for such special students as may be prepared for it, while normal training goes forward in 7 colleges, in an independent normal school, and in county institutes. Only 3 public high schools are officially reported, and of the students in these there is no return; but in the State university 223 preparatory and 167 collegiate students are on the lists; in the agricultural college at Ames, 302; in the State institution for the deaf and dumb, 181; in the State college for the blind, 112; in the State school recently established for the feeble-minded, 44.

COLORADO.

Colorado, admitted into the Union August 1, 1876, shows in her report for that year a decrease of 1,313 in youth of school age, due partly, perhaps, to the fluctuations in mining population, and partly to having cut down the school age from 5–21 in 1874–'75 to 6–21 in 1875–'76. She increased, however, by 1,606 the number enrolled in public schools; by 24 the number of teachers in these; by 12 the number of school districts; by 45 the number of school-houses; by $16,177 the income for her schools, and by $14,986 the expenditure upon them, the expenditure for pay of superintendents and teachers going $27,062 beyond that of 1874–'75. The duration of her schools fell off 16 days, but this is almost the only thing to indicate arrest of progress or even temporary check of her advance.

She comes into the Union with an organized university at Boulder, an agricultural college at Fort Collins, a school of mines at Golden, and an institution for the education of deaf-mutes at Colorado Springs.

CALIFORNIA.

California, still in her fresh young life, reports a school population (5–17) 13,224 greater than before, an enrolment in her schools 9,538 greater, and an average daily attendance enlarged by 5,364; more teachers by 289, with salaries somewhat increased; more schools by 539, but a shortening of the school term 5.18 days; receipts for schools $658,818 less; expenditures upon them $188,356 greater, mainly in the line of salaries paid teachers, which item is $165,675 beyond that of 1874–'75. The school-houses are reported to be in general comfortable, furnished with modern styles of desks, and fairly supplied with maps, charts, and simple apparatus, each having a small library secured by an annual State appropriation from the school moneys. The State normal school

taught during the year an average of 342, the number of normal students reaching in the whole 501, while in the San Francisco normal school for girls there was a class of 36. In public high schools there appear to have been 1,387 pupils for the year, besides 1,800 in partial courses; in the State university 177 collegiates; in the agricultural, mining, and mechanical department of the same, 142; in the 1 State special school, 113.

OREGON.

In Oregon, things seem to have gone well upon the whole; for, though without any apparently large advance, that which has been attained is proportionately great for a young country where the settlements are scattered and the large towns few. The report is of 3,886 more youth of school age (4-20) and of 2,572 more enrolled in public schools, though from some cause unexplained the average daily attendance fell off 2,240. There were 26 more men employed as teachers and 5 fewer women; 59 more schools of ordinary grade and 2 more of advanced grade; an increase of $137,803 in the value of school property, with some increase of the time the schools were taught; receipts for school purposes $10,951 beyond those of 1874–'75, and expenditures for these $29,058 beyond. The training of teachers has gone forward in an annual State teachers' institute held at the capital, and in nine district institutes held at as many points throughout the State. There are reported 17 schools of advanced grade, but no statement appears of the number of pupils in them. A State university, long wanted to complete and crown the school system, was to be opened in October, 1876, and is reported to be now in operation. In the Corvallis State Agricultural College were 57 preparatory students in 1876; in the institution for the deaf and dumb at Salem, 27 pupils; in that for the blind at the same place, 11.

NEVADA.

Nevada indicates an increase of 937 in youth of school age, (6–18,) of 439 in enrolment, of 546 in average daily attendance, of $3.71 in the average monthly pay of teachers, of $7,418 in the receipts for public schools, and of $1,462 in the expenditure upon them. There are no means yet for any special training of her teachers, nor is there a report of the number of the pupils in her 3 public high schools; but in her university 23 preparatory students were reported in 1876, while 5 special pupils are under training for the State in the institution for deaf-mutes and the blind at Oakland, California.

THE DISTRICT OF COLUMBIA.

The progress made in education in the District of Columbia deserves to be specially noted. It will be remembered by those who have observed my earlier reports that I had occasion to mention a board of education for the white schools of Washington City and a board for the white schools of the city of Georgetown, a board of education for the county schools, and a board for the colored schools of Washington and Georgetown. These boards are now substantially consolidated into one. The entire educational business proceeds, as might be expected, more systematically, affording the public better assurances of thorough and faithful administration in the employment of qualified teachers, in the selection of methods of instruction, and in the expenditures for the schools.

In 1872, when the trustees of the public schools of Georgetown were considering the proposition to erect in a central locality a building for their more advanced schools, it was suggested that the munificent but yet unused funds bequeathed to the city by the philanthropy of Mr. George Peabody and Mr. Edward Magruder Linthicum might be united to the money set apart for the building to their great mutual advantage. The Peabody fund, $15,000, was for the establishment of a general circulating library; and the Linthicum fund, $50,000, for the establishment of a free school for the education of indigent white boys, to be known as the Linthicum Institute of Georgetown. The board of trustees of the Linthicum Institute was making arrangements for active operations, when it received from the board of trustees of the public schools of Georgetown, through J. Ormond Wilson, esq., superintendent, overtures for the location of

the institute in the public school building, the erection of which was then under consideration. It was offered to set apart a room in the building, free of rent, for the use of the Linthicum Institute; a similar proposition was made to the trustees of the Peabody Library; the rooms to be so arranged as to leave each institution under the exclusive control of its trustees. These overtures were favorably received, and it was finally stipulated that in consideration of a loan of $40,000 by the institute to the public school board, secured by a lien or mortgage on the school property, suitable accommodations for the use of the institute should be provided in the projected school building. "The institute and the Peabody Library are already most valuable adjuncts to the public schools of Georgetown. As separate, independent institutions, in all probability they would have accomplished but little; united with the public schools, so that no part of their funds need be expended for buildings or rents, their annual income can be applied almost exclusively to direct educational work. In organizing the library, special reference has been and will be had to the wants of teachers and pupils; and the institute is an industrial night school for boys who are obliged to work during the day."

The introduction of drawing has already been fully vindicated in the judgment of the public. There has also been established a normal school for the training of young ladies as teachers. The supervision of the schools is steadily growing in efficiency.

Schools still suffer from a lack of well adapted houses, and are specially lacking in the provision of high school privileges. A very large proportion of those resident here are in the Government service; there is occasionally an energetic effort to permit only one of a family to be employed by the Government, and this effort is doubtless effectual in preventing such employment in general. Therefore the thousands of boys and girls belonging to these families, when they attain a proper age either to attend high school or to go into some business, are specially exposed to the temptations inseparable from idleness. The several colleges and professional schools in the District afford ample privileges for superior and professional instruction, but the lack of high school privileges prevents the preparation of many of these young persons for admission to college, and therefore deprives them of collegiate instruction.

No city in the country, perhaps, affords so many incidental opportunities for instruction or the acquisition of valuable knowledge as Washington. Here are gathered the experts in the employ of the Government in various departments of science and the arts. They are advancing on the very front line of their several specialties. They have about them more or less abundant material for illustration. No library in this country is able to aid students better than the Congressional Library. Nowhere else can they find better opportunities for the study of astronomy, of mathematics, of archæology, of engineering, and all its various branches, of chemistry, of geology, and of many other branches.

The comprehensive philosophical treatment of all these opportunities for instruction would add greatly to the intelligence of the National Capital, and afford advanced students advantages in many subjects not possible elsewhere in the country.

PEABODY FUND.

Nothing in the century of our history just closing, indeed nothing in human history, parallels George Peabody's aid to education in the Southern States, whether we consider the amounts bestowed or the methods in which the great trust is administered. Its operations commenced early after a great civil war. They aimed to secure not merely individual education, but the establishment of State educational systems by local action among a people who had little experience of common schools and little knowledge of their administration or their benefits. The task undertaken was one of the most delicate, the object aimed at most comprehensive and honorable. The following table, compiled from the reports of Dr. Barnas Sears, agent of the board of trustees, indicates by States and years the disbursements:

Table showing the amount and disposition of the sums disbursed from the Peabody Fund from 1868 *to* 1876, *inclusive.*

	Virginia.	North Carolina.	South Carolina.	Georgia.	Florida.	Alabama.	Mississippi.	Louisiana.	Texas.	Arkansas.	Tennessee.	West Virginia.	Total.
1868	$4,750	$2,700	$3,350	$3,562	.....	$1,000	$1,338	$8,700	.....	.....	$4,800	.....	$35,400
1869	12,700	6,350	7,800	9,000	$1,850	5,700	9,000	10,500	.....	$4,300	11,900	$10,900	90,000
1870	10,300	7,650	3,050	6,000	6,950	5,950	5,600	5,000	$1,000	11,050	15,050	13,000	90,600
1871	15,950	8,750	2,500	3,800	6,550	5,800	3,250	12,400	.....	9,200	22,650	9,150	100,000
1872	29,700	8,250	500	6,000	6,200	9,900	4,550	11,500	.....	22,250	23,250	17,900	130,000
1873	36,700	9,750	1,500	13,750	7,700	6,000	6,800	.....	.....	11,400	27,800	15,750	137,150
1874	31,750	14,300	200	6,500	9,900	9,700	6,700	2,750	1,000	3,600	33,100	15,100	134,600
1875	23,350	16,900	100	9,750	1,800	2,200	5,400	1,000	1,350	1,500	27,150	10,500	101,000
1876	17,800	8,050	4,150	3,700	1,000	5,500	9,950	2,000	4,450	1,000	10,100	8,600	76,300
Total	183,000	82,700	23,350	57,062	41,950	51,750	52,588	53,850	7,800	54,300	175,800	100,900	895,050

Great* as these sums are, much good as their use for personal culture would have accomplished in promoting general education, it can hardly be doubted by any fair minded observer that the methods by which the sums have been bestowed have increased their beneficial results tenfold.

CITY SCHOOLS.

Instead of the 177 cities which reported last year, there is presented herewith a summary of the returns from 192 cities having each over 7,500 inhabitants.

* Mr. Peabody's gifts to education and charity will never be fully known. So far as ascertained from authentic sources they were as follows. Of the total amount given, $5,522,500, the sum of $4,038,500 was in money.

For a church building	$100,000
United States Sanitary Commission	110,000
Museums, libraries, colleges, &c	1,813,500
Southern education fund	2,000,000
Southern education fund, Florida bonds, face value	384,000
Southern education fund, Mississippi bonds, face value	1,100,000
For arranging American exhibit in the World's Fair of 1851	15,000
Total	5,522,500

The reports of cities increase in interest from year to year. One hundred and ninety-two cities make returns and are included in this table against 177 for 1875. The embarrassments in the study of these statistics, arising from lack of school census, diversity of school age and other peculiarities of methods noted in connection with State systems, obtain here. But in spite of all these, it is manifest that efficient administration of instruction in municipalities is rapidly increasing.

In the organization of our city systems of education we have aimed directly at the results of the teacher's work on the individual pupil in the several grades, and there has been very generally remarkable success in the last quarter of a century. Some of the greatest excellences of American education are found in these systems, but we are reaching a point in their administration where various questions are arising which suggest a careful revision of the whole field of public school education in our great centres of population. Indeed the general administration of municipal affairs in our popular form of government is starting some of the most serious problems of statesman-

ship. The teacher and educator should not be behind in those which relate especially to their sphere of responsibility. They must take into consideration the entire school population, and leave no untaught classes or individuals from which, without let or hindrance, the ranks of pauperism, vice, and crime are to be recruited. To be sure the educator may say with justice, as a rule, that the child's life does not come under his direct responsibility until five years of age, and that, so far as reached at all by official action, he is affected at home or on the street only by the general municipal administration. But the educator, if he has not the direct control in any way over the child in this early period, is by the public set as the watchman on this part of the wall. The work which he is soon to take up is begun here. The form it takes here will have much to do with his success or failure. He cannot omit the study of these outside facts without plain dereliction of duty. He should be able to give a correct idea of them and their bearings to the public and to the officials charged with general municipal administration, and coöperate to secure such legislative and administrative measures as are best fitted to secure universal intelligence and knowledge, in accordance with the genius of our institutions. And while this is in a sense the special duty of the educator, it is an obligation in which every citizen and parent must bear a part. In the sphere of more direct responsibility, involving the organization of the city board of education, the selection of its members and the term of their office, the extent to which they shall have exclusive control over the administration of public education without interference from the general municipal administration of the city, the provision for houses, for the qualification of teachers, the methods of their employment, the extent to which professional supervision shall enter into the administration, the frequency and manner of electing the superintendent, are in some cases unsettled and in others already beginning to develop evils suggestive of serious results.

Generally the members of the board of education are not paid for their services, yet year by year giving their best thought and effort to the discharge of their duties, they come to possess eminent qualifications, and are benefactors to their communities. But not unfrequently in the different cities the members of the board of education are selected, it is to be confessed with profound regret, without special regard to their adaptation or qualification for the duties to be discharged; and often as soon as they have acquired a knowledge of these duties and facility in performing them, they give place to successors selected with the same disregard of qualification. In some places the superintendent and teachers are subject to annual election, giving an uncertainty to their official tenure utterly distasteful to persons of the required eminence and fitness. In some cities the board pursues a course of reasonable non-interference with what are properly called the professional duties of the superintendent and teachers. In some, these are not only interfered with by the general board, but by local boards, resulting in damaging changes. In some cities there has been an earnest struggle towards systematic supervision, providing a superintendent and several assistants, with marked success. Occasionally the jealousies of assistants, whose subordinate duties may not be exactly defined, lead to irregularities with their chief, destroying the force of systematic action and producing evils disastrous to all concerned. Instances are pointed out in which the selection of teachers is altogether capricious, or a matter of favoritism. In spite of these and many other defects, as I have observed, our city systems have attained some of the greatest excellences in education, but to the thoughtful student of these facts there comes the suggestion that there are among us cities enough, with diverse experiences enough, to begin to point out methods of organization and administration which shall assure not merely immediate and favorable results, but the best results for the longest succession of years. Some of our cities have already able series of reports. There is much literature on the administration of education in cities; there are many persons possessing large information and well matured opinions upon it. All these should be laid under contribution by the several city boards, and that thorough consideration given to their lessons which will eliminate the errors and confirm the merits of the past in systems worthy to receive and

train the millions of youth coming to them for their education. Many superintendents, teachers, and school officers hesitate in this discussion because of their own personal interest, but they alone are best situated to understand the points at issue, and should deal with them promptly and thoroughly, so that perils wherever impending, may be averted.

Mr. Rickoff, superintendent of instruction in the city of Cleveland, states in outline the different plans of supervision in several of the leading cities, as follows:

"Boston has one superintendent and six assistant superintendents. The duty of the superintendents is to examine teachers, inspect the schools, and examine pupils for promotion. There are forty-nine supervising principals, one in each grammar school district. The duty of the principal corresponds almost exactly with that of the supervising principals of Cleveland, though he has his headquarters at the principal school building of his district, not at the general office.

"New York has one superintendent and seven assistants, three for grammar departments, three for primary departments, and one for German instruction. The main, I might say the exclusive, duty of these officers is inspection; that is, examination of schools. They are the examiners, also, of teachers who may have been nominated for positions in the schools. The real work of direction and supervision, as it is here understood, is in the hands of the principals of the schools, of whom there are more than three hundred. They are not included in making up the averages by which the number of teachers in a school is determined, and have no classes under their own immediate instruction.

"Brooklyn has one superintendent and one assistant superintendent. The principals of the schools, as in New York, supervise the work of their own schools.

"Philadelphia has no superintendent. The principals of grammar schools act as local managers.

"Cincinnati has a superintendent. There are no assistants there having headquarters at the general office of the board of education. The principals of the schools are designated in the rules as local superintendents, and have no classes under their own instruction, most of them being provided with offices in their own school buildings. The duties of these local superintendents correspond exactly with the duties of the supervising principals of Cleveland. There are thirty-one principals or local superintendents in the entire city.

"St. Louis has one superintendent and two assistants, one of whom has special charge of the German department. There are in addition fifteen supervising principals, who are required to hear one lesson per day in the first grammar class. In other respects their duties correspond to the duties of the two supervising principals of Cleveland.

"Chicago has one superintendent and two assistants, one of whom, a lady, has charge specially of the German instruction. The principals of schools act as local superintendents, having no class for which they are specially responsible. They are generally provided with a convenient office in the school building.

"In Cleveland there is one superintendent, two supervising principals, and two special superintendents, one of German and one of primary instruction. The last is a lady. The principals of schools are responsible for the instruction of the first grammar classes. When these classes exceed forty-five in number the principals are allowed assistants, who have charge of the school in their absence and take such part in the instruction of the class as may be required by the principal. They have no directive power in the management or instruction of other classes, except in the halls, on the playground, and on the way to and from school."

TABLE III.—NORMAL SCHOOLS.

The following is a comparative summary of normal schools, instructors, and pupils reported to the Bureau for the years 1870, 1871, 1872, 1873, 1874, 1875, and 1876.

	1870.	1871.	1872.	1873.	1874.	1875.	1876.
Number of institutions	53	65	98	113	124	137	151
Number of instructors	178	445	773	887	966	1,031	1,065
Number of students	10,028	10,922	11,778	16,620	24,405	29,105	33,921

In the great army of educators, these are the officers under training to lead in the conflict against ignorance. On them the success of the struggle must depend. The figures given repeat the lesson that we have not a sufficient number of qualified teachers. All the teachers in the country have never been under normal training; many of them have not even remote hints of what right education comprehends. The increase of normal schools and of their graduates is gratifying; but the whole number receiving diplomas as teachers cannot yet supply the places of those retiring from the profession.

a Exclusive of appropriations for permanent objects.
b City appropriation.
c Also $35,000 special appropriation for rebuilding dormitory.
d Territorial appropriation; also $440 county appropriation.

The qualifications of teachers for country schools have, as a rule, been widely different from the qualifications of those engaged in teaching in cities. Usually advanced instruction develops more rapidly in centres of population, and city school systems have, as a rule, for a long time furnished in some form instruction in high schools as far advanced as that afforded in institutions known as academies. It was more in the natural course of events for the boys and girls in the city than for their brothers and sisters in the country to enjoy these privileges. These high schools have largely furnished the teachers in our cities. City schools have been also taught more months in the year, and have paid on the average higher wages, than the country schools; and therefore approach more nearly to furnishing the opportunity for a permanent professional career. In the country, too, generally the teachers have been furnished simply from the advanced classes, or were the best pupils in the several schools where they began to impart instruction. Sometimes the pupil who sought to teach attended for a term or so a neighboring academy, and obtained some hints of advanced studies. The normal school in the United States has entered upon its career with this mixed condition of facts around it, and the question arises, Shall normal schools prepare teachers solely for the country or city schools, or for both? Besides, the normal school has not always been accorded the privilege of determining whom it should admit. It aimed to prepare teachers for their professional work, but found many students coming for instruction who were not well grounded in the knowledge of the branches which they would be expected to teach; and being compelled at the outset to seek to remedy this pri-

mary evil, a large amount of its time and expenditure has consequently been absorbed, not in teaching persons how to teach, but in preparing them to receive the professional instruction which the school was primarily established to impart. Normal school teachers and officers have struggled against this condition of things, and now they are censured largely for having, here and there, yielded to the influence of the obstacle they have sought to overcome.

Prof. Hiram Orcutt, who, as secretary of the board of trustees, has done so much toward establishing and maintaining the State normal school in New Hampshire, well states the progress of public sentiment in connection with normal schools:

The views now entertained by our intelligent legislators are largely shared by nearly all the other States in the Union. At first, the normal school met the same hostility and opposition in other States as it encountered here. But as the people became familiar with the working and results of these professional schools, they not only sustained those which had already been established, but established others wherever they were needed. And as their need grew more urgent, they contributed more liberally and cheerfully to increase their usefulness. They fully understood that they could not afford to lose the advantages of normal training, as they realized that they were getting more than an equivalent for the money thus expended. And so it is with us. We have found by experience that normal training adds greatly to the value of the teacher's service. It creates ready skill, and makes available professional knowledge. With normally educated teachers, we have no longer to undergo the expense and loss of educating our teachers in the school room; we may know that our schools will be elevated, and our children properly taught, and inspired with the love of learning. This is a positive gain. If our normal school has done no more during these five years than to demonstrate, as it has, the great need of such an institution in the State, it would not have been established in vain. But it has done still more for the cause of popular education. It has educated the people to a higher appreciation of the importance of our public schools, and created a demand for better qualified teachers, and has done much already toward furnishing a supply. We cannot go back, we must go forward.

Dr. W. F. Phelps, in his report of the Winona Normal School, remarks:

There is no longer any room for doubt that the standard of education is advancing among the people, and that there is a higher appreciation of the necessity of skilled labor in the school room as well as in the material arts and industries of life. That the growth of this conviction is one of the most direct and valuable results of our normal school work, abundantly justifying all the labors and expenditures incurred in its behalf, no just and really well informed observer will longer be inclined to dispute. The teacher question is at the foundation of all educational progress. Poor teachers cannot make good schools. Poor schools cannot make good citizens. A supply of qualified teachers will not appear at our bidding. Like other great blessings, they must be sought by the wise application of means adequate to secure the desired result. As the State has established common schools for the education of its children, it must establish and liberally support normal schools and institutes for the training of its teachers. The last proposition is a corollary of the first. The two must stand or fall together. Having assumed the mighty task of educating the people to a proper appreciation of the rights and duties of a sovereign citizenship, the State has no alternative but to go forward and make its means fully adequate to accomplish their benign purposes. It is the solemn obligation of every friend of his country and of humanity to do his utmost to render this conviction universal.

Some, indeed, have so far mistaken the growing strength of institutions for normal training that they have ventured to assail them indiscriminately. Their friends, however, have only to demand that these schools be permitted to perform the task for which they are avowedly established and conducted, and that they be judged by this standard. The friends of popular education need everywhere to see to it that those seeking to become teachers, and desiring the necessary professional training, obtain the general culture necessary before entering the normal school. If this can be accomplished, the question relating to the support of these schools will be greatly simplified and more easily answered. Beyond all this, moreover, there should be a philosophical study of the relation of pedagogy to the whole subject of education. So far the instruction in our schools of law, medicine, and engineering, and in our colleges, is undertaken, as a rule, by those who are learned in the particular subjects they are to teach, whether they have or have not a knowledge of the principles of pedagogy as applied to their particular department of instruction. So, also, school officers of various grades are selected who are totally ignorant of the very elements of the philosophy of education. Moreover, I regret to observe that not a few teachers of the theory and

practice of education in the normal schools themselves seem to have no adequate understanding of the subject. Again, there are those who deserve all commendation for their efforts and success in formulating their pedagogic ideas and theories.

The following syllabus of a course of study in a normal school, by Miss Delia A. Lathrop, the former distinguished principal of the Cincinnati Normal School, deserves special attention:

I.—HISTORY OF EDUCATION.

a. Ancient education — Grecian. Roman.

b. Mediæval education — The Schoolmen. Revival of learning. Rise of schools and universities.

c. Modern education.

Theorists — Bacon. Milton. Montaigne. Locke. Rousseau. Spencer.

Practical educators — Linguists — Jesuits. Ascham. Sturm. Ratich. Jacotot. Comenius.

Realists — Francke. Basedow.

Humanists — Pestalozzi. Fröbel.

d. Review.

Education in Germany.
Education in England.
Education in France.
Education in America.

II.—SCHOOL MANAGEMENT.

1. *School.*

a. Definition. *b.* Object. *c.* Organization.
d. Seating. *e.* Programme. *f.* Records.
g. Promotion.

2. *Employment.*

a. Opening. *b.* Study. *c.* Recitation.
d. Recreation. *e.* Privileges. *f.* Recesses.
g. Dismissal.

3. *Government.*

a. Nature. *b.* Mode. *c.* Rewards.
d. Punishments.

4. *Motives.*

a. Patrons. *b.* Pupils. *c.* Teachers.

5. *Qualifications.*

a. Pupils. *b.* Teachers.

6. *Rights.*

a. Patrons. *b.* Committee. *c.* Principal.
d. Associate teachers. *e.* Special teachers. *f.* Pupils.
g. Visitors.

7. *Duties.*

a. Patrons. *b.* Committee. *c.* Principal.
d. Associate teachers. *e.* Special teachers. *f.* Pupils.
g. Visitors. *h.* Profession.

8. *Health.*

a. Temperature. *b.* Ventilation. *c.* Light.
d. Cleanliness.

9. *Care of teachers.*

a. Teacher. *b.* Pupils.

Moral culture, promptness, obedience, truthfulness, neatness, etc.

a. Why necessary. *b.* How secured.

III.—STATE SCHOOL LAW AND CITY SCHOOL REGULATIONS.

IV.—METHODS OF TEACHING.

a. Reading and spelling.
b. Number, weight, size.
c. Language, composition.
d. Place and geography.
e. Form and color.
f. Lessons on plants and minerals.
g. Lessons on animals and the human body.
h. Lessons on miscellaneous objects.
i. Penmanship.
j. Music.
k. Drawing.

V.—CRITICISM LESSONS.

VI.—TEACHING IN PRACTICE DEPARTMENT UNDER CRITIC TEACHERS.

TABLE IV.—COMMERCIAL AND BUSINESS COLLEGES.

The following is a comparative exhibit of colleges for business training, as reported to this Bureau from 1870 to 1876, inclusive:

	1870.	1871.	1872.	1873.	1874.	1875.	1876.
Number of institutions	26	60	53	112	126	131	137

a Includes 18 not reported separately.
b Some students are in both day and evening schools.
c Includes 175 not reported separately.
d Includes 914 not reported separately.

I have repeatedly in these reports alluded to the deficiencies of our commercial education. Instead of discussing these statistics in detail, I desire to call attention to some features of commercial education in European countries.

AUSTRIA.

The Commercial Academy of Vienna, (Wiener Handels-Academie,) founded in 1857, is the most important school of commerce in Austria.

The fund of $168,000 with which it was established was raised by subscription. It is provided with valuable technological collections, a museum of raw materials and manufactured articles found in commerce, and with a finely equipped chemical laboratory for the analysis of commodities.

The academy is under the control of a board of management (Verwaltungsrath) consisting of a president, vice-president, and seven other members. The principal is known as director. The faculty consists of 20 professors and 3 instructors in stenography and drawing.

The course of study is given in two divisions of two years' duration each, four years in all; the first being preparatory, and the second more strictly professional.

To be admitted into the first yearly course of the preparatory division, the applicant must be at least 14 years of age, and have completed the course of study given in the lower Gymnasia of Austria.

For admission to the second year's course of the preparatory division, he must be 15 years of age, with corresponding qualifications.

For admission to the first year's course of the second division, the age of 17 years is requisite; and to the last year's course, 18 years of age, with a certificate of honorable discharge from the higher Gymnasium.

The instruction in the first division embraces general and commercial arithmetic, physical geography, history of Austria and of the world, zoölogy, mineralogy, botany, and physiology, calligraphy, preparation for book-keeping; German, English, French, and Italian languages. These branches are further developed in the higher courses, and, besides, commercial calculation, commercial history and law, exchange, the relations of geography and statistics to commerce, and the principles of political economy are thoroughly taught.

The price of tuition is about $60 per annum, with a laboratory fee of $2 extra. The number of pupils was, in 1873, 600.

Besides the regular courses of instruction, (for day scholars,) there has also been opened an evening course for such as cannot attend during the day. This course lasts from October 1 to April 15. The evening course was attended in 1873 by 350 pupils.

PRUSSIA.

The following is the course of study pursued in a Prussian school of commerce:

1. German, French, and English languages.
2. General study of commerce and industry, including definitions of commerce, different kinds of trade, auxiliary means of trade, coinage, weights, measures, money, banking and exchange, and the most important laws relative to commerce and industry.
3. Commercial and industrial book-keeping, (by single and double entry.)
4. Commercial correspondence in German, French, and English.
5. Commercial penmanship.
6. General and commercial arithmetic.
7. Natural history.
8. Physics and chemistry.
9. Physiology.
10. Technology.
11. Commercial law, commercial history, and geography.
12. Drawing.
13. Stenography.

The tuition fee is $60 per annum.

BELGIUM.

The school of commerce at Antwerp is an institution which was founded in the year 1852 by the government of Belgium. The course of instruction embraces two years, and is both theoretical and practical. The following are the branches of study:

1. *Theoretical division.* General history of commerce and industry; commercial and industrial geography; political economy and statistics; general principles of law; comparison of commercial and maritime rights, and the principles of international law in their relations to commerce; the customs of Belgium and other principal countries; study of constructions and maritime armaments.

2. *Practical division.* Commercial affairs and banking; accounts and the management of books; correspondence; study of natural productions and of merchandise; correspondence in the German, French, Flemish, English, Spanish, and Italian languages.

The lessons in the theoretical department are principally by lectures, the students taking notes and undergoing subsequent examination upon the subject matter.

The instruction is given by 8 professors, 2 assistants, and 3 chiefs of bureaus. The tuition fee is $50 per annum.

Graduation takes place after a satisfactory examination before a commission appointed by the minister of the interior.

Students who attain diplomas of highest distinction may receive a bursary for travel in foreign lands. The government granted this favor to three pupils in 1864, and since that time eight other students have been subsidized in like manner.

South Carolina	1	2	20
Wisconsin	5	15	273
District of Columbia	6	14	163
Total	130	364	4,090

This summary in regard to Kindergärten is full of encouragement. The contrast between the figures of 1875 and those of 1876 shows great increase. The 4,090 children instructed are indeed an extremely small fraction of the total population of the admitted ages, but they are widely scattered, and each Kindergarten has an influence over more than those directly in attendance, by pointing out the better way of beginning to train the child's mind, and illustrating the method in a manner readily understood by all who have to do with childhood.

If there be anywhere too much reliance upon the book, if methods of instruction are too abstract, or are too destructive of child nature, the true Kindergarten is fitted to afford a remedy. It should be clearly distinguished from what is known as object teaching, and also from the idea of mere play.

The opportunities afforded by the Centennial for bringing the idea of the Kindergarten to the attention of teachers and parents were well improved.

During the year, the feasibility of establishing the Kindergarten in small country towns and of connecting it with city systems has found additional illustration.

A gentleman in Florence, Mass., after having experimented with the Kindergarten in his own parlor for the benefit of his children and those of his neighbors, erected a building 64 feet by 40 feet, with two stories and an attic, furnished throughout with hot and cold water, well ventilated, especially adapted to secure the sunshine, and rendered additionally attractive by pictures and growing plants. In addition to the well appointed house, there are appropriate grounds. The efficiency of the work in it is increased by the meeting in each month of the mothers of the little children with the teacher.

None of our school laws provides for the admission of children under four years of age, and most of them fix the age of admission at five or six. The Kindergarten, reaching below this age, has on this account and also because of the expense experienced difficulties in becoming a part of public school systems.

The experiment of a single Kindergarten in connection with the public schools was commenced in Boston in 1870. In St. Louis the Kindergarten has become a part of the public system on a larger scale. The superintendent, Mr. Harris, a careful observer of the philosophy and practice of the Kindergarten, makes an extended statement of the facts in his report for the year. He says:

The offer of Miss Susie E. Blow to undertake gratuitously the instruction of one teacher appointed by the board, and to supervise and manage a Kindergarten, provided the board would furnish the rooms and a salaried teacher, was accepted August 26, 1873, and Miss Mary A. Timberlake, one of the primary teachers, was assigned to a room in the new building of the Des Pères School set apart for the experiment. Under the enthusiasm and eminent practical sagacity of Miss Blow, the Kindergarten soon developed surprising results. In the following spring I described its results thus:

"The formation of habits of cleanliness and politeness is marked and successful. But the development of the intellect in making quantitative or mathematical combinations is more surprising. Geometry and arithmetic seem to unfold simultaneously in the minds of the pupils. They are trained to exercise their faculties in recognizing form, shape, and number, as well as in designing combinations with them. This training in the exact and quantitative is counterbalanced and compensated by a discipline of the phantasy and imagination. Manipulation in various ways—drawing, folding paper into artistic forms, embroidering, construction with sticks and softened peas, modelling in clay, so as to train the hand and eye—is practised. It would seem as though Fröbel had especially in view the education of a race of industrious and useful people."

Mr. Harris, in a foot note bringing the facts down to a date later than that covered by the body of his report, gives 30 Kindergärten, with a total enrolment of 2,400 pupils and an average attendance of about 1,200. The experience of the union of the Kindergarten with the public school system in St. Louis is full of valuable suggestions, which are set forth in Mr. Harris's report under "Cost," "Conditions of economy," "Dangers in management," "Play," "Gifts and occupations," "Educational results," "Kindergarten preparation," and "The Kindergarten Americanized." Under "Results" he observes: "In the common school, industrial drawing is the only branch which has anything specially to cultivate the hand and the eye. The Kindergarten, it is seen, does this by all of its appliances. The practical advantage of possessing a

skilful hand is not easily to be overestimated." Under "Preparation" he states: "It is found that the children who come from Kindergärten excel the others in ability of self-help, in maturity and quickness of sense perception, and in their grasp of thought. In one room 38 per cent. of the pupils had come from the Kindergarten, and 62 per cent. had received no Kindergarten training; the average age of the former was 7, of the latter 6½ years. Those who had been in the Kindergarten averaged 1½ quarters' work, and those who had not been there averaged 1 quarter's work. Those who had been in the Kindergarten averaged a half year older than the others. Their average work was 50 per cent. more, as measured by the standard of promotion and for the limited time on which the estimate is based." Again, he remarks: "Twenty-one pupils of another school had been in the Kindergarten an average of 1½ years, and performed the work laid down for 19 weeks in 16 weeks. The 28 pupils who had not attended the Kindergarten performed the work laid down for 18 weeks in 17 weeks. In matters of skill, taste, neatness, and many other things, this measure is no test whatever."

TABLE VI.—SECONDARY INSTRUCTION.

The following is a comparative summary of the number of institutions for secondary instruction making returns from 1871 to 1876, inclusive:

	1870.	1871.	1872.	1873.	1874.	1875.	1876.
Number of institutions	.....	638	811	944	1,031	1,143	1,229
Number of instructors	.....	3,171	4,501	5,058	5,466	6,081	5,999
Number of students	.....	80,227	98,929	118,570	98,179	108,235	106,647

In no part of the educational field has the collection of statistics encountered greater difficulties than in that of secondary instruction, *i. e.*, in the grade intermediate between superior and elementary.* Secondary instruction is specially imparted in city high schools, in academies, in preparatory schools, whether conducted independently of or in connection with institutions for superior instruction, and in normal schools to those pupils who require the information thus given preparatory to undertaking their professional labors.

The summary immediately following, which precedes the generalizations of Tables VI and VII, is made as an aid to those who wish to gain a comprehensive view of secondary instruction and find difficulties in tracing the details through the several tables in the appendix which contain the institutions in which this instruction is imparted. All who would limit public instruction to the elementary grade may well scrutinize this summary. In all the various institutions in which instruction of a secondary character is imparted, according to these reports there are enumerated only 184,440 pupils. Can any fair minded statesman look at these numbers and at our total population and the demands for this grade of information in the public and private affairs of the country, and come to the conclusion that there is too much work done in this grade, that there are too many receiving this measure of education? The facts clearly reveal weakness in our system of culture at this point, where in Germany there is great strength and superiority. It is not merely that they have in the different German states universal education so effectually carried out, but that they carry so many of the pupils up into the higher courses of instruction. Education is not only universal, but it is carried farther with a greater number; hence the greater effectiveness of their educational systems.

* Not only are these general divisions of elementary, secondary, and superior far from definite, but, as will be seen in looking over the annual reports of the country, the programmes of study in each are without exact definition. It would perhaps be more useful if there were published by the schools each year what has been accomplished in the several grades, instead of at the beginning of each year what it is proposed to do. Then we should have the record of acts instead of intentions, and possibly find the present confusion with reference to classification and gradation somewhat relieved. As it has been, and now is, the difficulties in getting out a measurably correct report of secondary instruction in this country are indescribable. With the hearty coöperation of educators in this grade, however, considerable progress has been made in gaining a knowledge of what is accomplished. The information on this subject in the city and State reports is becoming clearer. Those who wish to examine the information given to this Bureau specially in detail will find it in the high school grade in the table of cities, in the table of preparatory schools, and in that of academies. And in the abstracts of information there will also be found further details not yet possible to include in any of these tables.

Statistical summary of pupils receiving secondary instruction.

in all cases.

TABLE VII.— PREPARATORY SCHOOLS.

Detailed statistics of preparatory schools will be found in Table VII of the appendix. Prior to 1873 these schools were not separated from those for secondary instruction. The following is a comparative statement of the statistics of these schools, as reported to the Bureau, for 1873, 1874, 1875, and 1876:

	1873.	1874.	1875.	1876.
Number of institutions	86	91	102	105
Number of instructors	690	697	746	736
Number of students	12,487	11,414	12,954	12,369

These preparatory schools are another class also doing the work of secondary instruction, but having special reference to the preparation of students for admission to our colleges. In some instances they are a part of the college organization.

TABLE VII.—*Summary of statistics of preparatory schools.*

In the study of these statistics many important lessons will be found upon the very surface of the tables. In endeavoring, however, to understand the comparative merits of the several institutions there should be careful consultation of their programmes of study and of the work actually accomplished by the several pupils in each. Whatever the improvements in superior instruction for women have been in the past, it is clear to a careful observation running through a series of years that improvement is steadily progressing. Woman has a larger participation in the instruction given in colleges first established exclusively for men; and those devoted solely to the purpose of imparting to her this grade of instruction are increasing in their endowments, in their appliances, and in the thoroughness of their work. Vassar has been strengthened by the establishment of Wellesley and Smith; and no doubt, ere long, preparatory schools intended to fit young women to enter these colleges will come into existence, with ample provisions and able instructors. Having important bearing upon the value of diplomas given and the elevation of the standard of superior instruction for women, I may call attention to the

HARVARD EXAMINATIONS FOR WOMEN.

In his last annual report, the president of the university says:

"The examinations for women, first held in 1874, have proved useful and will hereafter be a regular part of the work of the university. Local committees were organized in 1875–'76 for conducting these examinations at New York and Cincinnati, and accordingly examinations will be held simultaneously in the first fortnight of June, 1877, at Cambridge, New York, and Cincinnati."

The following paragraphs from the last university catalogue will indicate the character of the examinations:

"The examinations are of two grades:

"I. A general or preliminary examination.

"II. An advanced examination for those who have passed the preliminary examination.

"Preliminary examination.

"The preliminary examination embraces the following subjects: English, French, physical geography, either elementary botany or elementary physics, arithmetic, algebra through quadratic equations, plane geometry, history, and any one of the three languages — German, Latin, and Greek.

"This examination can be taken as a whole only by young women who are at least seventeen years old. It may, however, at the option of the candidate, be divided between two years; and, in this case, the minimum age of admission is sixteen years. No candidate will, in any case, be admitted to examination on a part of any subject; and no account will be made of a partial examination unless the candidate has passed satisfactorily in at least three subjects. If the candidate passes in three or more subjects, the results of the partial examination will be recorded by the university; but no certificate will be given until the whole examination has been passed.

"Candidates who divide the preliminary examination will be expected to attain a somewhat higher degree of excellence than those who present the nine subjects at once.

"*Advanced examination.*

"The advanced examination is for young women who have passed the preliminary examination, and who are not less than eighteen years old. It is divided into five sections, in one or more of which the candidate may present herself. These sections are as follows:

"1. *Languages.*— Candidates may offer any two of the following languages: English, French, German, Italian, Latin, Greek.

"2. *Physical science.*— Candidates may offer any two of the following subjects: Chemistry, physics, botany, mineralogy, geology.

"3. *Mathematics.*— Candidates must present solid geometry, algebra, logarithms, and plane trigonometry, and one of the three following subjects: Analytic geometry, mechanics, spherical trigonometry, and astronomy.

"4 *History.*— In 1877, candidates may offer either of the two following subjects: (1) The history of Continental Europe during the period of the Reformation, 1517–1648; (2) English and American history from 1688 to the end of the eighteenth century.

"5. *Philosophy.*— Candidates may offer any three of the followingsubjects: Mental philosophy, moral philosophy, logic, rhetoric, political economy."

Candidates who successfully pass the examinations, receive certificates from the university.

HARVARD UNIVERSITY.

PRELIMINARY EXAMINATION FOR WOMEN.

A——— B——— has passed (passed with distinction) (passed with the highest distinction) the preliminary examination, held at ——, on the —— of ——, 187–, under the direction of the Faculty of Harvard College, and is entitled to proceed to the advanced examination.

——— ———,
President.

CAMBRIDGE, *August* 1, 187–.

HARVARD UNIVERSITY.

ADVANCED EXAMINATION FOR WOMEN.

A ——— B ——— having duly passed the preliminary examination on the —— of ——, 187–, has been admitted to the advanced examination in the section (sections) of ——, and has passed (passed with distinction) (passed with the highest distinction) the prescribed examinations in ——, held at ——, under the direction of the Faculty of Harvard College, on the —— of ——, 187–.

——— ———,
President.

CAMBRIDGE, *August* 1, 187–.

Notice of intention to be candidates must be sent to the secretary of the Woman's Education Association, 94 Chestnut street, Boston, or to the secretary of the New York local committee, 60 Fifth avenue, New York, before April 1, 1877. A pamphlet, containing full lists of books and specimen examination papers, and such further information as may be desired, will be furnished on application.

Young women in narrow circumstances will be aided in meeting the cost of these examinations. Applicants for such aid should address the secretary of the Education Association or the secretary of the local committee as above, stating their circumstances fully, the amount of help they need, the kind of assistance they would prefer, whether a remission of fees, a loan, or gratuitous board and lodging during the examination, and inclosing certificates of scholarship and character from their teachers.

TABLE IX. — UNIVERSITIES AND COLLEGES.

The following is a statement of the aggregate number of this class of institutions, with instructors and students, as reported to this Bureau each year from 1870 to 1876, inclusive:

Many questions are agitated in regard to the administration of superior instruction,—some would have it altogether under the control of the State, others that of the church; some would leave the course of study altogether optional with the students, others without any option; some would introduce coeducation of the sexes, others would exclude it. It seems to me that any unbiased mind will hardly observe the facts that are passing in review before this Office without a profound conviction that no procrustean plan can suffice to meet the demands of our civilization, and that what we need is this—great liberty, great variety, action by each the church and the state, and by corporations measurably independent and self-perpetuating. There may be evils in each, but there is greater security in all than in any one of the forms of administering superior instruction. It is no doubt true that this grade of instruction is injured in some quarters by a multiplication of institutions; but a sound and well informed public sentiment will after a time correct any errors in the minds of those who have the money to endow institutions of this grade and of those who have the aptitude to organize them. The increase of expense to the student is here and there alarming, as it points to the larger and larger exclusion of those able and aspiring youth who have not the money at command to meet the required expenditure, but from whose ranks in all time there have come many of the foremost men in all pursuits. The State college with free tuition still offers them an open way, and suggests to privately endowed institutions that their method of securing the same class of minds is by benefactions that will make their instruction free also. The most serious increase of expenses is not connected with the administration of the college, but arises from those incidental expenditures now becoming common among the students themselves. No well-wisher of learning can contemplate these without alarm. College officers, parents, young men, and the public at large must unite their corrective endeavors. There are some questions, however, connected with the administration of superior instruction in connection with which there could no doubt be great improvement made in different colleges. Some of these may be enumerated, though space would not permit their discussion. First, the communication between the institution for superior instruction and its alumni; second, communication between the institution and the general public; third, the connection between the institutions for superior instruction and those for secondary instruction; fourth, the relation of the faculty to the board of trustees in the administration of the college; fifth, the duties that shall be demanded of the president, and what assistants he shall have; sixth, the relation of the teacher in this grade of instruction to the theory and practice of education in the United States.

What does college education accomplish? This question, so often raised, has received no full and complete answer. Evidently the most important considerations bearing upon it are to be found in the answer to the question, "What do college alumni do?" Even an answer to this question is beset with serious difficulties on account of the lack of records. Many colleges have not a complete set of their own catalogues; and no one even of the older colleges has full knowledge of the career of its alumni. The necessity of some fuller information on this point was so keenly felt that early after entering on my duties here, inquiries were commenced looking to more definite results. The information that came to hand was worked up by Dr. Charles Warren, my chief clerk. In the midst of all the difficulties, it was found that the best opportunities for studying the facts were offered, at the time, in connection with Harvard, Yale and Dartmouth Colleges and Wesleyan University. Information was therefore collected respecting twenty-four classes graduated by Harvard, from the year 1836 to the year 1859 inclusive, comprising 1,637 men; twenty-eight classes of Wesleyan University, from 1833 to 1860 inclusive, containing 681 graduates; the Yale classes of 1837 and 1839 to 1843, inclusive, 1846 and 1848 to 1860, inclusive—twenty in all— comprising 1,920 graduates; and the twenty-four classes of Dartmouth College from 1837 to 1860, inclusive, comprising 1,344 men. These 5,582 persons formed the basis of the investigation.*

* Published in the Circular of Information for March, 1872.

Where born.— Of the 1,608 alumni of Harvard College whose birth-States were known, nearly three-fourths were born in Massachusetts, and four-fifths in New England. Nearly one-half the rest were born in the Northern States, and nine in foreign countries. More than one-twelfth of the graduates for the twenty-four years were born in the South. Twenty-five States and some foreign countries are represented in the list.

It is not known where 234 of the 681 graduates of Wesleyan University were born. Of the 447 known cases, more than one-half were born in the Eastern States; nearly all the rest in the Northern States. Nearly one-sixth of the number known were born in Connecticut, another sixth in Massachusetts, and more than one-third in New York; so that these three States produced two-thirds of the graduates.

Of 1,894 Yale alumni, more than one-half were born in the New England States, and more than one-third in the other Northern States. Nearly one-seventh of the number were born in Massachusetts, and more than one-fifth in New York. Less than one-third were born in Connecticut.

Of 1,327 Dartmouth alumni, more than one-half were born in New Hampshire; less than 100 were born out of New England.

Of the 5,276 cases thus reported, more than twice as many were born in Massachusetts as in Connecticut; New Hampshire produced more than Connecticut; about five-sevenths of the whole number were born in New England, and nearly one-eighth in New York. Four men born in Connecticut went to Harvard, and 9 to Dartmouth, while 254 born in Massachusetts and 34 born in New Hampshire, went to Yale; 84 New Hampshire men went to Harvard, and 209 Massachusetts men went to Dartmouth, and about 77 per cent. of college bred men born in Vermont went to Dartmouth.

Age at graduation.— Of 1,630 Harvard alumni whose ages at graduation were given, seven-eighths graduated between 18 and 22. The youngest graduates were 16 and the oldest 31; nearly three-tenths of the whole number graduated at 20. The youngest average age of any class was 19.82 years; the oldest average age was 21.85 and the general average for the whole time was 20.65 years.

The graduation age of only 451 Wesleyan graduates was given; the general average was 23.85 years.

The average age of the youngest class was 22 years, and of the oldest 26.8 years. Seven-ninths of the graduates were from 20 to 26 years old. Nineteen graduated at 30 and over.

Of 1,907 Yale alumni about seven-eighths were from 19 to 25 years old; nearly 400 graduated at 20. The general average was 22.06 years. Less than 1 in 100 graduated at 30 and over.

One thousand three hundred and eighteen Dartmouth alumni had at graduation a general average age of 23.57 years. The highest average age of any class was 24.15 years, and the lowest 22.83 years. Seven-tenths of the whole number graduated between 21 and 26.

On comparing the graduation ages in these four colleges, the Dartmouth and Wesleyan alumni appear to be the oldest and the Harvard men the youngest; of 750 who graduated under 20. 453 were at Harvard, 204 at Yale, 70 at Dartmouth, and only 23 at Wesleyan; of 142 who graduated at 29 and over, 8 were at Harvard, 34 at Yale, 40 at Wesleyan, and 60 at Dartmouth. Of the 5,306 alumni tabulated more than 36½ per cent. graduated at 20 and 21.

Percentage of deaths.— Of 1,637 Harvard alumni, 310 were dead, being about 19 per cent. In the earlier classes of the quarter century, one-third, and in the later years, one-sixth of the members had gone. The proportion of deaths in each class was not, however, regular in proportion to its position; the class of 1848, for example, had been unfortunate, while the class of 1855 had lost very few.

Of 681 Wesleyan alumni, 119, or 17½ per cent., were dead. The classes of 1853 and 1856 had lost only one member each. The class of 1836 had lost only 12 per cent. of its members.

Yale lost nearly 20 per cent. of her 1,920 tabulated alumni. The class of 1858 had lost only 9 per cent., and that of 1855 only 10 per cent.; the three earliest classes had lost 32 per cent. each.

Twenty-two per cent. of Dartmouth alumni were dead. The classes suffering most severely had lost 38 per cent., and those suffering least 8 per cent.

On comparing the percentage of deaths in these colleges with each other, we see that that of Wesleyan is 2 per cent. less than that of Harvard, 3 per cent. less than that of Yale, and 5 per cent. less than that of Dartmouth. The records of Wesleyan University were, however, so imperfect as to materially vitiate this conclusion.

Age at death.— Of 307 Harvard alumni whose age at death was given 69, or 21 per cent., died between 20 and 25; 88, or 29 per cent., died between 26 and 30; 59, or 19 per cent., died between 31 and 35; 50, or 18 per cent., died between 36 and 40; 21, or 7 per cent., died between 41 and 45; 16, or 5 per cent., died between 46 and 50; and 4, or 1 per cent., died between 51 and 53.

Of 53 deaths out of these 307, 27 were in battle or from wounds received in action; 15 from diseases directly contracted in the service; 1, an army officer, was drowned

at sea while on a health furlough; 1 died two years after resignation from causes not specified, and 9 had died after the war from causes which do not appear to have any connection with the service, though included in the Harvard army roll.

Of 119 dead alumni of Wesleyan, the ages of 57 were given, viz: 8 between 23 and 25; 7 between 26 and 30; 11 between 31 and 35; 15 between 36 and 40; 6 between 41 and 45; 3 between 46 and 50; and 7 between 51 and 55.

Only 26¼ per cent. of the known deaths occurred at or before 30 years of age; and while the Harvard table showed only 6 per cent. of deaths after 45, this table has 17½ per cent. after that age.

The ages of 372 Yale graduates at death were also known. Of these about 16 per cent. died between 20 and 25; 28 per cent. died between 26 and 30; 23⅓ per cent. died between 31 and 35; 16⅓ per cent. died between 36 and 40; 8 per cent. died between 41 and 45; 5⅓ per cent. died between 46 and 50; and 3 per cent. died between 51 and 59. Here 42 per cent. died at or before 30 years of age and 8⅓ per cent. after 45 years.

Of the 288 Dartmouth alumni whose ages at death were known there died 16⅔ per cent. at or before 25; 29½ per cent. between 26 and 30; 18⅔ per cent. between 31 and 35; 17¼ per cent. between 36 and 40; 10⅔ per cent. between 41 and 45; 4½ per cent. between 46 and 50; and 2⅔ per cent. between 51 and 56.

Further study of the ages at death of the 1,024 alumni thus enumerated develops the fact that the numbers who died increased every year, till between 25 and 30 we have the first maximum loss. The mortality then decreased gradually till 34, when there began a sharp increase, culminating in the second maximum loss at 38. The top of the third wave, if the expression be permissible, was at 47–49. After this age the deaths decreased in number gradually to the end of the table.

From this it seems that a good many young men die shortly after completing their collegiate and professional studies; that another fatal period comes after the strenuous and exhausting labors of early manhood, and a third soon after the sun of life passes the zenith.

Much of this loss in the first decade of post graduate life depended in these classes on the war; but there is a large number apparently caused by injudicious study and violation of other hygienic laws during and after college life.

Ages of the living.—Of 1,320 living Harvard alumni whose ages were known the average age for the 24 years was 42.42 years. The average ages of the classes decrease pretty regularly from about 55 years in the earliest to 35½ years in the latest one.

The age of 395 living Wesleyan alumni is known. The class of 1833 averaged 61 years; the class of 1860, 33½ years. The general average was 45.24 years.

The average age of the 1,520 living Yale alumni was 43.09 years. The class of 1837 has an average age of 55½ years; the class of 1860 an average age of 33½ years.

The 1,036 living Dartmouth alumni had a general average age of 45.20 years. The class averages range from 57.14 years to 34.85 years.

Of these 4,271 living alumni the average age in general was almost 44 years. There are no ages which so thoroughly unite strength, health, activity, and endurance in brain work.

It was also observed that the average age of the Harvard class of 1849 was very close to the average age of the Harvard alumni represented. The Wesleyan class of 1850 was pretty close to the Wesleyan average. The Yale class of 1851 and the Dartmouth class of 1849 were also near the respective general averages of those institutions.

This indicates that a college class from 20 to 22 years after its graduation is a fair representative of the best portion of the alumni of the college then living.

Average time after graduation.—These 5,295 alumni had, on an average, 19.44 years each after graduation, or an aggregate of more than 100,000 years, for work.

The colleges thus return to the community, in exchange for the wealth diverted to their endowment and support, a body of trained workers whose powers, exerted in every department of life, make themselves everywhere felt in the active work of the world, thus adding to the material prosperity of the country. Nor should it be forgotten that these seats of learning foster and encourage that intellectual life without which no nation can hope to advance or long endure.

Occupations of college graduates.—The occupations were given of 622 Harvard graduates, of 570 Wesleyan graduates, of 1,772 Yale graduates, and of 1,254 Dartmouth graduates. Of these 4,218 alumni there were about 26 per cent. clergymen, 33¼ per cent. lawyers, 13 per cent. physicians, 13¾ per cent. instructors, and the rest were engaged in various kinds of business,—journalism, commerce, manufactures, &c.

Nearly 45½ per cent. of the Wesleyan alumni were clergymen; more than 40½ per cent. of the Harvard alumni were lawyers; of the Yale men 34½ per cent. were lawyers, and 23½ per cent were clergymen.

The medical alumni of Harvard outnumbered the clerical, and Dartmouth showed more of them than Yale.

It will be understood that these numbers were compiled in the winter of 1870–'71.

In addition to the inquiries in answer to which the above results were reached,

others were addressed to these colleges for the statistics of insanity, crime, and pauperism among the college graduates.

From Dartmouth no answer was received.

The secretary of Harvard writes: "We have no means of answering the inquiries contained in your letter."

President Porter answers for Yale: "So far as my knowledge at present extends, not more than eight of the academical graduates of this college between 1836 and 1860 have become insane, while none are known to have been convicted of crime or to have become paupers or dependent on the public for support."

President Cummings, of the Wesleyan University, writes: "I know of no one of the alumni of Wesleyan University who has become insane; none who are known to have been convicted of crime; none who have become paupers; none who have become or are dependent on the public for support."

Another inquiry was designed to show where our college students in the year 1870–'71 came from and where they matriculated.* The table given below shows in parallel columns, first, the number of collegiate students matriculated in each State and Territory; secondly, the number who resided in each State and Territory; thirdly, the number who attended colleges in their own State; fourthly, the number who attended from other States, or the non-resident attendance; and, fifthly, the number who attended in other States, or the resident non-attendance.

* Published in the Circular of Information for March, 1872.

As a test of the estimation in which the opportunities for superior instruction afforded in each State were held by those interested the foregoing table excited much interest. Had time and other duties permitted, the investigation would have been repeated during the present year.

Statistical summary of number of students in institutions for superior instruction, (not including students in preparatory departments.)

States and Territories.	Number of students in colleges.	Number of students in schools of science.	Number of students in schools for the superior instruction of women.	Total number of students reported in these institutions.

TABLE X.—SCHOOLS OF SCIENCE.

The following statement shows the number of institutions and departments of this class, with instructors and students, as reported to this Office, in each year from 1870 to 1876, inclusive. The numbers under 1873, 1874, and 1875 include the national Military and Naval Academies.

	1870.	1871.	1872.	1873.	1874.	1875.	1876.

a Not yet fully organized.

The task imposed upon the colleges of agriculture and the mechanic arts, founded on the congressional grant of 1862, is rarely understood. Having nothing in their establishment antagonistic to classical culture, designed at discretion to comprehend all learning when established independently, or to harmonize with all other culture when associated as a department with institutions previously established, they are intended undoubtedly to furnish the opportunity for instruction in the direction of science, tech-

nics, and industry in this country. The institutions founded by this great grant came into existence after colleges of literature had secured a measurably well defined position. The term "American college" conveyed a fairly distinct idea. Institutions of secondary instruction, known as high schools, academies, and preparatory schools, had come into existence subordinate to the college and conducted with a view to fitting persons for admission to it. The college also, in a sense, opened a career to those who graduated. In a word, the problems in regard to the position of the American college, either in reference to subordinate instruction on the one hand, or special instruction or entrance upon the practical duties of life on the other, were settled. They had only to go forward. True, other demands had been for some time springing up in the direction of science and industry; and some persons at least saw clear evidences that the American college in failing to meet these demands was not increasing its alumni in proportion to the increase of population. The sentiment that had been struggling to meet the demand for additional superior instruction, though conscious of the necessity for an enlarged or modified curriculum, had little life, almost no experience, and struggled amid the greatest difficulties. However deficient education was in certain methods or in certain sections of the country, there were States whose systems left only a small percentage of the population wholly without instruction, and the disciplinary power of the methods of instruction was the very best, especially in the higher departments of learning, after the mind had sufficiently matured to receive the largest benefit from the combination of the lecture with study or the abstract methods generally prevalent. The colleges of agriculture and the mechanic arts, so far as they were expected to meet the new demands for instruction in science, art, and industry, as they entered upon their responsibilities encountered (1) a vast amount of opposition from the old order of things; (2) that condition of affairs in which there were no schools organized to fit persons for admission to them and no well defined career open to their graduates; indeed, the whole problem of scientific and industrial education was committed to them in all its vast extent, from the highest scientific connection down through all its grades to its application to the lowest forms of industry.

The solution of this stupendous problem was too much for institutions of a single grade. The intelligent judgment of the country required that this scientific and industrial training of theirs should hold a rank equal in elevation to that of the classical college. The men who were to solve this problem in the management of the instruction were necessarily drawn from those who had received their training in the established colleges. They had therefore to inform themselves, instruct the public, encounter the antagonisms of classical learning and those misconceptions of the several leading industries, such as agriculture, mechanics, and mining, each of which desired to monopolize the entire educating force of these new institutions or departments. The farmer especially, in his increasing sense of the need of greater skill, was dissatisfied if every alumnus of a new college did not return to the plough. Amid the diverse difficulties, reasonable and absurd, that sprung up, there arose early rumors of misappropriation of funds or of the lands granted. In some instances, it is to be confessed with regret, the facts disclosed proved that the rumors were well founded; but the most rigorous investigations that have been made on these points result in the conclusion that whatever malefeasance occurred, preceded the organization of the institutions, or at least of the faculties charged with the instruction under the grant.

The summaries of facts presented in these annual reports show remarkable progress. The solution of the great problem committed to these institutions has around some of them begun to develop results to the satisfaction of reasonable observers. The older classical colleges have found their endowments and numbers holding good, and in many instances increasing. Indeed, a careful study of the figures will undoubtedly lead to the conclusion that superior instruction has, by taking up this department of instruction more closely related to the sciences, arts, and industries, regained the hold that it was losing on the public mind, while in several instances these new institutions or departments have so dealt with great questions of science and industry in their several

localities, that the farmer, mechanic, miner, and engineer are beginning to understand how this instruction is related to their several industries, and to cherish and endow it and send their sons to the institution where it is imparted. State legislatures have occasionally come to understand the obligations to make appropriations in their behalf, and to commit to them scientific questions of State interest relating to mines, to geology, to standard weights and measures, the diseases of plants and animals, and the sanitary conditions of human life.

Very properly, they seek to offer free tuition to the studious and rising sons of poverty. Some people have believed that these when educated would return at once to some form of manual industry, and, if the alumni could not be traced to the farms and shops, there has been a disposition to condemn this instruction as a failure,—which is unjust in the extreme. It should be remembered that the poor young man's education, whether classical, scientific or industrial, is his capital. The supreme spirit of our civilization requires him to make the most of it. If he can do this on the farm or in the shop he undoubtedly will; and he undoubtedly will not unless the demand for his services there is sufficient to pay him as high a price as he can obtain for them in other pursuits. The young man of wealth who graduates at a college of agriculture and inherits an estate, may more reasonably be expected to return and use his acquired knowledge and training in directing its industries.

Moreover, the preparatory departments adapted to fit persons for admission to these colleges of agriculture and the mechanic arts, are established and call for teachers trained in the direction of the sciences and industries. It will undoubtedly prove true with us, as it has in other countries, that the great problem committed to these institutions will reach its final and satisfactory solution only by the establishment of a series embracing several grades of instruction, in which the influence of the highest scientific work will be brought down through all the grades of scientific and practical life to the very lowest.

Attention is invited in this connection to the following statements respecting agricultural and technical schools in certain foreign countries.

PRUSSIA.

Prussia maintains four *Royal Academies of Agriculture*, at which both the theory and practice of farming are taught during two years, at a cost to each student of less than $40 a year; instruction is given in political and rural economy; in the management of trees and woods; in the mode of manufacturing sugar, beer, bricks, and draining tiles; in mineralogy, geology, botany and chemistry, with experiments and excursions; and lastly, in mathematics, trigonometry, land surveying, practical mechanics, veterinary surgery, rural law, the history of the country, and constitutional law. Excursions into the most interesting districts are common. The persons who attend these academies are those who have to make their living by their own farms, commonly of small extent. For amateurs, a less practical course is provided at institutes connected with the Universities of Halle and Berlin. There are nineteen provincial schools of agriculture below the academies, subsidized by the state to the amount of about $10,000, and generally taught by some large farmer, assisted by the neighboring apothecary, schoolmaster, and veterinary surgeon. There are also numerous special schools for particular branches, such as market gardening and the cultivation of meadows and woods. The care of fruit trees is taught in one hundred and thirty-four schools in the ancient provinces alone.

The system of paid instruction is extended by the employment of itinerant teachers, who go from village to village criticising the cultivation and giving advice about rotation of crops and the most suitable kinds of manure. The state also maintains seven experimental institutes of organic and agricultural chemistry, which, on different soils and under different circumstances, are testing and completing the theories of Liebig, and improving the quality of the artificial manures of commerce.

Finally, there are 519 voluntary agricultural associations which, by conferences, exhibitions, and prizes, assist in spreading information.

The *Higher Weaving School at Chemnitz* is an institution intended by scientific instruction and practical exercises to train workmasters and manufacturers for all kinds of weaving, as well as to impart to young men who will devote themselves to the manufacturing trade, either as buyers or sellers, an accurate knowledge of manufacturing, and thus the ability of estimating the merchandise. For this purpose the school has—

1. One shaft room, with 22 hand looms, and all auxiliary machines for spooling, shearing, &c.

2. One Jacquard room, with 16 Jacquard machine looms and 2 machines for stiffening by gumming, spooling wheels, chenille machines, &c.

3. One machine room, with steam engine and boiler; seven looms of English and German construction, some with Jacquard machines; one hand weaving loom; one spooling machine, and one beam loom.

The course of instruction covers one year, in two terms and classes. Instruction is given from 8 to 12 a. m. and 2 to 4 p. m. daily, four times a week. Each lesson is at least of two hours; in the morning, generally of four continuous hours. The first term (of six months) embraces the following exercises:

1. Lectures on weaving material, two hours.

2. Lectures on construction and systems of the various hand weaving looms, and of the auxiliary implements, two hours.

3. Free hand drawing (outlines, designing of patterns) and chromatics, (theory of colors,) four hours.

4. Analysis of pattern, making of cartoons, and calculation of the respective stuff for hand and Jacquard weaving, with the appropriate instruction in finishing (*appretiren*) and the machines for it, eighteen hours.

5. Exercises in shaft weaving, six hours.

Second term, (class:)

1. Composition of patterns for hand and Jacquard weaving, four hours.

2. Lectures on mechanic looms, and on the auxiliary machines for mechanic weaving, four hours.

3. Continuation of analysis of Jacquard stuffs, velvets, gauzes, and ribbons, eight hours.

4. Drawing, four hours.

5. Exercises in weaving on looms of various construction, twelve hours.

FRANCE.

The government sustains in France for instruction in agriculture, &c., the following institutions:

Three agricultural schools, with 22 professors and 142 students;

One horticultural school, with 10 professors and 41 students;

Twenty-seven farming schools, with 135 professors and 800 students;

Three practical schools of agriculture, with 21 professors and 90 students.

All these schools are state institutions. The regular pupils have to pay a small fee, but a large number of farmers (not included in the above number of pupils) attend the lectures free of charge.

The object of these schools is, first, to induce young people to devote themselves to farming and gardening, and, secondly, to introduce the best methods of agriculture and horticulture into the country.

WÜRTEMBERG.

This country has the following agricultural institutions:

1. The Agricultural Academy of Hohenheim, with 25 professors and 76 students.

2. The popular agricultural evening and Sunday schools, with about 25,000 adult pupils, (males and females.) In these courses the best methods of agriculture are discussed, and all facilities are offered to the farmers to put in practice what they have learned at school. These schools are free.

3. The schools for vine culture. These are of recent date, and admit only day scholars, who have to pay a small tuition fee. Number of pupils, about 40.

4. The popular libraries. The different localities in rural districts have established popular libraries, especially for the use of farmers and mechanics. Their number is, at present, 691, and the number of volumes 100,775. Books relating to agriculture and industry are the most numerous in the collections.

DENMARK.

Farmers' high schools.—The first school of this kind was founded by Professor Flor, in the little village of Röddling, in Northern Schleswig, (now belonging to Prussia,) in the year 1844. The benefits of this institution were soon felt, and similar schools were founded in all parts of Denmark; at present their number is between 70 and 80. They have hitherto been entirely supported by voluntary contributions and the school fees of the students, the latter amounting to about $25 per term. But of late the government, recognizing the high importance of these schools, has granted an annual appropriation of $7,000 for their better support. These schools are intended for adults of the rural districts, and the age of the students ranges between 18 and 30 years.

All of these schools are well attended, and are exercising a most beneficial influence. The course of instruction embraces the following subjects:

General and Danish literature, general and Danish history and geography, chemistry, natural philosophy, zoölogy, botany, orthography, arithmetic, free hand drawing, leveling, surveying, singing, and gymnastics.

No text books are used, everything being treated by lectures. The pupils are never examined, and no lessons are recited; but it entirely depends on the student himself how much and what he wishes to learn. There is always a well selected library in connection with these schools, which is open for the use of the students. The course of instruction lasts six months, and it is a frequent occurrence that students will go through the course twice, and even three times. The spirit pervading these schools aims at a development of sound practical thought, and endeavors to cultivate a wholesome enthusiasm for all the higher and nobler interests of mankind, and to awaken an independent national spirit.

The general course in these schools is this:

Instruction commences at 8 o'clock a. m., and is opened with singing and prayer. The first hour of the morning is devoted to the reading of Danish authors. During the second hour, history is treated; at 10 o'clock there is an intermission of half an hour; after this there follow writing exercises and essays on given themes; at 12 o'clock, dinner; at 2 o'clock, instruction is resumed, and lasts, with an intermission from 5 to 6, till supper time, at 7 o'clock.

Quite recently similar courses of three months have been instituted in different localities for grown up girls of the lower classes. In these schools, more attention is given to housekeeping, needlework, gardening, &c.

BAVARIA.

Bavaria has 3 higher industrial schools, with 46 professors and 189 students; 260 professional evening and Sunday schools, with 827 teachers and 14,501 pupils; 947 special agricultural courses, with 18,260 attendants; a school of forestry, with 135 students; and 4 higher schools of agriculture, with 76 professors and 315 students.

All these schools are supported by the state and the local governments.

RUSSIA.

Russia manifests great interest in the establishment of agricultural schools. As early as 1824 a school for such instruction was established at Marjino. Soon afterward a school for instruction in bee culture was instituted. The government expends about $200,000 annually for the support of regular agricultural schools and evening classes.

Russia has also very good schools of arts and trades, the most prominent of which

is the school of Moscow, founded in 1775, under the reign of the Empress Catharine II. At its origin, it was designed to fit poor children for mechanical pursuits. Since that date, however, it has been expanded in aims and resources, having for its present object the cultivation of constructing mechanicians and skilful technologists.

The entire course of study occupies five years; it is divided into a theoretical and practical course (elementary in character) of three years and a special superior course of two years.

The school includes, besides these several workshops, a very large laboratory for technological operations and for chemical analysis, a museum of models and of mechanical apparatus, collections of raw materials used in manufacture, and a valuable scientific and technical library.

SCIENTIFIC ASSOCIATIONS, ACADEMIES OF SCIENCE, ETC.

It is deemed proper to present here, as a sort of appendix to the summary of the statistics of schools of science, some of the leading statistical items respecting the more important scientific associations, academies of science, &c., in the United States. Sixty-three associations, academies, &c., furnished replies to the inquiries sent out. Of these, fifty-four report a total membership of 20,851; thirty-five report a yearly income amounting to over $84,437; fifty-one report libraries numbering together 206,444 volumes; forty-four together report 227,710 pamphlets in their libraries; and thirty-two report that they have together published in the last five years 47,575 pages (mostly octavo) of "proceedings" and "transactions." The table also shows the number of meetings held by the several associations, &c., each year, the average attendance at the meetings, and titles of publications.

Eight of the associations are of a national character, and hence have no local habitation.

Sketches of the organization, work, and distinctive aims of these associations and academies must be here omitted for lack of space.

Efforts for the elevation of the standard of medical education are received with increasing favor.* The institutions which have adopted high standards and will certify

*The following interesting petition deserves preservation. It is without date, but in the handwriting of Doctor Theodorick Bland, of Virginia, who in 1761 was attending the University of Edinburgh, Scotland, with Messrs. Field, Arthur Lee, Blair, Bankhead, and Gilmer. It is found in the Bland papers.

"*To the honorable the Council of Virginia and House of Burgesses, the humble petition of the students of physic in the University of Edinburgh, from the Colony in Virginia, showing:* That we, your humble petitioners, being unanimously resolved to pursue our studies with such vigor and assiduity as shall most

only to thorough work have not lost patronage, as so many predicted. The advancement of the requirements in the medical institutions at Philadelphia is taking strong hold of the minds of medical men in that city, and it is believed that ere long one or more of the colleges will come to the front in these endeavors. The following editorial from a highly respectable journal illustrates the manner in which the question has been treated, and brings out some facts bearing upon the points at issue:

The system here in vogue is the traditional one founded on professors' fees. We offer to the medical student not a university career, but simple tuition under various able teachers, and practically void of penalties, discipline, or examinations for proficiency. The professors make the college; the students purchase tickets for the professors' lectures; teacher and pupil being thus placed in the direct relation of seller and buyer, with the inevitable deduction that the professor will be lenient with men who are his patrons. The reputation of a college is its life, and reports of the working of our system being carried out in every direction, men moved to enter the medical profession come to the Philadelphia schools knowing just what to expect, and calculating with justifiable assurance upon being given their diplomas at the end of two years, through formal attention to duty and because they have contributed their portion to the income of the professors. Under such a rule it is not possible that graduating conditions should be severe, and with the best desire to take a high stand, the professors are, in the nature of things, impelled to leniency. Matriculation is equivalent to graduation; for, while there are occasional instances of inability to graduate,—cases where the evident incompetency is too great to be overlooked,—as a rule the result is as we state it, and good, bad, and indifferent material alike passes the easy goal.—*Philadelphia Daily Evening Telegraph.*

As illustrative of the embarrassment which our medical diplomas encounter in foreign countries, it may be mentioned that two foreigners who had received a medical education in this country visited this Office with a member of one of the foreign legations, and called my attention to the fact that their diplomas would be substantially without value to them in their attempt to enter upon the practice of medicine at their homes, which they proposed doing. As the only relief from the difficulty in the power of this Office, the following certificate was given:

My attention has been called to the accompanying diploma in medicine given to ——— ———, by the academic senate of ———, situate at ———, in the State of ———, of the United States of America. The diploma, dated ——— ———, is duly signed by ——— ———, president of the university, and ——— ———, dean of the medical faculty; and I hereby certify to the authenticity of the diploma and genuineness of the signatures.

—— —— is one of the oldest and most distinguished of the institutions of learning in the United States, and a diploma in medicine therefrom is one of the best evidences that a student of medicine can obtain in the United States of having received a thorough medical education.

TABLE XIV.—UNITED STATES MILITARY AND NAVAL ACADEMIES.

In this table of the appendix will be found the statistics of examinations of candidates for admission to the United States Military and Naval Academies for the year 1876.

probably qualify us to practise with success the salutary art of healing, and entitle us to those honors in medicine which are conferred on those only whose proficiency in the art appears to merit them, and beholding with inexpressible concern the present unguarded state of physic in our native country, which lies open to the intrusion of every pretender to the medicinal art, who may there practise not less to the dishonor of medicine itself than the destruction of mankind, are moved by these considerations humbly to petition that the honorable the Council of Virginia and House of Burgesses will, agreeably to their distinguished regard for the people's welfare, enact such wholesome laws as shall to their wisdom appear most proper to remedy this public evil, and prevent any one for the future from professedly practising medicine who has not received a public testimony of his abilities by being properly licensed and honored with a doctor's degree.

"Your petitioners humbly conceive that such laws will not only most effectually conduce to the preservation of the health, (a point of the most interesting, inestimable, and tender import to every individual,) but, further, be a public and highly laudable encouragement to those students from the colony of Virginia who are now and may be hereafter engaged in the study of medicine to pursue it with the perseverance, industry, and address which alone can entitle them to a prospect of success. Such attention to the cultivation of each particular branch of science we humbly imagine to be eminently worthy of the regard of the fathers and protectors of our country. Thus sweet Heaven shall bless our happy country and breathe its kindly influence on her rulers. For which, as in duty bound, your petitioners will ever pray."

THE SALE OF DIPLOMAS.

This has been a subject of more or less correspondence since my connection with the Office. The sale of diplomas in foreign countries has become a great disgrace to institutions of learning in the United States. There should be some way to put an effectual stop to the occasion of the scandal. Certainly there can be a correct sentiment on the subject among all honorable men; and if we have no way of dealing summarily with the offenders, their misdeeds can be so closely brought home to them that it will be at least inconvenient and undesirable for them to continue their disgraceful operations in this direction.

I deem it important to note several recent communications upon this subject. Rev. Charles Beauclerk, British Episcopal chaplain at Boulogne sur Mer, France, writes:

I take the liberty of writing to ask if there is such an institution as "The American University of Philadelphia," empowered legally to issue degrees to persons out of the country.

A person named Dr. P. F. A. Van der Vyver, of Jersey, England, represents that he can furnish these degrees for the sum of twenty pounds sterling. One has been forwarded to me, the diploma signed by the following named persons, viz: John Buchanan, M. D., Dean of Faculty; A. R. Simpson, M. D.; D. Dillen, M. D.; M. V. Chapman, M. D.; Charles H. Polk, M. D.; I. I. Siggins, M. D.; Geo. D. Kitchen, Sec., &c.

Mr. R. W. Williams, M. A., Ph. D., of the British General Post Office, London, writes as follows:

I take the liberty of addressing you, seeking information which I presume it lies within your power to give, and by your kindly so doing I shall esteem it a favor.

The information I seek is this:

1st. Is there a university (or normal college) called "Richmond College," Richmond, Jefferson County, Ohio, established by charter bearing date 1835?

2d. Have they the power to confer degrees?

3d. Is a Mr. L. W. Ong, M. A., LL. D., the regularly appointed president?

4th. Is there any means of procedure against "representatives" of such universities, either here or in America, who obtain for persons seeking degrees diplomas in absentia?

5th. And, further, is a Dr. Sturman the "legal" representative in this country?

In this connection, the following account is subjoined of a prosecution under the English act to restrict unlicensed medical practice. It is taken from the Manchester Weekly Times of November 4, 1876:

On November 3, 1876, at the Manchester City police court, among several persons charged with having "wilfully and falsely pretended to be a physician, doctor of medicine, or general practitioner," was one who held a diploma from the Metropolitan College of New York. The counsel for the defence said that "his client for 33 years was in large practice as a chemist, and during that time obtained an extensive practical acquaintance with medicines and their effect. He likewise gained considerable medical skill. Under these circumstances, having passed an examination, he obtained a diploma from a United States college. He was ready to admit that that diploma was not actual evidence that the person acting upon it bona fide believed that he was entitled so to act." It was proved that the defendant had received a diploma from the Metropolitan College, New York, having previously passed an examination at the Liverpool Museum of Anatomy. The diploma contained the words "has attended lec-

tures in the Metropolitan Medical College the full time instituted and required by law. He has been most assiduous and diligent in the acquisition of those branches taught in the institution." The magistrate said that "any person looking at the diploma produced would infer that the defendant had studied in the United States and passed his examination there." Nevertheless it was proved that he had attended no lectures in New York, but had attended some lectures on anatomy and physiology at the Museum of Anatomy in Liverpool. A witness, who said he was a doctor of medicine, philosophy, and laws of the United States, stated, on behalf of the defendant, that the Metropolitan College of New York had power to institute examinations in any part of the world by its members, and then grant degrees on their recommendations. Replying to a question from the bench, the witness said that he had studied at the college, and paid money for his diploma. He did not know whether the defendant had paid anything. Another witness said that the Metropolitan College of New York became extinct on the outbreak of the civil war. It was decided that the defendant had committed an offence against the medical act of 1859, and a fine of £5 and costs was imposed.

TABLE XVI. — PUBLIC LIBRARIES.

The following is a summary of the statistics of 76 public libraries from which information was received too late for insertion in the "Special Report on Public Libraries in the United States," published by this Bureau in October of the present year.*

TABLE XVI.— *Summary of statistics of additional public libraries.*

States.	Number in each State.	Number of volumes.	Average yearly additions.	Yearly circulation.	Amount of permanent fund.	Total yearly income.	Yearly expenditures.

a One of the libraries is not yet open.

*Reports of Woman's Club and Library Association, Cairo, Ill., numbering 1,105 volumes; Citizens' Library, Washington, Pa., numbering 3,600 volumes; and Fond du Lac Free Library, Fond du Lac, Wis., numbering 1,800 volumes, were received too late for insertion in the table.

Two of these libraries, the Darby Library, at Darby, Pa., and the Library of the Moravian Archives, at Bethlehem, Pa., were formed in 1742 and 1743, respectively; brief notices of these will be found below, with mention of two other early libraries now extinct.

Of these 76 additional libraries, 74 report in the aggregate 99,509 volumes; 46 report an aggregate yearly increase of 7,383 volumes; 42 report an aggregate circulation of 185,309 volumes; 10 report permanent funds amounting to $418,166; 49 report total receipts from all sources, amounting to $20,947; 45 report a yearly expenditure for books, periodicals, and binding, amounting to $10,070; and 36 report a yearly expenditure for salaries and incidentals, amounting to $9,158.

STATISTICS OF THE SPECIAL REPORT ON PUBLIC LIBRARIES.

The following is a summary of the general statistical table of the Special Report:

Total number of volumes, (3,647 libraries reporting)	12,276,964
Total yearly addition, (1,510 libraries reporting)	434,339
Total yearly use of books, (742 libraries reporting)	8,879,869
Total amount of permanent fund, (1,722 libraries reporting)	$6,105,581
Total amount of yearly income, (830 libraries reporting)	1,308,756
Total yearly expenditures for books, periodicals, and binding, (769 libraries reporting.)	562,407
Total yearly expenditures for salaries and incidental expenses, (643 libraries reporting.)	682,165

The number of pamphlets reported was over 1,500,000. It should be stated, however, that a large proportion of the libraries made no return of this item.

Adding the totals for the 76 additional libraries to the summary of the table of the Special Report above mentioned, (see also Report of the Commissioner for 1875, p. cvii,) we have the following aggregates for the 3,723 public libraries now reported:

Total number of volumes	12,376,473
Total yearly additions, (1,556 libraries reporting)	441,722
Total yearly use of books, (784 libraries reporting)	9,065,178
Total amount of permanent fund, (1,732 libraries reporting)	$6,523,747
Total amount of yearly income, (879 libraries reporting)	1,329,703
Total yearly expenditures for books, periodicals, and binding, (814 libraries reporting.)	572,477
Total yearly expenditures for salaries and incidental expenses, (679 libraries reporting.)	691,324

LIBRARIES FOR THE UNITED STATES LIFE SAVING SERVICE.

Within the year, this service has received from a lady who desires to remain unknown the generous gift of fifty small libraries for the use of the crews at the several life saving stations on the coast. These libraries comprise more than six hundred volumes, each volume bearing the inscription, "Margaret K. Burtis Memorial Library for Seamen: Established Philadelphia, 1876, by her friend." The libraries contain an excellent selection of books of travel, of adventure, of fiction, of essays, of religious instruction, &c., and will afford a welcome means of intellectual recreation and improvement to the members of the service. Mr. S. I. Kimball, the officer in charge of the service, in acknowledging this valuable donation with other individual gifts of books, says:

In the absence of any provision by Government for reading matter for the crews of the Life Saving Service, and considering the substantial and vital benefit such matter confers alike upon the service, its individual agents, and the recipients of its humane offices, especial and peculiar gratitude is felt to the kind and noble donors of these volumes. It is probable and, of course, desirable that these presents of books for the crews of life saving stations may be hereafter largely augmented by similar donations from other sources as generous and benevolent; and, with this in view, as well as to provide for the proper protection of the volumes, suitable cases have been made for them, so constructed in point of strength and portability as to admit of their being

exchanged, with their contents, at certain intervals, between the crews at different localities, thus securing for these libraries the added benefit of circulation, in order that the utmost justice possible may be done to the intention of the givers.*

LIBRARY OF THE DEPARTMENT OF THE INTERIOR.

The following tables kindly furnished by Mr. J. G. Ames, librarian, exhibit the quarterly circulation of the Library of the Interior Department for the year 1876. This library is free to all employés of the Department, and the statistics of its use are of special interest as showing the kinds of books chosen by a particular class of persons, namely, the clerks of the Department. It appears that fiction holds its relative place in circulation here as compared with other public libraries, fully 77 per cent. of the books taken out being of that class.

These statistics have been prepared with great care, and are believed to be worthy of preservation.

* Annual report of the United States Life Saving Service for 1876. Washington: Government Printing Office.

Statistical report of the Library of the Department of the Interior for the quarter ended March 31, 1876.

Classes of books in the library.	Borrowers.		Number of volumes borrowed.	Per cent. of circulation by classes.	Number of volumes kept too long.		Number of volumes loans renewed.		Number of volumes in the library.	Number of volumes not taken.	Author preferred.	Book most frequently taken.

THE CONFERENCE OF LIBRARIANS AT PHILADELPHIA.*

The Conference of Librarians held at Philadelphia, October 4, 5, and 6, 1876, at the rooms of the Pennsylvania Historical Society, was perhaps the largest and most profitable meeting of the kind ever held. About one hundred delegates were present, including nearly all the leading librarians of this country, and several from abroad. Of the conference and its work, the American Library Journal for November, 1876, says:

The conference at Philadelphia proved a thorough and entire success — a success which was a surprise to those who hoped most from it. The faith and enthusiasm, the breadth of view, the carefulness of observation, and the patience of adaptation in making the popular library a great means for the development of the people shown throughout the proceedings, but especially in the papers and discussions on the encouragement of readers and the demand for fiction, were a revelation to those who had not watched the rapid development of the library interest in America, and gave the greatest encouragement to those hitherto isolated leaders who found that all through the country there had been growing up to them a school of disciples. Of all who came, there was not one who had not felt that he or she belonged to a philanthropic profession, and who had not recognized that the difficult and delicate art of library management rests upon a science whose principles must be reached by continuous and careful observation. A chief usefulness of the conference was that it made public expression and confirmation of this faith, in such wise that the spirit of the hundred who were there will go out and bear fruit among the thousand or more who had not awaked to the importance of their calling and of this conference.

Of the permanent results of the conference the organization of the American Library Association must be put first, because this means the frequent repetition of the conference;† a recognized authority which may promote or endorse desirable improvements, and furnish decisions on those many points at issue in which prospective general usage is the sufficient criterion, and a chance otherwise to reap the benefits of organized coöperation. Next should come Mr. Poole's determination, under the reënforcement of the conference, to bring his Index up to date; a work toward which he has been taking active steps since the adjournment, and which, we may be assured, will be followed by other labor saving compilations for general use; as, for instance, subject indexes on the business plan discovered by Mr. Poole for his Chicago finding lists. We would place third the prospective work of the committees on the coöperative cataloguing and size description of books; any authoritative decision on these points will solve a great difficulty, and it is not unlikely to be accepted by the English librarians, who, word has come since the conference, have awakened to the difficulty, but have no organized means of reaching it. These are but a few of the score of benefits that will hereafter be traced to the conference.‡

The following paragraph on some of the results of the conference is taken from the last report of the superintendent of the Boston Public Library:

Whatever may have been the satisfaction to the members of this conference during the season of it, the procession of events already following upon it is likely to prove of much more importance. It has made known much to librarians in this country, by which their labors are lightened or rendered more effective. In Europe it has helped to make known the work which we are accomplishing here in a way so different from their own, and it has instigated movements for similar gatherings in England and in Germany. In Great Britain the project bids fair to succeed; but in Germany the libraries are largely under the charge of officers who divide the interest in their work with other duties, much to the loss of an effective emulation. In France there is more sympathy, and various recognitions of the advantages of our free library system have been made of late in their public press, in which the [Boston Public] Library has more than once been pointed out as its exemplar. The destinies of Europe for the next decade may lucklessly be left to the arbitrament of war, but the season of the coming Exposition at Paris is likely, it is thought, to bring with it an international convention of librarians. It is somewhat significant that in a recent official document, laid before the municipal

Proposed conference of British librarians.—A recent number of the Academy, (London,) in a notice of the conference of librarians at Philadelphia, remarks: "The unequivocal success of the Conference and its permanent results suggest the advisability of English librarians holding a similar meeting and establishing a similar organization for mutual interchange of ideas." It is understood that a plan for a conference of British librarians has since been adopted, and that the conference will be held in London some time in the coming year.

† The second session of the conference of American librarians has been called to meet in New York City in September next.

‡ The following reports have been made by committees chosen by the Philadelphia Conference and printed in the American Library Journal: "Report on sizes," "Report on a new edition of Poole's Index," "Report on constitution of the American Library Association," and "Report on coöperative cataloguing."

council of Paris, while a review is made of the budget for the ensuing year, the question is raised of the propriety of that city's establishing a great public library for popular use, and the system of our own is commented upon as the fitting one. I have been called upon for more details regarding it than our usual printed reports show, and a summary of such as I have given is now appearing serially in the Journal Officiel, under the supervision of M. Guillaume Depping, librarian of the Bibliothèque Ste. Geneviève.

The following is a list of the papers read at the Philadelphia Conference:

Some popular objections to public libraries; William F. Poole, Chicago Public Library.

The preservation of pamphlets; Charles A. Cutter, Boston Athenæum.

A universal catalogue, its necessity and practicability; James G. Barnwell, Philadelphia Mercantile Library.

The sizes of printed books; Charles Evans, Indianapolis Public Library.

A coöperative index for public libraries; Thomas H. Rogers, Warren County Library, Illinois.

Free libraries and readers; Justin Winsor, Boston Public Library.

Bibliography as a science; Reuben A. Guild, Library of Brown University.

The qualifications of a librarian; Lloyd P. Smith, Philadelphia Library Company.

Personal relations between librarians and readers; Samuel S. Green, Worcester Public Libary.

Subject indexes for popular libraries; H. A. Homes, New York State Library.

Copyright in its relations to libraries and literature; A. R. Spofford, Librarian of Congress.

American Library Association.—The conference adopted a plan for a permanent organization under the name of the American Library Association, "for promoting the library interests of the country, and for increasing reciprocity of intelligence and good will among librarians and all interested in library economy and bibliographical studies."

The following officers of the permanent organization were unanimously elected:

President, Justin Winsor; vice-presidents, A. R. Spofford, William F. Poole, and Henry A. Homes; secretary and treasurer, Melvil Dewey.

A full report of the proceedings of the conference, including the papers read before it, register of delegates, &c., is printed in Nos. 2 and 3, vol. I, of the American Library Journal, which was made the official organ of the American Library Association.

PUBLIC LIBRARIES A HUNDRED YEARS AGO.

Chapter I of the Special Report on Public Libraries contains historical sketches of all American public or social libraries existing one hundred years ago concerning which information had been obtained before that report went to press. Notices of the following additional libraries formed in the colonial period are here printed as an appropriate appendix to that report:

*The United English Library, Pomfret, Conn.**—"Special efforts were made by the early inhabitants of this town [Pomfret] and vicinity to provide themselves with the means of general and useful knowledge. In 1739 a solemn covenant was entered into by sixteen individuals of Pomfret, Woodstock, and Killingly, including the ministers of the several parishes, to pay the sums affixed to their names for the establishment of a library. One man gave £30, and four others £20 each, and the sixteen made out £254.

"This library association was called 'The United English Library for the propagation of Christian and useful knowledge.' It was ordered that the books of said library should be kept in Pomfret. Mr. Williams was the first librarian. After the formation of the society, other individuals joined them; fifteen persons very soon, who paid into the society £185. With these funds a very valuable library was purchased. They also received presents of books from friends abroad, and from authors. Thanks were voted, as appears by the records, to Rev. Dr. Guise, of London, for his works. In 1745, the library was divided, the inhabitants of the several towns taking their share of the books and funds, to constitute a distinct library by themselves. General

* History of Pomfret. A discourse delivered on the day of annual thanksgiving in the First Church in Pomfret, November 19, 1840. By D Hunt, pastor of said church. Hartford: J. Holbrook printer. 1841.

Israel Putnam was admitted to this association August 27, 1753, and 'paid £16, old tenor.' The Pomfret branch continued to be sustained for many years. The old case and a remnant of the books I now have in my possession."

Bridgetown Library, Bridgetown, N. J.—The Bridgetown Library was chartered in 1765, with John Budd and others as members. The old town of that name is now called Mount Holly, and has been so called for the last hundred years. Nearly 300 volumes of this old library are still preserved in the Burlington County Lyceum of History and Natural Science, at Mount Holly. The books are kept in a separate case, marked "Bridgetown Library, 1765," and some of them have imprints as late as 1805, showing the library to have existed at that date.—(American Library Journal, vol. I, No. 8, p. 303.)

Library of the Moravian Archives, Bethlehem, Pa.—This library was begun about the year 1742, at which time the Moravian Church was organized at Bethlehem. It contains about fifteen hundred volumes and pamphlets, and about one thousand manuscripts. Among the bound volumes are a number of bound manuscripts, comprising reports of churches and missions, sermons and biographies. The other manuscripts comprise official correspondence, official diaries of the church at Bethlehem from 1742 to the present time, journals of missionary tours, official journals of the missionaries among the Indians, miscellaneous historical papers, and a large mass of financial papers, as also the account books of the various enterprises carried on for the benefit of the church at Bethlehem in the last century. The pamphlets relate mostly to colonial and revolutionary times; the printed volumes comprise, first, a tolerably complete collection of Moravian books, ancient and modern, and, second, miscellaneous works, Bibles, dictionaries, cyclopædias, sets of magazines, &c., nearly all of the last century.

The archives are kept in a large apartment in the second story of one of the wings of the church edifice.

Next to the library of the Pennsylvania Historical Society, in Philadelphia, and the State archives at Harrisburg, it is probably the most valuable historical collection in the State.—(Extract from a communication to the Bureau of Education by Rev. Edmund de Schweinitz, S. T. D., librarian.)

Darby Library, Darby, Delaware County, Pa.—The library company was organized March 10, 1743, by Joseph Bonsall and twenty-three others, most of whom were members of the Society of Friends. Among the early friends and active members of the library company were several of the most distinguished men of the Province of Pennsylvania, such as John Morton, one of the signers of the Declaration of Independence, and John Bartram, the American botanist, who established the first botanical garden in America.

The company was organized on the basis of "joynt copertnership," to "propagate useful knowledge, both religious and civil." Each subscriber to the articles of agreement paid in hand 20*s.*, (English,) and 5*s.* annually additional. This constituted a share in the company, and it could be transferred, sold, or devised by will, subject, however, to the approval of the company. The officers were a secretary, who was also charged with the duty of acting as moderator of the meetings, a treasurer, a librarian, and four assistants, all to be elected annually by the subscribers. The books to be purchased for the library were selected by a vote of the members at their annual meetings.

Under the original articles of agreement, with an occasional immaterial amendment, the company continued to transact its business for one hundred and twenty-four years. In 1867 the subscribers applied for a charter, which was granted, and accepted by the company January 7, 1868; the association is now a joint stock company with corporate privileges. It deserves to be mentioned that the annual meetings have been regularly held on the day appointed for one hundred and thirty-four years, without a single omission or failure to secure a quorum to transact business.

The officers, although elected annually, have generally been reëlected as long as they lived. The present president, Mr. John Sellers, has held that office for sixty-two years, and during all that period has never been absent from an annual meeting.

The regular resources of the company have been derived from membership fees, which, as has been stated, were at first 20*s*. Subsequently, the fee was fixed at £7, then at £8, then at $20; it is now $5. The original yearly payment of 5*s*. was subsequently increased to 10*s*; it is now $2. The membership has never been large, and consequently the revenues of the company have always been limited. The library now derives additional revenue from rent of the hall for occasional use and from lectures given in it for the benefit of the library. The yearly income from all sources does not ordinarily exceed $500; last year it was $409.

Until recently the company did not own any building, and consequently the library has usually been kept at the residence of the librarian. For his entire services, including room for the books, the care of the same, and all the duties of his office, the librarian was allowed an annual salary of 20*s*. This rate continued for forty years; but when good Ruth Bonsall, widow of the late librarian, continued to perform the duties of the office after the death of her husband, she was allowed 40*s*. per annum. In 1796 the salary was increased to £3 annually; subsequently to £7. This was the rate at the beginning of the present century and long afterward; and substantially the same economy of administration has marked the entire history of the company.

The first books were necessarily obtained from England. A portion of the letter accompanying the first order for books to London is herewith given:

DARBY, *y*e 14*th of* 4 *Month*, 1743.

Friend PETER COLLINSON:

There is a small number of us in Darby, near Phil*a*, who have formed ourselves into a company, in order to purchase a small set of books for our use; with well-grounded expectations of our numbers increasing in a little time, and being advised by our fr*d* and neighb*r*, John Bartram, to apply to thee to purchase the s*d* books, and in confidence of thy good disposition, and from y*e* character he gives of thee to encourage such a decision, have thought fit thereupon to send to and desire thee to do such an office of kindness for us; but as our number is but small, so is the sum of money, amounting only to fourteen pounds. * * * Be so good, also, as to get the books lettered on y*e* back, if that can be done without much trouble or cost, or as many of them as conveniently can be. We also desire thee to send the price of each book purchased, that being necessary for us to know in pursuance of our agreement. Thy answering our request will much oblige us, who, with due respect, are thy unfeigned friends. Signed in behalf of said company,

By JOSEPH BONSALL, *Secretary*.

The first list of books ordered is also a fair specimen of the character of all the books bought in the first one hundred years of its history. It included: The Gentleman Instructed; Puffendorf's Law of Nature and Nations; The Spectator, eight volumes; The Turkish Spy, 8 volumes; Tournefort's Voyages, 2 volumes; Whiston's Theory; Addison's Travels; Barclay's Apology; Locke on Education; Religion of Nature Delineated; Gordon's Geography; Grammar; Sherlock on Death; Whiston's Astr*o*. Principles; Maundrell's Travels; Dyche's Dictionary; Tull's Husbandry; Blackmore on y*e* Creation; Independent Whig, 3 volumes; Wood's Institute of y*e* Laws of England; Milton's Paradise Lost and Regained, 2 volumes; Puffendorf's History of Sweden; Raleigh's History of y*e* World, 2 volumes; and the Life of the Duke of Marlborough, 2 volumes.

Most of these books are still in the library, and in good condition. Many of the later accessions comprise a greater proportion of the class known as light literature, but the library still maintains its character for substantial books of intrinsic worth.

The assistant librarians, whose duty it has ever been to inspect the books and guard against loss, rebind those needing it, &c., have generally been faithful in the performance of their duties, and consequently remarkably few books have been lost or destroyed. In 1763, twenty years after the organization of the company, they report that, having inspected the state of the library, all the books are come to hand, except a small volume called "Buisy-Body," being the first volume thereof, and that book they understood was in the hands of a member of the company.

In 1776 the library contained 364 volumes; in 1800, 1,023 volumes; in 1843, at the completion of the first century of its history, it contained 2,026 volumes; and at

present, 3,683 volumes. The library is comparatively a small affair; but it must be remembered that it is a village library, and that the village itself has never contained more than sixteen hundred people at any one time.

The average yearly increase of the library for the last ten years has been 103 volumes; and the average yearly use of books about 4,000 volumes.

The amount expended for books during the last twelve months has been $150, which is about the present average expenditure for that object.

At the beginning the library was open on every other seventh day from 5 to 7 o'clock p. m.; subsequently every seventh day; then twice a week. It is now open every week-day from 11 a. m. till 8 p. m.

For one hundred and twenty-four years the library was kept in a private house, generally at the residence of the librarian; but in 1867 the company purchased an eligible lot of ground, at a cost of $1,000, and built thereon a substantial brick building for the use of the library. It is 29 by 55 feet and two stories high. The first story contains a room for the library 22 by 27 feet, and five other rooms, which are used for the residence of the librarian and family. The second story is fitted up as a hall, and will seat 325 persons.

The whole cost of lot and building was about ten thousand dollars, and was raised by subscription among the citizens of the village and vicinity, so that the library is now entirely free from debt.—(From a sketch furnished the Bureau of Education by Rev. W. T. Brown, of Darby, Pa.)

SPECIAL REPORT ON PUBLIC LIBRARIES IN THE UNITED STATES.

The report published in October of the present year will soon have been distributed to nearly all the public libraries in the United States. Copies are also being sent to all the more important public libraries in foreign countries. The very extensive demand for the report from educators, and from librarians and library committees charged with the work of organizing new libraries, attests that a new interest has been awakened in the subjects of which it treats, and that a powerful impulse has been given to the establishment of public libraries as well as to a more efficient management of libraries as a means of moral and intellectual cultivation. Besides this demand, perhaps the best evidence of the need of such a report, the Office is in almost constant receipt of the most gratifying testimonies to the great usefulness of the work from librarians, bibliographers, and scholars both at home and abroad.

Of this report Mr. Winsor, superintendent of the Boston Public Library, says:

Two or three years ago the Bureau of Education at Washington determined that their contribution to the records of the national anniversary should be an exposition of the library development of the country. General Eaton confided the immediate direction of this work to two gentlemen; also sought the assistance of the chief librarians of the States; and the result of all their joint labors took shape in a ponderous volume, which must pass for a bibliothecal cyclopædia, if the most varied and extensive gathering of knowledge and experience in library economy ever made entitles it to that designation.

LIBRARY OF CONGRESS.

Extent of the collection.—The report of the Librarian, Mr. A. R. Spofford, for the year ending December 31, 1876, shows an aggregate of 311,097 volumes of bound books in the Library, together with about one hundred thousand pamphlets; an increase during the year of 17,590 volumes, besides 8,636 pamphlets. Of the additions, 5,495 books and 745 pamphlets have been by purchase, 8,020 books and 5,295 pamphlets by copyright, and the remainder by deposit of the Smithsonian Institution, by donation, (including State documents,) and by exchanges. The acquisitions to the library by purchase during the year, though not so large numerically as in some previous years, have been more than usually important. Extensive auction sales in American cities and on the Continent have been availed of to make selections of rare and expensive books seldom occurring for purchase; and in this way very handsome acquisitions of early American imprints, and of multitudes of books and pamphlets relating to Amer-

ica, not before in the collection, have been secured. Among the foreign purchases worthy of note, were complete sets of the publications of the Maitland Club, in 110 volumes; Nichols's Bibliotheca Topographica Britannica; the Chetham Society Publications; the Dresden Gallery, 3 volumes, great folio; Ferrario's Costumes, 21 volumes, folio; the Critical Review, 144 volumes; the original manuscript Report of the Debates in the Irish Parliament, from 1775 to 1789; and many other works of great value and interest which have greatly increased the value of the collection as a complete library of reference.

Copyrights.—The business of the copyright department during the year shows a considerable increase of entries, notwithstanding the depressed condition of the book publishing trade and connected interests. The whole number of entries of copyrights during 1876 was 14,882 against 14,197 for the preceding calendar year. Of the whole number of articles copyrighted, 4,010 were books.

New catalogue.—The materials for the new general catalogue, which will represent the entire contents of the library up to date, have been completed, and all the titles, exceeding 260,000 in number, are ready for the press.

Documents relating to French discoveries and explorations.—Since the last report, the publication of the first volume of original historical documents relating to the French discoveries and explorations in the northwestern portion of the United States and on the Mississippi, has taken place. The whole work will be embraced in six octavo volumes, with an atlas of maps in quarto, and will cover a vast collection of letters, official papers, and other documents, in the original French, relating to the discoveries and settlements under Cavelier de la Salle and other explorers in territory now belonging to the United States, from 1614 to 1752. The edition will comprise only 500 copies.

Need of a new building for the library.—The question of most pressing importance connected with the interests of the Library of Congress, which has become by liberal legislation and extensive growth the library of the nation, is the provision of a suitable building to contain its rapidly accumulating stores. The injury to the books and objects of art that are piled up unprovided with shelves or room, increases with every addition, and the administration of the Library and the copyright business in such narrow quarters is attended with the greatest difficulties and embarrassments.

BOSTON PUBLIC LIBRARY.

The following extracts from the twenty-fifth annual report of the library will be found well worthy of perusal. In this report Mr. Justin Winsor gives a rapid sketch of the experiences of the library during his superintendency, which dates from 1867. The lessons to be drawn from this review are scarcely less important to educators than to professional librarians:

Extent of the collection.—The Central Library in Boylston street now holds 242,885 volumes, divided between 35,478 in the popular branch and 207,407 in the Bates Hall collection; the branches contain 69,125 volumes. The total contents are 312,010 volumes—an increase for the year of 15,169 volumes.

Circulation.—The libraries were open during the year for popular use and consultation 306 days. The loans and hall use of the Bates Hall collection advanced from 114,329 volumes in the previous year to 141,618 volumes,—a gain of nearly 24 per cent. The Lower Hall issued to borrowers 405,732 volumes, against a previous circulation of 348,842—showing an increase of nearly 17 per cent.—a result most surprising when the confined and unsuitable quarters to which the public are admitted are taken into consideration. From the six branches there were issued 593,202 volumes. The following table gives the number of books in each of the popular libraries, and their comparative use during the present and past year:

	No. of vols.	Use.	Average per vol.	Average last year.
Lower Hall, Boylston street	35,478	405,732	11.35	9.9
East Boston Branch	9,643	102,627	10.53	10.06
South Boston Branch	8,178	135,179	16.53	16.3
Roxbury Branch	12,535	146,429	11.71	9.4
Charlestown Branch	18,084	106,816	5.90	4.93
Brighton Branch	12,317	29,792	2.42	2.08
Dorchester Branch	8,147	71,979	8.83	9.29

It is not surprising that the great percentage of increase in circulation which the last year showed over the previous year could not be sustained. Though the increase in use was 192,951 volumes, a larger number than ever before, yet the percentage has diminished from 25 to 20 per cent. The utmost extent of circulation for any given population in a district is determined by the convenience of access and the proportionate number of volumes, fiction inclusive, which it desires to borrow. If a public library is administered upon the principle of giving fiction in preference to books of solid value, and as much as is wanted, there is no limit to the circulation which such popular library may acquire.

The reading rooms of such libraries as were opened to the public, including Sundays, through the year, received visitors on 360 days, during which 339,514 readers made use of 424,664 periodicals,—an increase of 22,206 readers and of 24,212 periodicals. The employment on Sundays of the branch reading rooms, as intimated in the last report of the trustees, has become so limited that a portion of them has been discontinued.

Contributions.—The contributions to the collection from individual generosity since the last acknowledgment of the trustees show 1,125 benefactors, who have given an aggregate of 3,562 volumes and 11,071 pamphlets. Besides this, there has been placed at the service of the institution by a previous benefactor, J. Ingersoll Bowditch, esq., the sum of $500, to be expended in the purchase of mathematical works, for the purpose of adding to the Bowditch library such publications as are needed to keep pace with the progress of that science.

Losses.—The losses of the library in books not recovered from borrowers still show the Central Library as the principal sufferer. The Roxbury Library has no volume missing from its circulation of 146,829 volumes—the largest circulation of a single library without loss yet known to our experience. The total issues of the branches were 593,202, and there are missing only 10 volumes, being 1 for each 59,322 circulated. Owing to the more changeable population of the city proper, its record is not so satisfactory, 119 volumes not having been returned from a delivery of 547,350 volumes, or one out of every 4,600,—a somewhat larger proportion of loss for the Central Departments than recent years have indicated.

The branches and the Central Library.—We have had abundant proof in our experience that the branches, with the territorial extent which has been left between them, have not at all diminished the usefulness either of oue another or of the Central Library. Some apprehension was felt, at the institution of the system, that Boston was hazarding its chances of making the library in Boylston street an important one for the country, and even for the world, in thus dissipating, as it was feared, the resources of the city among lesser projects, which would detract from the interest felt in the parent institution. The result has been just the reverse.

The statistics show that, while the circulation of the entire library has increased nearly seven times since 1867, the present aggregate is by no means wholly owing to the additional work of the branches; since the use of the popular collection in the Lower Hall has nearly trebled, and that of the higher department of the Bates Hall has quadrupled. The Bates Hall delivers as many books now as the Lower Hall did ten years ago. Our experience has been that also of the principal English libraries. Dr. Crestadoro writes to me from Manchester that the successive establishment of the branches of their library has in no wise interrupted the constant appreciation in use of the preëxisting departments.

Extension of library service.—Within the past year a sort of subdelivery has been established at Deer Island for the benefit of the city institutions situated there, books being sent in boxes from the Central Library once a month, two or three hundred at a time. At the request of the fire commissioners, a similar service has been given to thirteen of the engine houses in the city proper and to the fire boat for the benefit of the firemen; and it is probable that the protective department will come within the same rules. Under a guaranty from the authorities of the navy yard, a like privilege has been granted to the reading room within the walls of the yard for the advantage of the enlisted men on the station; but the arrangement has not yet been put in force.

Bibliographical aid to readers.—In 1873 the library made an innovation in the bibliographical matter which was made an adjunct of its popular catalogues. The new departure was a natural one, and followed as a matter of course in the development of the influence which it was the aim of the fathers of the library to bestow upon the public. Mr. Everett, its first president, enunciated a sentiment that has never been lost sight of, when he claimed that its mission was to supplement the schools; and a happy embodiment of the idea has found shape of late in the phrase of "the people's college." With the growth of any collection the ease of consultation naturally gives way to an indecision in the face of accumulated titles on every subject, and without some guide to a choice of books, discouragement is likely to ensue from any haphazard selection out of many, for any particular purpose. A consideration of these difficulties ripened the plan. As preliminary, the thought occurred of alluring the pastime reader, of whom all libraries in any degree popular have a large following, by easy steps to become a reader of better purpose. I am too much a believer in the general straight-

forwardness of ingrafted impulses ever violently to counteract them. I believe men can be led rather than pushed. The implanting in mankind of the story telling faculty, and the enjoyment of it in others, were not an idle creation; and the imagination has done too much for the amelioration of mankind not to deserve our acceptance of it as a handmaid of virtue and a promoter of intellectual advancement. This assistance was accordingly invoked in a list of historical fiction, which was prepared in chronological grouping under countries, as calculated to instigate a study by comparison, and lead the mind to history and biography by the inciting of the inquisitive faculties. I have reason to believe that the idea was not a futile one, from the interest manifested in the movement, and the avidity with which more than one edition of it was taken up. This was but a trial. The next step was the more serious one of endeavoring to direct the ductile perceptions of the less learned among readers. The effort was not to propound positively any course of reading, for there is danger always in dogmatism, however right its foundation may be. The notes which were appended to the subject references in the History, Biography, and Travel Catalogue of the Lower Hall, in 1873, served to render the ordinary reader more able to choose to his liking when an undistinguishable mass of equivalent titles perplexed him. That catalogue was a year in passing through the press, a term lengthened by the destruction of part of the work on it in the great fire of November, 1872; and when it was published in August, 1873, I was able to record for the next year, month by month, a remarkable increase of the use of books from the Lower Hall, in history, biography, and travel, amounting in some months to 200 per cent. At the end of the year we of course had to gain upon the work of its influence twelve months before, and the ratio of gain fell at once, though it still remained to give some testimony of its continued helpfulness. The files of the library show the opinions upon these results entertained by many gentlemen interested in projects of popular education. A veteran in this sphere, Mr. George B. Emerson, said, "I have never seen anything so excellent; and hereafter no large catalogue will be considered complete without something similar appended to it." From Europe like expressions of approval came. "I have shown it to some of the profession here," wrote one of the chief British librarians, "and they are as much astonished at the idea as at the execution of it. I do not think there will be many imitators. The labor of such a work must be enormous, and certainly beyond our resources and methods."

The expectation which was expressed by Mr. Emerson was soon realized in the adoption of many of its notes in the catalogues of some of the smaller libraries, and in 1875, the public library of the town of Quincy fully committed itself to the scheme, in the publication of an excellent catalogue, which had the editorial supervision of Mr. Charles Francis Adams, jr., the president of its trustees. Somewhat similar work, particularly embodying references to the sources of study in periodical literature, which had been made a part of the scheme, appeared in the careful catalogue of the Mercantile Library of Brooklyn; but the whole effort of its librarian, Mr. S. B. Noyes, cannot be appreciated until his work is completed. Similar notes, simplified to meet the wants of a smaller constituency, and improved in many respects, were repeated in a new edition of the Roxbury Branch Catalogue, issued last year. A set of references in elucidation of English history, printed in large type on broadside sheets, with spaces for the filling in of the shelf numbers, was perfected, with the numbers of each department inserted, and posted, with good effect, in the respective halls. The edition printed was small, and the demand for them from other places could not be met; but for the testing of its value in other communities copies were sent to various libraries in this country and in England, and I have since observed, in their reports, several references to their value.

Books of fiction.— Of the proportions of the various classes of books as sent into circulation the superintendent says: It will be seen that there is little change in these ratios. The most significant and gratifying is a marked diminution, since 1873, of the use of fiction in the Lower Hall; but it is apparent that the change has been brought about by the methods of instruction which we employ. The natural craving of the masses is for story telling. It cannot be eradicated. The attempt would only drive the frequenters of the library away in large numbers. I look upon the dominating taste in reading, as Kant regarded the general tendencies of mankind,—to accept it and to strive to better it. The wise course is to regulate it, and to use the instinct as a means of its own improvement. I selected one Saturday in the height of our season, and directed that all slips handed in at the Lower Hall counter which failed to secure a book should be saved. They numbered nearly 5,000, showing that twice as many slips failed of their purpose as succeeded. An analysis of these requests shows that 404, or about a twelfth part only, were non-fiction; more than two-twelfths were a miscellaneous assemblage of novels, each asked for once, twice, or perhaps thrice, but not sufficiently characteristic to signify any marked intent. Over 500, or more than a tenth part, were calls for dime novels, but few of which are now left in the library,— the remnants of a set which were, some years ago, experimentally put into use, but which at this time still stood in the printed catalogues which were on hand. The

single author most in request was Horatio Alger, jr., a writer for youths, whose books were marked on 390 slips. Mrs. Southworth came next, 301 times; then Oliver Optic, 292; Dumas, 199; Mrs. Stevens, 158; Miss Braddon, 154; Mrs. Holmes, 146; Fosdick, a writer for boys, 125; Fleming, 87; Kingston, a boys' writer, 83; Ainsworth, 69; Mrs. Wood, 60; Grant, 59; Lever, 58; Mrs. Grey, 54. The most sought-for single book was Alger's "Timothy Crump's Ward,"—64 times. Almost a quarter of the entire number may be called juvenile books. Over a third certainly would class among the lower grades of popular novelists, without counting such as were not popular and of this grade. About a sixth of the whole may be considered from fair to first class as to literary merits. Out of this 4,875 total, some of the well known names in literature stand low in the scale of demand; as, for instance, Don Quixote, 2; Jane Austen, 2; Goldsmith, 2; Swift, 3; Gœthe, 4; George Sand, 4; Scott, 5; Thackeray, 5; George Eliot, 9; Hawthorne, 10; Bulwer, 10; Charles Reade, 10; Miss Muloch, 10; Dickens, 25; Wilkie Collins, 27; Cooper, 34; Marryat, 44; James, 44.

This record should not afford the foundation for off-hand conclusions. The hours during which the slips were saved were the busiest of the week, and which the better readers shun. Duplicates of the higher class of novels being supplied on less urgency than those of inferior position, the exhaustion of such books signifies a relatively greater demand than is the case with the lower classes. It should always be further borne in mind that in public libraries the demand for the better books is considerably lessened, from the fact that such books are bought more commonly for the family book shelf than the inferior ones. It is for this reason that reputable authors of popular fame, like Irving and Hawthorne, never represent, in the circulation of public libraries, their hold upon readers.

On the other hand there is compensation in the growing circulation of the Bates Hall, representing the highest reading. Fifty-two per cent. of its issues are for reference in the building. A seventh part of the books recommended for purchase are in foreign languages.

Pamphlet collection.—Previous to 1868 perhaps 50,000 pamphlets had been secured, or an average of about 3,000 a year. The chief accessions in masses had come with the Parker Library, and with the divisions of the pamphlet collection of the late Edward Everett, when William Everett, esq., gave a due share to the institution upon whose career and good name his father had exercised so great an influence. Within the last nine years the claims of pamphlets for preservation have been fully recognized; and our efforts have been unremitting to gather them and combine them with our collection, first by assortment, then by binding and cataloguing, till we have acquired a collection which can hardly, in this country, be surpassed for serviceableness. In this nine years we have added an average of over 16,000 a year, or an aggregate of 150,000, which represents probably nearly as much work in care and cataloguing as the bound books shelved in the same interval.

Expenditure.—In most respects the work of the library has apparently increased from five to ten fold during the last decade. The work of detail naturally accruing to all processes which require handling of records of one kind or another is much larger, however, on each item, by reason of the larger masses to manipulate in a library of 312,000 than in one of 136,000 volumes. Consequently the apparent increase of work, as shown by statistics of results, is not adequate to represent the positive enlargement of labor. Nevertheless it can be shown that the expenses of the library to-day are not one-half as much, relatively, as in 1867. At that time our expenditure was $52,658 for the year, while for the past year we had to expend the city appropriation of $111,500, with $6,300 income from our trust funds, making a total of $117,800, or not greatly in excess of twice the amount in 1867.

Ventilation.—This is a matter which has been sadly neglected in library construction. The ventilation of the Lower Hall has always been excessively bad. Indeed, at times, according to the experiments of the late Dr. Derby, secretary of the State board of health, the worst air prevailed there that he could find in the State. It is hoped, however, that an improvement has been effected by pipes arranged to conduct the foul air from the floor into the flues, where a current is induced by hot air. The arrangement was suggested by Mr. Lewis, of the board. The closed windows of another winter will test more thoroughly its efficiency than has been possible since it was put in operation, only a few weeks ago.

THE COMMON SCHOOL AND THE PUBLIC LIBRARY.

At a recent informal meeting of the teachers of the public schools of Quincy, Massachusetts, Mr. C. F. Adams, jr., a member of the school committee, had a familiar talk with the teachers on the subject of books and reading among their scholars, in the course of which occurred the following remarks:

It may safely be asserted that the one best possible result of a common school education, its great end and aim, should be to prepare the children of the community

for the far greater work of educating themselves. * * * But I fancy that a comparison of experiences would show that scarcely one out of twenty of those who leave our schools ever further educate themselves in any great degree, outside, of course, of any special trade or calling through which they earn a living. The reason of this, I would suggest, is obvious enough, and it is not the fault of the scholar. It is the fault of a system which brings a community up in the idea that a poor knowledge of the rudiments of reading, writing, and arithmetic constitutes in itself an education. Now, on the contrary, it seems to me that the true object of all your labors as real teachers, the great end of the common school system, is something more than to teach children to read. It should, if it is to accomplish its full mission, also impart to them a love of reading. * * * Having given the child a start, by means of what we call a common school course—having, as it were, taught it to walk—the process of further self-education is to begin. The great means of self-education is through books, through much reading of books. But just here there is in our system of instruction a missing link. In our schools we teach children to read, we do not teach them *how* to read. That, the one all important thing—the great connecting link between school education and self-education, between means and end—we make no effort to supply. * * * Though the school and the library stand side by side, there is, so to speak, no bridge leading from the one to the other. As far as I can judge, we teach our children the mechanical part of reading, and then we turn them loose to take their chances. If the child has naturally an inquiring or imaginative mind, it perchance may work its way unaided through the traps and pitfalls of literature; but the chances seem to me to be terribly against it. * * * I think this is all wrong. Our educational system stops just where its assistance might be made invaluable—just where it passes out of the mechanical and touches the individual, just where instruction ceases to be drudgery and becomes a source of pleasure. * * * You are able, if you choose, to give your scholars a general introduction into literature, which, if you do give it to them, is worth more than all the knowledge contained in all the text books that ever were printed. To your whole schools you can give an elementary training as readers, and if in this matter you once set them going in the way they should go, you need not fear that they will ever depart from it.

TABLE XVII.—MUSEUMS OF NATURAL HISTORY.

Forty-three natural history museums and five anatomical museums are included in Table XVII of the appendix.

Zoölogical gardens.—Cincinnati, New York, and San Francisco are doing something in the way of furnishing their citizens opportunities to study animals by gathering these in appropriate places for the observation of visitors. The Zoölogical Garden of Philadelphia, however, is still far ahead in point of success. As was expected, it received a great impulse from its proximity to the International Exhibition. Six hundred and fifty-seven thousand two hundred and ninety-five persons visited the garden; total receipts at the gate, $151,060.63. As the officers remark with some degree of pride, "An amount from such a source the largest ever known."

The Zoölogical Society of Cincinnati has felt in its immediate vicinity the influence of no such great aid as the Centennial Exhibition, but it acknowledges the receipt of gate admissions for $23,696.10; or adults admitted, 89,419, and children, 13,055—a total of 102,474. The society is making a most commendable effort to increase its income to $36,000 the ensuing year.

TABLE XVIII.—RELATION OF ART TO EDUCATION.*

The introduction of drawing into all classes of the public schools, as one of the required studies, continues to interest educationists, and has steadily progressed since

* The "Special Report on Art Education," still in charge of I. Edwards Clarke, A. M., has necessarily been greatly enlarged in its scope by the holding of the Centennial Exhibition. The demands upon this Bureau for information relating to the introduction of drawing as a prescribed study in the public schools have increased. The Centennial itself required study in all its bearings upon the questions of industrial and technical art training. The funds of the Office available for printing will not permit the issue of the special report until further appropriations are made. Meantime, information can only be given in manuscript communications, and much of the report which had been prepared for publication at the close of the year 1875 will have to be rewritten and all the statistics revised and brought down to the final date of publication. The statistics given in Table XVIII, Parts 1 and 2, in this annual report for 1876, are from returns made by the various art museums and art training institutions. They are mostly to date of August 1, 1877, and as they will appear in the special report. Returns giving the

the attention of the country was first directed to the subject by the action of the legislature of Massachusetts in 1870, in making this study imperative in the public schools of that commonwealth. The example of that State has been followed at intervals by the official action of the school authorities in many cities and towns throughout the United States, and finally by the enactment of a similar law by the legislature of the State of New York, May 14, 1875.

The results of a course of several years of this study are now apparent in the schools of Massachusetts, and in those of many of the cities and towns of other States; and the progress made by such pupils as have persevered in the study two, three, or four years is most surprising and satisfactory, especially when the very limited amount of time given to this study, in proportion to that given to the other regular studies, is taken into consideration.

At the same time that this movement has been developing itself in the common schools, a very marked increase of interest in the relations of art to education has been manifested in many of the institutions of secondary and higher learning throughout the country. In many of the colleges the importance of some knowledge of the art of the ancients seems at length appreciated by the instructors, and where no positive instruction in the technicalities of art is attempted, the relations of the art to the civilization of the people whose literature has long been thought so essential an element of modern education having at last been recognized,* instruction is given in the history, development, and works of the artists of Greece and Rome; and the attention of the students is directed to the relation borne by these works to the religious beliefs and social manners of the people.

The economic importance of various applications of art to industry has been impressed upon those who deal with scientific and technical education.

While this awakening interest in the educational relations of art is so marked among the various classes and schools of educators, it is also true that the community at large is pervaded with a very general and growing interest in all matters relating to art.

This interest, already apparent before the opening of the Centennial Exhibition in Philadelphia, has been wonderfully stimulated, educated, and extended by the sight of the various objects there exhibited, by means of which the importance of the art element in the manufactures of the world has been for the first time brought generally to the attention of the American people.

On the other hand, the interest manifested by the great majority of visitors to the Centennial in the special art collections, has demonstrated to the most sceptical that the art instinct or the love of beauty is well nigh universal. Pictures, statues, and beautiful objects in all materials have proved attractive to those hitherto most unfamiliar with them, and hereafter there will be found a greater or less degree of intelligence upon art matters among the American people at large.

The year of 1876, rendered so memorable as the Centenary of American Independence, and made so important in its influence upon the future development of the

following changes, received too late for insertion in the tables of this report, will appear in the tables of the special report, viz:

School of Drawing and Painting, Boston Museum of Fine Arts.—Instead of 4 teachers, 100 pupils, 35 males and 65 females, read 3 teachers, 124 pupils, 47 males and 77 females.

The Art Students' League, New York.—Instead of 120 pupils, 70 males, 50 females, and no material, read 135 pupils, 78 males and 57 females, 3 casts of sculpture, and many engravings.

Courses in Architecture and Mechanic Arts, Cornell University.—Instead of 82 pupils read 153.

Woman's Art School, Cooper Union.—Add as note to 650 "other casts," 150 of these are reduced copies of statues and busts or "masks" full size.

School of Design, University of Cincinnati.—Instead of 40 "casts of sculpture" and 100 "other cast," read 19 "casts of sculpture" and 121 "other casts," with note "25 are reductions of antique statues."

Philadelphia School of Design for Women.—Instead of 100 pupils read 218.

Pittsburgh School of Design for Women.—Instead of 5 teachers, 65 pupils, and artisan male night class of 25 pupils, read 3 teachers, 45 pupils, and no artisan night class.

*The Polymetis of Joseph Spence (published 1747, London, folio) was an attempt to illustrate the Roman poets by comparing their descriptions (mostly mythological) with the remains of ancient art discovered up to that time.

country by the exhibition of the industry of all nations at Philadelphia, is also to be noted in our history as marking the commencement of an era of art development in its most comprehensive sense.

It is safe to say that the economic relations of art to the industries of a people were first in this year generally recognized in America. It is also true that a conception of what it is possible to accomplish in the development of artistic industries by systematic art education, first dawned upon the American people at the Centennial Exhibition.

In this connection, among the memorable events of the year now under review must be noted the formal opening by the Pennsylvania Academy of Fine Arts of a new and commodious building on Broad street, Philadelphia, and the reopening of the admirable art schools, which had been closed for several years while the new building was in progress.

The Boston Museum of Fine Arts was also inaugurated and took possession of its fine new building in the summer, the art school under its supervision being opened for the first time in the autumn of this year. Two wonderful art loan collections were held in New York city during the summer of this year, which brought together a most remarkable assemblage of the best work of modern art; these were so numerously attended that the receipts availed largely toward relieving the National Academy of Design and the Metropolitan Museum from debt. This year saw also the inception of an institution which promises to be of the greatest importance to industrial art, viz, The Pennsylvania Museum and School of Industrial Art, in Philadelphia, which has secured the retention in this country of many of the choicest examples of artistic productions, contributed by the artists and artisans of all countries to the Centennial Exhibition.

A similar museum of industrial art was incorporated at New Haven, Connecticut, which is likewise largely enriched from the treasures of the Centennial.

In addition to the founding of these great centres of art influence, which have their origin in or date their renaissance from 1876, there are also other events which bear more directly on education in art. Among these may be mentioned the reopening of the art schools of the Pennsylvania Academy of Fine Arts; the founding of the schools of the Pennsylvania Museum, which have in view the direct application of art to industry in all its forms; the founding of the High Art Schools of the Boston Museum of Fine Arts; the founding of a normal art instruction department in connection with the Woman's Art School of Cooper Union, New York, for the training of teachers to teach drawing in the public schools of that State; the founding of art galleries in connection with the South Hadley Female Seminary, in Massachusetts; with the Smith College for Women, in Northampton, Massachusetts, and the additions made to the excellent art collections possessed by Vassar College, with a view to the opening of a department for the serious teaching of art in all its branches.

Another fact of the greatest significance, not shown in the simple statement of the opening of new art museums, is found in the change that has taken place in the character of the collections exhibited in these museums. Formerly an art gallery was understood to contain a collection of paintings and statuary, with possibly a few specimens of choice engravings; now an art museum may comprise whatever the hand of man can execute. In the loan collections of the Metropolitan Museum; in the permanent and loan collections of the Boston Museum of Fine Arts; more especially in the very precious and comprehensive collections of the Pennsylvania Museum and School of Industrial Art, and in the smaller but similar collections of the Connecticut Museum of Industrial Art, there is found such varied wealth of objects as almost to defy cataloguing and render tabulation impossible.*

* The many notes to Table XVIII, in the appendix of this report, bear witness to the necessity of a new classification if the art museums are hereafter to be tabulated. These changes are significant; they mean no less than that the imperative necessity for art training by the manufacturers and producers of this country is recognized, and that education in art, certainly so far as art relates to industry, must henceforward be accepted as one of the problems to be met and solved by American educationists and educators.

TABLE XIX.—SCHOOLS FOR THE DEAF AND DUMB.

The progress of deaf-mute education is greatly promoted by the National College for Deaf-Mutes. This, as will be seen by the table, is situated at the seat of National Government, is sustained by appropriations from the National Treasury, and offers advantages to sufficiently advanced students in the several congressional districts throughout the country. The State institutions, necessarily chiefly devoted to elementary and secondary instruction, can, by a proper arrangement of their course of study, readily fit for this advanced training any who may desire. The effect of this opportunity for advancement cannot but be salutary to all the institutions that enter into this coöperative effort in behalf of this unfortunate class of our citizens.

Under Table XIX of the appendix will be found the details from which the following summary is drawn.

TABLE XIX.—*Summary of statistics of institutions for the deaf and dumb.*

States.	Number in each State.	Instructors.		Number under instruction during the year.			Total number who have received instruction.	Number of graduates who have become teachers.
		Total number.	Number of semi-mutes.	Total.	Male.	Female.

The matters of interest relating to these institutions are too numerous to be discussed here. I hope to be able to treat them in a separate publication. It cannot be doubted that these schools have supplied a great want and are performing a most essential work. They are often embarrassed by being classed among the punitive institutions, and more or less excluded from the sympathy extended by the public to institutions for the education of the young. All considerate persons are anxious to give them a position, both in fact and in appearance, best calculated to aid those intrusted to their care. Mrs. Mary E. Rockwell, assistant superintendent of the Girls' Industrial Reform School, in Connecticut, expresses in strong terms a fear which comes up from many quarters, viz, that these institutions are not so designated and treated by the public as to most completely relieve of odium those who have enjoyed their benefits and who earnestly seek to improve the advantages afforded them. She objects to "all expressions which characterize these schools as preventive, reformatory, or industrial, in distinction from others * * * I would plead earnestly for the abolishment not only from statute books, records, and reports, but from the acts, words, and thoughts of individuals, of the assumption that the child of the State is, by that position, less worthy of respect and trust than the child of the citizen. I would ask that the adoption of a boy or girl into any of the families which society has created for their care and instruction, shall not be made a reason for a difference in the estimation of society between them and children brought up by their own parents; that, in fact, no more disgrace or distrust shall attach to their pupils than to those of the public schools. Above all, I would recommend that no criminal process, nor anything re-

sembling a trial in court, nor any records calling in question the character of the child, should be used. * * * It is a serious matter what the world outside of the school thinks of it and its work. If the results of its training are to be abiding, the children must not be made ashamed of the place where it was received. If you desire that they should profit by the instruction and restraints provided for them, you must yourselves honor the schools, and see that no stigma is attached to their pupils."

TABLE XXIII.—SUMMARY OF SCHOOLS FOR THE FEEBLE-MINDED.

Table XXIII of the appendix presents the statistics of schools for the instruction of feeble-minded youth, of which the following is a summary:

TABLE XXIII.—*Summary of statistics of schools for feeble-minded youth.*

a For 5 months since opening.

These schools deserve the special study and sympathy of every educator and philanthropist. It is an honor to our country that so large a number of these unfortunates is greatly aided. The work requires the very first qualities of both mind and heart on the part of managers and teachers, and the limited powers of nature which they undertake to develop demand the very best knowledge of both analytical and synthetical methods in education.

Concerning the Iowa State Asylum for Feeble-Minded Children, at Glenwood, Iowa, the superintendent, Dr. O. W. Archibald, reports as follows:

The school was opened on the first Wednesday in September, 1875, with only one pupil. The number rapidly increased to 44, and at the date of the report, February 5, 1876, there had been received, in all, 60 applications. The school is now in successful operation. The buildings at present belonging to the institution will comfortably accommodate from sixty-five to seventy pupils.

The completion of the building for the school at Jacksonville, Ill., under the supervision of Dr. Wilbur, is specially creditable to the State. It is hoped that means so

ample will be furnished as that nothing may be lacking to carry on the great experiment committed to it.

TABLE XXIV.—BENEFACTIONS.

For fuller examination of these interesting facts during the year, reference should be had to Table XXIV of the appendix.

TABLE XIV.—*Statistical summary of benefactions, by institutions, for* 1876.

Institutions.	Total.	Endowment and general purposes.	Grounds, buildings, and apparatus.	Professorships.	Fellowships, scholarships, and prizes.	Aid for indigent students.	Libraries and museums.	Object not specified.
Universities and colleges.	$2,743,248	$1,295,250	$1,018,696	$204,669	$75,096	$3,163	$17,701	$128,673

Libraries.	970,300	.....	300,000	.....	.....	.....	670,300	.....
Museums of natural history.	1,725	.....	.....	.....	.....	.....	1,725	.....
Institutions for the deaf and dumb.	33,751	11,000	.....	.....	.....	.....	.....	22,751
Total	4,691,845	1,799,607	1,483,936	210,369	123,226	12,723	700,851	361,133

The above summary gives the various objects for which benefactions have been made during the year, without reference to States. The objects which lead are universities, colleges, libraries, schools for boys and girls, schools of theology, and preparatory schools. Secondary schools for the separate instruction of girls and boys received about an equal amount; schools for the superior instruction of women less than $80,000; schools of science less than $49,000; schools of medicine less than $47,000. It is very gratifying that in the severity of the financial trials of the country the total amount is in excess of that for 1875.

The above view presents the outlines of these interesting facts by States. It should be remembered that the reports are from the institutions, and, therefore, indicate the States where the benefactions have been received, and not always the State from which they are received. For instance, the large benefaction to Vanderbilt University, Ten-

nessee, was bestowed in New York. The year has been remarkable for the number of men of the greatest wealth who have passed away. The records show how slightly their names will be connected with institutions of learning.

Judge Nathan Crosby, of Lowell, Massachusetts, in a eulogy on Hon. Tappan Wentworth, of that city, who gave $300,000 to the Dartmouth trustees for the benefit of the college, remarks:

We may legitimately suppose that Mr. Wentworth, with his large amount of property to dispose of, spent many anxious hours in looking over the various objects and claims of benevolence and the great field of doing good. He was not the man for flourish of trumpets. No fancy object, no eccentric theory in morals or religion, no doubtful adventures, found favor with him. Without consultation, advice, or influence, he worked out the problem for himself.

His postulates must have been that the mind is the great working power of life; that it must be strengthened, instructed, expanded, cultivated, and balanced by varied, large, and solid learning, and all this must be done before manhood is reached and the mind turned to the business departments of life; that the college is the chief field for this culture; that education now covers four planes of study: the primary school, the high school, and academy, the college and the professional schools, and that of these, the college is the chief and most important. Here are four years of continuous study in the various branches of mental development and acquisition. Here is where the mental structure is built and equipped. Here is where weak powers are strengthened; where the crooked are made straight; where deficiencies are supplied and excrescences removed; where the mind is hammered, and filed, and polished; where the rustic becomes a gentleman, the vulgar refined, the ignorant wise; in fact, where the boy becomes a man.

METHOD OF TEACHING GEOGRAPHY.

There are gratifying indications here and there of a disposition to let common sense have greater influence in the selection of subjects and methods of instruction. It is clear to the best observers that for the lack of this, time and effort are wasted.

The London school board has so thoroughly recognized this waste that it has rigorously revised certain text books, reducing them to minimum manuals.

Sir Henry Holland, eminent among other things for his geographical knowledge, remarking, in his eighty-fourth year, upon the imperfect manner in which geography is taught in English education, both public and private, says: "It cannot be taught in any proper sense of the word by mere maps or a bald and wearisome nomenclature of countries, cities, mountains, and rivers. What is wanted is that these should be intimately blended with the history of the world of nature and the history of mankind, thereby better fixing the whole in the memory, and giving to geography its true rank among the sciences. The change thus indicated is in progress, but much is still wanted for its full accomplishment." His autobiography further illustrates the right method of securing interest in this subject, and points out the benefit of the method. He remarks of his early life: "I had a singular pleasure in all that belonged to the Tyne—its tidal changes, floods, and windings—and I was accustomed to pursue even to their sources many of the small streams (the *burns* and *deans* of Northumbrian speech) which run into this river. The phenomena of the tides had a peculiar interest for me. I well recollect the pleasure I felt in following their flow upward along these streams, marking the points to which they severally reached at spring and neap tides, and their various conflict with the waters flowing downward. These juvenile recollections are not effaced even by what I have since seen."

Burke remarks: "For my part I am convinced that the method of teaching which approaches most nearly to the method of investigation is incomparably the best; since, not content with serving up a few barren and lifeless truths, it leads to the stock on which they grew."

TRAINING SCHOOLS FOR NURSES.

BELLEVUE HOSPITAL SCHOOL.

Great interest is being manifested at the present time in the training of nurses for the sick. In May, 1873, a school was opened in connection with Bellevue Hospital, in New York, with a lady superintendent and a staff of six nurses. Since that time schools have been opened, though not all on the same plan, in Boston, New Haven, Philadelphia, and at Charity Hospital on Blackwell's Island. The Johns Hopkins Hospital, in Baltimore, is preparing plans for one on a large scale, and others are projected in New York and elsewhere.

Those who founded the Bellevue school were inspired by their knowledge of the bad nursing and attendant evils in Bellevue Hospital, and in appealing to the public for the funds necessary to start the work they announced their object as threefold, viz:

First. To train intelligent women to become skilled hospital nurses, under the supervision and instruction of physicians, whose standard of a nurse's duties would be exact and rigid, thus improving hospital nursing, not only at Bellevue, but throughout the country.

Second. To train nurses for the proper care of the sick in private families.

Third. To send nurses to the sick poor in their own homes, choosing for this object those whose Christian character, tact, and sympathy would fit them to be associated with the Bible women now attached to many of our churches.

The course of training requires two years, and few of the applicants were willing to give so much time to the acquisition of a profession. This was one of the most serious of the early difficulties, but as the object of the school came gradually to be understood throughout the country, applications from women deliberately choosing this profession, and desiring to learn it thoroughly, were too numerous to be granted.

In May, 1875, the first class of six graduated; a second class of seven passed their medical and surgical examination, and graduated January 31, 1876. And from that time the school has sent out every six months a class of trained women, who either establish themselves in the work of private nursing or remain attached to the training school as nurses, being sent out with pupils of the second year to private cases.

The success and growth of this school may be seen from a statement in their report for the year 1876:

From nine wards, with one hundred and sixty beds and thirty-one nurses, on the 1st of last February, we have now twelve wards, one hundred and ninety-two beds, and fifty nurses.

Ten trained nurses are at the present time detailed for private service. Seventy-three private cases have been attended during the year, and nurses have been sent to Albany, Newport, Saratoga, Philadelphia, Newark, Orange, and Brooklyn.

A class of six nurses graduated and received their diplomas in May, and another in October.

On entering the school, the pupils receive instruction—

First. From the head nurse of the ward to which they are assigned in general "ward work" and in the personal care of the patients.

Second. From the assistant superintendent in physiology, management of a sick room, and the duties of a nurse.

Third. From physicians and surgeons by the bedside of the patients.

Fourth. From lectures.

Course of training.

Those fulfilling the conditions of the probationary month will be accepted as pupil nurses. They must agree to remain at the school for one year, and after that time to consider themselves subject to the orders of the committee (of whom the superintendent will make one) for an additional year, making two years in all, in consideration of the training received.

The instruction includes:

1. The dressing of blisters, burns, sores, and wounds; the application of fomentations, poultices, and minor dressings.
2. The application of leeches externally and internally.
3. The administration of enemas.
4. The management of trusses and appliances for uterine complaints.
5. The best method of friction to the body and extremities.
6. The management of helpless patients; making beds, moving, changing, giving baths in bed, preventing and dressing bedsores, and managing positions.
7. Bandaging, making bandages and rollers, lining of splints.

The pupil nurses will attend operations and assist at them.

They will be taught every kind of sick cookery and the preparation of drinks and stimulants for the sick; to understand thoroughly the art of ventilation without chilling the patient, both in private houses and in hospital wards, and all that pertains to night in distinction from day nursing; to make accurate observations and report to the physician of the state of the secretions, expectoration, pulse, skin, appetite, temperature of the body, intelligence, as delirium or stupor, breathing, sleep, condition of wounds, eruptions, formation of matter, effect of diet or of stimulants or of medicines, and to learn the management of convalescents.

The teaching will be given by attending and resident physicians and surgeons at the bedside of the patients, by the superintendent, and by the head nurses.

The pupils will pass through the different wards, serving and being taught for one year. They will board and lodge at the home, and will be paid $10 a month for their clothing and personal expenses. This sum is in no manner intended as wages, it being considered that their education during this time will be a full equivalent for their services.

They are required to wear the dress of the institution, viz, a gray stuff dress in winter and calico in summer, (simply made,) a white apron and cap, and brown linen cuffs, covering the sleeve from wrist to elbow. Nurses will be cared for in illness at the home.

At the expiration of the year they will be promoted to such positions as they may be found capable of holding, with an increase of salary.

When the full term of two years is ended, the nurses thus trained will be at liberty to choose their own fields of labor, whether in hospitals, in private families, or in district nursing among the poor. On leaving the school, they will, on passing an examination, each receive a diploma signed by the examining board and by a committee of the board of managers.

Rules for nurses going out to private service.

1. That the nurses are to attend the sick, both rich and poor, at hospital or private houses, as the committee or superintendent may appoint.
2. That when sent from the home to attend a patient they receive their instructions from the superintendent, and do not leave the case without communicating with her. This they can do by letter at any time.
3. That while on duty in the home, at the hospital, or in private houses, the regulations of the school with regard to dress are to be observed by the nurse.
4. That a nurse is always to bring back with her a certificate of conduct and efficiency from the family of her patient or from the medical attendant.

It is expected that nurses will bear in mind the importance of the situation they have undertaken, and will evince at all times the self denial, forbearance, gentleness, and good temper so essential in their attendance on the sick, and also to their character as Christian nurses. They are to take the whole charge of the sick room, doing everything that is requisite in it, when called upon to do so. When nursing in families where there are no servants, if their attention be not of necessity wholly devoted to their patients, they are expected to make themselves generally useful. They are to be careful not to increase the expenses of the family in any way. They are also most earnestly charged to hold sacred the knowledge which to a certain extent they must obtain of the private affairs of such household or individuals as they may attend.

The following suggestions are made by the directors of the Bellevue school as to the organization and management of similar schools:

The superintendent.—She should be a lady in the best sense of the word, combining Christian graces with mental ability, having tact, judgment, and good temper, and possessing that nameless power peculiar to good generals of inspiring an esprit de corps in her subordinates. She should be held responsible by the governing body of the hospital for the discipline of her nurses, their good conduct, the order and cleanliness of the wards, and the domestic arrangements of the hospital. All the servants and nurses should in the performance of their duties be responsible to her alone. She should be responsible to the medical authorities that their orders for the treatment of the sick are satisfactorily carried out. Neither a medical officer nor any other male head should have the power to dismiss or suspend a nurse or servant for bad conduct or neglect of duty. He should report the case to the superintendent, who as we have said is responsible for the conduct of her subordinates.

"Simplicity of rules—placing the nurses in all matters regarding management of the sick absolutely under the orders of the medical men, and in all disciplinary matters absolutely under the female superintendent, to whom the medical officers should report all cases of neglect—is very important. At the outset, there must be a clear and recorded definition of the limits of these two classes of jurisdiction. Of course if she does not exercise the authority intrusted to her with judgment and discretion, it is then the legitimate province of the governing body to interfere and remove her. It is necessary to dwell strongly on this point, because there has been not infrequently a disposition shown to make the nursing establishment responsible on the side of discipline to the medical officer or the governor of a hospital. An attempt to introduce such a system would be merely to try anew and fail anew in an attempt which has frequently been made. In disciplinary matters a woman only can understand a woman."

To this opinion of Miss Nightingale we give our emphatic assent. To turn a body of young women into a hospital with no female head whom they can respect and must obey will be sure to end in failure so far as a school is concerned, and in disaster in other ways.

Pupils should be, as a general rule, between the ages of twenty-one and thirty-five, unmarried or widows. Habits of obedience, order, regularity, neatness, and quickness of observation, all indispensable qualities in a nurse, cannot be acquired after middle life, and it will scarcely occur that before the age of twenty-one a woman will have acquired that steadiness of purpose which a profession of such labor and self sacrifice entails. The pupil should have good temper and good health; a woman whose vision or hearing is defective, who is lame or delicate in any way, should not be accepted. Our experience proves that the better she is educated and the more refined and intelligent she is, the better nurse she makes, and we are glad to see that as the work becomes better known we have applications from women of a higher grade than many of those who first offered, and we look forward with confidence to the period, and that not long distant, when the profession of a nurse for the sick will rank with that of a teacher for the young.

Residence.—Miss Nightingale regards it as indispensable that the superintendent and her nurses should live within the hospital. Our experience is the reverse of this, and we account for it thus: American women, who are generally of sensitive nervous organization, brought from the comfortable homes of our rural districts, are at first depressed by the painful aspects of hospital life, and afterward, if they become interested in their work, they take it so "to heart" that unless they are forced to leave the hospital when off duty they would never have it off their minds, and in the end their health would be affected. Hence it is of great importance to the health and morale of the pupils that they should have a cheerful, comfortable home, where they can each day throw off the cares of their profession and rest when exhausted. We attribute the good health enjoyed by our pupils (no dangerous illness nor death has occurred among them in three years and a half) to their home, from which they walk to and from the hospital three times a day.

Salary.—It has been remarked by some with surprise that pupils should be paid while receiving their education. "Why should not women who are enjoying such advantages give their services in return?" To the same question Miss Nightingale gives the following reply: "The real point is that the women who have to earn their bread cannot, after twenty-five years of age, seek situations which require a year or more previous training; this, which is often overlooked, is so important that one sine qua non for all institutions which train nurses is that the probationers, if really good subjects are to be obtained, should receive wages during their year's training."

Dress.—A uniform, however simple, is indispensable, and should be rigidly enforced. It is advantageous on the ground of economy as well as neatness, and its effect on a corps of nurses is the same as on a company of soldiers.

BOSTON TRAINING SCHOOL FOR NURSES.

This institution went into operation in November, 1873. The school began with six pupils, nursing twenty-two patients in two wards. In 1876 the pupils numbered twenty-five, with eight head nurses, nursing 147 patients in eight wards. The course of instruction in this school is similar to that of the Bellevue Hospital school. The cost of carrying it on when it shall furnish all the fifty-two nurses required in the Massachusetts General Hospital, to which is attached, will it is estimated be about four thousand dollars per annum.

CONNECTICUT TRAINING SCHOOL FOR NURSES.

The school aims—

First. To provide a useful and honorable means of livelihood for young women who desire to support themselves.

Second. To help the sick poor in the hospital and out of it.

Third. To train nurses for the families of the public in times of distress.

The number of pupils is limited at any one time to twelve, and fifteen months are their term of service. A colored pupil has recently been admitted.

The great desire of this school is to have the opportunity to train nurses for mission work, but the fact that this as well as the other schools depends for its support upon the rich, deprives it of the privilege of sending nurses to the poor. The same obstacle was found in England, and Miss Nightingale says:

> Experience hitherto shows that if an institution is begun to provide skilled nurses for the rich and poor, especially if it be self-supporting, it ends by providing skilled nurses for the rich alone. For the rich must come first if the institution is to be self supporting, and if the rich come first they will be first and last.

PHILADELPHIA LYING-IN AND NURSE SCHOOL.

Since the organization of the Lying-in Charity, in 1831, there have been about ten thousand patients cared for in the obstetrical department of the institution. Nearly four thousand of these have received nursing aid, and many of the most destitute have received nourishment and clothing; many hundreds of cases have been cured or relieved at the clinic for diseases of females.

One hundred and ninety-five nurses have received regular and explicit instruction in the lecture room since 1844, besides a number unknown, who appear to have received "instruction" and "training" of some kind from the physician of the Lying-in Charity, under the auspices of the Nurse Society, between the years 1839 and 1844. One thou-

sand three hundred and eighty-three medical gentlemen have also received instruction in the lecture room, and occupied the position of pupil physician to the Lying-in Charity. More than six thousand citizens have applied at the institution for nurses, of whom about four thousand have been supplied."

SCHOOL OF DOMESTIC SCIENCE.

A School of Domestic Science and Art has been established in the Illinois Industrial University, and Dr. Gregory, the regent, remarks:

The purpose is to provide a full course of instruction in the arts of the household and the sciences relating thereto. No industry is more important to human happiness and well being than that which makes the home. And this industry involves principles of science as many and as profound as those which control any other human employment: it includes the architecture of the dwelling house, with the laws of heating and ventilation; the principles of physiology and hygiene, as applied to the sick and the well; the nature, uses, preservation, and preparation of animal and vegetable food for the healthful and for invalids; the chemistry of cooking; the uses, construction, material, and hygiene of dress; the principles of taste as applied to ornamentation, furniture, clothing, and landscapes; horticulture and culture of both house and garden plants; the laws of markets; the usages of society and the laws of etiquette and social life.—(Catalogue and circular of Illinois Industrial University, 1876–'77.)

THE DUTY OF THE STATE RESPECTING EDUCATION.

An oft repeated objection to the common school system is made by those who believe that the whole responsibility for the instruction of the child rests with his parents, or with his family connections, or with his spiritual pastors. The State or the city, it is said, has no right to educate the young within its limits. The experience of England in this matter is one of great interest.

No one can deny the conservative character of English thought, society, and life. Change is to the Englishman the worst of ordinary evils. Even an abuse, if hoary with years, receives almost affectionate reproach. Only by successive improvements and modifications have the great changes in English laws and usages been achieved. It may be of interest to mark a few of the points of this progress in the methods of supplying English elementary instruction.

King Alfred urged on parents the duty of educating their children. In succeeding ages benevolent men founded schools, this being especially the case during the reigns of the Tudor monarchs. But the popular ignorance was always appallingly great; even the earnest appeal of the great Milton in behalf of education did not lead the independents under Cromwell to favor public intelligence. The philosophic Locke spoke to his countrymen almost in vain. The example of her own New England colonies was unheeded.

Then came the period of individual effort and labor: Raikes, with his Sunday school in Gloucester, (1781;) Bell's first school in St. Botolph's, Aldgate, (1797;) Lancaster's first school in 1798, and his Royal Lancasterian Institution in 1808, which has become the British and Foreign School Society; then Bell's labors in founding the National Society in 1811; Pounds, the Portsmouth cobbler, founded the first ragged school in 1818, and Wilderspin the first infant school in 1824.

But how little individual and ecclesiastical labor had been able to accomplish for the instruction of the common people was shown by the published results of Brougham's parliamentary commission, and was driven home by the trenchant essay of John Foster on the Evils of Popular Ignorance, 1819. Even then twenty years were allowed to elapse before the department of education was established. Then thirty-three years passed before popular ignorance had so forced itself on the attention of the public that the elementary education act of 1870 became a law.

This law* and its successive amendments, the acts of 1873 and 1876, show that

*An abstract of this law was given in the annual report of this Office for 1870.

England has at last gone seriously and systematically to work to get rid of popular ignorance. Nothing can better show the wisdom, prudence, and success of the measures taken than the paper (now presented to the reader) by William Jack, M. A., LL.D., formerly one of Her Majesty's inspectors of schools.

THE RESULTS OF FIVE YEARS OF COMPULSORY EDUCATION IN GREAT BRITAIN.*

I do not propose to discuss the question whether the quality of elementary education in Great Britain has improved or deteriorated in consequence of the introduction into the country of compulsion. Few inquiries would be more difficult. There is no absolute standard of quality, and the question whether an increased amount of teaching in "extra subjects" has compensated for the falling off, if there is any falling off, in the acquirements ascertained by the pass examinations in reading, writing, and arithmetic, would be answered differently by different people. I use the word *results* for two things which can be measured in figures:

(1) The change in the *number* of children attending *efficient* elementary schools.

(2) The change, if any, in the *regularity* of attendance at school.

PROVISIONS OF EDUCATION ACTS IN ENGLAND AND SCOTLAND.

In the English education act of 1870, the government for the first time sanctioned the principle that wherever the school board of a locality believes that children ought to be compelled to attend school, parents *may* be compelled to send them under penalty of fine or imprisonment, under such by-laws as the school board may enact.

Since that time school boards representing a population of nearly twelve and one-half millions of people in England and Wales have passed and worked compulsory by-laws. Compulsion was, up to October, 1876, adopted by 46 per cent. of the whole population of England and Wales, and by 82 per cent. of the borough population.

In the new education act of 1876, England has adopted the principle of universal compulsion, creating a school attendance committee where there is no school board, and enjoining that committee or the school board of the locality to make and enforce by-laws and otherwise carry out the provisions of the act.

Its provisions are briefly these:

First. It is declared to be the duty of every parent to see to the elementary education of his child above five and below fourteen.

Second. No employer is permitted to employ—

(1) Any child under ten years of age, with certain—no doubt considerable—permitted exceptions; or

(2) Any child over ten and up to fourteen without a certificate either of education or of previous attendance of a due amount.

The employer is liable in penalties not exceeding forty shillings. The parent is liable for his child, and he may be fined or his child may be taken from him and sent either to a certified industrial school or to a new kind of certified day industrial school, which will give meals, probably in most cases a midday meal, but not lodging. The school board and the school attendance committee are to have power to make by-laws which can be legally enforced regulating the attendance of children. For the present the standard of education required after ten will be Standard IV,† that suitable to ordinarily well trained children between ten and eleven, and of school attendance 250 attendances (out of 450 possible) in each of five years after five years of age. These provisions will come into force fully in 1881. Up to Christmas, 1876, in consequence partly of some oversight in drawing the new act, there is no experience large enough to enable me to describe its working or forecast its results.

In Scotland, the act of August, 1872, for the first time adopted the principle of uni-

* This paper originally appeared in Macmillan's Magazine for November, 1876. It is now republished, with many additions by the author himself, and with his consent.

† Reading, a few lines of poetry or prose, at the choice of the inspector; writing, a sentence slowly dictated once, by a few words at a time, from a reading book, such as is used in the first class of the school; arithmetic, compound rules, (common weights and measures.)

versal statutory compulsion, and the school boards which are established in every parish in that country have since been charged to see that all children between five and thirteen attend school with reasonable regularity. Offenders are liable to prosecution by the school board before the sheriff. But there is no definition of regularity of attendance in the act; there is no power given to school boards to make *binding* by-laws in the matter; and the sheriff is the sole judge whether a school board prosecuting for irregularity is setting up a reasonable or an unreasonable standard.

In Ireland there is no compulsory law.

COMPARISON OF RESULTS—IRELAND.

In the belief that a statement of the actual results of the compulsory measures which have been tested by experience may be generally interesting, and in the hope that it may point to some important practical inferences, I have collated the statistics of the different countries and of several great cities. I owe my information to the official returns, and especially to the great courtesy of the school board officers for London, Birmingham, Liverpool, Manchester, Glasgow, and Edinburgh.

Ireland, as I have said, is under no compulsory law. Its educational progress may, therefore, be advantageously compared with that of Scotland and England, and especially with that of the four great English communities in which compulsion has been more or less gradually introduced since 1871, and with that of Glasgow and Edinburgh, where it has been introduced since 1873. The returns are those of the national board, whose schools certainly supply most of the educational wants of that country; though, since the figures given as the results of the inquiry of the primary education commission for Ireland held in 1868, there is no means of indicating the precise proportion of the work done there by outside organizations.

The *advance* of education in Ireland may be measured by the following figures:

Children on rolls, 1870	951,000
Children on rolls, 1875	1,012,900

—an addition in five years of 61,000, or 6 per cent. This provision of school education in Ireland may at first sight seem sufficient; the population being somewhere about five and a half millions, and one in six in school attendance being admittedly a very high figure, not reached by either England or Scotland. But the national board counts children on the roll in a way different from that general in England and Scotland. The details of that difference are explained in the Irish report for 1875, to which it is enough to refer my readers. In that year the board has for the first time given us the means of comparing attendance with population according to the scale with which we are familiar in England. It appears that, instead of 1,012,000 children on the rolls, 578,000 would have been so reckoned on the English method—say between one in nine and one in ten of the population on the roll. There is thus a great mass of uneducated children to draw upon, and I may say without any hesitation that the slow increase of about 1 per cent. per annum on the average of the last five years is *not* due to the supply of uneducated children in Ireland having been at all exhausted. The average daily attendance in national schools is 390,000, which is 67 per cent. of the roll attendance computed according to the English mode, and about one in fourteen of the population. The Irish mode of reckoning one attendance per day, however, is less strict than the English mode of two attendances; and I have no doubt that if the Irish were to adopt the English method, the Irish proportion of average to roll attendance would be lower than 67 per cent. The one important and certain result is that an addition of about 6 per cent. in five years represents the advance of the Irish national system, which is without compulsion.

The three tests by which I shall measure educational status will be these:

1. What is the average attendance and what proportion does it bear to the population?

2. At what rate has it been recently increasing?

3. What proportion of the children on the rolls are in average attendance?

The third question tests the regularity of the children. It is a rough and not a satisfactory test, but it is the only test available. No doubt the rolls are kept in a rather loose way in many localities, and it would be infinitely better if some statistical datum subject to no dubiety (*e. g.*, the number of all the children who have actually attended school during a certain time, say a year, fixed uniformly for the whole country) were substituted for the roll attendance, by the central authorities. In the mean time I have no choice, and although the test is a rough one, it is probably fairly sufficient.

SCOTLAND.

In Scotland the change to the new system was made in 1872. During the last year of the old system, the annual grant schools showed an average attendance of 214,000, being one in sixteen of the population. In the first year the change had scarcely begun to work, the average rising only to 221,000. In the second year, however, it rose to 264,000, and in the present year to 304,000. In three years, therefore, under the quickening impulse of a universal compulsory law, the average school attendance of Scotland has increased by 90,000 children, being 42 per cent.; while in five years the average attendance in Ireland has increased from 359,000 by 31,000 pupils, being 8½ per cent. The average attendance in national schools in Ireland in 1870 bore much the same proportion to the whole population as in privy council schools in Scotland in 1872. In 1875 the average attendance in national schools in Ireland was one in fourteen of the population, while in Scotland in privy council schools it was one in eleven.

These figures are certainly too favorable to the principle of compulsion. The Scotch act transferred to the annual grant schools a number of old parish schools, which formerly did a considerable portion of the work of the country, but which had not till then been included in the privy council returns. I have no data by which I can accurately measure the amount of this mere statistical addition to the privy council figures. It cannot have been so much as the whole difference between 1872 and 1874, from 214,000 to 264,000. Even if it were taken at that amount, the rise to 304,000, in what would then be *one* year, would be a rise of 15 per cent. In the list of schools actually added and to be added, I find that the number of new schools for which building grants have been obtained since 1872 is 1,383, being half as many as the whole previous supply.

The average attendance over all Scotland bears now the proportion to the roll of 75 per cent., which compares very favorably with the Irish average of 67 per cent., and the more favorably as a great number of the new scholars in Scotland belong to the classes whose children are most disposed to attend irregularly.

ENGLAND.

The effect of the changes which have taken place in England since 1870 is not masked by any statistical accident like the addition of the old parochial schools en masse to the annual grant list. In the year before the English educational act with its permissive compulsion began to operate, the average attendance of day scholars was 1,152,389, being one in nineteen of the population, whereas it is now (1876) 1,837,180, or one in thirteen of the population. It has risen 685,000, or 60 per cent., in the five years, while that in Ireland has only risen 8½ per cent., and that in Scotland has apparently risen 42 per cent. in three years. It may be comforting to ratepayers to learn that the schools already provided can hold a considerable number of additional children. Each department in England with accommodation for 163 scholars had an average attendance last year of 95. The accommodation provided in England is in excess of that used by as much as 70 per cent. In Scotland, as might have been expected, there has been no such extravagance in public money in anticipation of public needs. The Scotch schools have accommodation for 133 per department to meet an average attendance of 103, an excess of 30 per cent. The 70 per cent. of England is no doubt partly due to the passionate efforts made by managers during the English year of grace in 1871.

The average attendance in England, 67 per cent. of the roll, is identical with that

of Ireland; a result which is somewhat surprising, considering that 60 per cent. of new and untrained, and consequently irregular scholars, have been added to the school lists during the last five years.

These are the general results for the three countries. But in England compulsion is only partial, and although it is universal in Scotland it is only at the beginning of its work. I shall, accordingly, look somewhat more in detail to the results of the application of compulsion in the large cities, which are types of 82 per cent. of the borough population of England.

The act of 1870 decreed a school board for London, other cities being left to the freedom of their own will. The first step which the board took was to discover the actual school supply in the metropolis, and to make a reasonable estimate of what was wanted. The government theory was, that accommodation ought to be provided for one in six of the population. After making allowances for the middle and upper classes, and for the necessary absences, the school board of London decided that a supply for one in eight of the population was enough to provide for elementary schooling in its district. Accordingly it was necessary to have accommodation for 420,000 children, the population in 1871 being approximately 3,356,000. The board found schools existing in 1870, or erected or projected between that and 1873, for 308,000, so that their first duty was to build for 112,000 more children. Many of the existing schools were inefficient; they had to work gradually toward the remodelling or uprooting and subsequently the replacing of these inefficient schools; they had to alter the habit of irregular attendance. Between the spring of 1871 and the Michaelmas of 1873, two and a half years, they had increased the average attendance by 60,000. At midsummer, 1876, the average attendance had risen to 305,749, an increase of 131,448 over the spring of 1871, when it was 174,301. At Christmas, 1876, it was 313,985. Thus in five years, to take round numbers, the average attendance on efficient schools has risen by 75 per cent. in the metropolis, against the Irish 8 per cent. in five years. The latest return shows that the increase is not stopped, and indeed that it shows no sign of stopping. Besides, there were 42,000 in non-efficient schools at midsummer, 1876, which is 12,000 fewer than in the previous year. There were 87,000 who ought to have been at school, but who were absent from various causes at midsummer, 1876. This official estimate of deficiency is founded on the theory that 575,000 children between three and thirteen require elementary teaching — say 1 in 6 of the population. But the school board of London does not think it necessary to provide school accommodation for more than 440,000 — say 1 in 8; and in fact it had provided up to the middle of 1876 for 420,000, which was its original estimate of what would adequately supply existing deficiencies. It has only to provide in addition for the children representing the increase of population since 1871, in efficient schools. The provision at Christmas, 1876, is for 433,190 children; the total number of children between three and thirteen requiring elementary education is estimated at 574,693.

The change wrought since the foundation of the school board system is thus enormous. Considering the number of untrained children drawn for the first time within the school board net the regularity of attendance secured is also very remarkable. It was 75 per cent. of the roll in midsummer; 74.5 per cent. at Christmas, 1875; 76.5 per cent. at midsummer, 1876; 77.4 at Christmas, 1876—rather better than that in Scotland; and these results are to be compared with the 67 per cent. of Ireland, where there is no compulsion, and of all England, where it is only partial.

Of the 87,000 not attending school in the metropolis at midsummer, 1876, I must add that 65,000 are under five, an age when people in Scotland scarcely think of sending children to school at all. The infant school system is, it is well known, much more developed in South than in North Britain.

For the sake of simplicity, I have neglected the varying increases of population in the large towns. To take them into account would introduce no material change in the comparative figures, and very little change of any kind.

PROSECUTIONS UNDER THE EDUCATIONAL ACTS — LONDON.

It remains for me to look at the dark side of compulsion. In London two preliminary

notices precede the parent's summons before a magistrate for neglect of his children. These warnings generally have the effect desired. Thus there were 35,000 A notices in the half year ending midsummer, 1876, which brought 13,000 to school or made them more regular. Then there were 23,000 B notices; these were followed by 3,990 summonses, and by about 3,400 fines. At that time in London 150 people were summoned and 130 people were fined every week for neglecting the education of their children. In the half year ending Christmas, there were 30,715 A notices, 20,638 B notices, 4,273 summonses, 3,492 fines. The cost of this machinery for the year is £24,000, being 1*s.* 7*d.* per head per annum on the average attendance secured. But the cost, heavy though it is, seems to me scarcely worth counting, compared with the feeling among the poor which I should expect these prosecutions to create. There is no sign, however, that the efficiency of the present compulsory action is diminishing. The addition to the attendance in the half year ending midsummer, 1875, was 17,600. In the half year ending Christmas, 1875, it was only 1,400. But the winter was an exceptionally severe one, and the increase in the half year ending midsummer, 1876, has again risen to 17,252. The increase in the half year ending Christmas, 1876, is 8,236.

Figures and percentages are apt to leave rather a vague and shadowy impression, and it may help my readers to realize the difficulty as well as the extent of the problem practically presented to school board officers if I take four instances at random from the report of the London school board. They seem to me to throw a vivid light on the infinite variety of domestic and social entanglements in which the enforcement of compulsion inevitably involves us.

Richard Rust was summoned for Richard, aged 9. The lad is a very bad one, and was rapidly going to ruin. The father having arranged with some friends in the country to take charge of him in the future, the summons was withdrawn upon payment of costs.

Tomlin. In this case, notwithstanding fines were imposed, and a warrant applied for and granted for the apprehension of the defendant, no good result ensued, as the warrant officer was unable to apprehend the father, who worked in the country, and seldom or never returned home except on Sundays. Application was made to the magistrate for a summons against the wife, on the ground that she had the "actual custody." This was granted, but she removed, and the visitor has been unable to ascertain her address. She probably went into the country.

Richard Raymond was summoned at Lambeth police court for neglecting to cause his son William to attend school. The father stated that the boy had been refused admission on account of an impediment in his speech. In order that inquiries might be made Mr. Ellison adjourned the case for one week, when the statement of the father being proved false, a fine of 2*s.* and costs was inflicted.

Henry Warner, summoned for his son, aged 10, pleaded that it was no fault of his; that his wife was master of the situation and would not let the lad attend school. Case was adjourned for inquiry, which resulted in establishing the fact that the defendant was certainly not the master of his household; but the magistrate said he ought to be, and fined him.

A family like Rust's shifts its residence out of London. The case drops out of the cognizance of those who have long been watching it, and new officers have to take it up from the very beginning. Tomlin's father is never at home except on Sundays, and when the school board officer summons the mother who has "the actual custody," Mrs. Tomlin slips through his fingers like an eel. Raymond's father pretends that he has an impediment, and that schools won't take him in. Poor Warner has a wife who won't let the lad attend school and won't let Warner send him there. There are forty cases for every one of these every week; eight thousand such stories are told annually before the police courts of London; every one of them with some ingenious variation of pretended excuse or some miserable and perplexing real difficulty.

LIVERPOOL.

The statistics of Liverpool at midsummer, 1876, are as follows: The cost of compulsion is about 2*s.* per child on the roll, about 3*s.* per child in average attendance,

which is about twice what it is in London. The increase in the average attendance on public elementary schools in five years is from 33,827 to 41,192, being 21 per cent., as against the 8 per cent. of Ireland or the 75 per cent. of London. The average attendance has fallen from 70 per cent. to 64 per cent. of the number on the roll, which is very significant of the class of children brought in by the compulsory clauses. Besides the public schools, the authorities of Liverpool estimate that there were 10,058 on the roll of all other elementary schools in 1871, and 14,300 of all others in 1875. Liverpool has advanced, but very much more slowly than London. It started very much better than London did, and had far less leeway to make up. It is difficult precisely to compare its present educational position with that of London, because the non-public schools occupy much more of the ground in proportion than in the metropolis. Its population was 493,000 in 1871, and there were 14,000 seamen belonging to the port. So far as school attendance goes, there is probably little now to choose between the two cities.

The Liverpool authorities have been good enough to supply me with the totals for April for seven years. They are:

April, 1871	31,438
April, 1872	37,283
April, 1873	36,323
April, 1874	38,296
April, 1875	41,528
April, 1876	41,679
April, 1877	45,163

in average attendance in all public inspected elementary schools. This shows a rise of 47 per cent. in six years, the rise last year having been especially remarkable. The average attendance was 71 per cent. of the roll attendance in 1871 and 70 per cent. in 1877.

In Liverpool great attention is paid to the working of the compulsory by-laws. In the year ending October 1, 1876, 6,182 notices were issued to parents, and 1,817 prosecutions took place in consequence. This would correspond to about 12,000 in London, the rate there being 8,000. Before the parent is prosecuted, parents are brought by the notices to meet a member of the board and the superintendent of visitors, and such meetings are held two or three times a week. For instance, I am told, "In one small district, having about 2,000 children, the parents of 355 were brought before a member of the board, and the present result is that 124 are regulars, 11 are delicate, 10 have removed, 6 are over age, 1 has been exempt, and there are 203 who are still irregular; 24 of these have been summoned more than once. Those from the 203 who are still irregular and have not been summoned are not considered irregular enough for a summons."

In 1876 there were prosecutions for 2,119 children, of whom 1,638 were prosecuted for once and 481 more than once. The result is that 518 have become regular, 851 are absent from reasonable causes, and the remaining 750 are more or less black sheep. Let me add what the clerk of the Liverpool school board tells me of the difficulties of compulsion:

The great difficulty of enforcing regularity of attendance in large towns like Liverpool is the enormous number of cases in which infractions of the law are committed, so that although the number of cases actually prosecuted each week is considerable, they form but a small section of the persons who have rendered themselves liable to prosecution; again, there are a considerable number of cases in which prosecution carried on to the length of imprisonment over and over again completely fails to secure the attendance of the child. These cases no doubt will be to a large extent met by the provisions of the new act when in operation. Another, and perhaps the principal difficulty, arises from deficient means of information as to cases of neglect. The knowledge which the board has of the age of children and often of their very existence is derived at present mainly from the statements of the parents, and is therefore in a very great number of cases no doubt misleading where the pressure of compulsion is most needed. I have little doubt that in Liverpool, and in almost every other large town,

there are hundreds, if not thousands, of children of school age about whom the school board knows nothing. This difficulty will, to a considerable extent, be met in the future by the power which is given in the new act to require returns of births and deaths from the local registrars, though even with this information it will be a hard task to keep some of the families in view, through their frequent migrations, accompanied in many cases even by a change of name.

MANCHESTER.

The statistics of Manchester are somewhat similar to those of Liverpool. The Manchester attendance returns were first collected by the board in December, 1871. At that date the average attendance was 26,328, and the number on the roll was 39,240. The quarterly returns for the quarter ending June, 1876, showed 32,220 children in average and 50,461 in roll attendance. Thus, in four and a half years, the average attendance has risen 22.5 per cent., or 5 per cent. per annum. The population of Manchester has remained practically stationary during the time, so that the same extent of increase was not to be expected as in the case, for instance, of Glasgow and of London. But the general effect on the results of making the allowance would nowhere be of very great importance.

The regularity of attendance may be measured as usual by the proportion which the average bears to the roll attendance. It was 67 per cent. in Manchester before compulsion; it is now 64 per cent., and the change seems to signify that a new class, whose attendance it is unusually difficult to secure or to make regular, has been brought into school. In Manchester great attention has been paid by the board to educational statistics, and they have a method of their own for testing regularity. They find the average attendance for the quarter much in the usual way and compare it with the average number present at all, which is the average of the entire children attending in each week of the quarter. The proportion is called the percentage of regularity. It was 80.5 in 1877, and 78.8 in 1876. The average attendance had risen from March, 1876, to March, 1877, from 32,114 to 34,952, or 9 per cent. in the year.

The compulsory powers of the school board are extensively used in Manchester. The clerk of the board tells me that the recent average is 70 or 80 cases brought before the magistrate per week. The pressure is exercised on two grounds: non-attendance, and irregular attendance; and the board at present aims to constrain children to give at least 80 per cent. of possible attendances. The population of Manchester is 351,000, so that 70 per week, say 3,500 per year, represent one prosecution for every 100 persons. But this rate is only the existing or recent rate in 1876. In the whole of 1875 there were only 1,039 prosecutions, say 20 per week, or 1 in 340 of the population. I suppose that the increased activity of prosecution is largely due to the rise in the increased number of attendances, from 50 to 80 per cent., required under recent by-laws, in the last week of which I was told the prosecutions amounted to as many as 130, which is pretty much the same as for the ten times more populous city of London. I do not know the expense of school board prosecutions in Manchester.

BIRMINGHAM.

In Birmingham the results are very remarkable. The city was the headquarters of the Education League, and that powerful and intelligent organization ultimately controlled and now controls the school board. Noblesse oblige. The Birmingham board felt itself bound to show what educational zeal could do. In December, 1871, the average attendance in public elementary schools was 16,263. Compulsion was not resorted to till May, 1872. Then and since then the average has been—

December, 1871	16,263
May, 1872	20,028
May, 1873	28,035
May, 1874	30,339
May, 1875	34,718
May, 1876	38,817

Thus, in four and a half years the apparent increase in Birmingham has been 138 per cent. When account is taken of half timers, according to the modes of computation of the department, with which I need not trouble my readers, the increase in these four and a half years is the prodigious one of 150 per cent. In addition to this, the proportion of average attendance to the roll attendance has risen from 62 to 70 per cent. These magnificent results make the record of the first two school boards of Birmingham memorable in the educational annals of England. They have not been obtained, however, without great exertions and severe pressure. Since May, 1872, prosecution has been resorted to in 7,515 cases, an average of 1,900 annually. At that rate the annual average for London, with its 306,000 of attendance, should be 17,000 instead of 8,000. Birmingham manages compulsion cheaply. Prosecutions used to cost there £1,000 annually. They now cost, under a system of specially reduced fees, only £300. But the chief expense of compulsion in London, and probably everywhere, is due to the staff of visitors. The mere legal expenses of compulsion in London were under £300 in the half year ending midsummer, 1876.

The compulsory action taken in London, Birmingham, Manchester, and Liverpool is very stringent. In London there is one prosecution annually for every 450 of the population; in Birmingham, about one for every 200; in Manchester, about one for every 100 in 1876, and about one for every 340 in 1875. To me it appears doubtful whether the poorer classes will long endure so severe a pressure with patience. As the conviction of the necessity of school attendance and the habit of obedience to the law deepens in the masses of the people, we may hope that the same results, or others even more satisfactory, may be obtained at a far lower cost of legal process, with all the hardships and harassments which it involves.

GLASGOW.

In these respects the procedure and experience of Glasgow and Edinburgh are in remarkable contrast with that of England. The authorities in Glasgow started two years later than in England, and as new schools have often to be built before children can be driven to school, the first years of compulsory action are always the least effective. The results are these. In inspected schools and not inspected efficient schools charging the same as board schools there were 30,103 in average attendance in 1873; 36,568 in average attendance in 1874; and 42,675 in average attendance in 1875. The rise in two years has thus been 12,572, or 42 per cent., a rate almost as remarkable as that of Birmingham. The percentage of average attendance to roll attendance amounts to 79 per cent. in 1873, 76 per cent. in 1874, and 78 per cent. in 1875, which is still more remarkable. The results for October, 1876, are that Glasgow has managed to raise her average attendance to 84 per cent. of the numbers on the roll.

Some not inspected efficient schools are included in these estimates; but they are a small fraction of the whole, and their exclusion would not materially alter the proportions of increase. They account for about 3,000 children. Setting them aside, indeed, we should have an increase of 50 per cent. in the two years in the inspected schools, which is nearly or quite equal to that of Birmingham. The rate of progress has not, however, been maintained in the latest returns, which show an average of 43,358, a rise of scarcely 2 per cent. on the preceding year. The accommodation in inspected schools has risen in the three years from 31,327 to 50,935, being 62 per cent. The inefficient schools have, meanwhile, been steadily disappearing.

The remarkable part of the case of Glasgow is the manner in which the compulsory clauses have been worked. I have thus described the process elsewhere:

The Glasgow secret is very simple. The board goes down among the defaulting parents, holding frequent meetings in their own localities, to hear the stories of the poor and to persuade them for their own and their children's good. They try everything before they prosecute. They distribute copiously fly leaves narrating the facts, so as to make every actual prosecution go as far as possible in persuading other people. Gentleness would be useless without firmness, and the Glasgow board has not worn its sword of justice altogether in vain; but it has shrunk from prosecutions with an energy and a success which, now that compulsion is to be universal, I hope we may

see widely imitated. In some rural districts, and perhaps with sensible women for compulsory officers, prosecutions ought to be almost unnecessary. The fact that the law is in the background ought, there at least, to be generally sufficient.

Many people seem to doubt the efficacy of "fly-leaves," and to want something a little more like "fly blisters." I quote from a speech delivered by Mr. Mitchell, the convener of the Glasgow school attendance committee, on October 9, 1876:

My belief is, that the fly-sheets on which a few of the worst cases are recorded, with the corresponding penalties, are far more effectual with flagrant defaulters than actual prosecution itself would be. They see there, or have read to them, details of prosecutions wherein parents neglecting the education of their children have been fined and imprisoned; and the dread of a similar infliction on themselves has an effect probably more powerful than a sheriff's warrant. Those of us who witnessed the proceedings in the sheriff's court connected with the few prosecutions which we instituted last year must have been impressed with the conviction that the cure was nearly as bad as the disease. I am inclined to the belief that we have nearly as many necessary illustrations for our fly-leaves as may serve our purpose and prevent the need of prosecutions for many days to come.

I supplement what I have said above by Mr. Mitchell's further statement that the conduct of the school board officers has naturally been animated by the spirit of their masters:

Without doubt these meetings have had the best possible effect, both directly and indirectly. Still I would remind the board that for one parent dealt with in this way there are a hundred defaulting parents who have been induced to send their children to school by means altogether different. The call of the school board officer, the printed form setting forth the requirements of the education act, the persuasive remonstrance and warning which the officer plies *during repeated calls*—these have been by far the most effectual means in enabling us to reduce the number of defaulting parents. The officers, no doubt, who are always present at the board meetings with defaulting parents, have largely imbibed the spirit of forbearance and sympathy which the board has shown to the poor people who are brought before it, and this has given them access to the parents and a success in their work which they might not otherwise have attained.

The monthly table of the school officers shows that 9,283 children were reported by the teachers irregular and absent; that there were 969 vagrants, and 1,192 left over from the previous month. The result of dealing with these children was to send to school 7,189. There were 661 temporarily ill, 238 exempted, 79 under six years of age, 1,190 removed or not found, 620 vagrants, 233 defaulters, and 1,236 irregulars to carry forward to the next month.

The name of the convener of the Glasgow school board school attendance committee will long be held in honor. In the three years of his reign the school attendance committee has dealt with 20,515, less by removals 2,819, and exemptions 1,684—say 16,000 defaulting parents. Of these, 8,000 sent children to school after a remonstrance and personal warning by visit of the officers; 5,800 more went to school after notice sent to them warning them of the possibility of prosecution following that notice. The members of the school board themselves met with the defaulting parents on eighteen separate occasions, and 1,400 children of the balance of nearly 2,200 were sent to school in consequence. *Only* 51 *have been prosecuted during the three years of the action of the board.* Everything is done to avoid prosecutions; it is only when everything else fails that they are resorted to. The ratepayers' money is saved; the good will and the consciences of the people are enlisted in education; the work of future boards is made infinitely easier, and attendance quite as regular as elsewhere has been secured. No part of the labor of the Glasgow board has been more profitable than the eighteen meetings held with defaulting parents in different parts of the city where the people live, between February, 1874, and January, 1876. There were 1,834 parents summoned to meet the board, representing 2,269 children. All but 250 of the parents answered. The board divided itself into fragments, each sitting separately, and in the whole of a long day getting through about 100 cases each. Mr. Mitchell has shown how to meet the greatest difficulty of the compulsory system. His is a kindly and patriarchal government. Parents are, so far, reasonable creatures, and an ounce of gentle but firm persuasion seems to go as far with most of them as a pound

of punishment. Even if, on a review of the whole circumstances, it might seem desirable, it would in some cases be difficult to go back on the decided steps which have been elsewhere taken. And these steps, it must be remembered, have been fairly effectual. In London and Birmingham the results obtained are undoubtedly satisfactory, and in Liverpool and Manchester they are very considerable. I do not pretend to criticise the action of men to whose admirable labors this country and these great communities are deeply indebted. I have no wish to make out percentages of credit for the different communities and school boards. If I did I should certainly have to take account of an infinitude of circumstances neglected here. I am dealing only with actual results; and nobody will doubt that persuasion, with punishment in the background, is a better way than punishment, if only it be a possible way; and Mr. Mitchell has shown that it is possible in Glasgow, whatever may be the truth with regard to other great cities which have acted more strictly. Half the country comes now, for the first time, under compulsory laws, and we may hope at least to disseminate education as widely as in Glasgow by the same wise and benevolent effort among a willing people.

Compulsion costs far less in proportion in Glasgow than in Liverpool; about 1*s.* 2*d.* per head of the average attendance, instead of 1*s.* 6*d.* in London, and 3*s.* in Liverpool. The amount, which is £2,400, instead of £5,700 per annum for Liverpool, is considerable; but it is less than that incurred by more stringent action. The process has, so far, been reasonably effectual.

EDINBURGH.

The results obtained in Edinburgh are less striking. The numbers of children on the rolls of all the primary schools in the city, with an average fee of 9*d.* per week or under, including the whole of the free schools and the Heriot schools, are shown in the following table:

	Children on roll.
1872–'73	22,489
1873–'74	24,749
1874–'75	26,069
1875–'76	25,309

—an increase only of 2,820 in three years, say 12½ per cent. The increase would have shown much better but for the falling off in the last year. The rise in average attendance corresponds. I have not the figures for 1875-'76, but the proportion of average to roll attendance was 82.8 in 1872-'73, 80.8 in 1873-'74, 81 in 1874–'75, and 84.4 in 1876-'77. Thus, though the compulsory clauses have driven in the careless and irregular classes, the regularity of attendance appears to have increased.

The case of Edinburgh is altogether peculiar, the free Heriot schools, where regular attendance has long been made the condition of obtaining a good elementary education free, doing about one-fourth or one-fifth of the work. The Edinburgh board seem to think the Scotch powers of prosecution too limited, and are anxious to have the privileges conferred on England under Lord Saunders's act of 1876 extended north of the Tweed. They say that "under the Scotch act the parent is brought before a magistrate and convicted; the child is sent for a day for two to school and then withdrawn, because he knows that nothing further can be done to him for another three months," whereas defaulting parents can be prosecuted once a fortnight under Lord Saunders's act. I should have inclined to think once a quarter a better arrangement than once a fortnight.

The Edinburgh board has acted much as their Glasgow neighbors have done. They held in all 17 meetings to deal with defaulting parents. They summoned 361, of whom they ordered 174 to be prosecuted, of whom again they found that 144 submitted within the week before the prosecution was begun. Thus in the three years 30 were prosecuted and 14 fined or imprisoned. The Edinburgh board have not hitherto prosecuted for children under seven years of age, nor the Glasgow board for children under six. In the London school board detailed lists of special cases I find that 11 children

of six and 1 child of five seem to have been prosecuted. The child of five, however, was along with two elders of the same irregular family. I presume, therefore, that prosecution for children under six years is very rare in London and probably throughout England.

The actual legal cost of thirty-nine prosecutions in Edinburgh up to June 30, 1876, was £67, and the cost of these prosecutions, instituted largely in terrorem, is not probably a material reason for keeping down the number. The experience of England points to the probability that more prosecutions may be found ultimately necessary in Scotland than in these earlier years of compulsion, Scotland having started two years later than England. The trawl net of the school board must go gradually deeper into the lowest and most neglected strata of society, and the most irregular classes will probably be those last brought in and most difficult to deal with. The actual cost of legal proceedings in Liverpool and Birmingham is far less in proportion than in Edinburgh.

In Liverpool, with its 1,800 cases a year, the cost of prosecutions was £58 in 1875, £93 in 1876, and £142 in 1877, and it is obvious that these sums interpose no barrier in the way of the penal enforcement of the act. The main cost of compulsion is and must be due to the little army of district visitors. There are 205 in London alone, of whom I am glad to see that 22 are women. The salaries of these officers must be paid whether legal proceedings or perpetual persuasion are the favorite mode of operation.

There are few presentations of statistics to which some objection may not be taken, and the educational statistics of the large towns under school boards, and of the country so far as it is under the official cognizance of the privy council, can form no exception. Some private adventure schools for the classes that need elementary education still survive, and a few of them may be efficient. It would scarcely affect my figures, the main value of which is comparative, if I attempted to estimate these additional elements in the problem on the inadequate data which are alone accessible. If I confine myself to the broad, general conclusions which lie on the surface of the figures I have given, I think I cannot go very far wrong. I throw together the results for the five cities, excluding Edinburgh as exceptionally situated, and taking the figures for 1876:

Cities.	Cost of compulsion per child in average attendance.	Present ratio of cases prosecuted annually to population.	Annual increase under compulsion in children taught.	Change under compulsion in regularity of attendance.
	s. d.			*Per cent.*
London	1 7	1 in 450	15	From — to 76.5
Liverpool	3 0	1 in 270	4	From 70 to 64
Manchester		1 in 100	5	From 67 to 64
Birmingham		1 in 200	31	From 62 to 70
Glasgow	1 2	1 in 20,000	25	From — to 78

I have not taken into account the educational position of the great towns at the beginning of the compulsory era, and that is undoubtedly an element, and a considerable element, in the problem. But there is none of them in which there was not room for very great advances, and in most of them ample room is still left for increasing both the amount and the regularity of attendance. The population of Manchester, for instance, is 8,000 more than that of Birmingham, but the average attendance there in 1876 is only 32,000, against 39,000 in Birmingham. The London average attendance would need to be some-

thing like 380,000, instead of 306,000, to reach the Birmingham level. The Glasgow attendance still remains very far below the point which it may be expected to reach. I have contented myself with recording the rate of advance from a position far behind that which the great cities have now reached, to one distinctly behind that to which they will probably soon attain.

There is another point to which I have adverted already. The Scotch act does not, like the English act, suggest and authorize the making of by-laws requiring so many attendances out of the whole number possible. The sheriff of Lanarkshire might refuse to recognize any standard the Glasgow board inclined to set up. But the by-laws regulating the amount of attendance with which the English boards will be satisfied are permissive, and at their own discretion, and if they choose they may dispense, and Mr. Hughes, a leading member of the Manchester school board, seems to think that they ought to dispense, with such by-laws. These rules multiply statutory offences according to an arbitrary definition. They create and as it were authorize a recognized minimum of attendance. The Birmingham board have no minimum named, and are in that respect much in the same position as the Glasgow board. Their by-laws require perfectly regular attendance, and they are legally entitled to enforce them at their discretion. Perhaps the Glasgow board and the other Scotch boards could not if they had wished have prosecuted as frequently as their neighbors in England. Mr. Mitchell thinks so, and believes that a very great deal of the greater leniency and the smaller amount of prosecution in Scotland is due to the more lenient spirit of the framers of the Scotch act. He is most probably right; and one of the main points to which I hope that this discussion may direct the attention of school boards is the policy or impolicy of very numerous and stringent by-laws.

I have said nothing about the application of the industrial schools acts or the new day feeding schools. The great expense of schools of the former class has made school boards everywhere shy of touching them, and the new experiment is scarcely begun. But it is my belief that the duty of universal elementary education, enforced by compulsory provisions, can never be completely brought home to the poorest classes till there has been a considerable development of these institutions.

I think that my figures point to this, that the best results, both in increased quantity and in regularity of attendance, are not necessarily connected with the strictest working of the compulsory law. Manchester, which seems at present to be strictest, and Liverpool, which is third on the list, are lowest in both respects. Birmingham, which is second in strictness, is highest in increased quantity, as well as in actual amount of education, and third in respect of regularity of attendance, which has risen there in a remarkable degree. London, which seems most lenient of the four great English cities, has increased education much more rapidly than Manchester or Liverpool, though it seems to have now reached very much the same level in respect of quantity. It has a more regular attendance than either of these cities or than Birmingham. Glasgow, which in respect of compulsory action by legal process is almost ludicrously lenient in comparison with the other cities, stands highest in respect of the regularity of attendance obtained, and second in respect of the increased quantity of education. Of course neither Glasgow nor any other board can reap where it has not sowed, and the paucity of legal processes is no sign that the Glasgow board did not spend an indefinite amount of labor in securing the results it has obtained. I am speaking only of the last resort to the pains and penalties of law, and I think I can scarcely be mistaken in saying that my figures almost disprove the theory that the tighter the screw is pressed down in the way of actual punishment the more effective must the pressure become.

I do not care to press the inferences that the facts I have collated seem to me to establish any further than these five conclusions:

1. That the need of the country for compulsory education was a crying need in 1870.

2. That the success of the experiment which has now been tried in Scotland, and in nearly half of England, justifies the modest advances that have been made by the government in the bill of the present year.

3. That compulsion has been carried out in one great city with great efficiency, and with a very trifling amount of legal process.

4. That no connection between stringent *legal* compulsory action and great educational results is indicated by the figures. It is almost needless to say that I do not suppose that a school board can safely leave the matter to take care of itself.

5. That there is no agency short of compulsion which can bring Ireland on a level, in popular education, with her sister countries.

INDUSTRIAL DAY SCHOOLS.

Mr. Charles L. Brace says decidedly that the public schools, juvenile asylums, protectories, and reformatories are not sufficient to meet the wants of society with respect to neglected, destitute, and exposed children, but need to be supplemented by the day industrial schools, in which only food and instruction (both scholastic and industrial) are provided, the children going home at night. "The public school system," he says, "breaks down in one direction, and does not reach the classes who need it most." The great majority of non-attendants at school in New York are not vagrants; for a like reason they are not fit and lawful subjects for asylums, protectories, or houses of refuge. The majority are busily or industrially employed. It is for this reason that the compulsory law has broken down so far as this class of children engaged at street trades is concerned. They are forced to be employed during a portion of the school hours, and they cannot meet the first demands of the public school system—punctuality and regularity of attendance. Then there is an immense number of cases where "the supplying of a daily meal or a few gifts of clothes or shoes will often make to a poor family sufficient difference to enable them to withdraw their children from the street. Moreover, this class of street children needs peculiar treatment as to habits of cleanliness, moral instruction, and industrial training. The free use of the bath, the learning of some simple industry, and the moral influence of devoted volunteers, who come down from the fortunate classes to aid them, often save them from criminal courses afterward. Whatever is done for this great class of exposed and destitute children must be done by private associations, though it is but fitting that they should have public assistance. He continues:

The effect of these schools in the diminution of juvenile crime in the city of New York is remarkable. The great majority of their attendants are destitute and exposed little girls. In former years, these children as they grew up became street vagrants. The commitments of females for "vagrancy," in the city, sixteen or twenty years ago, reached a fearful amount. The tables show a decrease in fifteen years of 5,700 commitments among girls and women. If we take the average annual expense of a prisoner as $150, (which, considering all expenses, is a fair estimate,) and suppose each of these girls imprisoned on an average four months for vagrancy, we shall have in the expenses of their maintenance, a saving to the city in a single year of $285,000; all this being only one result of the industrial schools. When we find in twelve years a reduction of commitments for thieving of 664 females, each of whom would cost the city at least $100, or eight months' imprisonment, besides considerable property destroyed and lost, we find another saving in one year of over $66,000; and when we hear of almost no young girls sentenced for petit larceny by our city courts, we can understand something of the economy as well as the moral effects of prevention.

If with the establishment of day industrial and feeding schools, the school authorities of our cities have the power granted them of compelling half time attendance at schools, and they themselves open "half time" schools for children working at street trades, we shall see an even greater progress made in checking childish vagrancy and crime.

THE BOSTON WHITTLING SCHOOL.

An exceedingly interesting experiment has been in progress in Boston under the care of the Industrial School Association, Rev. Geo. L. Chaney, president, and Miss S. C. Paine, secretary. The last report is so exceedingly suggestive that I give the descriptive text in full.

In the winter of 1876–'77, the Whittling School, which had been carried on for five seasons in the chapel of Hollis Street Church, Boston, Mass., united with the industrial school, conducted for two seasons in the Lincoln building, and formed the school described in the following report. The friends and supporters of both schools,

and others interested in the cause of industrial training, formed an association called the Industrial Education Society, and this association has developed and maintained the school.

Mr. Frank Rowell, of the firm of Allen & Rowell, photographers, had been the superintendent of the Whittling School from its beginning, and he generously consented to take charge of this school without other remuneration than the satisfaction he would take in its success. Messrs. J. H. Fifield and Charles B. Cox, practical wood carvers, were employed to prepare the lessons and give the instruction. Professor Whitaker, of the Institute of Technology, gave much valuable assistance in the formation of our plan, and to these gentlemen we are chiefly indebted for its success.

The city gave us the use of the ward room on Church street, and there, on the evenings of Tuesday and Friday of each week, from seven to nine o'clock, the school has been held.

This room had to be prepared for its new uses. Firm work benches were set up, giving each boy a space for his work four feet in length and two and a half feet in width. Each bench had a vise with common wooden jaws and an iron screw, a drawer with lock and key, in which the tools were kept, and a gas burner with movable arm. Each boy was provided with a large work apron of cotton drilling. All the benches, tools, and aprons were numbered, and each boy was made accountable for their care and keeping.

Printed rules of the school were pasted on each bench, and every precaution taken to secure good discipline.

BENCH REGULATIONS.

1. Be at bench at seven o'clock, according to your number.
2. Do not leave your bench without permission.
3. Give all your attention to your own work. Do not notice anything that others are doing unless requested to do so.
4. Make no unnecessary noise, such as whistling, &c.
5. Keep your bench neat, and do not deface it in any way.
6. After work place all your tools and other equipments in your drawer, according to your number, and return the key to teacher.
7. Every boy will be held accountable for the tools placed a this bench for his use, according to his number.

Thirty-two boys were admitted to the school. Their ages ranged from twelve to sixteen. About half of them were still attending the day schools; the others were employed in stores or offices. They came from the Sunday schools of the Hollis Street Church and the First Church, and from the Lincoln building. Perhaps twelve of them had had some instruction in the use of the jig-saw and knife, but none of them had had any previous training in wood carving or the use of the chisel. There were more applicants for admission to the school than we could receive. If any boy was absent two successive evenings his place was taken by another. A rank list was kept and pasted on the wall, and each boy knew how his work was estimated by consulting the list. A course of twenty-four lessons in wood carving was prepared with special reference to securing the greatest amount of instruction with the least expenditure for tools and material. It was not designed to make finished workmen in wood carving, but to take advantage of the natural inclination toward handicraft, the Yankee taste for whittling which belongs to most boys, and to develop it and guide it to useful applications.

The tools used in the following lessons were the flat chisel, the gouge, and the veining tool or small gouge. Smooth blocks of white wood, six inches long by two or three inches broad and one and a half inches thick, were the material worked upon.

1. The first lesson aimed to teach the boys to cut a concave chamfer around the block, keeping carefully within the lines drawn parallel with the edge of the block, and making the mitres perfect. They were also taught to keep the dip of the gouge even throughout.
2. The second block had eight corners instead of four, as in the first lesson, and the same manipulations were continued.
3. The third block had curved corners.
4. The fourth lesson introduced flat chamfers, with vein lines cutting across the block.
5. In lesson fifth the vein lines of block No. 4 were stopped before coming to the edge.
6. The sixth lesson introduced a pattern or ornamental figure for veining.
7. No. 7 taught the boys to make perfect corners with vein lines.
8. The shape of block was changed and a new pattern for veining given.
9. This lesson taught how to make round ends to flutings.
10. Finishing mitre ends of chamfer.
11. Fluting, with especial care in keeping dip of gouge even and making the mitres perfect.
12. Carving diamond points all around the block and fluting.

13. Making perfect projections around the block.
14. } Fluting and finishing the end of flute.
15. }
16. Same as No. 15, with change in shape of block.
17. Making scroll corners.
18. } Same as No. 17, with change in pattern.
19. }
20. } Same as No. 19, with new pattern.
21. }
22. Cut corner chamfer and flute.
23. Same as No. 22, with new pattern.
24. Make perfect mitres, with sharp points at mitres.

In one of these lessons cherry was substituted for whitewood, but it was too hard for the younger boys. It will be noticed that no specific article was made in the school. The variety of manipulations and change of patterns were enough to maintain the freshness of the scholars' interest without introducing the manufacture of any article of trade or commerce.

The object of the school was not to educate cabinet makers or artisans of any special name, but to give the boys an aquaintance with certain manipulations which would be equally useful in many different trades. Instruction, not construction, was the purpose of this school. After the blocks were finished they were placed in a rack on one side of the room, and each boy's progress could be seen by consulting those specimens of his work.

The blocks were prepared by the teachers before the school opened. If another term of instruction could have been given, the boys would have been taught to prepare the blocks themselves.

Those of them who have been trained in industrial drawing in our common schools would be perfectly competent to make their own patterns. As an illustration of this, one of the teachers said that he took some of the patterns from the drawing book of his own child, who was a scholar in one of our public schools.

Does not this incident show the natural sequence of such a course of hand culture as we have been describing upon the education in drawing now prevalent in our common schools? One such work school as we have described might furnish four hours' instruction every week for one hundred and ninety-two boys; or if evenings were added, for two hundred and eighty-eight boys. This is more than the number of pupils between the ages of thirteen and sixteen commonly found in any one grammar school. We cannot but believe that it would be easy to establish, in connection with all our grammar schools for boys, an annex for elementary instruction in the use of the half dozen universal tools; *i.e.*, the hammer, saw, plane, chisel, file, and square. Three or four hours a week for one year only of the grammar school course would be enough to give the boys that intimacy with tools and that encouragement to the inborn inclination to handicraft and that guidance in its use for want of which so many young men now drift into over crowded and uncongenial occupations or lapse into idleness or vice.

COMPULSORY EDUCATION IN FRANCE.

M. Victor Bournat, a member of the Paris bar, has been studying the question of educating children, where their education is neglected or opposed by the parents, and says some things worthy of special consideration. He remarks * that the primary school is said to be the college of the sons of the workingman and the poor, but he denies the absolute justice of the comparison. The college receives boarders; the primary school admits only day scholars. This, he claims, is a hiatus in popular instruction. The opinion is even held by him that the opportunity to board is perhaps more necessary to these who frequent the primary school than to those who go to college. The father, and often the mother, are away from the domestic hearth the whole day. The child sent to school is exposed to the seductive temptation of truancy and vagabondism. He is without defence against the allurements of comrades already corrupted.

From cases which have come under his observation M. Bournat draws the conclusion that there is a necessity for primary schools, in which, at a cost not much exceeding that expended on the child at home, the family may place him as a boarder. Society, he says, has provided infant nurseries and infant schools, in aid of parents whose occupations prevent them from watching over their children during the day. The same necessity requires that it should continue this assistance when they send their

* Adoption, éducation, et correction des enfants pauvres abandonnés, orphelins, ou vicieux, par M. Victor Bournat, pp. 241.

children to the primary school. At that time the danger becomes even greater, the remedy still more necessary. The vagrancy of the scholar prepares the criminal, or at least a man idle and useless, and therefore hurtful to society.

This plan has been tried in Paris with highly encouraging results. "The best proof that these primary boarding schools are necessary, is that those already in existence have never a vacant place. The price of board varies from two hundred and fifty to three hundred francs a year; it is paid by the parents or by those whom charity has prompted to connect themselves with this work of education."

In the organization of these establishments the benefit of young girls has been principally aimed at. In every quarter of Paris, and in all parts of France, religious communities receive such girls to board. They bring them up and teach them a trade, retaining them till their twenty-first year.

It would be difficult to retain boys till they are twenty-one, and this has not been attempted. The first establishment of the kind for boys was founded in 1827 by Monseigneur de Bervauger. At first he opened in the suburbs of Paris a house for the reception of a few boarders at 15 francs a month. In 1835 the number had increased to 100. In 1844 the establishment was transferred to Paris. Here it grew so rapidly that sixteen years later it numbered 1,500. A second house was established at Issy. More than 30,000 children have been shielded from desertion and misery, and a large proportion of them no doubt saved from vice and crime, through this institution. The work is kept up to-day in the two houses at an annual expense of not less than three hundred to four hundred thousand francs.

There are other houses in Paris which receive as boarders little boys, the children of laboring people, at a price corresponding to the resources of their parents.

M. Bournat urges, in the strongest terms, the importance and necessity of professional schools. They are, in his view, the last stage, the final process, in the education of the common people, and ought to share equally with the primary school the attention of the legislator. He insists that it belongs to the communes or towns to undertake this work; and they cannot, without a dereliction of duty, refuse to interest themselves in the professional education of children whose labor must be their sole source of support. It is required that each commune have a primary school, so that all children may have the opportunity of learning to read and write. Is it less necessary to teach to all some trade or business? If it is just to inscribe among the obligatory expenses of a commune those of primary instruction, it is, he maintains, no less just to place there the cost of professional instruction whenever it is necessary. He would, therefore, have industrial schools established in sufficient number to insure the professional education of all poor children. For the most part it is sufficient to assist parents, but sometimes it is necessary to replace them; at other times, we must overcome their indifference, or even their opposition. In any event, charity must watch over the child, and the law must furnish it the means of accomplishing its work in spite of the resistance of the family.

The Office has aimed to gather and communicate as far as possible facts illustrating the endeavors made in different parts of the civilized world by which it is sought to insure instruction to every child. The necessity of securing this condition of things among us is more and more recognized and felt. Laws against truancy against the employment of children so as to prevent their attending school, compulsory educational laws, are all so many struggles in the same direction. Indeed, the voluntary acts of citizens and the laws providing for orphans, neglected children, or juvenile offenders, are also coöperative to the same result. When the home shall furnish the child a normal condition of physical and moral life and the school shall come in in its proper place and manner and carry forward the work of instruction, all compulsion will be unnecessary.

But even if the home, by the vice, the idleness, or crime of the parent, does not dis-

charge its part in the great work, there is among us a certain sentiment against laws compelling the child to attend school, notwithstanding the public is so directly interested in his intelligent and virtuous training, and has been at the expense, by taxation and organization, to provide for it amply in the public school system. Foreign writers in observing these facts among us have sometimes remarked, "We apply compulsion to the parent; your laws appear to be aimed more at the child." At this point among us there have appeared efforts to prevent cruelty to children.

PREVENTION OF CRUELTY TO CHILDREN.

Numerous societies and institutions existed for receiving and caring for little children, but they assumed the care and control of their inmates only after these had been legally placed in their custody. The police and prosecuting officers of the people were necessarily engrossed in securing the conviction and punishment of offenders of a graver legal character, and although ready to aid in enforcing the laws referred to when duly called on so to do, could hardly be expected to seek out and prosecute those who claim the right to ill-treat children over whom they have apparently legal control. Hence those who cruelly ill-treated and shamefully neglected little children lived in comparative security, and the children, hardened by brutality and cruelty, grew up to be men and women scarcely less callous than their tyrants.

To meet the necessity the New York Society for the Prevention of Cruelty to Children was organized in December, 1874, in New York City, for the purpose of enforcing by lawful means and with energy the ample laws that had been passed by the legislature of the State for the protection of and prevention of cruelty to little children, and to secure in like manner the prompt conviction and punishment of every violator of any of those laws.

The work of this society has made gratifying progress, and, within the year 1876, 197 cases have been prosecuted, 223 children rescued and found homes or placed in institutions, and numerous other cases have been disposed of through the milder instrumentality of remonstrance or warning and occasional visits by the officers of the society.

The hiring out and use of children as gymnasts, acrobats, circus riders, &c., in the city of New York has been entirely suppressed, and throughout the country it has received a serious check.

The National Prison Congress at its fourth session, held at Steinway Hall, New York City, June 9, 1876, passed the following resolution:

Resolved unanimously, That the National Prison Congress, now in session in New York, greets well the Society for the Prevention of Cruelty to Children, gives them its warmest sympathy, and sends them a hearty God-speed in their beneficent and noble work.

Modelled on this, the recognized parent society, seven distinct societies have been formed, besides several others now in process of formation throughout the country. The following are the names of those now in operation:

The New York Society for the Prevention of Cruelty to Children, organized December 15, 1874; the Rochester Society for the Prevention of Cruelty to Children, organized October 6, 1875; the Newburgh Society for the Prevention of Cruelty to Children, organized November 4, 1875; the Buffalo Society for the Prevention of Cruelty to Children, organized April 28, 1876; Cleveland Humane Society,* Cleveland, Ohio; California Society for the Prevention of Cruelty to Children, San Francisco, Cal., organized August 30, 1876; the New Hampshire Society for the Prevention of Cruelty to Children, Portsmouth, N. H., organized November 13, 1876; the Pennsylvania Society to Protect Children from Cruelty, Philadelphia, Pa., organized November 27, 1876.

At the request of the New York Society for the Prevention of Cruelty to Children, Mr. Lewis L. Delafield has prepared a compilation of the laws of the State of New York and of the United States relating to children, with notes and references.

*This society, originally Cleveland Society for the Prevention of Cruelty to Animals, secured laws to prevent cruelty to children April 11, 1876, and reorganized, changing name as above.

The aim has been to furnish the officers of the society with all the statutes of the State of New York and of the General Government relating to the personal rights of children and the duties and obligations of all persons, whether natural or artificial, to whose custody they are committed, with a reference to the most important decisions and a brief statement of the law affecting them.

STATE LAWS RELATING TO CHILDREN.

A compilation of the laws relating to children of all the States would be of very great value to all individuals and societies to whom are committed the care, protection, and instruction of neglected and unfortunate youths, especially to educators and students of social science, and it is the purpose of the Bureau of Education to prepare and publish such a compilation within the coming year, or as soon as practicable.

The following extracts are made from an address delivered before the Prison Congress by Daniel Haines, ex-governor of New Jersey:

It is asked by what constitutional authority can the young be arrested, taken from their parents, and, without trial by jury, be committed to such an institution as a reformatory. In reply it may be said that it is by virtue of the superintending power of the government, which, as parens patriæ, seeks not only to protect but also promote the welfare of all its citizens. It is that power which, in rescuing the neglected and the tempted from the evil influences that surround them, affords protection to them, and at the same time relief to the community from the effects of the violence and crime that otherwise might be committed by them. It is the exercise of an administrative police, which has for its object the maintenance of public order and the tranquillity of all the citizens. * * * If there is authority to punish for offences actually committed, there must be sanction for such reasonable measures as will prevent crime and its consequences to the community, and to the individuals composing it; sanction for the exercise of such salutary measures as will rescue the exposed and the tempted from the perils which surround them. If it be lawful to extinguish an incipient fire which threatens the destruction of the town, it must be proper to restrain such conduct as menaces the peace and safety of its inhabitants.

On the same principle of the propriety of preventive agencies quarantine laws are enacted and enforced to promote the welfare of the city by protecting it from contagion, although it may retard the business or diminish the profits of the shipping merchant; the health of the public being paramount to the interest of the individual. Who questions the constitutionality of the law limiting the hours of labor of children in factories, thereby preserving their physical and their moral health? Who doubts the authority to enact laws to prevent cruelty to animals, bull baiting, dog fighting, and laws suppressing vice and immorality? These are but preventive measures to save the community from the debasing influences of such offences.

A like parental power is exercised in the provision made for the public schools, and especially in that for compulsory education, although the property of one man is taxed for the instruction of the children of another. It is on the principle that the whole community has a direct interest in the welfare of each individual; and that those who are to become the citizens of the State, its electors, and perhaps its rulers, may by proper instruction be qualified for their privileges and duties; and that those who are to be its matrons and mothers may become virtuous, intelligent, and useful. The policy and charity which prompt to the establishment of asylums for the blind, the deaf-mute, the feeble-minded, and the insane, incite also to the erection of refuges for those who are so morally blind as not to see the path of rectitude; for those too deaf to hear kind words of admonition, too feeble-minded rightly to comprehend their condition, and too insane properly to govern their actions. * * * To the reflecting mind, the economy of such institutions is obvious, even from the financial and lowest point of observation. It costs the State far less to support and educate the inmates of a reformatory than to maintain them in a prison; less oftentimes than the expenses of a trial and commitment to a penitentiary. If we add to such expenses of convicts the value of the property they destroy, or of which they deprive others, and the amount of injuries committed by violence and fraud against persons and property, we will find the aggregate loss to the community and its members far, very far, to exceed all the costs of the reformatories. What would have been the amount of money saved to the State of New York, and how many inmates of a refuge would that amount have sustained, had "Margaret, the mother of criminals," been reformed in early life?

At a recent meeting of the London school board, the special committee on incorrigible truants presented a report recommending the establishment of a truant school on a plan similar to that adopted in Hamburg, and elsewhere in Germany, where truant

children are sent on a first complaint for one week only to an institution called the "punishment school," and this is in most cases sufficient.* The class of boys for which the school is considered desirable is not that of the vicious or semi-criminal. For these the ordinary industrial schools provide. But many poor parents are exposed to special difficulty under the compulsory by-laws, through their inability to compel the attendance of wilful boys. The corrective treatment for such boys would seem to be some simple and effectual mode of convincing them that they cannot have their own way, and that if their parents cannot control them there is a power that will. For this purpose a long process of discipline is not necessary.

The following rules were proposed:

1. Periods of detention to commence with, perhaps six days, but never under any circumstances to exceed a month.

2. The corrective discipline to consist in the absolute prohibition of conversation among the boys one with another, and deprivation of play, drill being substituted by way of physical exercise.

A member of the board objected that if the proposed school was to be formed upon the basis of the school at Hamburg, there would be an infringement of the liberty of the subject.

Mr. Pictou, the chairman of the special committee on incorrigible truants, said that "the board labored under a great difficulty with this class of children, and they were bound to do their utmost to remove it, and it was no use going into the heroics when dealing with naughty children, when the object was simply to keep them from becoming bad men. * * * For the class of incorrigible truants no provision has been made. The time, he said, is at hand when a school of this kind should be established. * * * It had occurred to him, as well as to other members of the committee, that there is an element in the German truant schools which could with safety be applied in England, and that is the discipline of silence. He did not mean the silent system of some prisons. He did not mean that they should not speak a word but that they should speak as much as they ought to speak in school; that they should take part in the devotional services, and that they should speak to the teacher and the governor, but that they should not be allowed to speak to each other at all. * * * If this were intended to go on for six months or even for two months, it might be thought too severe; but he thought that a single week of this kind of discipline would be sufficient to induce most boys under twelve or thirteen years of age to attend the day school regularly afterwards. Of course, in all cases, the consent of the parent would be required."

---

*I was informed that if the schools control committee were satisfied that in any particular case of truancy the parent had done all in his power to send the child to school, the penalty was made to fall on the child himself in the shape of consignment for a week or two (at the very longest two months) to the punishment school.

The children are of three classes. First, there are obstinate truants, beyond the control of their parents and sent by the schools control committee. Next, there are children under twelve years of age, who have been unable to keep their hands from picking and stealing, and are sent by the police. Thirdly, there are ungovernable children, sent by their own parents. The last are paid for by the parents; the others are kept at the expense of the town. There is no separation between the different classes; and on expressing my doubts about such a promiscuous mingling of merely obstinate with dishonest children, I was told that no evil could possibly arise, as the cause of the detention is never known except to the authorities and the parents, and in the school itself no conversation is ever allowed among the children under any circumstances. That, in fact, is the punishment. They are always, night and day, under the eye of a master or attendant, and perfect silence is rigorously enforced. Of course this could not last long without danger of idiocy. But then the sentences are usually only for a week or two and never longer than two months.

For the most part the young delinquent is mastered at once by the grim silence into which he is plunged. This silence is only broken by lessons and prayers. During his brief residence he never goes out even to church, no play of any kind is permitted, and the only exercise is drill.

Every care is taken that this punishment shall leave no stain behind it. The children are not jail birds. They have been sent to a stricter school; that is all. And there is no public record that can be used against them.—(Letter of J. Allanson Picton, member of the London school board, describing a punishment school at Hamburg, in the School Board Chronicle, September 25, 1875.)

After considerable discussion, Mr. Pictou's motion, that a letter be addressed to the secretary of state for the home department in accordance with the recommendation of the report, was agreed to.

REFORMATORIES IN ENGLAND.

In the report of the National Prison Association of the United States, for the years 1874 and 1875, Dr. Wines remarks:

The system of certified industrial and reformatory schools, with a vast number of other similar establishments not certified, now existing in every part of the British Isles, has made a real and perceptible impression upon crime, both as to its amount and character. But the diminution has nowhere else been so marked as in Gloucester County. Thirty years ago that county had seven prisons, with an average annual population of 850 inmates, whereas at the present moment it has but one, the other six having been pulled down, or otherwise disposed of, and the average number of prisoners in the single remaining jail has been, for several years, less than 200.

It is further said:

Official returns, printed in the blue books, show that, in 1843, when the population of the country was 16,300,000, the criminals sentenced to penal servitude or transportation, that is, criminals convicted of the higher crimes, amounted to 4,488, whereas in 1869, when transportation had ceased, and the population was 21,900,000, and the criminals sentenced to penal servitude ought, by the rules of proportion, to have amounted to 6,027, the number actually so sentenced was only 2,006; a most notable diminution of criminality, when the increase of population is taken into the account.

This work has been effected in large measure through the agency of reformatory institutions, industrial schools, training ships, refuges, homes, and such like establishments; but, upon a larger scale, through the multitudinous and diversified operations of the ragged school union of London.

Mr. T. Ll. Barwick Baker, visiting justice, Gloucestershire, England, says:

Prior to 1856, we had in all parts of England, but especially in the large towns, many boys confirmed in a long continued habit of stealing. The magistrates naturally disliked committing a child under 16 to a jail for more than three months, and there were then no reformatories to give a milder detention of greater length. The consequence was that boys came out from jail, after an imprisonment too short to make them forget their bad habits or to lessen their skill; they found their associates still in practice and able to assist them; and, returning to their old courses, they increased their skill and hardihood till they frequently were able to take lodgings and support themselves entirely by thieving. * * * The very sight or knowledge of a number of boys so living in luxury without work was a terrible incitement to any boy of weak and unstable mind to follow the same course. Boys' crime throughout England was rapidly and sadly increasing. In 1856, 13,981 boys and girls under 16 were committed to prison. But at this time reformatories came into general action, and it became the the custom to commit to them, for a long period of detention, all who were committed for two or more times. In a very short time all the habitual boy thieves—all the examples of success, all the instigators and instructors, the generals in the army of boys' crime—were removed from society, and were turning over the clods of some retired farm. The natural, the almost inevitable result, was that boys ceased to be tempted by the prospect of success. They had none to instruct them in their art, they had none to cheer them on and to show them that the prison failed to check any who had strength of mind not to be frightened at it; and in 1860 the numbers of children committed to prisons or reformatories had fallen from 13,981 to 8,029. Nor was this all. The 8,029 were mostly children on a first conviction, who had weakly yielded to some sudden temptation, but were not skilled or hardened in crime. This, it will be seen, was not the effect of the reformation of the individual. There were not 4,000 children committed to the reformatories in the four years, while the prevention amounted to nearly 6,000 per annum; and few of these had been discharged by 1860, so that we may fairly say that, if the reformation of those received had been an utter failure, the effect would have been nearly the same. It was not the reformation of the individual, but the taking away of the temptation, the removal of the leaven from the lump, the preventing infection by the absence of the infectious element, which caused the diminution.

* * * * * * *

In Middlesex, the county in which London is situated, in 1856, 4,113 children were committed, but in 1862 the number had dropped to 1,511.

I should here explain, that when we began our work in 1856, it was the common impression that most of the boys were instructed and trained by men. Had this been so, of course no such reduction in crime could have taken place. But as we went on

and became acquainted with the habits and feeling of those under our charge, we found that the boys, nearly without exception, were corrupted and trained by other boys under 16.—(Report of National Prison Association, pp. 458–460.)

Speaking of the effect of industrial and reformatory schools in diminishing crime, Dr. Wines remarks:

The effect of these institutions has been greatly to diminish juvenile delinquency in Edinburgh, as shown by a return made last year by the governor of the city prison, from which it appears that the number of juveniles under 16 years of age committed to the prison in 1847 was 512, and in 1875 the number was reduced to 131. The proportion of juveniles under 16 committed in 1847 to the aggregate number committed that year was about 5½ per cent.; while for the last year the proportion was only a little more than one-half of one per cent.

A reduction to a greater or less extent has been effected in other localities, but nowhere so great as in Aberdeen. There, the average yearly number of thefts reported to the city police during the five years ending 1860 was 1,142, while, during the five years ending 1874, the average yearly number was 286; and at the circuit court of justiciary held there in September last, *not a single case was set down for trial*, the like not having occurred for more than a hundred years. The magistrate said that he imputed this gratifying state of matters mainly to the industrial and reformatory schools.

Dr. Wines remarks, in reference to Miss Mary Carpenter's day industrial feeding school at Bristol:

The children remain ten hours a day at the establishment, spending three hours in school, about the same time at meals and recreation, and four hours (perhaps a little more) in industrial occupations—tailoring, shoemaking, working up old railway ties into kindlings, &c. The habit of steady work and the modicum of skill in the use of tools thus acquired enable them after a few years, sometimes even a few months, spent in the school readily to obtain employment.

* * * * * * *

Miss Carpenter is now seeking special legislation at the hands of Parliament. What she desires is to have power given to school boards to compel attendance [at industrial schools] and pecuniary subventions from the parents to meet the cost. Until such power and aid are granted, she thinks it impossible to reach the bulk of this class of children. The voluntary reformatories and refuges, she says, never touched the really criminal children, and, multiply these day industrial feeding schools as you will, they will never clear the streets of Bristol, and, of course, of no other great city, until power is given to the school boards to enforce attendance at them. Sheriff Watson never rid the city and county of Aberdeen of juvenile vagrants until he used the arm of law, first to bring the children in and afterward to check vagabondism. Then his day industrial school was soon filled, and new schools were speedily established, with results that have been the admiration of the world. This gentleman has recently, at the Edinburgh congress of superintendents and managers of industrial and reformatory schools, borne public testimony, after thirty-four years, to the perfect success of the system.

EDUCATION IN FOREIGN COUNTRIES.

I.—Europe, Asia, and Africa.

Algeria, French colony in Africa: Area, 258,306 square miles; population, 4,851,199.

The number of primary schools is 591, of which 489 are public and 102 private. The number of pupils in public and private schools is 41,447; viz, 21,884 boys and 19,563 girls. There are besides 151 asylums, with 15,002 children; viz, 6,527 boys and 8,475 girls.—(Manuel Général, Paris, January, 1877.)

Austria-Hungary.—*a.* Austria, constitutional monarchy: Area, 108,234 square miles; population, 20,394,980. Capital, Vienna; population, 1,020,770. Minister of public instruction, C. von Stremayr.

According to the school census in 1875, the total number of popular schools was 15,166; viz, 14,257 public and 909 private. This shows an increase of 397 schools since 1871, and of 2,382 since 1850. The number of teachers was 31,196 in 1875; average salary 717 florins, (1 florin = about 50 cents.) The number of pupils in public schools was 2,050,808, against 1,753,787 in 1871; in private schools there were 83,875 pupils, against 65,923 in 1871. The total number of pupils in public and private schools in 1875, was 2,134,683, or 17.2 per cent. more than in 1871.

A large number of children of school age who did not attend the popular schools received instruction elsewhere; viz, 17,705 were instructed by private tutors at home,

76,688 frequented advanced private schools, 17,887 secondary and technical schools, and 102,232 were on the rolls of the so-called review schools, (Wiederholungschulen.)

The city of Vienna continues to improve her system of popular education. Several new schools have been built in 1876, and several other schools have been greatly improved. The increase in the number of pupils was 3,374 in 1874–'75. In the latter year the number of pupils was 60,258, 53,571 of whom attended public and 6,687 private schools. The amount expended by the city of Vienna for education in 1876 was 2,109,790 florins; viz, 1,725,600 florins for popular education, 325,600 florins for middle class schools, 48,830 florins for the training of teachers, and 9,750 florins for Kindergärten.—(Seyffarth's Chronik des Volksschulwesens, 1877.)

b. HUNGARY, constitutional monarchy: Area, 118,172 square miles; population, 15,509,455. Capital, Buda-Pesth; population, 270,476. Minister of worship and public instruction, G. de Tanárky.

Hungary has 11,743 communes and 15,387 schools, 13,831 of which are supported by religious bodies and 1,556 by the state. The total number of children of school age is 2,139,207. Of this number 1,195,687 attend the elementary schools, 20,027 the private schools, and 12,735 the Gymnasia and Realschulen. The school attendance has considerably increased since 1869. In that year only 47 per cent. of all the children of school age were at school, while, in 1874–'75, we find nearly 70 per cent. of the school population in attendance. The total number of teachers is 19,610, and their average salary 319 florins, (about one hundred and sixty dollars.)

Hungary has 15,390 school buildings with 20,098 rooms, 16,018 school gardens, and 1,881 school libraries. The number of teachers' seminaries is 58; viz, 48 for males and 10 for females. The number of students is 2,651; viz, 1,905 males and 746 females. There are 200 Kindergärten in Hungary, and 5 seminaries for the training of Kindergarten teachers. For secondary education there are 146 Gymnasia, with 1,768 professors and 27,144 students, and 35 Realschulen, with 431 professors and 8,086 students.

The university of Buda-Pesth has 149 professors and 2,361 students; the polytechnic school of Buda-Pesth 40 professors and 685 students. There are besides 41 schools of theology, with 134 professors and 766 students, and 13 law schools, with 111 professors and 1,417 students.—(Report of the minister of public instruction for 1874–'75, Buda-Pesth, 1876.)

BELGIUM, constitutional monarchy: Area, 11,373 square miles; population, 5,336,634. Capital, Brussels; population, 376,965. Minister of the interior, under whose jurisdiction the supervision of public instruction is placed, C. Delcour; chief of the educational section, M. Le Bon.

Little or no progress has been made in education during the last years. The province of West Flanders may serve as an example of the present condition of education in the whole kingdom. The population of West Flanders is 700,000. The number of public schools is about fifty, the number of pupils only 5,854; viz, 2,256 boys and 3,598 girls. Of 873 recruits in 1874, only 315, or 36 per cent., could read and write.—(Seyffarth's Chronik des Volksschulwesens, 1876.)

DENMARK, constitutional monarchy: Area, 14,553 square miles; population, 1,903,000. Capital, Copenhagen; population, 233,000. Minister of worship and public instruction, J. C. H. Fischer.

The public schools of Denmark enjoy a high degree of efficiency and perfection. There is an exceedingly small percentage of the population unable to read and write.

The following is a brief summary of the school laws now in force:

1. Education is compulsory. The children are required to attend school from their seventh to their fifteenth year. Whoever does not comply with this requirement is fined.

2. The public schools are divided into two classes, viz, primary or elementary, and secondary or intermediate. In the schools of Copenhagen no class is allowed to have more than from 30 to 40 pupils.

The number of schools in country districts is dependent upon the following conditions:

1. No pupil is to be obliged to go to school at a greater distance than one English mile.

2. Tuition in public schools is free.

The salaries of teachers in the schools of Copenhagen range from 1,200 crowns ($320 gold) to 2,200 crowns, (about $600 gold.) In the country they range from 800 crowns ($215 gold) to 1,400 crowns, ($375 gold;) but the latter are, in part at least, paid in "natural allowances," such as dwelling, fuel, and a piece of ground.

The expenses for primary schools are paid by communities, or districts in which they are located. Secondary schools receive a subsidy from the State.

Besides the public schools, there is a large number of private schools, which are attended by children of the wealthier classes.

There are four seminaries for the education of teachers in Denmark, together with about fifteen so-called learned schools or academies, with from ten to twenty professors each. There is also a veterinary college and agricultural high school, with about twenty-five professors.

Denmark has a military academy and several navigation schools. The University of Copenhagen, established in 1478, has four faculties, with 71 professors and 6 tutors. The university library contains 260,000 volumes and 4,000 manuscripts.

EGYPT, a dependency of the Turkish empire in Africa: Area, 212,607 square miles; population, 5,252,000. Capital, Cairo; population, 349,883. Minister of public instruction, Sabit Pacha.

There are at present 140,977 pupils under instruction. Of these, 111,803 are in primary Arab schools; 15,335 in those attached to mosques; 1,385 are educated by government; 8,961 by missions and religious communities, and 2,960 in the municipal schools. There are only two female schools returned, those started by the Khedive; but in the Coptic and mission schools a few little girls may be found. It will easily be seen that the primary Arab schools educate more than two-thirds of the children, and that they consequently are of the first interest to any one anxious for the improvement of the national culture. Unfortunately they seem to exist only in order to impart a parrot-like acquaintance with the text of the Koran. For this purpose only have they been endowed by pious people.

One primary school in Cairo is well worth a visit. It has a class room about ten feet square. It is below the level of the road, and lofty for its size. A grated window, high up, gives a dim light; but a flood of sunshine comes in at the open door, and strikes full on the bright crimson robe of the fakeeh as he sits on his cushion in the corner. At one end stands the only piece of furniture in the room. It looks like a large harmonium, done up in brown holland; but turns out to be a box containing the bones of a saint. In front of this curious piece of school furniture squat about twenty-four little black and brown boys. One or two are disguised as girls, to protect them from the evil eye. All have dirty faces, and several are suffering from ophthalmia. They sit in two rows, facing each other, and simultaneously rock their bodies violently backward and forward as they recite the alphabet, or that verse of the Koran which forms their day's task. The children shout at the top of their little cracked voices in a nasal tone far from musical. If they cease their rocking and shrieking, even for a moment, the master brings down his long palm cane upon their shaven skulls, and they recommence with renewed energy and an even more violent see-saw. The sentence repeated does not convey the slightest meaning to their minds, nor is any attempt made to explain it. Two or three older children are sitting beside the fakeeh, getting lessons in the formation of the Arabic characters. Their copy book is a piece of bright tin, and they use a reed pen, called a kalam. The ink bottle is a box containing a sponge saturated with some brown fluid. A long row of tiny slippers, of every form and color, lies neatly arranged at the door; for the place where the bones of a saint are enshrined is holy ground, and no one may soil the clean matting of the floor with outside defilement. No register is kept of the pupils, or of their days of attendance. Indeed, although the fakeeh can repeat the whole of the Koran

off book, it is highly probable he would find some difficulty in counting up to the number of his pupils. His acquirements begin and end with the textual knowledge of the sacred book, and, unfortunately, the wishes of his pupils' parents with regard to the education of their children are bounded by the same narrow limits. The schoolmasters are miserably paid; but they exercise considerable influence, and no marriage or family fête is complete without their presence. In better class Arab schools a little arithmetic is sometimes taught, but not always. Boys who wish to pursue that branch of their education generally learn from the public gabâni, a man whose business it is to weigh merchandise. A child whose father keeps a store is taught by assisting in it. Geography is also neglected, which is fortunate, as nothing can be more ludicrous. The teaching is, of course, entirely based upon the Koran, which upholds Mr. Hampden's views with regard to the shape of the earth. The children learn that it takes 500 years of travelling to get round the mighty plain, while perhaps a few yards from the school door hangs one of Mr. Cook's placards offering to do the whole business in 90 days. It must be a little hard to explain all about the seven earths and the seven heavens and the seven climates and the seven seas of light. The one important fact which the children retain is that Mecca is the centre of the earth. At present each boy comes to the master with his lesson, says it, and returns to his seat. He is succeeded by another, and so on during the whole day. This would be impossible if more than reading and writing were taught. Of the mosque schools the ancient El Azhar is still the most important. It provides instruction, such as it is, for more than 11,000 pupils. A considerable number are housed and fed within its hospitable walls. The pupils are of all ages, and come from the most remote provinces as well as the larger towns. They may stay as long as they like and go there when they please. If they are rich they make presents to the professors, who are paid entirely by voluntary donations; if they are very poor, they receive help from their alma mater in the shape of food. The baksheesh of 500 sheep sent one day by the Viceroy on the occasion of a family rejoicing, was therefore not unacceptable. The school is, in fact, a great free national university for the teaching of the Koran. There are few rules; there is no compulsory course of study; there is no roll call or classification of students. Curiously enough, coffee and tobacco are here forbidden within the walls.

Some of the Coptic schools are well worthy of a visit. The principal one in Cairo is exceedingly well attended. The boys look as if their intelligence was cultivated, and many of them read and speak either French or English with ease and a good accent. They seem to have a great interest in each other, and to feel a genuine pride in seeing their companions show off their small accomplishments to strangers. The Copts take same pains to teach their girls, and have two fairly well managed schools at Cairo. The children are taught reading, writing, arithmetic, singing, and needlework.—(The Educational Times, London, June 1, 1877.)

FINLAND, grand duchy, dependency of Russia: Area, 144,222 square miles; population, 1,882,622. Capital, Helsingfors; population, 32,113.

According to the official report for 1870-'75, Finland has 324 popular schools, with 387 teachers and 14,895 pupils; 58 secondary schools, with 430 teachers and 4,952 students; one university, with 60 professors and 642 students; 63 special schools, with 208 teachers and 3,177 pupils. There is, besides, a large number of private schools with about 300 teachers and 2,500 pupils.

FRANCE, republic: Area, 201,900 square miles; population, 36,102,921. Capital, Paris; population, 1,851,792. Minister of public instruction, M. Brunet, since May 17, 1877; from March 9, 1876, to May 16, 1877, M. Waddington.

The number of schools under lay teachers is 41,959; viz, 19,044 for boys, 6,399 for girls, and 16,510 for both sexes. The total number of pupils of these schools is 2,340,344; 704,028 children do not pay school fees.

The number of convent schools is 11,391; viz, 1,970 for boys, 8,322 for girls, and 1,099 for both sexes. The total number of pupils of convent schools is 1,137,198; the number of children admitted free is 662,332.

The total number of schools is thus 55,350, and the total number of pupils 3,477,542. France has at present 81 departmental normal schools, the course of study in which is 3 years. Pedagogy and history of pedagogy are not taught. The students have to pay 450 francs a year for board and instruction. Of the 60,000 communities in France about twenty thousand have not their own school-houses.

The department of the Seine has now 2,005 schools, with 5,147 teachers and 238,660 pupils. About thirteen thousand children do not attend school, on account of the want of school-houses. About fifty new schools have been established within 3 years.

The following is a synopsis of an education bill which was recently laid before the legislative assembly:

Every commune is authorized to establish absolute gratuity in her public schools. Communes that cannot raise the necessary amount to defray the expenses for popular instruction shall receive a subsidy from the state. The instruction in all the public schools must be gratuitous. This law shall take effect January 1, 1878.—(Seyffarth's Chronik des Volksschulwesens, 1876, and Manuel général de l'instruction publique, Paris, 1877.)

GERMANY.—Constitutional monarchy, (empire:) Area, 212,091; population, 42,752,554. Capital, Berlin; population, 968,634.

The empire of Germany has no national system of education, but each of the twenty-six states composing it has its own ministry or bureau of public instruction, and manages its own educational affairs. Education is compulsory throughout the empire. The school population of Germany (6–14) is 7,075,281; viz, 3,544,833 boys and 3,530,448 girls. The detailed statistics of primary and secondary education in some of the German states will be found under special headings. The following table gives a list of all the German universities, with the numbers of professors and pupils, in 1876:

Universities.	Professors and assistants.	Students.				Total.
		Theology.	Jurisprudence.	Philosophy.	Medicine.	
Berlin	197	162	802	911	263	2,143
Bonn	117	127	186	271	123	707
Breslau	107	115	422	419	160	1,116
Erlangen	54	134	35	99	161	429
Freiburg	59	52	48	54	120	274
Giessen	54	13	103	115	84	315
Göttingen	115	78	352	433	123	986
Greifswald	57	33	71	122	218	444
Halle	96	187	130	441	112	870
Heidelberg	104	9	197	195	87	488
Jena	73	64	92	209	75	440
Kiel	61	50	17	71	64	202
Königsberg	83	44	196	223	148	611
Leipzig	156	337	1,171	989	428	2,925
Marburg	65	46	67	166	122	401
München	116	84	276	496	347	1,203
Münster	29	208	.....	223	.....	431
Rostock	39	25	37	55	36	153
Strassburg	90	50	197	239	191	677
Tübingen	84	353	168	145	157	823
Würzburg	67	129	106	201	548	984
Total	1,800	2,300	4,678	6,077	3,567	16,622

The number of students in the table given includes only those regularly matriculated at each university. There were, besides, 2,377 non-matriculated students, (Hörer, zum Besuch der Vorlesungen berechtigt,) the vast majority of them, namely, 1,962, at the University of Berlin. Thus there were altogether 18,999 students in the universities of Germany in 1876. Fourteen of the twenty-one universities of the empire are Protestant, four are Roman Catholic, and three are mixed; but it may be said that the faculties of theology only have a religious character. In a Protestant university nothing but Protestant theology is taught, in a Catholic university nothing but Catholic doctrine, and in a mixed university both Protestant and Catholic theology are treated.

In most of the German universities there is a regular course of pedagogy for those who desire to prepare themselves for practical school work. In Berlin the number of hours in a week devoted to this branch of study is six, in Bonn four, in Halle five, in Leipzig eight, in Würzburg four, and in most of the other universities three.

Hitherto, the German universities admitted no one to the lectures who was not in possession of a certificate of capacity issued by the commission appointed each year to examine the graduates of the secondary schools; but the university of Berlin has recently published the following decision of the academic senate:

Young men who have not passed the examination as to capacity, (Maturitätsexamen,) and who desire to attend the lectures of this university with a view only to acquiring a general culture in a certain branch, without aspiring to appointments in the higher service of state and church, may be matriculated according to section 34 of the statute of June 4, 1834.

PRUSSIA, constitutional monarchy: Area, 137,066 square miles; population, 25,693,688. Capital, Berlin; population, 968,634. Minister of public instruction, Dr. Falk.

The following summary has been abstracted from the "Jahrbuch für die amtliche Statistik des preussischen Staats, Berlin 1876:"

Primary education.—The number of primary schools (Elementarschulen) is 34,988; viz, 33,120 public and 1,868 private. The number of classes in all the public and private schools is 57,228 and the number of teachers 57,936. The number of pupils is 4,007,776; viz, 3,900,655 in public and 107,121 in private schools.

Teachers' seminaries.—The number of regularly organized seminaries is 103, with 269 classes, 677 teachers, and 6,544 students; but there are besides 37 preparatory seminaries, with 55 teachers and about 1,000 students. A large number of higher schools for females, (höhere Töchterschulen) have established courses of pedagogy for those of their students who intend to become teachers. In 1874–'75, 36 higher schools for females had 909 students of pedagogy.

Secondary education.—For secondary education there are in Prussia 90 higher burgher schools, with 802 professors and 15,971 students; 96 Realschulen, with 1,711 professors and 38,135 students; 261 Gymnasia, with 4,009 professors and 78,506 students; 215 higher female schools, with 2,206 teachers and 43,247 pupils.

Schools for the deaf-mutes.—In 1875, there were 37 schools for the deaf-mutes, with 235 teachers and 2,351 pupils.

Schools for the blind.—The 13 schools for the blind in Prussia had, in 1875, 88 teachers and 560 pupils.

Agricultural schools.—Number of schools, 81; number of teachers, 392; number of pupils 2,040.

Schools of forestry.—There are 6 schools of forestry in Prussia, with 27 professors and 237 students.

Special schools.—There are about one hundred and eighty special schools, as military, naval, technical, and commercial schools, with about one thousand professors and fifteen thousand students.

The following are the results of the examination of recruits in Prussia for the year 1875–'76: The total number of young men examined was 85,507, 2,749 or 3.2 per cent.

of whom had received no school education. The largest number of illiterate recruits came from the Polish provinces of the kingdom.

In the city of Berlin, the one session system has been tried since 1876, and the result gives general satisfaction. Attendance is more regular, punishments are rarer, and the pupils' work is much better than formerly. The pupils are now able to assist their parents in the afternoon. Teachers and pupils enjoy better health, for there is now more time for cleaning and ventilating the school rooms daily and thoroughly.

BAVARIA, constitutional monarchy: Area, 29,292 square miles; population, 5,024,832. Capital, Munich; population, 193,024. Minister of worship and public instruction, Dr. von Lutz.

The examination of recruits for 1875 showed that 2 per cent. of the young men had received no satisfactory school education. Illiterates were not found at all.

The 35 preparatory teachers' seminaries have at present 1,650 pupils, and the 13 regular seminaries have 944 students.

The city of Munich had, in 1874–'75, 16 public schools, with 279 classes and 15,253 pupils. The number of teachers was 413; viz, 237 males and 176 females.—(Seyffarth's Chronik des Volksschulwesens, 1877.)

SAXONY, constitutional monarchy: Area, 6,777 square miles; population, 2,760,342. Capital, Dresden; population, 197,295. Minister of public instruction, Dr. von Gerber.

Saxony has 2,143 public elementary schools, with 8,357 classes, 5,060 teachers, and 429,679 pupils; viz, 212,732 boys and 216,947 girls. There are, besides, 124 private schools, with 711 teachers and 8,267 pupils; viz, 4,178 boys and 4,089 girls. The 182 Sunday and evening schools have 12,594 pupils and 626 teachers. There are 91 Kindergärten, with about two thousand pupils. The teachers' seminaries number 14; viz, 13 Protestant and 1 Catholic. The number of teachers is 133, and the number of students 1,595; 62 are females.

For secondary instruction there are 13 Gymnasia, with 280 professors and 3,368 students; 12 Realschulen of the first rank, with 202 professors and 4,129 students; and 13 Realschulen of the second rank, with 122 professors and 1,958 students. The 11 technical schools have 97 teachers and 1,013 pupils. The higher institutions of learning have 251 professors and 3,754 students.—(Allgemeine Schulzeitung, December 9, 1876.)

WÜRTEMBERG, constitutional monarchy: Area, 7,675 sq uare miles; population, 1,881,505. Capital, Stuttgart; population, 107,273. Minister of public instruction, Dr. von Gessler.

The school population of Würtemberg (6–14) is 295,923. All these children, with the exception of the sick, attend the primary or secondary schools. The schools are in excellent condition, and the teachers are all thoroughly trained for their work. During the last years a large number of agricultural evening schools for adults have been established throughout the kingdom. The number of persons attending them is estimated at 25,000. For secondary education Würtemberg has 185 schools, (Gymnasien and Realschulen,) with 16,964 students.

The conservatory of music at Stuttgart has a worldwide reputation. It has about six hundred pupils and forty teachers.—(Chronik des Volksschulwesens, 1877.)

BADEN, grand duchy: Area, 5,851 square miles; population, 1,506,531. Capital, Carlsruhe; population, 42,768. Chief of the education department, G. Nokk.

The schools are in a good condition, but it is to be feared that they will suffer very much on account of the scarcity of teachers. Nearly three hundred places are now vacant, and there is no hope of getting a sufficient number of competent teachers to fill these vacancies. During the last year the number of candidates who had graduated from normal schools was only 59, while the number of teachers pensioned and discharged and deceased was 124.—(Chronik des Volksschulwesens, 1876.)

HESSE, grand duchy: Area, 2,866 square miles; population, 882,349. Capital, Darmstadt; population, 43,937. Minister of the interior, Baron von Starck.

The school population (6-14) is 141,968. All children of school age attend school, and the schools are generally considered very good. The teachers' salaries have been considerably increased. The minimum salary is now 1,000 marks (1 mark = 25 cents) and the maximum 1,600 marks, besides a dwelling house or compensation for house rent.—(Allgemeine Schulzeitung, 1876.)

ALSACE-LORRAINE, imperial land (Reichsland): Area, 5,580 square miles; population, 1,529,403.

The school population is 259,620; viz, 130,400 boys and 129,220 girls. Since the introduction of the compulsory school laws attendance is very regular. In the city of Mühlhausen the average attendance has increased 2,000 within three years. During the year 1875 sixteen higher female schools, two schools of agriculture, and several technical schools have been established.—(Chronik des Volksschulwesens, 1876.)

GREAT BRITAIN AND IRELAND, constitutional monarchy: Area, 121,114 square miles; population, 33,089,237.—*a*. ENGLAND AND WALES: Population in 1876, 24,244,010. Capital, London; population, 3,489,428.

The following table, compiled from the official report for the year 1875-'76, shows the progress of education between the years 1870 and 1875:

	1870.	1875.
I. Estimated population	22,090,163	23,944,459
II. Number of schools inspected	8,919	14,140
III. Annual grant schools:		
a. Number of departments:		
1. Day schools	12,061	19,245
2. Night schools	2,504	1,392
b. Accommodation:		
1. Day schools	1,878,584	3,146,424
2. Night schools, (not connected with day schools)	.....	13,055
c. Present at examination:		
1. Day scholars	1,434,766	2,221,745
2. Night scholars	77,918	37,665
d. Average attendance:		
1. Day schools	1,152,389	1,837,180
2. Night schools	73,375	48,382
IV. Number of teachers:		
1. Certified teachers	12,467	20,940
2. Assistant teachers	1,262	2,713
3. Pupil teachers	14,304	29,637
4. Students in training colleges	2,097	2,975
V. Simple inspection schools:		
1. Accommodation	53,982	82,688
2. Present at examination	39,122	51,976
3. Average attendance	16,599	25,996

b. SCOTLAND: Population in 1876, 3,527,811. Capital, Edinburgh; population, 215,146.

In December, 1875, there were 2,329 public schools under school boards in Scotland, with 307,955 pupils on the rolls and an average attendance of 233,130, taught by 3,418 principal teachers and assistants, and 3,024 pupil teachers. There were 165 evening schools, having 12,343 pupils on the roll and an average attendance of 9,803. In these schools there were 203 principal teachers, 103 assistant teachers, and 65 pupil teachers.

The school boards report that during the last school year, in carrying out the compulsory clauses of the education act, 7,499 parents have been summoned to appear before their respective boards and that notice has been sent to 421 employers; that 279

parents and 1 employer have been prosecuted; that 197 of the former were convicted, of whom 135 were fined and 20 imprisoned. The number of children who during one year have been brought into school by the operation of the compulsory clauses is estimated at 28,054. Of these children, 15,516 belong to towns and 12,538 to rural parishes.

c. IRELAND: Population in 1876, 5,317,416. Capital, Dublin; population, 314,666.

According to the official report for the year 1875, the number of pupils of national schools was 347,814, taught by 9,929 teachers and assistants and 288 teachers of needlework. The convent schools had 37,056 pupils and 1,681 teachers.

GREECE, constitutional monarchy: Area, 19,941 square miles; population, 1,457,864. Capital, Athens; population, 44,510. Minister of public instruction, Mr. Milissi.

In 1832, Greece had only 75 elementary schools, 18 Progymnasia, and 3 Gymnasia, with a total number of 11,000 pupils; in 1872 she had 1,177 elementary schools, 5 schools of commerce, 4 schools of theology, 4 schools of navigation, 1 polytechnic school, 1 teacher's seminary, 1 school of agriculture, 17 Gymnasia, 1 higher female school, and 1 university. The number of common school teachers is 2,273 and the number of pupils 77,580; viz, 61,885 boys and 11,695 girls. The number of newspapers in Greece is 127, 4 of which are in the French language.—(Chronik des Volksschulwesens, 1876.)

ITALY, constitutional monarchy: Area, 114,296; population, 26,801,154. Capital, Rome; population, 219,608. Minister of public instruction, M. Coppino.

Italy has 115 normal schools, with 815 teachers and 6,130 students; 18,243 public schools for boys, with 17,900 teachers and 801,358 pupils; 3,228 mixed schools, with 3,266 teachers and 174,723 pupils; 3,892 private schools for boys, with 4,035 teachers and 72,141 pupils; 3,982 private schools for girls, with 4,168 teachers and 88,890 pupils; 1,292 mixed private schools, with 1,378 teachers and 31,077 pupils; 1,099 infant schools, with 2,627 teachers and 130,806 pupils; 9,809 evening schools, with 11,548 teachers and 375,947 pupils; 4,743 Sunday schools, with 5,020 teachers and 154,585 pupils.

According to a report of General Torre, in 1872, 54,675 of 96,363 recruits were illiterate. Italy has compulsory school laws; but as the clergy still have control of many schools, it is very difficult to enforce attendance. Some communities have established unsectarian schools. In Rome these schools are attended by 14,838 pupils. In the city of Naples more than one-half of the persons who applied for marriage licenses in 1874 were wholly illiterate.—(Educatore Italiano, December, 1876.)

JAPAN, absolute monarchy: Area, 156,604 square miles; population, 33,579,909. Capital, Tokio; population, 674,447. Acting minister of education, Fujimaro Tanaka.

There were in Japan, in 1876, 246 middle school districts; elementary school districts, 46,115; school population, 4,923,272, viz, 2,563,700 male and 2,359,572 female; number of attendants, 1,590,115, viz, 1,183,731 males and 406,384 females; number of non-attendants, 3,333,157, viz, 1,379,969 males and 1,953,188 females; pupils under six and over fourteen years, 146,452, viz, 130,037 males and 16,415 females; elementary schools, 20,017, viz, 17,696 public and 2,321 private; middle schools, 32, viz, 11 public and 21 private; normal schools, 53; foreign language schools, 91; government colleges for special branches, 2; whole number of colleges and schools, 20,195; pupils of public and private elementary schools, 1,714,768, viz, 1,297,240 males and 417,528 females; pupils of public and private middle schools, 3,153, viz, 3,125 males and 28 females; pupils of normal schools, 5,072, viz, 4,998 males and 74 females; pupils of foreign language schools, 6,638, viz, 6,230 males and 408 females; pupils of government colleges for special sciences, 548; whole number of pupils, 1,730,179, viz, 1,312,141 males and 418,038 females; percentage of population under instruction, 5.15; total number of native and foreign teachers, 37,736, viz, 37,057 males and 679 females.—(Second annual report of the minister of education, published in 1876.)

NETHERLANDS, constitutional monarchy: Area, 20,527 square miles; population, 3,809,527. Capital, The Hague; population, 100,254.

The number of primary schools is 3,790, and the number of pupils 500,059. The total number of teachers is 11,465; viz, 8,991 males and 2,474 females.

There is a large number of evening schools, with 23,791 pupils; and 241 repeating and Sunday schools, with 573 teachers and 10,975 pupils.

For secondary instruction there are 36 schools, with 348 teachers and 4,504 pupils.

There is besides a royal polytechnic school, with 25 professors and 236 students.—(Verslag van den staat der scholen, 1874–'75.)

PORTUGAL, constitutional monarchy: Area, 36,510 square miles; population, 3,995,153. Capital, Lisbon; population, 224,063. Minister of the interior, A. Rodriguez Sampaio.

Portugal has 2,240 primary schools with 113,097 pupils. For secondary instruction there are 18 lyceums with 2,385 pupils, and 123 other institutions with about 5,000 pupils.

Higher institutions of learning are the University of Coimbra, with 52 professors and 913 students; the polytechnic school of Lisbon, with 174 students; the military academy, with 272 students; the polytechnic school of Oporto, with 109 students. The total annual expenditure for education is $1,200,000.—(Chronik des Volksschulwesens, 1877.)

RUSSIA, absolute monarchy: Area, 8,444,766 square miles; population, 86,586,000. Capital, St. Petersburg; population, 667,963. Minister of public instruction, Dr. Tolstoï.

Superior instruction.— On the 1st of January, 1874, there were 8 universities in Russia, which were situated at St. Petersburg, Moscow, Kharkoff, Kazan, Kieff, Odessa, Dorpat, and Warsaw. The number of professors was 569, and the number of students 6,145; viz, 2,249 in the faculty of law, 1,922 in the faculty of medicine, 883 in mathematics, 501 in philology, 86 in theology, and 48 in the department of Oriental languages.

The Imperial Institute of History and Philology admits about one hundred students, most of whom aspire to situations under the jurisdiction of the ministry of public instruction. The government defrays all the expenses of this establishment. Talented young men are also sent to foreign countries for the study of languages. The library of the institute has 9,000 volumes.

The two lyceums, at Yarosloff and Niejene, had 216 students in 1873. Yarosloff has a library of 5,300 works.

On the 1st of January, 1874, the veterinary school of Kharkoff had 144, and that of Dorpat 30 students; 28 students passed the prescribed examination and were allowed to practise.

The number of students at the Agricultural and Sylvicultural Institute at Nova-Alexandria in 1874 was 52; viz, 39 in the agricultural and 13 in the sylvicultural department.

Secondary instruction.—There were, in 1874, 123 Gymnasia and 44 Progymnasia. The total number of students was 4,200.

Previous to the year 1874 there were only 30 professional schools in Russia, but the ministry of public instruction has since established 43 new schools in different cities. In 1873 the professional schools were attended by 4,275 pupils.

The three theological schools were attended by 1,418 students, of whom 570 belonged to the orthodox church.

Primary instruction.— Number of elementary schools in 1876, 24,431; number of pupils, 1,006,719; viz, 806,965 boys and 199,754 girls.

The expenditures for primary education in 1873 were 4,762,678 roubles, (7 roubles=1 pound sterling.)

There is at present only one school for 3,294 inhabitants, and the following table shows that school attendance is anything but satisfactory:

Province.	School population. (7–14.)	Proportion of attendance in 1873.	
		Boys.	Girls.
Dorpat	100, 892	1 of 15.	1 of 24.
Warsaw	163, 142	1 of 28.	1 of 61.
St. Petersburg	62, 405	1 of 43.	1 of 198
Odessa	55, 173	1 of 50.	1 of 233.
Vilna	69, 328	1 of 47.	1 of 510.
Kharkoff	115, 858	1 of 47.	1 of 511.
Kazan	164, 614	1 of 58.	1 of 333.
Kieff	64, 556	1 of 77.	1 of 658.
Moscow	63, 597	1 of 105.	1 of 498.

The minister of public instruction adds the following remarks to these statistics:

The above table proves that our population does not appreciate the value of instruction, and if this is true of our population in general, it is especially true of the female population in many of our provinces.

Speaking of the school teachers and their training, the minister says:

We have unfortunately too small a number of teachers, and those few are far from being competent to do their work. The small salaries have doubtless caused this deplorable condition.

According to a report of the inspectors of four large provinces, 500 schools had no teachers at all, and 3,000 schools were in charge of ignorant persons. It is therefore absolutely necessary to establish more teachers' seminaries. The small number of 45 seminaries with 2,725 pupils cannot furnish a sufficient number of competent teachers for our large country.

Miscellaneous.—In 1874 there were 216 ladies' high schools, with 27,577 pupils. The total expenditures in 1873 amounted to 1,231,277 roubles, (7 roubles = 1 pound sterling.)

Number of private schools in the whole empire, 1,728; number of pupils, 59,685; viz: 29,604 boys and 30,081 girls. There are 343 private schools in St. Petersburg, and 129 in Moscow.—(Rapport du ministre de l'instruction publique pour l'exercice 1873, St. Pétersbourg, 1876.)

SERVIA, principality, nominally belonging to Turkey, but semi-independent since 1856: Area, 12,600 square miles; population, 1,338,505. Capital, Belgrade; population, 26,674. Minister of the interior, M. Miloikovitch.

Servia, which has 1,200,000 inhabitants, possesses a university with 17 professors and 196 students; a theological seminary, with 11 professors and 279 students; 17 Gymnasia, with 59 professors and 1,186 pupils; 11 industrial schools, with 49 professors and 546 pupils; 1 teachers' seminary, with 11 professors and 59 students; 1 female high school, with 26 teachers and 238 pupils; 507 common schools, with 627 teachers and 22,756 pupils, and 13 free schools. Each common school has an average number of 44 pupils, and each teacher 34 pupils.

Among the recruits of the Servian army there were only 15 per cent. who could read and write. As 22 per cent. of the former had received a school education it is evident that 7 per cent. of the young men forgot all they had learned in school.

As agriculture is the almost exclusive occupation of the Servian people, and large cities are very scarce, the country deserves great credit for having established nearly 600 schools in a period of 40 years. A teachers' seminary was established in 1871 at Kragniewatz, the centre of the country. The candidates are obliged to serve the

country for six years as teachers; this does not, however, relieve them from military service.

The teachers' seminary has a physical cabinet, a chemical laboratory, and a library of about 2,000 volumes.—(Freie pädagogische Blätter, Wien, 1876.)

SPAIN, constitutional monarchy: Area, 182,758 square miles; population, 16,835,506. Capital, Madrid; population, 332,024. Minister of the interior, F. Romero y Robledo.

Middle class education is given in 58 public colleges by 757 professors to 13,881 pupils. The expenditures for public education by the government amounted to £250,000 in 1876.—(Stateman's Yearbook, 1877.)

SWEDEN, constitutional monarchy: Area, 171,749 square miles; population, 4,341,559. Capital, Stockholm; population, 150,446.

Of 28,893 recruits, who were examined in 1874, 49 per cent. could read fluently, 48 per cent. read middling well, and 3 per cent. could not read at all. In writing 24 per cent. were good, 62 per cent. defective, and 14 per cent. could not write.—(Chronik des Volksschulwesens, 1876.)

SWITZERLAND, confederate republic: Area, 15,233 square miles; population, 2,669,147. Capital, Berne; population, 36,001.

Switzerland has at present 5,095 schools, with 411,800 pupils and 7,480 teachers. The number of school libraries is 1,216, and the number of volumes 327,297. The 26 normal schools have 182 teachers and 1,505 students.

The following statistics refer to education in the Canton Berne:

Primary schools.—Number in December, 1875, 1,734. Number of pupils, 92,232; viz, 46,314 boys and 45,918 girls. The number of teachers was 1,719; viz, 1,114 males and 605 females. The 78 private schools were attended by 4,610 pupils. There are two institutions for deaf-mutes which are supported by the state.

Middle class schools.—The 52 Progymnasia and Realschulen had together 228 teachers and were attended by 3,406 pupils.

Teachers' seminaries.—The 4 seminaries received a government grant of 119,900 francs.

Gymnasia.—The number of Gymnasia was 3 and the number of pupils 832.

University of Berne.—Number of students during the winter semester, 1875–'76, 345.

Veterinary school at Berne.—This institution had, in 1875, 10 professors and assistants. The number of lectures given was 20 each week. The number of students is not mentioned.—(Schweizerische Lehrerzeitung, 1876, No. 38.)

TURKEY, absolute monarchy: Area, (Turkey in Europe,) 138,264 square miles; population, 8,315,000.

Public instruction is in a most lamentable condition. We not seldom see in Turkey deserted school-houses, almost fallen to ruins. Old inscriptions above their doors still tell us that they were once used for educational purposes.

The instruction given in these schools was doubtless very defective and one-sided; but it was at least better than nothing. At present, public instruction has entirely ceased in the Turkish provinces.—(Wiener Freie pädagogische Blätter, December 2, 1875.)

II.—North America and South America.

ARGENTINE REPUBLIC, confederate republic: Area, 515,700 square miles; estimated population, 2,130,000. Capital, Buenos Ayres; population, 177,787. Minister of public instruction, Dr. D. Onesimo Leguizamon.

The following statistics have been kindly transmitted to this office by the Argentine minister at Washington, Dr. Manuel R. Garcia.

The school population (6-14) is 504,800. The number of primary schools for both

sexes is 1,900, and the number of pupils, 120,000. For secondary instruction there are 14 colleges, with 4,558 pupils, and for superior education there is a university with 334 students. For the training of teachers there are 7 normal and preparatory schools, with 1,439 pupils.

BRAZIL, constitutional monarchy: Area, 3,275,326 square miles; population, 10,108,291. Capital, Rio de Janeiro; population, 274,972.

Public education is divided into three distinct forms or classes, namely: primary, secondary or preparatory, and scientific or superior. The primary instruction in the capital is under the charge of the general assembly, and in the provinces under the provincial assemblies. According to the constitution, primary education is gratuitous, and it will become compulsory as soon as the government considers it opportune. Notwithstanding the efforts of the legislature in recent years for the spread of education, it is still in a very backward state, and the public schools were frequented in 1874 by only 140,000 pupils.—(Statesman's Yearbook, 1877.)

CANADA, (Dominion of Canada,) British possession: Area, 3,540,000 square miles; population, 3,833,132.

The following is an abstract of the work "L'instruction publique au Canada, par M. Chauveau, ancien ministre de l'instruction publique, Québec, 1876."

General remarks.—Public instruction, in most provinces, is under the control of a council of education and of one or more superintendents.

In the province of Quebec there is a superintendent and two secretaries, one Catholic and one Protestant. The council of education has a Catholic and a Protestant section. The bishops are ex officio members of the council.

In the province of Manitoba there are two superintendents of public instruction, a Catholic and a Protestant, and the council of education has a Catholic and a Protestant section.

Newfoundland has no council of education; she has only three superintendents, one for the Catholics, one for the Episcopalians, and one for the Methodists. Schools of other religious denominations are provisionally under the control of the two Protestant superintendents.

In the provinces of Ontario, New Brunswick, Nova Scotia, and British Columbia, the religious element is not recognized in the organization of councils of public instruction.

The province of Ontario has substituted for the council of public instruction a committee of the executive council, and for the superintendent, a minister of public instruction with a deputy minister.

In New Brunswick the council of public instruction is composed of the lieutenant governor, of members of the executive committee, and of the superintendent of education.

In Nova Scotia the members of the executive committee form the council of public instruction, and the superintendent acts as secretary of the council.

Prince Edward Island has a bureau of education, composed of eleven members who are appointed by government.

Instruction is entirely gratuitous in the province of Ontario.

In the provinces of Ontario, Manitoba, and British Columbia school attendance is compulsory, and the laws are strictly enforced.

In the province of Quebec no compulsory laws are in existence, but the parents have to pay school fees for all their children of school age, (7–14,) no matter whether they send them to school or not. This is in a certain degree equivalent to a compulsory system and has proved a success.

The children of the poor are in all the provinces admitted free to the public schools, and the governments of the provinces grant subsidies to such districts and towns as are too poor to establish and maintain schools.

All the provinces, excepting Newfoundland, Manitoba, and British Columbia, have several normal schools. In the province of Ontario there are two normal schools,

They are non-sectarian and open for both sexes. In the province of Quebec all the normal schools are sectarian.

The number of female teachers is larger by far than that of male teachers in all the provinces, excepting Newfoundland.

The number of young men who embrace teaching as a profession is very small. Such as are talented and ambitious find more lucrative occupations.

In some provinces the teachers' salaries have been raised. Ontario and British Columbia are far in advance of other provinces in this respect.

In the province of Quebec the salaries are comparatively small, because a large number of religious persons who have made teaching their profession, prepare and offer teachers for small salaries, and this is not the only reason why preference is given to them. Nevertheless it is a great negligence on the part of school authorities that lay teachers are not better paid, and, what is still worse, that the small amount to which they are entitled is not regularly paid.

Teachers' conferences are held in almost all the provinces.

The number of educational journals published in the different provinces is five; viz, two in the province of Quebec, one in the province of Ontario, one in Nova Scotia, and one in New Brunswick.

Religious instruction.—The two provinces in which the system of public instruction is absolutely non-sectarian are New Brunswick and British Columbia. In Nova Scotia and Prince Edward Island the minority (Catholics) have by common consent the privilege of combining religious with secular instruction. In Nova Scotia no steps have yet been taken to abolish this system; but it seems as if the school system of Prince Edward Island is rapidly approaching the system of New Brunswick. In the province of Ontario the religious minorities, Catholics or Protestants, can obtain separate schools under very easy conditions.

In the province of Quebec, the Protestant minority have obtained many privileges which are by far superior to those which the Catholics enjoy in the province of Ontario.

In the province of Manitoba the division is still more complete. There are two sections in the council of public instruction, two superintendents, and separate schools, which are either Catholic or Protestant.

In the province of Newfoundland the Catholics are not only completely separated from the Protestants, but the different Protestant denominations have each their superintendents, their commissioners, and their subsidies, proportioned according to their population. Five religious denominations have thus far been recognized by law; viz, the Catholics, the Episcopalians, the Methodists, the Presbyterians, and the Congregationalists.

General statistics.—According to modern views, the reports on public instruction ought to embrace the following division: Superior education, secondary education, special education, and primary education, with the subdivisions of elementary and advanced elementary instruction. Since no uniform system of classification exists in the different provinces, this résumé has not been made with strict reference to the above division.

There are still other grave difficulties to surmount, and this ought to induce the school authorities of the different provinces to agree upon some plan for the publication of uniform statistics, which would facilitate the compilation of statistics for the whole Dominion.

Superior education has been slowly established and gradually developed in the provinces where it exists at present. The University of Toronto and the McGill University were chartered in 1827, and the Laval University, although only chartered in 1852, can be traced back to the year 1663. The University of New Brunswick was first chartered in 1800, and that of Nova Scotia in 1788. Classical colleges, which are mostly connected with universities, exist in every province.

In the following tables of all the institutions of learning, there is given the exact

number of schools, including independent establishments, which are not mentioned in the official reports of the different provinces, with the exception of Ontario and Quebec. The statement, as given below, is based upon the latest reliable information which could be obtained. Even in the provinces of Ontario and Quebec several special schools have been omitted in the official reports:

Provinces and territories.	Universities and colleges.	Pupils.	Special schools.	Pupils.	Lyceums, grammar schools, academies.	Pupils.	Normal schools.	Pupils.	Primary schools.	Pupils.	Total number of institutions.	Total number of pupils.

The following table contains a comparison of the different provinces of the Dominion.

In compiling the table the European method has been followed in comparing the total population with the total number of registered pupils. More exact information relative to the state of affairs could be obtained by comparing the school population with the average attendance of all pupils below the age of 16; but in many provinces this number is not given except in the schools of the government.

Comparative table by provinces of school statistics in the Dominion of Canada.

Provinces.	Area in square miles.	Population according to the census of 1860–'61.	Population according to the census of 1870–'71.	Probable population in 1875, (excepting the three last provinces.)	Total number of institutions of learning in 1874 and 1875.	Total number of pupils.	Number of inhabitants to one institution in 1875.	Number of inhabitants to one pupil in 1875.
Ontario	107,780	1,396,090	1,620,851	1,733,236	5,187	485,352	334	3.55

Newfoundland.—The first efforts to establish public instruction were made under the government of Vice-Admiral Gambier, appointed in 1802. The city of St. Johns had at that time 3,420 inhabitants, two-thirds of whom were Catholics. The governor consulted the leading ministers of the Protestant and Catholic Churches in reference to the establishment of free schools for poor children of both religious persuasions. Every citizen furnished voluntarily his contribution, and the funds thus obtained were divided between the two religious denominations in proportion to their population. Schools were established and opened every Sunday morning and afternoon, and once or twice on week days. This system was very beneficial and successful.

Until the year 1843 contributions for school purposes were entirely voluntary. In 1843 an annual grant of $20,000 was appropriated by the government, to be equally divided between Catholics and Protestants. The school fees were fixed at $1 per pupil per annum. The poor were exempted from this payment. In 1844 a law was passed ordering the establishment of the Academy of St. Johns. Since that time several other legislative and administrative measures have been adopted. The author of the History of Newfoundland, in 1863, states that in spite of an annual expenditure of $65,000, the progress of education is still very insignificant, and he adds that the greatest obstacle is found in the apathy of the parents.

The present school inspectors, Mr. Haddon, Protestant, and Mr. Kelley, Catholic, agree in demanding a change in the present system. Mr. Haddon insists upon the establishment of a normal school. He also expresses himself strongly in favor of sectarian schools. The government grant for Protestant schools, in 1873, amounted to $33,105, and the school fees to $2,250. The average salary of teachers was $170.

The following table shows the progress the Protestant schools have made during the last years:

Established by—	1859.		1863.		1869.		1873.	
	Number of schools.	Number of pupils.	Number of schools.	Number of pupils.	Number of schools.	Number of pupils.	Number of schools.	Number of pupils.
Bureau of government elementary schools	92	4,340	119	5,409	139	6,341	153	7,436

Total	136	7,912	156	8,260	181	9,596	195	11,149

The report of the Catholic school inspector mentions 108 schools, with 4,647 pupils, under the control of the Catholic bureau. The bishop of St. Johns has founded a college, under the direction of priests; and the Sisters in the dioceses of St. Johns and Havre de Grâce conduct 18 schools, with about 1,600 pupils.

The schools of Labrador are under the control of the district judge, who reports to the Government. In his latest report, this official mentions 5 schools, with the same number of teachers (2 male and 3 female) and 162 pupils. The average salary of teachers is $340.

According to the foregoing details, the total number of schools in Newfoundland is 314, and the total number of pupils 16,058. The latter number is large, if we take into consideration that the population of Newfoundland is generally poor and scattered over an immense area.

A new school law for the province of Newfoundland was passed in 1874 and confirmed in 1876. According to this law the sum of $58,437 is annually devoted to public instruction, being equally divided among the recognized denominations in proportion to their population. The law further allows, under the above conditions, $4,000 for poor school districts, $1,000 for the purchase of books, $4,051 for the training of teachers, $3,999 for the inspection of schools, and $5,886 for commercial schools. In regard to religious instruction, the laws forbid teachers to compel attendance whenever parents object to it.

The report of Mr. Kelly, inspector for Catholic schools, makes the following statement for the year 1875: Number of schools that furnished reports, 109; number of pupils on the roll, 5,529; average attendance, 3,021; highest amount of teachers' salary, $360; average salary, $80 to $100.

Manitoba.—According to the first report on the missions of Manitoba, published in 1839, there were only two elementary schools in that vast territory. These schools were connected with the Catholic missions established by two priests in 1818.

In 1844, Bishop Provencher visited Canada and France, where he procured the services of several new missionaries and teachers for Manitoba. Their number has since then increased considerably.

According to a report of the Protestant superintendent of schools, Mr. Pinkham, the number of schools in 1872 was 17 and the number of pupils 977; viz, 530 boys and 447

girls. The Catholic superintendent, Mr. Dubuc, mentions in his report 18 schools, with 824 pupils.

There has been for several years a college and a clerical seminary at St. Boniface, the seat of the archbishop.

The first school law for Manitoba, sanctioned in 1871, has been amended four times. The law of 1875 abolished the old system of appointing an equal number of members of the two leading denominations, Catholics and Protestants, for the council of education. The council consists now of 22 members, 12 Catholics and 10 Protestants. The law of 1875 also prescribes the division of government grants in proportion to the total number of Protestant and Catholic children between the ages of 5 and 16 years. The law of 1876 makes school attendance compulsory in all the cities for children between 7 and 12 years of age.

According to the latest report of Mr. Tassé, Catholic superintendent of schools, the number of schools during the first semester of the year 1874–'75 was 21, and the number of pupils 998; viz, 534 boys and 464 girls. The average attendance was 594. Ten of these schools are conducted by religious persons and eleven by lay teachers.

The report of Mr. Pinkham, the Protestant superintendent, gives the number of Protestant schools during the same period as 22, and the number of pupils as 1,248; viz, 695 boys and 533 girls. The average attendance was 635. There is also a Protestant college, under the direction of the bishop of Rupert's Land. The Protestant superintendent recommends the abolition of the sectarian school system; but the legislature is not inclined to adopt this suggestion.

The superintendents receive a salary of $600 and travelling expenses.

CENTRAL AMERICAN STATES: Total area, 155,574 square miles.

Guatemala.—In Guatemala, by a late decree primary education is made gratuitous and compulsory. The number of pupils in 1874 was 20,528. The total amount expended by the government for public instruction was $64,779.

Guatemala has a polytechnic school, a university, two normal schools, a school of medicine and law, and several other institutions of learning in the capital. The polytechnic school and the two normal schools are conducted by foreigners.

San Salvador.—San Salvador has about twenty-eight thousand pupils, two normal schools, and a university. In the year 1873, $50,068 were expended for public instruction.

Honduras.—In Honduras there are said to be 275 schools with 9,000 pupils. Honduras has a university and a college.

It is generally reputed that Honduras is more backward in point of education than any of the other states. The government of President Leiva has taken the most active steps to remedy this evil.

Nicaragua.—In Nicaragua there are 180 schools and 4,500 pupils. Primary education is gratuitous.

There are three colleges and one university in the state. The government expends $50,000 a year for education.

Costa Rica.—According to the last official report of the minister of public instruction, there were 95 public primary schools and 5,755 pupils.

There is one university and several colleges.

The government appropriation for public instruction for 1874 was $72,138. Primary education is gratuitous and compulsory.

Although there are many universities in Central America, it seems to be generally admitted that the standard of education is not very high.

Education in Central America has passed from the hands of the priests into those of the laity.

The study of the English language has become more general in the colleges and universities as well as in private schools.—(Foreign Relations of the United States, 1876.)

CHILI, republic: Area, 132,606 square miles; population, 2,068,447. Capital, Santiago; population, 148,264.

The following statistics have been kindly transmitted to this Office by Hon. F. G. J. Errazuriz, of the Chilian legation:

The total number of schools in 1875 was 1,359; viz, 818 public and 541 private. The total number of pupils was 89,505; viz, 65,875 in public and 23,630 in private schools.

JAMAICA, British colony: Area, 6,400 square miles; population, 506,154. Capital, Kingston; population, 35,000. Inspector of schools, John A. Savage.

The following is an abstract of the report of April 12, 1877:

Number of elementary schools, 569; number of pupils on the rolls, 46,654; average attendance, 27,270. Number of government schools, 2; number of pupils on the rolls, 176; average attendance, 118. Number of endowed schools, 15; number of pupils on the rolls, 1,621; average attendance, 1,160. Number of normal schools, 5; number of pupils, 104. Total number of schools, 591; total number of pupils on the rolls, 48,555; total average attendance, 28,652. Total expenditure for education in Jamaica, £45,616.

III.—AUSTRALASIA.

NEW SOUTH WALES, British colony: Area, 323,437 square miles; population, 503,981. Capital, Sydney; population, 134,755.

The following is an abstract of the report of the council of education for 1875:

The total number of schools in 1875 was 1,030; viz, 461 public, 262 provisional, 116 half time, and 191 denominational schools. There is thus an increase of 40 in the number of schools since 1874. The aggregate number of pupils enrolled has also increased by 4,072. In 1874 the total number of pupils was 100,384; in 1875 it was 104,456; viz, 58,811 in public, 8,786 in provisional, 2,350 in half time, and 34,509 in denominational schools. The proportion of average attendance to the average enrolment was 64.5. The school fees amounted to £56,246. The number of free pupils was increased from 6,426 in 1874 to 6,600 in 1875.

At the close of 1875 there were 1,504 teachers in the service of the council; viz, 975 principal teachers, 220 assistants, and 309 pupil teachers. The average salary paid was £104; total expenditure for primary schools in 1875, £183,059.

NEW ZEALAND, British colony: Area, 102,000 square miles; population, 279,560. Capital, Auckland; population, 12,775.

The number of school districts is 108, and the number of schools 140. The number of pupils on the rolls is 8,284, and the number of teachers 178. Total expenditure for education, £20,531.—(Report for 1875.)

QUEENSLAND, British colony: Area, 678,600 square miles; population, 133,533. Capital, Brisbane.

The following is an abstract of the official report for the year 1875:

Number of schools in operation, 231; number of new schools opened, 35; number of teachers and pupil teachers, 674; aggregate attendance of pupils, 33,643; average attendance, 16,887; parliamentary grant for education in 1875, £87,200.

TASMANIA, British colony: Area, 26,215 square miles; population, 104,217. Capital, Hobart Town; population, 19,092.

The following is an abstract of the report of the board of education for 1875:

During the year 1875 there were 154 schools in operation. The total number of children on the rolls was 12,271, and the average daily attendance 5,703.

As compared with the year 1874, the number of schools has increased by 7; but the average daily attendance has decreased 164. This reduction is owing, in a great measure, to the increased demand for juvenile labor during the fruit and hop picking seasons. Scarlet fever and measles, which raged throughout the colony during the year, also materially reduced the average attendance.

The number of teachers in 1875 was 161, and the average salary £136. The total expenditure for education in 1875 was £14,598.

VICTORIA, British colony: Area, 88,198 square miles; population, 808,437. Capital, Melbourne; population, 54,993.

The following is an abstract of the report of the minister of public instruction for the year 1875–'76:

The total number of children between the ages of 3 and 16 is 280,983. The total number of children enrolled in school was 220,533, and the average attendance 101,495. The number of schools was 1,320, and the number of teachers 3,341.

EDUCATION AT THE INTERNATIONAL CENTENNIAL EXHIBITION.

The exhibition continued to impose special labors upon this Bureau during the year 1876. All the plans announced in the report for 1875 were steadily pursued as far as time and means would permit.

The Office sought as far as possible to promote the efficiency of the educational portions of the exhibit in several ways.

One object was to stimulate educators at home and abroad to participate in it. This was done by correspondence, by publications, and by visiting agents. One agent visited a large number of the colleges and universities of the country, with a view to securing their coöperation in the exhibition and in the preparation of brief histories for publication. Another visited most of the colleges of agriculture and the mechanic arts in the Mississippi Valley and eastward, with a view to bringing out as far as possible what the national grant to these institutions had accomplished. Another personally visited those in charge of institutions providing for the care of orphans, neglected children, and juvenile offenders, in order that the charitable side of American education might have due record and representation.

The Office sought also to increase the efficiency of the exhibition by bringing to the knowledge of the director general the best ideas upon the organization of this part of the exhibition, the desires of the educators of the country, and their plans and schemes of preparation and exhibition. The difficulties encountered were very great. Congress, instead of increasing the means of the Office in proportion to the increase of its work, had reduced its miscellaneous appropriation for the year by several thousand dollars.

Few persons in this country had any adequate idea of how an educational exhibition should be made, and fewer far had any conception of what the institutions and systems of the United States were prepared to exhibit illustrative of the growth of education. The director general and his associates on the commission, who had manifested deep interest in the educational exhibit, had little conception of the amount of space required

Receiving inquiries and suggestions from all quarters, I was particularly aided by the gentlemen associated with me on the committee of the department of superintendence of the National Educational Association appointed at the meeting in Washington, January 27, 1875, viz: Hon. J. P. Wickersham, State superintendent of common schools of Pennsylvania; Hon. J. D. Philbrick, superintendent of city schools of Boston, Mass.; Hon. Alonzo Abernethy, State superintendent of public instruction of Iowa; and Hon. W. H. Ruffner, State superintendent of public instruction of Virginia.

Formal inquiry having been made by the director general of the Centennial Exhibition concerning the amount of space required for the educational exhibit, I endeavored to obtain the opinions of leading educators on the subject, and, with this end in view, addressed a communication substantially as follows to the Hon. Alonzo Abernethy, of the committee previously referred to, then in attendance upon the National Educational Association, which met at St. Paul, Minn., August 3, 1875:*

*In accordance with a resolution adopted at this meeting Hon. A. J. Rickoff, superintendent of city schools, Cleveland, Ohio; Hon. J. L. Pickard, superintendent of city schools, Chicago, Ill.; and Hon. J. H. Smart, State superintendent of public instruction of Indiana, were appointed a committee to prepare rules and regulations by which teachers and pupils should be governed in the preparation of such products as may be executed by them. These rules and regulations were printed in a separate circular by this Bureau and circulated among the educators of the country.

Colonel Goshorn, the director general of the International Centennial Exhibition, just now sends me an important question which I can only answer as the information is afforded by the respective States and Territories. If some estimate of the space required could be furnished from the States represented in the association it would be a great aid.

In response to this the convention adopted a resolution offered by Hon. J. H. Smart, of Indiana, to the effect that wall space of not less than 2,000 feet in length, with accompanying counter and floor space, would be needed for the proper display of educational products. In a letter of September 13, 1875, I communicated to the director general this action of the convention, and also the estimate of Hon. J. D. Philbrick, based upon the educational space at the Vienna Exhibition, that not less than 26,000 square feet of floor space would be needed, and that if 40,000 or 50,000 feet could be allowed it might be profitably occupied. Having stated these facts, I remarked: "My impression is that there will be required more than 26,000 square feet of floor space and adjoining wall space."

The director general was quite unprepared to believe that the space estimated would be required. Indeed he found the demands for space in all directions much greater than the earlier previsions of the commission. New buildings were erected in various directions to accommodate the surprising demands. As the preparation of the educational material went on, and State and city school executives and those in charge of educational institutions wishing to exhibit began to make application for the space required, the discouraging conclusion was forced upon them that it could not be afforded.

Some fourteen of these officers met me in Philadelphia, at the request of Hon. Mr. Etter, superintendent of public instruction of Illinois, to confer on the subject. The director general and his associates of the executive committee of the commission, listened at considerable length to the several statements which were made; a number of the executive committee specially visited the grounds for personal examination of the facts, but adhered to the views of the director general that no further accommodations could be furnished for the exhibition of education.

Educators were doubly disappointed; first, in not having space enough, and secondly, in having the exhibition of education scattered in fragments, thus greatly injuring its effect and diminishing the lessons it might be expected to teach. Some time before this the book trade had severed itself from the organized exhibition of education and had secured space on the floor of the Main Building. The Stevens Institute of Technology fortunately secured similar space. Massachusetts was given room in the gallery over the south entrance of the main building, and some other States over the west entrance. The State of Pennsylvania, under the leadership of its able superintendent, Hon. J. P. Wickersham, finding their exhibit otherwise unprovided for, erected a separate building known as the Pennsylvania Educational Department. This Bureau availed itself of a portion of the space assigned to the Interior Department in the Government Building. Professor Ward's educational illustrations of natural history were exhibited in the Agricultural Hall. Cornell University and the Worcester Free Institute had a portion of their exhibition in Machinery Hall. Under the auspices of the Women's Centennial Executive Committee an admirable building was erected. Children were furnished from the Foster Home and means obtained by Miss Elizabeth Peabody and others to conduct, under the instruction of Miss Ruth R. Burritt, an excellent Kindergarten during a portion of the exhibition.

Miss Coe, a successful teacher in New York City, erected a building for her "American Kindergarten," and in it illustrated her scheme and her ingenious methods.

Foreign countries represented their education in the space assigned them for their respective exhibits.

When this lack of space and breaking up of the unity of the educational exhibit became known throughout the country, many educators were discouraged, and some ceased their efforts altogether. No one can fully describe the meritorious labors of many of the State school executives in their endeavors to secure a just representation

of their systems of schools. In some instances where States had made appropriation for a State exhibit no money was provided for the educational department, and the State school officers were compelled to raise by voluntary means, such as lectures and exhibitions, the money necessary to meet expenses. Some States that made little show of material, and some that barely entered the exhibition, witnessed meritorious efforts on the part of their school officers to awaken interest and secure preparation. Indeed the country was greatly indebted to the various school officers for its knowledge of what the exhibition would be.

After the exhibition opened it was apparent that the special task was committed to this Office of answering the inquiries of foreign gentlemen for comprehensive views of education in our country as it exists throughout the United States, and as it was represented at the exhibition. To facilitate foreign visits a simple directory of the educational exhibits was printed, and a gentleman speaking several foreign languages was employed. Fortunately a new edition of a thousand copies of each of the previous reports of this Office had been printed. These barely met the requirements of the year, and only a small number of each report is now on hand in the office.

In response to foreign and domestic demands, the Office coöperated in the organization of the International Educational Conference, and furnished a stenographer, an interpreter, and a secretary for the same. The report of this conference is ready for publication.*

Everything was done by the Office to facilitate intercommunication between American and foreign educators, and to afford information to aid educators from abroad in visiting the several States and cities of the Union for the study of our educational institutions and systems. The following letter was addressed to the chiefs of the several foreign commissions:

SIR: It is my desire, as the official representative of the United States in matters connected with education, to afford to gentlemen from other countries visiting the Centennial Exhibition every possible facility for becoming acquainted with the educational institutions and systems of our country. I should therefore be pleased to be furnished with lists of persons coming from your country who may be known to you as desiring information on educational subjects; and should also be pleased to welcome any such persons either at my office in the Interior Department of the United States Government Building at the Centennial, or at the Bureau of Education, Washington, District of Columbia, with a view to answering whatever inquiries they may wish to make.

My hope is that I may be able soon to put into the hands of educators and persons interested in education from other lands a list of both the annual public celebrations of colleges within reach of Philadelphia, and of the meetings of State teachers' associations or other educational conventions which it may be interesting for them to attend.†

Assuring all such persons a most cordial welcome from Americans at the college celebrations and educational conventions, I have the honor to be, very respectfully,

JOHN EATON,
Commissioner.

The foreign commissioners generally replied to this letter, giving, so far as known to them, the names of citizens of their respective countries especially interested in education.

The Office was urged to publish a catalogue of the educational exhibit for the study of educators‡ and the guidance of those making reports upon education; but this was

* This special report referred to has since been issued.

† These facts were published in pamphlet form in due time.

‡ There are many evidences of the favorable effect of the study of the exhibition upon the educational thought among us. The following letter from Rev. David Wills, D. D., an eminent clergyman, formerly president of Oglethorpe University, in Georgia, illustrates the manner in which many studied for themselves the comparative value of education as illustrated in the progress of the countries participating in the exhibition:

WASHINGTON, *November* 4, 1876.

DEAR GENERAL: Your kind letter of introduction to the delegates of education at the Centennial enabled me to confer freely with them on the cause they represented, and thus gave me a good opportunity to determine with considerable accuracy the question of the relations of popular education to the practical industries of the world. And as a rule, I ascertained that the best educated nations brought the richest and best contributions to the exhibition at Philadelphia, and that those which made the

impossible; indeed, there were not funds at command to make even a manuscript catalogue of the articles exhibited by the Bureau. For the same reason, the Office could not respond to the very reasonable request that it should at once publish a general report on the entire educational exhibit. However, the comprehensive plans early formed by the Office in reference to the educational features of the exhibition were steadily kept in mind.* The thousands of coöperative historical efforts commenced by correspondents of the Office will, it is hoped, be prosecuted to a satisfactory conclusion.

Many local memorial centennial reports of educational systems and institutions have already been published; others are in course of publication. These are carefully gathered. Much has been contributed to the Office by letter and in manuscript.

The report on medical education during the century, undertaken by N. S. Davis, A. M., M. D., of Chicago, will, it is believed, be early ready for the printer.†

The valuable material collected for the history of normal instruction is awaiting time and money for its publication.

The history of college education, in charge of Dr. F. B. Hough, made rapid progress while there was money to pay for work upon it. The sketches of one hundred and fifty colleges are now in hand substantially complete. I have hoped the first volume could be issued early in the coming year.

The first part of the history of text books, by Dr. L. P. Brockett, approaches completion.

An exchange of histories of academies and other institutions for secondary instruction was undertaken, but this has been delayed till all that have given notice of a desire to participate shall have reported and the Office shall have an opportunity to mail exchanges.

Other reports undertaken have been mentioned in their appropriate places. It is hoped that additional historical efforts will result in an accumulation of facts in regard to the general phases and methods of education among us which may render possible more satisfactory scientific inquiry into results. It enables the reports of this Office to start with the facts of the past more definitely in view.

The abstracts in the appendix of this report will be found to contain an unprecedentedly full summary of legislation upon education in the respective States.‡

---

least provision to impart the elements of knowledge to their citizens furnished the fewest valuable material products and the poorest specimens in mechanics and art.

Germany has become the arbiter of Europe by reason of her superior system of public instruction, and England and France are making rapid and important advances on this subject as a necessary means of national development and defence. An educated people, all other things being equal, are always the most powerful both on land and sea. "The schoolmaster is abroad in the land," said Lord Brougham, "and he is a greater power than armies and navies." "It is intelligence," remarks Webster, "which has reared the majestic columns of our national glory, and this alone can prevent them from crumbling into ashes."

A wise and efficient system of elementary education is essential to the preservation of the union and the prosperity of the States. The quickest and surest means of rebuilding the broken fortunes of the South is to educate as far as practicable all the people of that section. Trade will revive with the revival of letters, and no permanent prosperity is attainable apart from popular and impartial instruction. Whenever a good system of public schools is established in all the Southern States it will attract to them the best people of the Old World and the New, and thus enhance the value of the lands and provide capital for every department of industry. We wish we could impress on all our old friends and fellow citizens in the South the magnitude and importance of this subject and the great necessity for vigorous and speedy efforts in this direction. We are fully persuaded that a fair experiment would convince them thoroughly of the wisdom of this policy.

Yours ever,

DAVID WILLS.

*See reports of the Bureau of Education for the years 1874 and 1875, and circulars of information.

†Placed in the printer's hands before the publication of this report.

‡ This was prepared at the cost of great labor by Dr. Shiras, of this Office. In accomplishing this difficult task the Office is indebted to those State superintendents who have taken pains to forward the school laws of their States, and also to Mr. A. R. Spofford, Librarian of Congress, and his assistant, Mr. Hoffman, now in charge of the law section of the Congressional Library.

Having thus recited briefly what was done by the Office in general furtherance of the display of American education at Philadelphia, I present the following résumé of its own special exhibition:

The object of the collection exhibited by this Office at the Centennial was to illustrate the relations of the General Government to education, to indicate the principles underlying American education, and to show specimens of the practical details thereof chronologically and geographically arranged. The endeavor was to supplement, not to duplicate, the exhibitions made by individual schools, systems, and persons.

The relation of the National Government to education was illustrated by a map showing the grants of land to the States and Territories for educational purposes, by a set of the publications of this Office, and by a complete set of the "documents" yearly printed by the Government and distributed to designated depositories by the superintendent of documents.

Each of the several grades of elementary, secondary, superior, special, industrial, and professional instruction was illustrated by reports, catalogues, and photographs.

School architecture was illustrated by photographs of many school buildings, and by models of a log school-house, an adobe school-house of the Southwestern Territories, a modern rural school-house, and a graded school building, such as is seen in our modern cities.

Among the articles of school furniture and appliances exhibited, may be mentioned collected specimens of the wood, bark, blossoms, leaves, and seeds of twenty-eight American trees; Kindergärten furniture, material, and diagrams; improved school furniture, collections of minerals, geographical and astronomical appliances, &c. This collection also contained chemical apparatus and appliances, and a very remarkable collection of birds and animals mounted by a pupil of a New York public school, &c.

The collection also contained a series of the text books formerly used in American schools and colleges. Especially notable among these were the dictionaries and spelling books of Noah Webster, a large collection of books for the blind, &c. The later school and college text books were so fully represented in the book trade department of the main exhibition that it was not thought expedient to attempt a duplication.

Another class of articles exhibited consisted of maps and statistical charts. The maps showed the location of Kindergärten, private secondary schools, colleges, and professional schools, orphan, reformatory and charitable schools for the young, &c. The school statistics of thirty-two cities were presented to the eye on a corresponding number of charts, and the historical development of libraries from 1776 to 1876 was also shown in two other charts.

Another series of articles consisted of the work of children in several Kindergärten; examination papers and drawings from the public schools of two or three cities, and from several private schools; also schedules of study and other material of similar character.

Many colleges and schools having adopted the suggestion of this Office that they should prepare succinct histories of their origin and their progress up to that time, another part of the exhibit consisted of a collection of these histories, together with other reports, series of catalogues, photographs and views of school buildings, portraits of eminent teachers, &c. Notable among those specially commemorated were Mrs. Emma Willard, of Troy, N. Y., the Hon. Horace Mann, of Massachusetts, and George Peabody, esq. The enormous benefactions of the latter to education were illustrated by a map showing the towns and cities which had received aid from the Peabody fund, and the places where schools, academies, and colleges had received gifts.

The exhibit of deaf-mute education was crowned with a portrait of the eminent Dr. Gallaudet, the father of the first institution for the instruction of this unfortunate class in this country. Beneath this was a map locating the several institutions in which this instruction is now imparted, together with photographic views of the grounds, buildings, &c.; and on the opposite side of the aisle, in glass cases, for examination, reports of the institutions and a set of the journal published for their benefit.

Medical education, in addition to catalogues and reports, was illustrated by a collection of skeletons, charts, models, and surgical instruments, exhibited by John Reynders & Co., New York.

Instruction in dentistry was similarly illustrated; and its aids, in the way of operator's instruments, models, &c., were exhibited by Dr. J. H. McQuillen, of the Philadelphia Dental College. A similar exhibition of pharmacy was made by the College of Pharmacy of Philadelphia.

The calisthenic and gymnastic apparatus illustrated the advances which have been made in the means of taking physical exercise.

Charts, books, and the organ, by Estey, illustrated the instruments used in imparting instruction in music.

Voluntary action in behalf of education conducted as a private enterprise, without charter or actual incorporation, was illustrated by school work, compositions, and collections in botany, &c., from the pupils of Park Seminary, Washington, D. C.

Institutions for commercial education, for the instruction of nurses, and homes for orphans, were not omitted.

Associated effort in behalf of education, supplemental to school or lecture room instruction, was brought to mind by the examination of reports of the American Society for the Advancement of Science, and reports of the Antiquarian Society of Worcester, Mass.

The comprehensive organization of superior instruction under the auspices of the State was represented by a series of reports of the regents of the University of the State of New York.

Practical methods of instructing children in clay modelling were exhibited by Mr. Edward A. Spring; the orrery by Mr. Lowe; the study of phonetics by Mr. Lindsley, of New Jersey, and a study in the origin of the human alphabet by Professor Enthoffer, who also illustrated the progress of instruction in sanitary science by exhibiting the actual in contrast with the ideal arrangement of houses and yards in an urban square.

The new interest awakened in instruction in drawing was illustrated by the elaborate lithograph copies of drawing subjects of Messrs. Prang & Co., and the instruction in Syracuse schools by Mrs. Hicks, and by a rare collection of the works of the pupils of the Cooper Union Art Schools. Among them was a portrait of Peter Cooper, its philanthropic founder.

The organization and progress of education in cities was illustrated by the exhibits of Washington and Syracuse.

The progress of civilizing and educating the Indians was shown by several hundred photographs of school-houses, churches, shops, and implements; by specimens of their writing books, needlework, weaving, blacksmithery, and other work; by copies of newspapers, text books, catechisms, prayer books, dictionaries, and other works in Indian languages.

No attempt at a full description can be made here. It is hoped that before long means may be furnished for preparing a complete catalogue of the exhibit.

THE CENTENNIAL NORMAL INSTITUTE.

In the spring of 1876, Prof. George P. Beard, of Shippensburg, Pa., sent to several of the leading educators of the United States a circular letter submitting a plan of organization for an educational institute to be held in connection with the Centennial Exhibition in Philadelphia.

The objects of the institute, as stated in this circular, were: 1. The establishment of an educators' headquarters near the exhibition grounds, where suitable accommodations could be secured at reasonably low rates. 2. The study, from the educational standpoint, of the exhibition as a grand complex object lesson of the world's civilization. 3. An exposition of advanced education, by means of instruction, lectures, and discussions by acknowledged leaders in their respective fields of labor. 4. Comparisons and criticisms of American and foreign educational institutions and systems.

This prospectus met with a prompt and universally favorable response from representative educators in every class of institutions and every State in the Union. Encouraged by their earnest and emphatic indorsements, Professor Beard issued, June 1, another circular letter giving details concerning the management of the institute and a list of about seventy lecturers and instructors who had been engaged. This programme and a circular of the headquarters, the Atlas Hotel, were largely distributed, and resulted in bringing together many thousands of educators during the months of July and August.

The institute opened July 5, and continued in session six weeks. Commissioners and representatives from several foreign nations presented congratulations from the educators of their countries to the educators of the United States. Music was furnished on this and several occasions by the celebrated Hutchinson family. The inaugural address was delivered by Hon. John Eaton, United States Commissioner of Education; subject: "The education of the world as related to the education of America."

During the various sessions of the institute lectures were delivered as follows: Hon. C. J. Meyerberg, Stockholm, Sweden, "The Swedish language," and "Education in Sweden;" Hon. F. Tanaka, minister of education, Japan, "Education in Japan;" Prof. E. Jones, Liverpool, England, "Phonetics;" Prof. B. W. Putnam, Boston, "Art;" Hon. B. G. Northrop, Connecticut, "The new era in Europe," and "Education in Japan;" Prof. J. H. Hoose, New York, "Morals and religion in American public schools;" Hon. H. A. M. Henderson, Kentucky, "The sphere of the educated American woman;" Prof. J. W. Dickinson, Massachusetts, "Scientific and elementary teaching;" Prof. J. W. Dodd, Kentucky, "The influence of song;" President E. E. White, Indiana, "The American method of teaching;" Prof. William F. Phelps, Minnesota, "Oral instruction;" Mrs. A. J. Field, Michigan, "Causes and cure of crime," "Hindrances to teaching," and "Sunday school instruction;" Hon. William T. Harris, St. Louis, "The future of the Mississippi Valley," and "The educational aspects of the exhibition;" Prof. L. V. Dodge, Kentucky, "Shall we speak pure English?" Col. Homer B. Sprague, Brooklyn, N. Y., "Milton as an educator," and "Shakspere's life and works;" Prof. N. B. Webster, Va., "History;" Hon. Alex. Hogg, Alabama, "The lack and need of the South;" Mrs. Julia Ward Howe, Boston, "Language culture;" Prof. J. C. Stewart, Ohio, "Vocal music in schools;" Prof. John S. Hart, Philadelphia, "Macbeth;" Prof. J. W. Shoemaker, Philadelphia, "Elocution," and "How to say things;" Mrs. J. W. Shoemaker, "Criticisms on and readings from Tennyson;" Prof. F. A. March, Lafayette College, "The study of English;" Rev. E. D. Pitts, Texas, "English literature;" Prof. R. M. Thorden, University of Sweden, Upsala, Sweden, "University life," and "The Swedish language;" Prof. J. C. Greenough, Rhode Island, "English literature;" Rev. D. Wills, Washington, D. C., "Uncle Tom without a cabin."

A variety of subjects was treated by numerous other speakers in a familiar manner.

An international convention for the reform of English orthography was called under the auspices of this institute and remained in session four days, August 14 to 17; it brought about the union of many organizations of a kindred nature into one permanent organization, known as the Spelling Reform Association. Among the more prominent members of this convention were Prof. F. A. March, president; Prof. Melvil Dewey, secretary; Prof. S. S. Haldeman, Prof. E. Jones, Rev. J. W. Shearer, Prof. C. K. Nelson, Prof. Charles Raddatz, Prof. W. H. Parker, and others.

The institute was considered by its friends eminently successful as a headquarters where educators could meet daily and in a social and familiar manner discuss topics of special interest to them.

INTERNATIONAL EDUCATIONAL CONFERENCE.

At the close of the International Conference at Philadelphia, on motion of Hon. J. G. Hodgins, deputy minister of Ontario, Canada, the following resolution was adopted:

Resolved, That in the opinion of this conference it is desirable that there should be

held at the next universal exposition an international educational congress, and that the United States Commissioner of Education is hereby requested to take such steps, whether by correspondence with foreign governments or otherwise, as to him shall seem most proper to bring about that result.

This action I had the honor to communicate to M. Buisson, the chairman of the committee, who manifested the most earnest sympathy, in a full conversation upon the wishes and desires of American educators. The substance of the resolution and of the conversation was communicated by him to the French minister of public instruction, M. Waddington, who telegraphed his approval and his desire that this Office should, as requested, proceed with its endeavors to organize an international conference for the coming exposition at Paris. This I desire to do, if Congress shall take action concerning an appropriation, or if the people of the United States shall make arrangements for participating in the exposition of 1878.

NOTABLE EDUCATIONAL VISITS.

DOM PEDRO, EMPEROR OF BRAZIL.

The visit of Dom Pedro, Emperor of Brazil, though not exclusively educational, was specially so.* His stay among us was a lesson in statesmanship. He came to

*Dom Pedro II of Brazil, born December 2, 1825, became Emperor by the abdication of his father, April 7, 1831, and was proclaimed as the actual Emperor July 23, 1840. At the age of five years he was committed to the guardianship of José Bonifacio de Andrada, a pious and learned man, so earnest and constant in the investigation of nature and of science as to be called the Franklin of Brazil. The Emperor's career has shown how he has profited by that guardianship and instruction, and what an admirable superstructure has been built upon the devoted patriotism and solicitude for the welfare of his people he inherited from his father. In 1848, when scarcely twenty-three years of age, his reign was disturbed by a revolution in two of the largest provinces of his empire. Having conquered the rebels, he availed himself of the prerogative granted him by the constitution, and pardoned them.

Order was hardly restored after this revolution, when the attention of the government was called to the imminent danger to Brazilian commerce from the increasing power of General Rosas, President of the Argentine Confederation. The Emperor formed an alliance with General Urquiza, governor of a province of the Argentine Confederation in revolt against Rosas, and their united forces vanquished him completely February 2, 1852. From this period really began that progress which excites the admiration of all who compare the Brazil of the present with the Brazil of twenty-five years ago. This era commenced with the abolition of the slave trade, followed by an enthusiasm for commercial and industrial enterprises. Then were laid the first railroads; the companies for river and maritime navigation were largely increased; Europe was brought into communication with Brazil by means of steam; gas was introduced into all the great cities and good roads were opened. These enterprises gave a marked impulse to agricultural industry, and were thus of material benefit to all classes of society. The prosperity of the country was increased by the Emperor's frequent visits to the various provinces in order to learn what was needed to secure their intellectual and material progress. On his return to the capital, measures were taken in conformity with the information thus obtained.

In 1863, after a conflict with England, the necessity was felt of placing the country in nearer equality with the great maritime powers. The idea was conceived of a national subscription for the purchase of modern cannon and ironclads. For this purpose the Emperor subscribed the fifth part of his civil list, and the Empress, and the princess, his daughter, followed his example. He also visited every day the arsenals, workshops, dockyards, war vessels, military schools, &c., and everywhere exhibited knowledge which astonished even specialists. These efforts were crowned with brilliant success. In 1863 occurred the revolution of Uruguay, which lasted five years. Immediately upon the close of this struggle, 1868, the Emperor devoted himself to carrying out his views concerning the abolition of slavery. The country had lost 100,000 men, mostly cultivators of the soil, during the late war; a resupply of the farming population was imperatively necessary, and this seemed a favorable time to bring the question before Parliament. But this body, composed largely of wealthy planters, slaveholders, opposed the idea of liberation, and it was not until September 28, 1871, and then not without great trouble and three changes in the ministry, that a law was passed declaring the children born of slave women after that day to be free, and requiring the owner of the parents, for a slight indemnity, to maintain the children until the age of twenty.

In 1871, Dom Pedro visited various countries of Europe, making a careful examination of the works of art, of science, and of industry, the schools, universities, and scientific societies. After his return to Brazil one of his first acts was to abolish the system of vassalage which had descended from the

increase his resources as a ruler for the benefit of his people. No subject was too abstruse, no interest too minute for his attention, if he could draw from it any benefit for them. He traversed the country from ocean to ocean and from lake to gulf, examining all forms of industry, studying the different phases of internal and external commerce, but examining nothing with greater manifestations of interest than our systems and institutions of learning. He manifested his profound statesmanship by putting education in its true relation to all other interests of his people. Everywhere his intelligence, simplicity of manner, and hearty interest in whatever was meritorious won the good will of those he met. Many incidents connected with his visit deserve special record. Space, however, permits the mention of but one.

On Friday, June 2, an occasion of great interest occurred at Kendall Green, of which the following description appeared in the National Republican of Washington the following day:

A little after 7 o'clock yesterday morning Dom Pedro d'Alcántara, Emperor of Brazil, accompanied by Vicomte de Bom Retiro, chamberlain to His Majesty, and Señor A. P. de Carvalho Borges, Brazilian minister, visited the National College for Deaf-Mutes, on Kendall Green, in the northeastern suburbs, where they were received by General John Eaton, the Commissioner of Education, by whom the officers of the institution were presented to the distinguished visitors.

President Gallaudet briefly explained the scope of the institution in answer to the Emperor's pertinent inquiries, while pupils from the primary department wrote original exercises, which the Emperor read and commended. Words of welcome were then written by representatives of the college classes. We can give only a few extracts. A freshman wrote: "We welcome you, not merely as a formality, nor because it is the first time a foreigner of so honorable and responsible a position as yourself has thus honored our institution, but because we desire that your visit shall be one of pleasure, interest, and profit. * * * Our only regret is that we have not the honor and pleasure of extending our welcome to Her Majesty the Empress. As you have come early, we kindly ask you to stay late." A sophomore wrote: "We admire your policy, activity, and the pleasure you are taking in your visit to our country. It would give us great pleasure to entertain you, and to make you a deaf-mute for a while, if thereby the mutes of Brazil might be benefited." Another student wrote: "The silent manifestations on every side speak louder than my words can of the cordial greeting extended to you, sire, and of the pleasure felt at your visit. Recognized as a strong and zealous advocate of learning, an eager participant in whatever tends toward the advancement of civilization, whose manifold blessings are already blooming in the sunny land of Brazil, we trust that this institution, one of civilization's fairest fruits, will disclose to you the importance of its work—act as a plea for the deaf-mutes of your empire." A senior wrote: "It is a great privilege to be allowed to study, to learn, to be educated. Happiness requires it, beauty of character demands it, and pureness of spirit needs it." Another senior gave some entertaining examples of pantomime, after which the Emperor personally tested the attainments of some of the classes by exercises of an impromptu character in Latin, algebra, chemistry, and astronomy, and took for future inspection specimens of papers written by the students at the regular examinations.

---

ancient Kings of Portugal. Then he hastened to introduce every useful art and custom he had seen abroad compatible with the climate, institutions, and national habits of the country. The most remarkable results of these efforts at Rio are the foundling asylum, the Hospital of Mercy, the military school, the primary schools, the exchange and the public treasury. Brazil was then united by telegraph with Europe and the United States. The construction of new railways and the opening of new roads was undertaken. In political and intellectual affairs there was radical reform, especially in the reorganization of schools and the revision of the electoral law. The latter is one of the greatest benefits Brazil has received from the Emperor. His extraordinary attainments have been thus admirably recounted: "While yet a mere youth he was an expert chemist, busy in the application of chemistry to the industrial arts. He understands machinery and mechanical appliances like a born mechanic, and examines every new machine, tool, engine, and process with the ardor of an inventor. He is a good civil and topographical engineer and draftsman; he is a learned geographer and philologist; he speaks and reads six modern languages; he is thoroughly acquainted with the politics, public affairs, and progress of the various nations of the world; his library is an admirable collection of the best books in all departments of literature, and he is a devoted reader of newspapers, giving several hours of each day to the perusal of the journals of his own country, and the principal journals of the world. His great natural gifts, and his acquired talents and learning, he devotes to the improvement of his country by investigating all that promises to promote the welfare of his people. His great title to honor with mankind is that he is a wise and good ruler, who understands and carries into practice the true purposes of all government, the happiness and prosperity of the people intrusted to his care."

Just before his departure the Emperor performed a beautiful act in a very graceful manner, the planting of an ivy. He received the vine from the hands of the venerable widow of the founder of the first deaf-mute institution in America, the voiceless mother of President Gallaudet, planted it skilfully, and plucked from it some leaves as a souvenir of his visit.

The Emperor seemed to be highly interested in all that he saw, and certainly his intelligence, appreciation, kindness, and suavity won the hearts of all he met on Kendall Green.

This Office has sought in every way, by forwarding its publications and other means, to furnish a correct view of education in the country to the Emperor or his representatives. Councillor A. P. de Carvalho Borges, the Brazilian minister plenipotentiary to this country, who heartily seconds the zeal of the Emperor in behalf of education, is a frequent caller at this Office, gathering special information in regard to different phases of education in this country and furnishing in return reports and facts from Brazil.

Dr. da Motta, the commissioner of the Brazilian department at the Centennial Exhibition, has extensively visited systems and institutions of education in the country and gathered a very large amount of information on all subjects connected with their administration. His courteous manner has won him many friends. Dr. da Motta contributed valuable articles to the Bureau illustrative of education in his empire, which are duly acknowledged and will form a part of the collection illustrative of education for which it is hoped Congress will make ample provision.

OTHER NOTABLE VISITORS.

Professor Meyerberg, superintendent of schools, Stockholm, Sweden, had charge of the Swedish educational exhibit at the Centennial. He was a great admirer of the American school system. Few foreign educators at the exhibition took more interest in educational affairs than he. He was present at all the preliminary and regular educational meetings held in connection with the exhibition, and took a lively part in the discussions on educational topics.

His remarks on the school system in Sweden, on the courses of study, on the training of teachers, and on secondary education were highly interesting, and threw new light on the condition of education in his native country.

Professor Meyerberg returned to Sweden in August, 1876, as his valuable services were required at home.

M. F. Buisson, of the University of France, member of the educational statistical commission of the ministry of public instruction and fine arts, one of the ablest and most zealous educators in France, was appointed in 1873 by M. Jules Simon, minister of public instruction, to study the educational systems of countries represented at the Vienna Exhibition, and to report upon them.

The report of M. Buisson, an octavo volume of nearly 500 pages, is highly appreciated by European and American educators on account of the many valuable suggestions which it contains.

The successor of M. Jules Simon, Minister Waddington, knowing the excellent qualities of M. Buisson, appointed him, in 1876, president of an educational delegation to be sent to the Centennial Exhibition at Philadelphia. The delegation consisted of M. Buisson, president, and five other educators, viz: Messrs. Laport, Olagnier, Rauber, Valens, and Berger. The last five gentlemen are inspectors of primary schools in Paris and the suburbs. The delegation arrived at Philadelphia in the beginning of July, 1876, and minutely studied the various phases of education represented there.

M. Buisson, however, did not limit his studies to the exhibits at the Centennial; he spent about two months in visiting the principal cities in the United States and Canada. He took special interest in the work of pupils, and during his travels in the United States had several persons engaged in copying the pupils' work of different grades.

Immediately after his return to France he had this interesting work translated and published for the information of his countrymen. The demand for his valuable book

of 500 pages was so great that the first edition was exhausted six weeks after its publication.

M. Buisson's general report on education at the Centennial and especially in the United States is in course of preparation and will be ready before the 1st of December, 1877.

Dr. F. Migerka, imperial and royal councillor in the Austrian ministry of commerce and chief commissioner for Austria-Hungary at the Philadelphia Exhibition, was specially charged by His Excellency Dr. von Stremayr, minister of public instruction for Austria, to make a report on education in the United States, and to collect in this country various State and city reports for the library of the ministry of public instruction.

His Majesty the Emperor of Austria-Hungary has, in recognition of the valuable services of Dr. Migerka, appointed him chief commissioner for the Paris Exposition, in 1878.

Dr. Migerka has liberally contributed to the educational museum to be established in Washington, and he desired that the United States should take the well organized museum at Vienna as a model in the establishment of a similar institution.

F. Tanaka.—The following dispatch contained an announcement of extreme interest to American educators:

UNITED STATES LEGATION, JAPAN,
Tokei, April 14, 1876.

SIR: By the American steamer Colorado, His Excellency Mr. Tanaka, the Japanese vice-minister of education, visits America, attended by Mr. Hatakeyama, superintendent of schools, Mr. Taizo Ahe, sixth official rank of the educational department, Mr. Sinicho Tigima, eighth official rank of the educational department, and Mr. Rikio Ideura, with ninth official rank of the educational department, and interpreter to Mr. Tanaka.

Mr. Tanaka with his associates visits America to witness the Centennial and inquire into the educational system of the United States. He is a gentleman of character and intelligence, greatly interested in our western civilization, and exceedingly anxious, as far as possible, that Japan shall learn by our example.

I have the honor to be, sir, your obedient servant,

JNO. A. BINGHAM.

Hon. HAMILTON FISH,
Secretary of State, Washington, D. C.

Mr. Tanaka was the commissioner of education associated with an embassy extraordinary that visited this country some years ago and studied our educational ideas and customs so thoroughly, afterward taking an extended tour through Europe with a similar purpose, and becoming vice-minister of education for his empire, or in effect the administrator of the educational department.

Mr. Tanaka's first visit had everywhere won him friends who rejoiced at another opportunity of meeting him, and gave a hearty welcome to him and his associates, who sincerely seconded his able and zealous efforts for education.

Dr. David Murray, the able foreign assistant in the Japanese department of education, had been for some time in this country, and was able by his familiarity with our affairs to greatly facilitate the success of Mr. Tanaka's visit. He visited extensively in this country and Canada, and made many collections for the educational museum at Tokio. By the generosity of Mr. Tanaka, almost the entire educational exhibit of Japan was donated to this Bureau on behalf of education in the United States. This is a unique gift of rare value, and will always be greatly prized by the students of education.*

* The old educational organization of Japan was abolished in 1870, and in 1871 the present department of education was established, and all matters relating to schools, colleges, libraries, and other educational institutions were placed under its jurisdiction. In November, 1871, Fujimaro Tanaka, then chief secretary of the department, was sent to America and Europe, in connection with the foreign embassy, as a special commissioner to investigate the educational institutions and administration of these countries. He was absent during the whole of 1872, and the results of his observations were embodied in an extended report and in the code of education which was subsequently prepared. In 1873 he was again sent out as commissioner of education, and soon after his return was appointed junior vice-minister of

Hon. J. George Hodgins, deputy minister of public instruction in Ontario, and for so many years the able assistant of Dr. Ryerson in the management of the department of education for that province, spent considerable time at the Centennial, imparting much information in regard to the interesting features of education in the province under his supervision, and adding greatly to the interest of the educational conferences.

Hon. H. R. Hitchcock, inspector general of schools in the Hawaiian Islands, by his presence called to mind the singular elevation of that interesting people from barbarism.

RECOMMENDATIONS.

The experience of the year gives new emphasis to the following recommendations, which I hereby renew:

First. An increase of the permanent force of the Office. The experience of the Office indicates clearly that the collection of educational information, and publication of the same, as required by the law regulating it, cannot be properly done with the present limited clerical force.

Secondly. The enactment of a law requiring that all facts in regard to national aid to education and all facts in regard to education in the Territories and the District of Columbia necessary for the information of Congress, be presented through this Office. For the purpose of enabling the Government to meet its responsibilities with respect to the education of the people in the Territories, I recommend that the office of superintendent of public instruction for each Territory be created, to be filled by appointment by the President; his compensation to be fixed and paid as in the case of other Federal appointees for the Territories.

Thirdly. In view of the large number of children growing up in ignorance on account of the impoverished condition of portions of the country, and in view of the special difficulties in the way of establishing and maintaining therein schools for universal education, and in consideration of the imperative need of immediate action in this regard, I recommend that the whole or a portion of the net proceeds arising from the sale of public lands shall be set aside as a special fund, and its interest be divided annually pro rata between the people of the several States and Territories and the District of Columbia, under such provisions in regard to amount, allotment, expenditure, and supervision as Congress in its wisdom may deem fit and proper.

Fourthly. I respectfully recommend that such provision as may be deemed advisable be made for the publication of ten thousand copies of the Report of this Bureau immediately on its completion, to be put at the control of the Bureau for distribution among its correspondents, in addition to the number ordered for distribution by members of the Senate and House.

Fifthly. I also recommend that provision be made for the organization of an educational museum in connection with this Office, and for the exchange of educational appliances with other countries.

---

the department of education. During the same year the office of chief minister became temporarily vacant, and Mr. Tanaka was appointed acting chief. Under his administration in this year an inspection was made of most of the school districts, the bureau of superintendence was established, and two additional normal schools were founded. In February, 1874, a department of industrial arts was established in the University of Tokio, four additional normal schools were founded, and in the following month the Tokio Female Normal School was established. In September, Fujimaro Tanaka was advanced to the rank of senior vice-minister of education. Shortly after, all the foreign language schools except that at Tokio were constituted English language schools. In January, 1875, the amount appropriated by the government to the department of education was fixed at two million yens per year, and the sum contributed by the department to the local governments for the support of elementary education was fixed at seventy thousand yens. In the same month Mr. Tanaka presented to the Emperor the first annual report of the department of education. In July three officers were sent to America to investigate the methods of conducting normal schools. The semi-annual appropriation from the general government to the department of education was made on the scale of 1,700,000 yens per annum. In November of this year the constitution and limitations of the authority of the department of education were revised and proclaimed by the general government.

CONCLUSION.

The year has been one of the severest strain upon my assistants* and myself. For all of their coöperation they have my heartiest thanks.† The tax upon us, as I have indicated, has been specially increased, first, by the historical inquiries incident to the year among our own educators; secondly, by inquiries from foreigners stimulated by the exhibition at Philadelphia and their visits to our country; thirdly, by the special work in aid of the preparation for the Centennial Exhibition, for which the additional appropriation was entirely inadequate; fourthly, by the exacting demands for the results of experiments in various sections of the country made by those called upon to encounter here and there the reactionary educational tendencies. Much of this additional strain in the Office could have been lessened if there had been adequate means for publication; besides, the benefits of these efforts would have been much more widely diffused, and other educators in embarrassment received aid in their struggles to advance public intelligence if the information furnished in manuscript form had all been printed.

I desire to acknowledge my indebtedness‡ for aid in prosecuting the work of the Office for the year to the Hon. Secretary of State, in connection with the foreign correspondence, and Professor Joseph Henry, of the Smithsonian Institution, for the exchange of reports with foreign countries; also to the Commissioner of Patents, Commissioner of Indian Affairs, Commissioner of the General Land Office, and for the cordial coöperation of yourself and the President.

I have the honor to be, very respectfully, your obedient servant,

JOHN EATON,
Commissioner.

Hon. Z. CHANDLER,
Secretary of the Interior.

---

*Dr. Charles Warren remains my chief clerk and chief assistant.

†Miss M. E. McLellan, whose entire efforts in the Office for several years have been devoted to its statistics, has resigned, and closes her labors here with this report. With excellent natural abilities, improved by the opportunities afforded for woman's education at Cambridge, Mass., she brought to her work systematic habits and an accuracy and fidelity which have done much to give value to the statistical work of the Bureau.

‡In overcoming the extreme difficulty of correcting all the mistakes of manuscript and of type with a fair degree of accuracy in a report so full of figures and names, I have been greatly assisted by Mr. Thomas Hampson, the proof reader of the Office.

ABSTRACTS

FROM THE

OFFICIAL REPORTS OF THE SCHOOL OFFICERS OF STATES, TERRITORIES, AND CITIES,

WITH

ADDITIONAL INFORMATION FROM VARIOUS SOURCES.

PREFATORY NOTE.

The following abstracts of education in the States and Territories are derived from a great variety of sources. First among these come reports of State officials, such as State boards of education and State superintendents of instruction; next, those of county and city superintendents, school committees, acting school visitors, and principals of State institutions. From these is derived nearly all the information given respecting elementary and special instruction, city school systems and normal schools, and much of that relating to secondary schools, as the high schools of the States and cities. What concerns private secondary schools is almost wholly from returns made by the principals of these to the Bureau of Education, supplemented by catalogues and other documents.

For the matter relating to universities, colleges, scientific and professional schools, dependence is based on the annual catalogues of these institutions, on occasional circulars issued by them, and on special returns, made usually in the autumnal and winter months, in reply to circulars of inquiry sent them by the Bureau.

In every instance, official authority only is relied upon for statements distinctly and definitely made, though sometimes a piece of interesting information from other than official sources may be given, with a reference to the quarter from which it is derived. In such cases, however, an effort is always made to verify the statement before it is committed to the press.

The matter derived from the various sources above indicated is formulated, in the abstracts of education for each State, substantially in accordance with the schedule given below.

GENERAL PLAN OF ABSTRACT.

1. STATISTICAL SUMMARY	(*a*) School population and attendance.
	(*b*) Teachers and teachers' pay.
	(*c*) School districts and schools.
	(*d*) Income and expenditure.
2. HISTORICAL SKETCH OF SCHOOL SYSTEM.	
3. ELEMENTARY INSTRUCTION	(*a*) Public school systems, marking specially anything new and noteworthy.
4. CITY SCHOOL SYSTEMS.	
5. TRAINING OF TEACHERS	(*a*) Normal schools and normal departments.
	(*b*) Teachers' institutes.
	(*c*) Teachers' department of educational journals.
6. SECONDARY INSTRUCTION	(*a*) Public high schools.
	(*b*) Academies.
	(*c*) Preparatory schools.
	(*d*) Business colleges.
7. SUPERIOR INSTRUCTION	(*a*) Colleges for males, with universities.
	(*b*) Colleges for females.
	(*c*) Resident graduate courses.
8. SCIENTIFIC AND PROFESSIONAL INSTRUCTION	(*a*) Training in scientific schools and agricultural colleges.
	(*b*) Training in theology.
	(*c*) Training in law.
	(*d*) Training in medicine.
9. SPECIAL INSTRUCTION	(*a*) Deaf, dumb, blind, &c.
	(*b*) Musical conservatories.
	(*c*) Art training beyond that in schools.
10. EDUCATIONAL CONVENTIONS	(*a*) Meetings of State associations.
	(*b*) Special meetings of teachers, school principals, and superintendents.
11. NOTEWORTHY BENEFACTIONS.	
12. OBITUARY RECORD	(*a*) Brief memorials of teachers, superintendents, and other promoters of education, deceased during the year.
13. LIST OF SCHOOL OFFICIALS	(*a*) State board of education or State superintendents
	(*b*) County, city, or town superintendents.

The statistics furnished the Bureau in answer to its circulars of inquiry are, for convenience of reference and comparison, given in tables at the conclusion of this volume, while summaries of these statistics may be found under their appropriate heads in the preceding special report of the Commissioner.

For the general courtesy with which his circulars have been replied to, alike by State and city officials, by college presidents and heads of schools, as well as for documents additional to these replies, the Commissioner of Education herewith renders his cordial thanks to all concerned.

ALABAMA.

SUMMARY OF STATISTICS.

	1874–'75.	1875–'76.	Increase.	Decrease.
SCHOOL POPULATION AND ATTENDANCE.				
Children of school age, (5–21)	*406,270	†405,226		1,044
Enrolled in public schools	147,340	126,893		20,447

Expense per capita of pupils enrolled		89		
SCHOOL FUND.				
Amount of available State school fund		350,000		

(From reports of State Superintendents Hons. John M. McKleroy and Leroy F. Box.)

* The proportion of males and females, both among children and teachers, may be found in Table I, at the close of this report.
† Whites, 236,530; colored, 168,706.
‡ Whites, 67,024; colored, 43,229.

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Ormond & Bagby's Code of Alabama, 1852, pp. 126, 155, 208–210; Walker's Digest of Revised Code, pp. 164, 165, 262–278; Statute Laws of 1854; Reports of State Superintendents from 1869 to 1876.

THE SCHOOL SYSTEM BEFORE THE WAR.

Alabama, formed out of territory which had belonged to Georgia and Florida, entered the Union in 1819, with a constitution declaring that schools and the means of education should forever be encouraged, and with the sixteenth section lands in every township as a provision from the Government for the support of schools. But, though the lands were husbanded, efforts made at different times for the establishment of a school system, and schools to some extent established and maintained, nothing efficient appears to have been reached till 1854–'56. On February 15 of the former year an act was passed, and approved on the 17th instant, "to establish a system of free public schools." In this, provision was made for a State school fund, a State superintendent of education, three commissioners of free public schools in each county, and three trustees of such schools in each township. The superintendent was to hold office for two years, to have a salary of $2,000, to exercise a general supervision over the schools, to disseminate information respecting public school instruction and the best methods of managing all school concerns, to prescribe to commissioners, trustees, and teachers their duties as to management, studies, &c., and to carefully guard against sectarian influences in the schools. The commissioners were to be elected for two years, and to have a supervision of the schools of counties, with care and distribution of the school funds; the trustees, for a like period, to supervise the schools of townships and to have power to establish two or more in each township, employing teachers for them as the number of pupils might demand and the funds at their disposal might allow. On this basis the new system was set in motion and worked with a considerable measure of success, $232.515 being sent forth from the State treasury to aid in the instruction of 145,518 children of school age.

Three county officers, however, proved too many, and on February 14, 1856, another law was passed, replacing the three commissioners of a county by a county superintendent, with essentially the same powers and duties. This unification of the county supervision gave to the system a concentration that secured a large increase of efficiency, the statistics of the next year (1857) showing a growth of 175 public schools, of 6,008 registered pupils, and of 4,974 in the average daily attendance. A subsequent superintendent claimed, indeed, that at this time Alabama, "in proportion to her white taxpaying and school attending population, was far ahead of nearly all the Southern States and most of the New England States; was the superior, in the school room, of even Massachusetts, and was almost the peer of New York and Pennsylvania."

Of the period intervening between this and the termination of the civil war no printed reports are at present to be found, though it appears from the records that superintendents were appointed and at least the skeleton of a school organization for the State maintained. The only information which comes to us for this period is that derived from the census of 1860, which shows 1,903 public schools, 2,038 teachers, and 61,751 pupils. But as the income of these schools was derived pretty nearly equally from taxation and public funds and from fees paid by pupils for tuition, it would seem that they were either in large part pay schools, receiving for a consideration public school pupils to their classes; or nominally free schools, taking in pay pupils with the free; or possibly schools taught on a free basis as long as the public funds held out each year and then on a paying basis for whatever other period might be desired.

THE SCHOOL SYSTEM AFTER THE WAR.

Notwithstanding the confusion in all civil matters for some time after the great civil war, efforts were very early instituted for the resuscitation of the school system of the State. The constitution adopted September 30, 1865—only five months subsequent to the disbandment of the southern troops—provided that the general assembly should make proper laws for the encouragement of schools and education, should take measures to preserve from waste or damage lands granted by the United States for the use of schools, should apply to the sustenance of public schools the funds derived from such lands, should place the school fund under the management of a State superintendent of education, and should arrange for a county superintendent of free public schools in each county and for the appointment of three trustees for such schools in each township. A revised legal code, prepared in accordance with the provisions of this constitution, was adopted February 19, 1867, and in this "every child between the ages of 6 and 20 years" was declared to be "entitled to admission into and instruction in any of the free public schools of the township in which he or she resides or to any school in any adjacent township," on the consent of the majority of the trustees there.

Under this constitution and legal code the designated school officers appear to have been appointed and the schools brought into some working order over a considerable portion of the State. But almost before this order could be well established, a called convention of the citizens recognized as loyal prepared and recommended a new constitution for the State, which was ratified February 4, 1868. The article on education in this constitution placed the common schools and other educational institutions of the

State under the management of a board of education, to consist of a superintendent of public instruction and two members from each congressional district, the governor of the State to be ex officio a member of the board, but to have no vote in its proceedings. This board was to be also a board of regents of the State university, and, when acting in that capacity, was to have the president of the university as a member, but without a vote. In either case the State superintendent was to be the president of the board and to have the casting vote if there should be a tie. Authority was given it to exercise full legislative powers in reference to the public educational institutions of the State; and its acts, when approved by the governor or when reënacted by two-thirds of the board, in case of his disapproval, were to have the force of law, unless repealed by the general assembly. It was made the duty of the board to establish throughout the State, in each township or school district which it might create, one or more schools, at which all the children of the State between the ages of 5 and 21 years might attend free of charge. A permanent State school fund was directed to be formed from the proceeds of United States grants and individual gifts to the State, from escheated property and moneys paid for exemption from military duty, the income from this fund and from the rents of unsold lands, with whatever other means the general assembly might provide, to be inviolably appropriated to educational purposes alone. One-fifth of the aggregate State revenue, with certain specified taxes, was to be added to the income of the fund and devoted exclusively to the maintenance of public schools.

Besides the institution of the board of education, the investment of it with full power over the schools, the freedom decreed from all charges in these schools, and the limitation of the distribution of the public funds to public schools alone, another point of difference may be noted between this constitutionally provided system and that by which it had been preceded. It is, that there was no express direction for the continuance of the former school machinery of county superintendents and township trustees of schools. This defect the large powers given to the board enabled it directly to amend, the State superintendent nominating and the board approving a superintendent of the public schools for each county in the State. The commissions sent to these superintendents were accompanied with letters of instruction authorizing them to appoint three trustees in each township, with school commissioners in the county of Mobile, which had a special system of its own.

The superintendents thus appointed entered at once upon their work, and though there was great difficulty in getting reliable trustees for townships and some grating in the new machinery before it could be gotten fully under way, the first State superintendent under this system, Dr. Cloud, claimed, in his report for 1869, that it had "dotted Alabama, from the mountains to the Gulf, with nearly 4,000 public schools during the first scholastic year," including 9 normal schools for training teachers. It may have been, as was subsequently charged, that the zeal in this direction went too fast and far; that more schools were established than could be sustained; and that, while the numbers taught made a favorable show, the sessions had to be generally closed before anything considerable could be accomplished. But this was not unnatural at the outset of a system which, for the first time, undertook to meet the needs of a previously neglected portion of the population, and to include in its instruction not the white children of the State alone, but the colored also. A year's experience taught some useful lessons as to the need of greater caution in efforts toward even so desirable an end; and the next year, as the fruit of this experience, the number of the schools (2,775, as Dr. Cloud's report shows) was brought into a more fair proportion to the State fund set aside for their support, while measures were taken to increase the proceeds of local taxes raised for the same end. How far the attendance was affected by the diminution of the number of the schools does not appear, the statistics at this period being very incomplete. Funds were drawn from the treasury on the basis of 387,057 children of school age; but what proportion of these was brought under instruction in the 2,775 schools reported, Dr. Cloud does not say.

In November, 1870, Col. Joseph Hodgson succeeded Dr. N. B. Cloud as State superintendent of instruction. He had under him, from March, 1871, a set of school officers elected by the people, instead of appointed, as previously, by the State board or its appointees, while in each county were added by election two directors, to form, with the superintendent, a board for examining teachers. The officers thus elected were said by Colonel Hodgson to be an improvement on their predecessors, and with their aid he appears to have administered the school system with at once a greater economy and a higher measure of success; reporting, at the close of 1871, that the cost of the department of education for the year had been lessened by $42,535, though the school term had been lengthened from 2 months and 9 days to 3 months 6½ days, and the average attendance in the schools increased from 52,060 to 107,666. Colonel Hodgson did also a good service in this year by organizing a State teachers association, and by codifying and circulating in pamphlet form the school laws of the State, which previously had been largely out of reach of the school officers. The next year's report was not quite so favorable as to school attendance, though the number of schools had

somewhat increased. A failure of the State to pay the teachers had been the especially depressing influence.

In November, 1872, Hon. Joseph H. Speed, for two years previously a member of the board of education, succeeded Colonel Hodgson in the superintendency, continuing till the same period in 1874. He directed his endeavors especially to the amendment of the State's neglect to pay its teachers; but had to labor under the discouragement of finding small sympathy from the State officers and legislature. "The provision of the constitution which required the inviolable devotion of certain revenues and school funds to the purposes of education was disregarded at each successive session of the general assembly, and each year an increasing percentage of the school fund was diverted from its legitimate use to the defraying of the general expenses of the State."* The consequence was an almost entire paralysis of the State school system in the country districts, though some of the cities, through local taxation and aid from the Peabody fund, were able to go forward and improve. The university partook of the general depression, and had to curtail its teaching force and reimpose tuition fees, which had been abolished. Several of the 9 normal schools before referred to perished, some only surviving through assistance from the North; but, happily, an opportunity was given to make this loss good, and the board, embracing it, established a new State normal school for white male and female teachers in good buildings offered for this use at Florence. This has proved quite successful.

The difficulty he had been endeavoring to remedy having "neither been removed nor lessened," Mr. Speed was doubtless very willing to yield, in November, 1874, the chair of superintendency to Hon. John M. McKleroy, who had been elected to succeed him. Mr. McKleroy reaped some good fruit from the labors of his predecessor, and had the pleasure of reporting at the close of the next scholastic year that, through arrangements Mr. Speed had set on foot, an adequate school fund for the year had been provided; that the said fund had been available when needed, and that thus the opportunity for the enjoyment of school privileges had been offered every child of school age within the State. Out of a population of this age numbering 406,270, there had been enrolled 91,202 pupils in 2,610 schools for whites, which had continued, on an average, 4¼ scholastic months under 2,675 teachers, besides 54,595 pupils in 1,288 schools for colored children, continued 4½ scholastic months under 1,286 teachers; a total of 145,797, or about 36 per cent. of the whole school population, had been thus under instruction in the public schools. The State normal school for whites at Florence and two for colored pupils at Huntsville and Marion were also reported to be in flourishing condition, receiving an aggregate of $10,000 from the State and numbering 280 pupils under 9 teachers. Like favorable accounts were given of the university and agricultural college; the former having an attendance 42 per cent. better than the year before, and the latter "steadily increasing in public favor."

About the time of the presentation of this report, *i. e.*, December 6, 1875, a new constitution for the State went into effect. This abolished the board of education; confided the general management of the public schools to the State superintendent of instruction, and that of the university and agricultural college to boards of chosen trustees; withdrew the appropriation of one-fifth of the State revenue for school purposes, and substituted for this an annual appropriation of $100,000, with the proceeds of a poll tax of a dollar and a half per capita, and such further increase of the school fund as the condition of the treasury and State resources should admit; required the formation of separate schools for white and colored children, which had been previously provided for by law; and forbade the appropriation to sectarian schools of any money raised for the support of public schools.

The final report of Mr. McKleroy for 1875–'76 does not speak encouragingly as to the effect of these changes, good as some of them were; the disposable school fund having diminished from $565,042.94 to $351,496.64; the schools in fifty-one counties heard from having sunk from 3,211 to 3,088; the attendance on them, from 118,252 to 104,414; and the average time for which they are kept, from 86 to 80 days.

A new superintendent, Hon. Leroy F. Box, succeeded on the 10th of November, 1876, Mr. McKleroy, who had been elected to the legislature; and, as Mr. Box was long a member of the late board of education, has had large knowledge of the school system of the State, and has done much to give that system whatever present efficiency it has, the hope is entertained that he may infuse into it some new life.

For information respecting the university, agricultural college, and institutions for deaf and dumb and the blind, see Superior, Scientific, and Special Instruction, following.

ADMINISTRATION OF THE SYSTEM.

The names of those who have served as superintendents of the State school system, with their terms of office, are as follows: W. F. Perry, 1854–'55; G. B. Du Val, 1858–'64; W. C. Allen, 1864–'65; J. B. Taylor, 1865–'66; J. B. Ryan, 1866–'68; N. B. Cloud, 1868–'70; Joseph Hodgson, 1870–'72; Joseph H. Speed, 1872–'74; John M. McKleroy,

* Memorial of the Board of Education to the General Assembly of 1873–'74.

1874–'76; Leroy F. Box elected 1876 for a term to be fixed by the legislature. Of these gentlemen, Mr. Perry was of Macon County; Messrs. Du Val, Allen, Taylor, Cloud, and Hodgson, of Montgomery County; Mr. Ryan, of Jackson County; Mr. Speed, of Perry County; Mr. McKleroy, of Barbour County; and Mr. Box, of St. Clair County.

ELEMENTARY INSTRUCTION.

SCHOOL FUND.

The school fund of the State, which is obtained from the interest on sixteenth section funds and on surplus revenue funds, from escheats, poll tax, and the Alabama Mutual Aid Association, amounted during the year 1875–'76 to only $351,496.64; a decrease from that of the previous year of $213,546.30, or nearly 40 per cent. This diminution is due to the reduction of the rate of interest paid on the various funds from 8 to 4 per cent.; to the abrogation of the constitutional provision which set apart one-fifth of the aggregate revenue of the State for educational purposes and a substitution therefor of an annual appropriation amounting to much less than this, and to the further fact that the fund of the former year embraced the poll tax of two years instead of one.—(Report of Superintendent McKleroy, 1875–'76, pp. 4, 5.)

THE SCHOOLS.

The whole information respecting the public schools is contained in the statistics before given, which embrace the returns from fifty-one counties out of sixty-five, and show 3,088 schools under 3,771 teachers. The schools are of four grades: primary, intermediate, grammar, and high; but how many are taught in each of these grades does not appear.—(Table 3 of State report for 1875–'76.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOLS.

A report from this school to the State superintendent, dated October 28, 1876, represents it as in a prosperous condition. The attendance was greater than at any time in the past and the prospects for other accessions were good. The total number of students was 114, of whom 48 belonged to the normal department. (In a separately published catalogue these numbers appear as 122 and 65.) A class was expected to graduate in 1877. This is the only school in the State for the instruction of whites as teachers, and in the opinion of the superintendent it is not adequate to entirely supply the need. He thinks, therefore, that normal departments should be established at the State university and at the agricultural college.

Both the normal schools for the training of colored teachers, the superintendent says, have been in operation during the year, and have doubtless done good work in their sphere. The institution at Marion is not only a normal school, but it is so liberally endowed by the State and furnished with so competent a faculty as to afford to the colored race opportunities for the acquirement of a collegiate education. The students, December 20, 1876, numbered 100, of which number 70 were normal students, while in the one at Huntsville, where the training provided for seems less complete, 71 normal students were in attendance at about the same date, making, with the 65 at Florence, 206 in the three State normal schools. At Talladega College, under the American Missionary Association, were 59 in normal classes. Vocal music is taught in all these schools; instrumental also at Talladega and Marion. Some philosophical apparatus is possessed by all.—(Report of superintendent, 1875–'76, pp. 14, 18, 19, and returns to Bureau of Education for 1876.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

In the tables appended to the report of Superintendent McKleroy for 1875–'76, there appear 166 high schools, of which 12 are for colored students; but, as in many other of the States, no additional particulars concerning these schools are given. Allowing an average of 30 pupils for each school, which would certainly not be a high estimate, we have 4,980 high school pupils in courses embracing probably some Greek and Latin studies, with somewhat advanced English ones.

PRIVATE SECONDARY SCHOOLS.

In 1 school for boys, 1 for girls, and 4 for both sexes, outside of the public school system, there have been reported to this Bureau 664 pupils, under 23 teachers. Of these, 104 were in classical studies, 15 in modern languages, 10 preparing for a classical course in college and 3 for a scientific course. Drawing is taught in 2 of these school, vocal music in 3, and instrumental music in 2. Chemical laboratories are

eported by 2, philosophical apparatus by 3, and libraries of 120 to 2,000 volumes by 3, the aggregate number of volumes being 3,020.—(Returns to Bureau of Education for 1876.)

PREPARATORY SCHOOLS AND DEPARTMENTS.

From 1 school aiming to prepare students for college there are reported 11 teachers and 150 pupils, of whom 50 were preparing for a scientific collegiate course and 20 had entered on such a course since the last report. It had a chemical laboratory and philosophical apparatus.

Two preparatory departments of colleges also reported 2 instructors additional to those of the colleges, and 71 preparatory students, 12 of them preparing for a classical and 23 for a scientific course.—(Returns for 1876.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF ALABAMA, TUSCALOOSA.

As mentioned in the report for 1875, an important change in the academic department has been proposed to be made, from the "college" or "close" system to the "university" or "open" system, a change which involves the grading of the courses of instruction in the several schools in such a way as to meet the wants of beginners in those schools, as well as of more advanced students. By this arrangement, any applicant over 15 years old, who has received a common school education, may enter the schools of the university without examination in regard to any fixed standard of literary qualifications, and may elect not only any school or schools in which to study, but any grade of any school in which he can study to most advantage. Whether this arrangement has been effected does not appear in the State report for 1875–'76.

The State superintendent advises a closer union between elementary and higher education, and that they should mutually subserve and encourage each other. With the public schools for the base, the university for the crown, and high schools in the cities and populous communities as intermediate between the two, the educational structure would be symmetrical and complete. Steps towards this end, he states, have been already taken.—(Reports of State superintendent for 1874–'75, pp. 124–126, and for 1875–'76, p. 15.)

OTHER COLLEGES.

Howard College, Marion, (Baptist,) has a course of study divided into 10 distinct schools, viz: Latin, Greek, modern languages, English, moral science and theology mathematics, chemistry, geology and mineralogy, natural philosophy and applied mathematics, civil engineering, business. No degrees, honors, or promotions are given except those based upon attainment.—(College catalogue, 1875–'76.)

Spring Hill College, (Roman Catholic,) near Mobile, has a preparatory course intended to last one year, but embracing only English studies; a classical course intended to last six years, and leading to the degree of A. B.; a commercial course covering three years, and embracing the main studies of the classical, except Latin and Greek. Others than Roman Catholics are admitted on condition of their conforming to the exterior exercises of worship.—(Catalogue for 1874–'75.)

Southern University, Greensborough, (Methodist Episcopal South,) includes a college of liberal arts, a college of medicine, and a college of law. The circular for 1876–'77 contains no information of any change in the first named, which, as was stated in 1875, is organized upon the plan of separate schools, in any one of which a student may graduate, while to obtain a degree, such as bachelor of arts, he must graduate in a certain number of schools.

Talladega College, Talladega, not having any students in collegiate courses, has been remitted to the list of secondary schools.

COLLEGES FOR WOMEN.

Nine of these institutions—7 of them chartered and as many under denominational control—make returns for 1876, which show a total teaching force of 83, with 860 students of all grades, 488 of these being classed as regular collegiate, 33 in special or partial courses, and 18 graduates who remain to pursue studies additional to the collegiate course. All teach vocal and instrumental music and French; 6 unite German with the French, and 1 Spanish and Italian also. Drawing and painting are taught in 7 of the 9, and the same number have some apparatus for illustration of natural philosophy. Eight report chemical laboratories; 2, collections illustrative of natural history; 3, at least the beginning of an art gallery; and 2, a gymnasium; while 7 have libraries of 200 to 3,500 volumes each, the aggregate in the 7 amounting to 11,250. For further particulars, see Table VIII of appendix.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The *State Agricultural and Mechanical College* at Auburn, in its report for 1876, states that the imperfect preparation in the rudiments which many of the applicants for admission exhibit, has rendered it necessary to establish a class below the fourth one of the regular course. Students entering this class will be fitted for the fourth class of any course of the college; the courses being, as stated in 1875, in agriculture, in literature, in science, and in civil engineering, with a practical instruction in surveying which gives it almost the character of a fifth course. Each course, except the agricultural, requires 4 years for completion of its studies. The agricultural—not embracing so much in languages as the literary course, nor so much in mathematics as the scientific—is of 3 years. Two experimental farms, one at Auburn, under the eye of the college, another in the valley of the Tennessee, under Hon. J. J. Barclay, aid in the instruction of the students as well as in the improvement of the farming of the State. The president reports that a larger percentage of the income of this college than of any other of its class in the Union, is expended for purposes of instruction.

PROFESSIONAL.

The *Law Department of the University of Alabama*, at Tuscaloosa, aims to give the student patient, intelligent, and careful instruction in the elementary principles of law; and to this end analysis of each subject is required, while the application of principles is illustrated by a selection of leading cases. Moot courts are held and instruction given in the preparation of briefs and the manner of conducting cases before courts and juries. The course includes 3 terms of 4½ months each, and graduation in it admits to practice in all State courts.—(Circular for 1876.) A circular from the Southern University at Greensborough gives us information respecting the law school there for 1876, showing its continued existence with 3 professors, but nothing more.

A *College of Medicine*, with 4 professors, also exists in connection with the Southern University, but no length of course is indicated. That of the Medical College of Alabama, at Mobile, is of 2 years.—(Circular and return for 1876.)

Theology continues to be taught to some slight extent at Howard College and the Southern University, and with apparently some fair degree of fulness at Talladega College, Talladega, most of the students at the last named putting their acquirements to practical use during the course by performing mission work at surrounding stations.—(Circulars for 1876.)

SPECIAL INSTRUCTION.

ALABAMA INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND, TALLADEGA.

The original act of January 27, 1860, for the establishment of this institution, provided only for the education of the deaf and dumb. It was not till February 18, 1867, that further provision was made for the education of blind children also in the same building.

The report of the principal, dated October 27, 1876, stated that there had been no changes made in the corps of 4 instructors mentioned in the preceding year, but that from February to July a teacher of drawing had been added. The results of the instruction in this branch had been sufficiently encouraging to induce regret that it could not be continued. Forty-nine pupils, 3 less than in 1874–'75, had been under instruction during the year, 39 of them being mutes and 10 blind. In consequence of the small number of blind pupils and the necessity for economy at every point, the principal had not felt authorized to employ a teacher in the department of handicraft for them. The blind boys, however, had occasionally done a little work at bottoming chairs, while work in shoemaking had been carried on regularly by the mute boys, some of whom did good service. Instruction in the shoe shop had been given gratuitously by two of the teachers. The teaching in the school rooms is said to have been thorough and faithful, the discipline good, and the measure of health enjoyed better than ever previously.

Two committees, one appointed by the trustees and another by the legislature, after examining the general management and working of the institution, publish, in connection with the report of the principal, most favorable accounts of the school and its management.

LIST OF SCHOOL OFFICIALS IN ALABAMA.

Hon. LEROY F. BOX, *State superintendent of education, Montgomery.*

[Term November 23, 1876, to November 23, 1878.]

COUNTY AND CITY SUPERINTENDENTS OF EDUCATION.

Expenditure per capita of average attendance.	17 57			
STATE SCHOOL FUND.				
Amount of available school fund	135,000	161,352	26,352	

(From reports of Hon. George W. Hill for 1874–'75 and 1875–'76. The receipts for the latter year in Mr. Hill's printed report differ from those given in his written return to the Bureau of Education, from which the figures here given are taken. In the printed report they are as follows: From State apportionment, $105,586.70; from district tax,

$87,739.51; from sale of school-house or site, $444.64; from grants or gifts, $674.99; total, $194,445.84. The discrepancy may arise from the written report being for the year ending October 30, 1876, while the printed one is for that ending June 30, 1876. The account of expenditures agrees in both, except in the last item, which is necessary to make up the total given.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Constitutions of 1836, 1864-'65, 1868, and 1874; Returns of United States Census on Education, 1850 and 1860; A sketch prepared by Hon. George W. Hill, State superintendent of public schools in Arkansas; Laws of Arkansas, compiled and arranged by J. Steele and J. McCampbell, 1835, pp. 509-514; English's Digest of the Statutes of Arkansas, 1848; School Laws of 1871 and 1875.

EARLY SCHOOL LEGISLATION.

Arkansas—organized as a Territory in 1819 and admitted as a State in 1836—came into the Union with a constitution which ordained (art. ix, section 1) that "knowledge and learning, generally diffused through a community, being essential to the preservation of a free government, and diffusing the opportunities and advantages of education through the various parts of a State being highly conducive to this end," it should be the duty of the general assembly to provide by law for the improvement of such lands as either had been or might be granted by the United States for the use of schools, and to apply any funds which might be raised from such land, or from any other source, to the accomplishment of the object for which they were intended.

Previously to this, under territorial laws passed November 21, 1829, November 3, 1831, and November 15, 1833, there had been provision made for due care of the school lands and of moneys arising from the rent of these, the agents for the care of the lands being trustees appointed by the judge of each county court, and the county court itself being guardian of the funds derived from rent of such lands, with supervision of the schools sustained through the aid of these funds.

By act of February 3, 1843, a commissioner for the sale of sixteenth section lands was to be elected by the people of each township desiring such sale, on a day appointed by the county court; and at the same time three trustees were to be chosen for care of the schools, for support of which a fund was to be formed from the proceeds of the sales. These trustees, whose term of office was two years, were to determine the terms of lease of school lands; were to have a general oversight of schools sustained from the school fund; and were, with the commissioner, to visit these at least once a month, to see that they were properly kept, to examine the scholars, to make sure that books, furniture, and fuel were provided, and that due cleanliness and decency were maintained. They were also annually to make an enumeration of the youths of school age (5-21) in their township, noting how many were sent to school and how many were not, the amount subscribed for each one sent to school, and the number for whom there was no subscription. The results of this enumeration were to be reported to the county clerk, with a statement of the amount of funds raised in their township for the support of schools therein, and the sources from which these were derived, the price of tuition for each scholar, the cost of books and stationery for him, the time the schools were kept, and the amounts paid teachers.

By the same act of February 3, 1843, the voters in each county were to choose, at each general election, three school commissioners, who, with the clerk and presiding judge of the county court, were to be a board of school commissioners for the county, the main duty of these seeming to be to care for county funds appropriated to the support of common schools, and so to distribute these as (1) to secure four months' schooling, with the necessary school books, annually for each indigent child in each township; (2) to effect as nearly as possible an equalizing of the annual school funds of the townships by augmenting those of the poorer townships.

A State board of education was also constituted, to consist of the governor of the State, the chief officers of the senate and house, and the judges of the supreme court ex officio, and of ten members of the general assembly elected every two years by the assembly. The members of this board were to have power to carry out all laws and regulations passed by the general assembly in aid of education, and were to report to the assembly, at each session, the condition and progress of education in the State.

Under this system there were found in 1850 by the United States census marshals 353 public schools, with 355 teachers and 8,493 pupils, besides 90 academies and other schools, with 126 teachers and 2,407 pupils, not aided from the public funds.

By acts of January 11, 1853, and January 20, 1855, most of the provisions of this older law were reënacted and affirmed, but with some difference in the personnel of management. Instead of the State board, came the secretary of state as ex officio State commissioner of schools; instead of a board of five county commissioners of

schools, came a single commissioner, elected by the people at each biennial general election, for visitation of schools, examination of teachers, care of school lands, and distribution of school funds; and, instead of three trustees for a township, came one, with the same general duties as had previously belonged to the three.

The system thus put into lighter marching order showed as its tangible results in the census of 1860, public schools, 727; teachers, 757; pupils, 19,242; total income, $120,613. Then in academies and other schools which numbered 109, with 168 teachers and 4,415 pupils, must also have been some scholars belonging to the public system, as these schools received from taxation $700 and from public funds $8,645.

LATER LEGISLATION WITH RESPECT TO SCHOOLS.

The before mentioned provision of the constitution of 1836 was incorporated into that of 1864–'65, but not very much came of it; for, though more interest in education and a greater wish for it were by that time aroused, the period was not yet a propitious one for schools.

Under the constitution of 1868, however, which required the general assembly to "establish and maintain a system of free schools for the gratuitous instruction of all persons in this State between the ages of 5 and 21 years," an act was passed, July 23, 1868, providing for such a system of common schools, and repealing preceding school laws where they came in conflict with the later. This act provided that there be a State superintendent of public instruction elected by the people quadriennially, and that his salary be $3,500 per annum. He was required to report annually. There was also to be appointed by the governor, with the advice and consent of the senate, a circuit superintendent for each judicial district of the State, his salary to be $3,000 per annum. The circuit superintendents were to report annually to the State superintendent, and had the supervision of all school matters in their respective districts. With the State superintendent they formed a State board of education. The counties were divided into school districts, each district having one trustee, elected by the electors of the district, and receiving from its people $2 per day for the time actually employed by him in the discharge of his duties, provided he should not be paid for more than ten days' service. The interest on the permanent school fund, a special district tax voted by the people, the per capita tax, "and so much of the ordinary annual revenues of the State as might be hereafter set apart by law for such purposes," were to be "faithfully appropriated for maintaining a system of free common schools for this State."

Under this act the school system was commenced, and, though meeting with indifference in some places and opposition in others, made considerable progress, 67,412 children being gathered into the schools in 1869 and 107,908 in 1870. A serious depreciation in the State scrip issued in payment of the wages of the teachers caused, however, very general discouragement.

At the same date with the foregoing was passed an act for establishing an industrial university. It required that, in addition to the usual course of study prescribed in universities, there should be taught the science and practice of agriculture, the mechanic arts, engineering, and military science. The location was left to be decided by bids from individuals, counties, cities, &c., their offers being open till the first day of the next session of the general assembly.

In February, 1869, the general assembly passed an act providing for the "better regulation of schools in cities and towns." By this a city or town could be made a special school district, with six directors elected by the people for the supervision of the schools in the town or city. The directors could make rules for their government, not inconsistent with the law; could estimate the percentage of taxes necessary to keep the schools in operation, and were elected on the third Saturday in December annually.

Under this act city schools were organized in Little Rock, Fort Smith, Pine Bluff, Helena, Arkadelphia, Dardanelle, and Camden, and are said to have done "reasonably well." In subsequent years Augusta, Batesville, Duvall's Bluff, Fayetteville, Forest City, Jacksonport, and Ozark were added to the list.

An act of the general assembly approved March 27, 1871, made provision for the establishment of the Arkansas Industrial University, before determined on. Gen. A. W. Bishop was first president of the university, which was located at Fayetteville, and Prof. N. P. Gates succeeded him. The university has succeeded very well so far, and promises much.

In the year 1859 the Arkansas Institute for the Blind was organized at Arkadelphia, and was continued in operation for three and a half years, when, in consequence of the war, it suspended in the fall of 1863. It was reopened in February, 1867. By act of the general assembly, approved July 22, 1868, the institution was removed to Little Rock, where it is now in successful operation. It has a board of three trustees appointed by the governor.

In July, 1867, a school was opened in the city of Little Rock, at the expense of the city, for the education of the deaf and dumb. In July, 1868, it was incorporated as a State institution and provision made for its support. It has since been very successful,

though there is not sufficient accommodation for all the mutes in the State. Persons between the ages of 9 and 30 are admitted to the institute.

The general assembly, in an act approved April 29, 1873, changed the school law passed in 1868, the principal changes being as follows:

A State board of education, composed of the State superintendent and the trustees of the Industrial University, took the place of the former one, composed of the State and circuit superintendents, and had large powers given it of legislation and provision for the schools.

The office of circuit superintendent was abolished and that of county superintendent instituted. These superintendents were elected by the trustees of the counties, respectively, and were allowed a salary not exceeding $300 in counties having 8,000 or less inhabitants and $500 in counties having more than 8,000 inhabitants. The district tax was by this act limited to 5 mills on the dollar. At the election of 1872, Hon. J. C. Corbin was elected State superintendent. During his term of office the depreciation of the State scrip was such as to cause a great decline of the interest in public schools, the warrants in which the teachers and school officers were paid not bringing more than 50 cents on the dollar, and sometimes less. The constitutional convention held in July, 1874, abolished the office of State superintendent and constituted the secretary of state ex officio State superintendent of public instruction until other provision should be made by law. The legislature, at an adjourned term, in December, 1875, passed the present school law, which provides for a State superintendent at a salary of $1,800 per annum, who reports annually. The office of county examiner takes the place of that of county superintendent. The examiners are allowed no salary, but can collect the sum of $2 from every applicant for license to teach. There are to be three directors for each school district, elected annually, with no other compensation than exemption from jury service and work on public highways.

The electors can vote a special tax, not to exceed 5 mills on the dollar.

The State superintendent is required by law to hold annually normal institutes in each judicial district.

During the time intervening between July, 1874, and December, 1875, from the absence of any active supervision, the almost utter lack of school funds, and the violent political agitations in the State, the interest in public schools decreased to a very great extent among the people, and only in some few localities were the schools kept up. Since the latter date the people are showing in most parts of the State a greater interest in common schools than for several years previously, and it is hoped that through the restoration of the State superintendency this interest may be increased, though the lack of county supervision must be a hindrance to the efficiency desired.

SCHOOL ADMINISTRATION.

The administration of the school system, under the law of 1853, was put, as has been stated, in the hands of the secretary of state. But as that officer had, as such, work quite sufficient to keep him actively employed, and needed for this to be usually present at the capital, there could not be performed by him as superintendent those various duties of general visitation, public speaking on school questions, and private removal of objections and old prejudices, which were necessary to secure a favorable judgment for the schools. The lack of anything like full success was in such circumstances not to be wondered at, especially among people whose more wealthy families were able to have private teachers in their homes, while many of the poorer ones were indifferent about having children taught at all.

Under the law of 1868 came in a State superintendency detached from other civil office and wholly devoted to school work with the aid of a circuit superintendency, which, if not the best imaginable, was perhaps best suited to the exigencies of the time. After more than two years' trial of it, Superintendent Thomas Smith, the first State incumbent under the law, reported in 1870 increased interest everywhere manifested in general education and a hearty influence of the old citizens of the State in support of free schools. "The work," he says, "progressed slowly at first, but has moved on with rapidly increasing interest, until now good schools are established in all the cities and principal towns, and school-houses are seen dotting the rural districts in nearly every portion of the State." A State Teachers' Association, too, had been formed and an educational journal established, while, out of 180,000 people of school age, 107,908 were enrolled in 2,537 schools, under 2,302 teachers. The report for 1872 showed a considerable decrease of attendance in the schools, only 69,927 pupils having been enrolled in 1871 and 32,863 in 1872, a decline attributed by Mr. Smith mainly to two causes: (1) A limitation by the legislature of the right of local taxation to one half of 1 per cent. in country districts and three-fourths of 1 per cent. in towns and cities; (2) a collection of school taxes in depreciated State scrip, making the maintenance of even a three months' school in country districts difficult, while the payment of teachers in the same scrip had so reduced their salaries as to induce many of the most valuable ones to throw up their positions and leave the State. Against both these things Mr. Smith entered his earnest protest, but was unable to secure a change.

He had, however, the pleasure of aiding in laying the foundations of the State Industrial University, of seeing a considerable increase of town and city schools systems, and of announcing the continuance of the educational journal of the State. He also did much to improve the school fund.

Mr. J. C. Corbin, who succeeded Mr. Smith in 1873, reported, in November of that year, a continuance of the difficulties arising from deficient power for local taxation and from payment of school taxes and school teachers in a greatly depreciated scrip, with the additional one that, by a decision of the attorney-general, a State school tax of 2 mills on the dollar, which had constituted three-fourths of the distributable school fund, was cut off, leaving only $55,000, worth 35 cents on the dollar, as the State fund for distribution among the schools. These difficulties more than counterbalanced the advantage of a change from circuit to county superintendency, which had been made at the beginning of the year; and, notwithstanding earnest efforts on the part of Mr. Corbin and the State board of education to improve the condition of the schools, there was a steady depreciation. The political convulsions with which the State was shaken in 1873 helped other injurious influences to paralyze the State school system; and in 1874 Mr. Corbin went out of office disheartened and depressed, a new State constitution having vested the superintendency of schools temporarily in the secretary of state, "until otherwise provided for by law."

It was not till December 7, 1875, that a new school law, under this new constitution, was enacted, and meantime "the public school matters of the State," according to the report of the secretary, were "at a standstill."

The new law provided for a State superintendent of public instruction, to be chosen at the next general election and every two years thereafter; dropped the State board of education and substituted for it a board of commissioners of the common school fund; abolished the office of county superintendent and instituted, in its stead, that of county examiner, without the duty of visitation of the schools; left local taxation still limited to half of 1 per cent., without discrimination in favor of the cities; but, like preceding laws, made provision for the formation of a school fund, the annual interest of which, together with a poll tax of $1 per capita on males over 21, and so much of the annual revenues of the State as might be set apart by law for such purposes, should be appropriated for maintaining a system of free common schools for the State. Under this law Mr. George W. Hill came into office as State superintendent, December 18, 1875, and, having secured sufficient favor to be elected for another term of two years, from November 2, 1876, it is hoped that he may be able to revitalize the school system.

ELEMENTARY INSTRUCTION.

WHAT THE CASE WAS A YEAR AGO.

Superintendent Hill, in his first report, for the year ending July 1, 1876, says of the condition of things when he came into office, December, 1875: "I found the interest of free education of the youth of the State in not so favorable a condition as might be desired. The depreciation in the value of State scrip had been militating against this interest for about two years and had temporarily prostrated the common school system. In the wake of a depreciated currency, in which teachers were paid and by which schools were attempted to be maintained, followed numerous attendant evils, such as discouragement of school officers, complaint on the part of the enemies of free schools, a somewhat reckless incurring of debt, a loss of confidence in the minds of the people, and a partial abandonment of free schools by good teachers."—(Report, p. 5.)

WHAT THE CASE IS AT PRESENT.

The cessation of political agitation and an improved management of the State finances are reported to be bringing up the State treasurer's certificates to something nearer their par value. As a consequence of this, "the districts generally are getting out of debt and are resuming their schools, confidence is being restored to the people, and there is light ahead for the common school system. There are assurances from all parts of the State of growing intelligence, of an increasing spirit of inquiry, of an awakening appreciation of education, of an enlarging number of friends of common schools, of a more earnest call for teachers of higher qualifications, of a greater disposition on the part of the State press to speak in advocacy of the free schools, and of better county and district officers being elected."—(Report, pp. 5 and 20.)

The statistical tables appended to the report show some fruits of the educational awakening thus referred to, indicating the presence of 15,890 pupils in the schools of 29 counties that report attendance, out of 60 in the State, though many of the districts in even these 29 failed to make this report. The division of studies among the 15,890 reported pupils was as follows: In orthography, 8,080; in reading, 6,027; in penmanship, 4,625; in mental arithmetic, 2,194; in written arithmetic, 3,399; in grammar, 2,300; in geography, 1,328; in history, 914; in higher branches, 544. Of the 461 teachers reported, 135 held first grade certificates, 167 second grade, 123 third grade. The grade of the remaining 36 is not given.

CITY SCHOOL SYSTEMS.

LITTLE ROCK.

Officers.—These are a board of school directors of 7 members, elected for terms of three years, a certain fixed number going out of office each year. A city superintendent of schools has the executive charge under the board.

Statistics.—The average monthly enrolment of pupils in school in 1875–'76 was 1,178; average number belonging, 1,046; average daily attendance, 926. Number of cases of tardiness among pupils, 3,922; among teachers, 190. Number of teachers, exclusive of the superintendent, 27. Salaries from $50 to $100 a month. Number of schools, exclusive of the high, 4; of these, 2 are for white and 2 for colored children. Cost of education per pupil on average monthly enrolment, $14.40; on average daily attendance, $18.33.

Remarks.—The public schools were never in a more prosperous condition than they are at present. They are becoming celebrated throughout the State, and many persons are moving into the city for the express purpose of placing their children in them. The elementary schools are divided into nine grades, each occupying a year, and are followed by a high school course of three years. The high school is in good condition and is improving. Enrolment, 44 pupils; average daily attendance, 35. The course of study is the same in all the schools, alike in those for white and those for colored children. All the teachers but 2 were white.

Aid was received from the Peabody fund of $2,500. There has been no time in the history of the schools, it is stated, when this help has been of greater benefit or more gratefully received.—(Report of City Superintendent J. M. Fish, 1876, and correspondence of the American Journal of Education, April, 1877.)

TRAINING OF TEACHERS.

A normal department, in connection with the State Industrial University, was provided for by the State law establishing that institution and is now fully in operation. It is designed to furnish a thorough course of instruction to all who desire to engage in the profession of teaching in the public schools. Free tuition is offered 238 pupils, who must intend, in good faith, to make teaching their profession.

Music, vocal and instrumental, is taught; drawing is optional. A chemical laboratory and philosophical cabinet are possessed. There were 51 normal students in attendance, 32 men and 19 women; 3 were graduated last year, of whom 2 engaged in teaching.

The organization of a branch normal college was provided for in 1873, and $25,000 were appropriated to carry the act into effect; but this fund was in State scrip, and, owing to its depreciation in value, the organization of the college did not take place until 1875. This college is located at Pine Bluff, and is specially designed for the benefit of colored students. It is under the management of the board of trustees of the Industrial University. The building is in an eligible location, with ample grounds and suitable outbuildings, is well lighted and ventilated, and affords accommodations for over 100 students.—(Catalogue of Industrial University 1875–'76, and special return to United States Bureau of Education.)

DISTRICT NORMAL INSTITUTES.

Superintendent Hill says that, in accordance with section 15 of the school law, a district normal institute was held in each judicial district of the State, each institute lasting from two and a half to three and a half days. Two objects were had in view: the improvement of the teachers and the rectification of popular sentiment. It was intended to benefit the teachers by increasing their information respecting the theory and practice of teaching, by stimulating thought and arousing a spirit of investigation, by uniting their efforts in the cause of education, by strengthening the esprit de corps of the profession, and by elevating their conception of the duties and responsibilities belonging to a teacher's place. It was expected that public sentiment would be influenced for good by diffusing information and showing that education *pays*, financially and every other way. Such a programme of exercises was adopted as it was thought would tend to accomplish the two purposes in view.

The attendance of teachers at these institutes was only about one-tenth of the whole number in the public schools, and as the law imposes no penalty for non-attendance, though it makes it the duty of teachers to be present, there was no remedy for this neglect. The superintendent, therefore, proposes that the legislature, at its next session, should make the attendance of public school teachers compulsory, by affixing a penalty to non-performance of the duty, and those present at one of the institutes united with him in this proposal. But as the expense of attendance would be a heavy tax on many poorly paid teachers, it is suggested that the districts in which they are employed be required to pay a part of this expense, as the people will reap much of the benefit received.—(State report for 1875–'76, pp. 6–8.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

No information respecting such schools in Arkansas has reached the Bureau beyond the preceding statement in the report from Little Rock, that the high school there had 44 pupils in 1876, of whom 35 were, on an average, in daily attendance. Aid from the Peabody fund to Van Buren, to the amount of $800, implies the existence of a graded school there; but whether the grades reach up to a high school is not stated.

In the tables appended to the State report, as was before said, 544 pupils are spoken of as engaged in "higher branches," but what these branches are, or to what extent they are pursued, does not appear.

PRIVATE SECONDARY SCHOOLS.

The depression of educational interests in the State is manifested by the fact that, out of 9 private schools of secondary rank heard from in previous years, only 3 schools for boys and girls make any return for 1876, and that of these 3 only 2 appear to have been in actual operation. These report 6 instructors and 213 students, of whom 172 were in English studies, and 31 in classical. Music, both vocal and instrumental, was taught in these, but of other advantages beyond these there appears no trace.—(Returns for 1876.)

PREPARATORY SCHOOLS AND DEPARTMENTS.

Of schools engaged especially in preparing students for college there seems to be none in this State, except the preparatory departments of 4 colleges and of the State Industrial University. In the last named 153 preparatory students were reported for the year; in 3 of the former, 169, making 322 in all, of whom 33 were preparing for a classical collegiate course and 38 for a scientific. In 3 of these institutions 6 instructors are connected especially with the preparatory departments. In 1 other all the faculty instruct in this line, as well as in the collegiate classes.—(Returns for 1876.)

SUPERIOR INSTRUCTION.

ARKANSAS INDUSTRIAL UNIVERSITY, FAYETTEVILLE.

This institution, established in accordance with the act of Congress making a grant of land for the benefit of agriculture and the mechanic arts, aims to supply at once the place of an agricultural college, a classical college, and a normal school. It proposes to impart a knowledge of science and its application to the arts of life, to afford to students the benefits of daily manual labor, to prosecute experiments for the promotion of agriculture and horticulture, to provide instruction in military science, and to offer a thorough general education not inferior to that of the best colleges.

Provision has been made for 238 beneficiaries who are entitled to four years' free tuition, as are also an equal number of normal students, who are apportioned among the several counties according to their respective populations.—(Catalogue of Industrial University, 1875–'76.)

OTHER COLLEGES.

Arkansas College, Batesville, (Presbyterian,) opens its doors to both sexes, and instructs in vocal and instrumental music, French, and German, in addition to the regular studies of its collegiate course. Students who desire to do so may substitute French or German for the mathematics of the senior year. The statistics from it are not very different from those of 1875.—(Catalogue for that year and return for 1876.)

Cane Hill College, Boonsboro', (Cumberland Presbyterian,) chartered in 1852 and reorganized in 1868, reports primary, preparatory, and collegiate departments in operation. Both sexes are admitted to all these. Painting and music are among the studies attended to.—(Report for 1875–'76.)

Judson University, Judsonia, (Baptist,) is a new institution, established in White County, near the head of navigation on the Little Red River, in railway communication with St. Louis, 292 miles distant, and with Little Rock, 53 miles away. Normal, business, and preparatory departments have been organized, and it is hoped that in due time regular collegiate classes will follow these.—(Report for 1875–'76.)

St. John's College, Little Rock, (Masonic,) still has the greater portion of its students, as in 1875, in its preparatory department, only 2 out of 48 being in a collegiate class. Of the remaining 46, however, 15 are reported to be preparing for a classical collegiate course.—(Return for 1876.)

SPECIAL INSTRUCTION.

EDUCATION OF THE BLIND.

The trustees of the Arkansas Institute for the Education of the Blind, at Little Rock, in their biennial report, state that the institution is in excellent condition. All debts have been paid and the school is well organized, with a corps of competent and faithful officers and teachers. The number of pupils in attendance in 1875 was 35. Owing to the limited means provided by the State, the number of pupils in 1876 was reduced to 28, by discharging some, permitting others to remain at home temporarily, and by admitting as new pupils only a few of the most promising applicants.

The literary branches pursued are reading of raised print, orthography, writing, grammar and analysis, descriptive and physical geography, American, English, and universal history, English literature, science of familiar things, mental and written arithmetic, algebra, geometry and physiology. The teachers have been faithful, the pupils studious, and the progress satisfactory. Music is taught, not as an amusement, but as affording a means of support. An excellent organ, affording all the practice of a large church organ, has been recently purchased. In the shop, instruction is given in broom and mattress making, and chair seating. In the girls' workroom, a large variety of garments and other articles have been manufactured.—(Biennial report of the Institution, 1875, 1876.)

EDUCATION OF THE DEAF AND DUMB.

The Arkansas Deaf-Mute Institute reports an attendance of 46 pupils, (28 males and 18 females,) who were taught by 4 professors and instructors. Since its organization, in 1868, the institution has given instruction to 210 pupils, who have spent, on an average, from 3 to 4 years in it. The branches taught are reading, writing, arithmetic, geography, grammar, history, and philosophy.

The institute owns 92 acres of land and other property valued at $35,000.—(Report to the United States Bureau of Education, 1876.)

In consequence of a suspension of the school from April 21, 1875, to February 2, 1876, the number of pupils for the spring of 1876 was smaller than usual, and for the same reason an almost entire change in the corps of teachers had to be made.—(Letter from principal in American Annals of the Deaf and Dumb, July, 1876.)

LIST OF SCHOOL OFFICIALS IN ARKANSAS.

Hon. GEORGE W. HILL, *State superintendent of public instruction, Little Rock.*

(From returns of Hon. E. S. Carr, State superintendent of public instruction, for the years 1874–'75 and 1875–'76.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

The main authority relied on here is Swett's History of the Public School System of California, Mr. Swett having been so intimately acquainted with that system from the outset as to make him a sufficient witness for all important facts. Other authorities, however, have been consulted, and particularly the school laws and State reports.

LAYING OF FOUNDATIONS.

Acquired from Mexico in 1848 and admitted as a State in 1850, California had no time to institute a territorial school system. Provision for a State system was, however, made by the convention which prepared in 1849 the constitution under which admission to the Union was secured, for in this instrument directions were given for the appropriation to school purposes of the 500,000 acres granted by the General Government to each new State for internal improvements, as well as the sixteenth and thirty-sixth section lands in every township. The legislature was also directed to provide for the election of a State superintendent of public instruction, for the encouragement of intellectual and scientific improvement, for the institution of a system of common schools by which a school should be sustained in each district for at least three months in every year, and for the protection, improvement, or other disposition of lands granted for a university. The lands devoted by this constitution to the school fund were sufficient to make this a magnificent endowment for a noble system of free schools; but, as has been too common with new States, the speculators proved stronger than the friends of education, and sales which, wisely delayed and made with care, might have brought in many millions for the schools brought only about a poor $600,000 in the end.

SCHOOL LAWS AND SUPERINTENDENTS.

The first State school law, passed in 1851, was cumbersome in its provisions for disposing of school lands and contradictory to itself in those for distribution of school funds, in which distribution sectarian schools were allowed to share in common with State schools. But, in accordance with recommendations made by superintendent John G. Marvin, (1851-'54,) the legislature, in 1852, passed a revised school law much more consistent and complete. By this law a State board of education was established, county assessors were made ex officio county superintendents, three school commissioners in each district were to be elected for one year, constables were to act as school census marshals, and the State school fund was to be apportioned on the basis of the number of children between 5 and 18 years of age. No books of a denominational or sectarian character were to be used in any common schools. A State school tax of 5 cents on each $100 was directed to be levied; the common councils in incorporated towns were authorized to raise a school tax not to exceed 3 cents on $100 and to levy the same amount, "provided that no school should receive any apportionment of public money unless free from all denominational and sectarian bias, control, or influence whatever." In 1853 this law was changed, in some matters for the worse, cities, for instance, being given the power to raise by tax whatever amount of money was deemed necessary for school purposes, and religious and sectarian schools being allowed a pro rata share of the school fund.

On January 1, 1854, Hon. Paul K. Hubbs, who had been elected as successor to Mr. Marvin for 1854 to 1857, assumed the office of State superintendent, and in his first report, on the 24th of that month, stated that about half the school lands still remained unsold, argued for a reservation of the sales of township sections as a basis for township school funds, recommended a distribution of the school fund according to attendance rather than to population, and urged the establishment of a State university. In his next report he advocated the establishment of a State industrial school and the abolition of the county superintendency. During his incumbency, but apparently not through his influence, a new school bill was passed (in 1855) which, among other enactments, limited the power of cities as to the levy of a school tax, provided that no school should be entitled to any share of the public fund that had not been taught by teachers duly examined and approved by legal authority, and decreed that no sectarian books should be used and no sectarian doctrines taught in any public school, under penalty of forfeiting the public funds. This settled then and probably forever in the State the question of sectarian instruction in the public schools.

In 1857 Mr. Hubbs was succeeded by Mr. Andrew J. Moulder, (1857-'63,) whose first report showed that, while the number of schools had increased nearly sevenfold, and the number of teachers nearly ninefold, the State contribution for schools had diminished by almost one-half and the pay of teachers from it to less than one-sixteenth of what it had been; that parents, consequently, were forced to make up deficiencies; and that the schools were not really free schools. He therefore recommended an in-

crease in the rate of county school taxation, in order that the schools might be made truly free. It was not, however, until the following year that his suggestion was acted on. The legislature of 1858 provided that school districts, by a vote of the people, could levy a district tax for the support of schools or for building school-houses, under the restrictions that the district must have maintained a school four months, that the public money must be insufficient to defray one-half the expense of another term, that a tax for supporting a school and for building a school-house could not both be levied the same year, and that the trustees considered the tax advisable. Several important amendments were made to the school law by the legislature of 1860. The maximum rate of county school tax was raised from 10 to 25 cents on $100, and both State and county boards for examining teachers were provided for. The State superintendent was authorized to hold a State teachers' institute annually, an appropriation of $3,000 being made for payment of expenses, as well as one of $30,000 for building a State reform school at Marysville. In 1862, after repeated recommendations to that effect by Superintendent Moulder, the legislature passed an act to establish a State normal school, appropriating $3,000 for the purpose. The school was located at San Francisco and was opened during that same year.

In 1863, Mr. John Swett, the author of the history from which this sketch is drawn, became State superintendent. He held office for two terms, (1863–'68,) his first having been cut short by a change in the constitution. To him was referred by the senate committee on education the task of revising and codifying the school laws. Public opinion was not yet sufficiently awakened to secure any very liberal taxation for support of schools, but some provisions looking toward good tax collections were incorporated into the law, while a step backward was taken in providing for assessing and collecting rate bills. In 1864 a supplementary bill, prepared by Superintendent Swett and passed by the legislature, directed the levying of an annual State school tax of 5 cents on each $100 of taxable property in the State, with a county school tax equal to at least $2 for each child between 4 and 18 years of age; raised the maximum rate of county tax allowed by law from 25 to 30 cents on each $100 of taxable property, and made it the imperative duty of school trustees to levy a direct property tax sufficient to maintain a public school 5 months each year whenever the State and county school money should be insufficient for that purpose. In 1866, by the passage of a revised school law, the State school tax was raised to 8 cents on the $100 and the minimum county tax to $3 per census child, both provisions together increasing the school revenue by at least $125,000 a year. The last school report of Superintendent Swett opens with the remark that the school year ending June 30, 1867, makes the transition period of California from rate bill common schools to an American free school system. For the first time in the history of the State every public school was made entirely free for every child to enter.

Superintendent Swett was followed by Rev. O. P. Fitzgerald, (1868–'72.) The first important occurrence under this administration was the passage by the legislature of 1868–'69 of a bill to provide for organizing a State university. In 1870 the revised school law was reënacted under the title of the California school law, but was not changed in any of its main features. The sections relating to rate bills were stricken out, being no longer needed; the State Normal School was taken from the hands of the State board of education and placed under the control of a board of normal school trustees appointed by the governor; while the State tax for schools was raised to 10 cents on $100.

Superintendent H. N. Bolander succeeded Mr. Fitzgerald in 1872, remaining in office until 1876. He had the pleasure of witnessing and aiding in a great advance in the prosperity of the State school system, of welcoming an appropriation of $300,000 for the buildings of the University, and of seeing the institution settled in these buildings, with a president and faculty well adapted to the work. He labored successfully for the procurement of a compulsory school law, for an apportionment of at least $500 annually to each school district, and for the securing of a State uniformity in text books, directing also his endeavors for some time to an improvement in the quality of teachers, and consequently in the instruction to be given in the schools.

On his retirement Dr. Ezra S. Carr, previously of the agricultural department of the university, succeeded to the superintendency for a term of four years from 1876, Mrs. Carr being associated with him as deputy superintendent.

SUCCESSION IN THE SUPERINTENDENCY.

The successive State superintendents, as may be seen from the preceding sketch, have been as follows:

Under the first constitution, which prescribed a term of three years, each holding office till his successor was qualified, (1) Mr. John G. Marvin, 1851–'54; (2) Hon. Paul K. Hubbs, 1854–'57; (3) Mr. Andrew J. Moulder, 1857–'63, two terms; (4) Mr. John Swett, 1863, elected for a term of three years, which, by a change in the constitution, was cut short to eleven months.

Under the second constitution, which prescribed a term of four years, (1) Mr. John

Swett, 1864–'68; (2) Rev. O. P. Fitzgerald, 1868–'72; (3) Mr. Henry N. Bolander, 1872–'76; (4) Prof. Ezra S. Carr, term 1876–'80.

Since 1872 there have been chosen two deputy superintendents, Mr. J. H. Eikhoff, aid to Superintendent Bolander, 1872–'76, and Mrs. E. S. Carr, aid to Superintendent Carr for his term, 1876–'80.

ELEMENTARY INSTRUCTION.

THE SCHOOLS.

Mr. Swett (p. 36 of his history) says that in general the school-houses are comfortable, furnished with modern styles of desks, and fairly supplied with maps, charts, and simple school apparatus. The average length of term is seven and a half months. There is a good course of study laid out by the State board, but carried out to only a limited extent in county districts. Each school is supplied with a small library, secured by an annual State appropriation of one-tenth of the school moneys.

POPULAR INTEREST IN PUBLIC SCHOOLS.

An intelligent correspondent of the London Times, writing from San Francisco, says, respecting an observed increase of truancy and absence from the schools throughout the State: "Discouraging as these facts might seem to one reading them at a distance, it is impossible to live among the people and see the interest taken in the schools by the most intelligent and those who socially are the most influential in the country without feeling that the inert mass of ignorant foreign born voters will eventually be carried along by a force of public example that must prove irresistible. The cost of maintaining these schools is a heavy charge upon the taxpayers; yet I have never heard any grumble at the expense; and if there are any who begrudge it, they are certainly not sufficiently numerous to find an organ to represent them among the newspapers of the State. It is noticeable, too, that in ten years the number of children attending private schools has decreased 21.17 per cent., the pupils having been transferred to the public schools. These schools, however, are not mere pounds for stray children, but steps of a ladder reaching from the nursery to the State university; and many who could afford to send their children to the best private schools prefer to send them to the public schools."

MODE OF APPORTIONING SCHOOL-FUNDS.

The same correspondent writes, on this point: "In order to make a description of the method of distributing the State school apportionment intelligible, it will be necessary to explain what a "school district" is and how it is formed. The Californian school district, then, is not an area of ascertained extent set out by metes and bounds, the segregation of a neighborhood and the formation of a district depending upon population; for, supposing two or three families to number among them as many as 15 children between the ages of 5 and 17, and to be unprovided with an easily accessible school, they may constitute a district. In 1875 there were 1,579 school districts in the State and 2,190 schools. Until 1874, the law providing for the distribution of school moneys by the State and county was unfair to the small districts, because the apportionment was made according to the number of census children in a district, and as much money was required to maintain a school and pay a teacher in a district with 15 as in one with 50 children. Thus hundreds of districts did not receive sufficient funds to maintain every year the three months' school guaranteed by the constitution to every district in the State. The State legislature of 1874, however, adopted a system of apportionment recommended by the State superintendent, Mr. Henry N. Bolander, and in 1875 every district in the State received at least sufficient funds to provide for a six months' school, while 49.53 per cent. of the districts maintained an eight months' school. By the new law, $500 have been fixed as the minimum amount which every district must receive for every teacher assigned to it; and for every 100 census children, or fraction thereof, being not less than 15, one teacher is to be assigned. Besides providing that the school revenue shall be sufficient to give $500 for every teacher assigned to any district, it is enacted that where, after the funds have been distributed at this rate, a balance remains, this balance is to be apportioned, in proportion to the number of census children, among districts having not less than 50 census children. The result of a year's experience of the working of this law is that $500 are not enough to maintain an eight months' school in a majority of the districts, and the superintendent recommended, in his last report, that the minimum grant to each district should be raised to $600.

"The importance of this question of the pay of teachers as affecting the quality of the instruction the children will receive is fully recognized, and, making allowance for the comparatively low purchasing power of gold here, the salaries paid are not high, while they are, at least in the cities and populous districts, generally sufficient to enable the teachers to live in comfort."

KINDERGARTEN.

A Kindergarten school at Los Angeles, under the instruction of Miss Emma Marwedel,

formerly of Washington, D. C., with 20 children in attendance, reports that all Frœbel's gifts are possessed and all his occupations attended to, mostly in the open air, under an 80-foot arbor of evergreen pepper trees, each child having a veritable little garden of its own. The exercises occupy 3½ hours each day for 5 days of the week and 40 weeks in a year.—(Return for 1876.)

CITY SCHOOL SYSTEMS.

SAN FRANCISCO.

The foundations of a State school system having been laid, as before stated, in the constitution of 1849, San Francisco took the lead in organizing under it a free public school. The first public school ordinance of any kind passed in the State was one by her city council, adopted April 8, 1850, authorizing J. C. Pelton, a teacher from the East, to open in the Baptist chapel a city public school, to contain not more than 100 scholars, who should be instructed free of charge. The rush to this free school was so great that the number to which it had been limited had to be exceeded by one-half, and eventually was trebled. It was continued till September 25, 1851, when, under a new school ordinance, a city superintendent and other teachers were appointed, and Mr. Pelton temporarily retired.

The succession of city superintendents from that period has been as follows: Appointed by the board of education, Thomas J. Nevins, 1852–'53; William H. O'Grady, 1854–'55. Elected by the people, E. A. Theller, 1856; John C. Pelton, 1857; Henry B. Janes, 1858–'59; James Denman, 1860–'61; George Tait, 1862–'65; John C. Pelton, 1866–'67; James Denman, 1868–'70; J. H. Widber, 1871–'73; James Denman, 1874–'75; H. N. Bolander, 1876–'78.—(Swett's History, pp. 12–14, 16, 90.)

Organization.—The school organization here consists of a board of education of 12 members, a superintendent of schools, a deputy superintendent, a secretary, a clerk, a copyist, and a messenger; also, under a general school law, a city board of examination, composed of the city and county superintendent and of 4 teachers, residents of the city and holders of State diplomas, chosen by the board of education. The examining and licensing of teachers belong to this board of examination; the general care of the schools, to the board of education; the special supervision of them under the board, to the city superintendent and his deputy.

Statistics.—Estimated present population of the city, 272,345; number of children between 5 and 17 years of age, 46,238. This is the age for which public money can be drawn, though the minimum of age for attendance at school seems to be fixed at 6 years. Number of children between 6 and 17 years of age, 42,287; number enrolled during the year in all public schools, 34,029—boys, 17,995; girls, 16,034; increase for the year, 2,901; average number belonging, 24,150; increase for the year, 1,703; average daily attendance, 22,761; increase for the year, 1,747. Number attending private and church schools, (not including Chinese,) 6,655; increase for the year, 561. Total attendance upon public and private schools, (not including Chinese,) 35,289; increase during the year, 2,984. Number of children, 5 to 17 years of age, who have not attended school at any time during the year, 10,949. Total enrolment in public high schools, 756; in grammar schools, 12,808; in primary schools, 17,549; in evening schools, 2,916; number of school-houses, 56; of teachers: men, 67; women, 507—total, 574. Total expenditures in 1876, $867,754.89; increase during the year, $160,309.53; income, $799,191.27.

Remarks.—Commendable progress has been made in the different studies pursued in the public schools. During the last six months of the year several measures calculated to improve the system were introduced, among which are a general revision of the course of study and the suppression of some text books deemed superfluous. This imposes upon the teacher the duty of condensing the instruction in the branches in question and of presenting it to the class in the simplest and most direct manner. An effort has been made to contract the amount of arithmetical work, with a view to making it more immediately practical, and a considerable number of obsolete and useless subjects have been entirely dropped. The same object has been sought in revising the course in grammar. Much attention is paid to the actual writing of good English, and but little to the formal and mechanical processes of parsing and analysis.

There are two public high schools, with an average total of 646 pupils, divided into 24 classes and taught by 29 teachers, of whom 12 are men. The assistant superintendent, who visited them frequently during the year, commends the work done, with the exception that too much time and thought, he thinks, seem to be given to marking recitations. The present elastic character of the course in the boys' high school is a great improvement on the rigid routine of the past.

The want of a suitable normal school in the city has long been felt, and an important step toward such a school has been taken in the establishment of a normal class, numbering at present about 36 members, in connection with the girls' high school, which gives one year's instruction in methods of teaching to graduates of that institution.—(Report for 1876 of Hon. Henry N. Bolander, city superintendent, pp. 2, 18, 36–39, 61–63.)

SAN JOSÉ.

Organization.—A board of education, city superintendent, and city board of examiners.

Statistics.—Estimated present population, 16,000. Number of children of legal school age, (5–17,) 3,074; enrolled in public schools, 2,374; average daily attendance, 95 per cent. of enrolment. Teachers employed, 42; wages of these, $750 to $1,500. Salary of superintendent, $1,500. Enrolment in private and parochial schools, 526. Receipts for public schools, $89,060; expenditures, $65,237, leaving a balance of $24,823. Average cost per pupil, estimated on the basis of average attendance, $27.

Remarks.—Additional to the above enrolment, there appear in another portion of the report 35 colored children, who seem to have formed a school by themselves, having an average attendance of 23. Of the whole number of school age, 760 white, 10 negro, and 3 Indian children are reported as not attending any school. The schools below the high school are of eight grades, with one class of mixed grades; and as the value of the school libraries is set down at $1,500, it may be inferred that the children and teachers have a fair amount of books for miscellaneous reading out of school. A new course of study has been prepared, omitting much that has been found to be unprofitable, and it is hoped that this will enable pupils to complete the usual curriculum in less time and with greater proficiency than in the past. Special teachers of drawing and penmanship are employed.—(Report of City Superintendent L. J. Chipman, for 1875–'76.)

STOCKTON.

Organization.—A board of education, city superintendent, and city board of examiners.

Statistics.—Estimated present population, 15,000. Children from 5 to 17 years of age, 3,327; enrolled in public schools, 2,800; average daily attendance, 2,301. School buildings, 9; rooms, 31; sittings for study, 1,740. Teachers employed, 32; wages of these, $900 to $2,000. Salary of superintendent, $900. Enrolment in private and parochial schools, 120. Receipts for public schools, $61,302; expenditures, $41,602, leaving a balance of $19,700. Average expense per capita for supervision and instruction, with incidental and contingent expenses, $17.46.—(Return of Superintendent G. S. Ladd to Bureau of Education, for 1876.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL, SAN JOSÉ.

Applicants for admission here must declare that their purpose in entering is to prepare themselves to teach and that they intend to teach in the public schools of California. That declaration made, they may, if ladies, enter at 16; if gentlemen, at 17 years of age, provided they give evidence of good moral character and stand an examination, such as would be required to obtain a third grade certificate as teachers, or provided they can present a valid certificate, State or county, of any grade. Even certificated teachers, however, must be examined for classification; for the junior class, in elementary studies; for more advanced standing, in all the studies gone over by the class it is proposed to enter. Having entered, they receive free tuition, with the advantage of a well selected apparatus and of a library of about 1,100 volumes, in a course which covers two years. If not prepared for this course, however, they may enter a preparatory class, connected with the school; in which case a tuition fee will be required. All who enter undergo a monthly examination.

During the past year the requirements for admission have been raised somewhat, and such pupils as were judged unfit to make successful teachers were dropped to give place for others of higher type. The school year 1875–'76 was entered on with an enrolment of 292, and progressed with an average monthly enrolment of 342, the average attendance exceeding by 60 the highest number enrolled the preceding year. At the close of 1876 the number of normal students for the year was reported to be 501; of other pupils, (probably in the model school, connected with the institution,) 134. Including the principal, 11 teachers were employed, 3 of them in the preparatory and model schools. Drawing and vocal music were among the branches taught. The graduates for the year were 38. Of the 2,800 teachers in the public schools of the State, 240 are graduates of this school.—(Return to Bureau of Education and report for 1875–'76.)

OTHER NORMAL TRAINING.

The proposition, mentioned in the report of this Bureau for 1875, to establish a normal school for San Francisco has been so far carried out that a normal class has been connected with the girls' high school. This class is meant to give to the graduates of that school who wish to become teachers a year's instruction in methods of teaching. A competent teacher has been put in charge, and the class in 1876 numbered 36 members. Two classes in a model school at hand have been set aside as training classes,

and members of the normal class are detailed in turn to take charge of them, under the supervision of experienced teachers. It is hoped that by this means a corps of well trained recruits may be prepared to supply the frequent vacancies occurring in the city schools.—(City report for 1875–'76, p. 63.)

Then, in any county with twenty or more school districts, the county superintendent of schools is required to hold each year at least one teacher's institute of from 3 to 5 days' continuance, and every teacher employed in a public school in the county must attend such institute and participate in its proceedings. An opportunity is thus afforded to intelligent superintendents to instruct and improve considerably the teachers already in the field.—(State School Law of 1874, p. 10.)

SCHOOL JOURNALS.

The California Teacher, established July, 1863, and conducted under the auspices of the State Educational Association till 1873, became the organ of State Superintendent Bolander at the latter date and continued to be published by him till 1876. In that year the legislature cut off the State subscription, on which the journal had largely depended for its support, and its issue ceased in April. An important element of information and improvement for the teachers of the State was thus cut away.

The Los Angeles Schoolmaster, published during 1875, and devoted to the educational interests of Southern California, has not appeared at the Bureau of Education since that year, and whether it still pursues its useful work is thus unknown.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Respecting the 14 public high schools in this State there is yet no approximation to a full return, except through the State reports which come every second year. For 1876 the only returns are from San José, where were 34 high school pupils under 2 teachers; from Oakland, where 8 teachers instructed 135 pupils; and from San Francisco, where 12 male and 17 female teachers had under their charge, in a high-school for boys and one for girls, an average of 646 pupils out of a total enrolment of 756. The enrolment in the remaining 11 high schools for 1875–'76 is given by Mr. Swett as 472, at page 232 of his history, besides 1,800 pupils in first grade schools, pursuing an advanced or partial high school course. The course in the San Francisco schools is of 3 years, and is meant to prepare for either the ordinary business of life or for the classes of the university. The classical course, looking to this latter end, embraces, besides a good range of English studies, Cornelius Nepos, 6 orations of Cicero, the Eclogues of Virgil and 6 books of the Æneid, 3 books of Xenophon's Anabasis, and 2 of Homer's Iliad. The graduates from these two schools in 1876 were 112, of whom 8 were from the classical course.—(City reports for 1876.)

PRIVATE SECONDARY SCHOOLS.

In 2 schools for boys, 8 schools for girls, and 8 others for both sexes, outside of the public school system, there have been reported to this Bureau 2,590 pupils, under 142 teachers. Of these, 248 are in classical studies, 519 in modern languages, 41 preparing for a classical course in college and 22 for a scientific course. Drawing is taught in 16 of these schools, vocal music in 16, and instrumental music in 13. Chemical laboratories are reported by only 2, philosophical apparatus by only 2, and libraries of 40 to 3,000 volumes by 13, the aggregate number of volumes reaching 10,330.

PREPARATORY SCHOOLS AND DEPARTMENTS.

Five schools professedly of this class — 1, however, a military academy, 1 a public high school, and 2 chartered as colleges — make return of 34 teachers and 427 pupils, of whom only 18 are specifically reported to be preparing for a classical collegiate course and 40 for a scientific course. The so-called colleges appear to be the lowest in the scale here, one having "no course yet fixed;" the other, few pupils beyond "a juvenile department, to which pupils are admitted as soon as they are able to read." The full course in one of the 4 with fixed courses is 3 years, in 2 is 4 years, and in the remaining one, 6. Only 2 possess any apparatus for chemical experiments, and as many some means for gymnastic exercise, while 3 report apparatus for illustration of natural philosophy. All have libraries of 158 to 2,500 volumes, the whole number of volumes being 5,558.

Returns from 14 colleges with preparatory departments show in these 18 instructors, exclusive of professors, and 809 pupils, 123 of these being in preparation for a classical collegiate and 209 for a scientific course. Total of preparatory teachers, 52; of preparatory students, 1,236; preparing for collegiate classical course, 141; for a scientific course, 249.—(Returns to Bureau of Education, 1876.)

BUSINESS COLLEGES.

The Sacramento and San José business colleges return, for the year covered by this report, 8 instructors and 219 students, 10 of whom were in phonography, 41 in teleg-

raphy, 9 in German, 14 in French, and 7 in Spanish. Heald's, in San Francisco, reports only through its publications, which show 15 instructors, but give no indication of the number beyond the fact that increase of these has compelled a large increase of accommodations. In all the three there appear to be ample opportunities for securing a good business training, including commercial law and forms, arithmetic, penmanship, and the languages and occupations above indicated.—(Returns to Bureau of Education for 1876.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF CALIFORNIA.

History.—Provision for the endowment of a State university out of the proceeds of the congressional land grant for that purpose was made in the first constitution of the State, in 1849. It was not, however, until 1868 that a bill passed the legislature for the establishment of such a university, with which was to be connected an agricultural college, a bill for organizing which had passed two years before. September 23, 1869, the university commenced its sessions in the buildings of the College of California, at Oakland, with an attendance of about 50 students and a faculty of 9 professors. The College of California soon transferred to it extensive grounds at Berkeley, opposite San Francisco, and on this site the university buildings were erected out of an appropriation of $300,000 made in 1870 by the legislature. On the completion of these buildings, in 1873, the faculty and students were established in them, the work of beautifying and improving being left to go forward as means for it should be supplied.

From the first the institution was made free and was opened to young women as well as to young men.

In November, 1868, Gen. George B. McClellan had been elected president, and, on his declining, Prof. John Le Conte was asked by the regents to act as president pro tempore. He served as such till 1870, when Henry Durant, esq., who had been active in efforts to establish the university and secure to it the transfer of its present site, was chosen to preside. In 1872 he resigned, and was succeeded by Prof. D. C. Gilman, of Yale College. After a highly successful administration, he resigned, in March, 1875, to accept the presidency of the Johns Hopkins University, Baltimore, and was succeeded by Prof. John Le Conte.—(Swett's History, pp. 165, 166.)

The students at Berkeley are not only enrolled in separate colleges, but in each college they may enter in regular or special courses, the regular leading to a thorough and systematic education, the special to proficiency in a single branch or a few correlative branches. The colleges of the university are 7: of letters, of agriculture, of mechanics, of mining, of engineering, of chemistry, and of medicine. The California College of Pharmacy has been affiliated with the university, retaining its own organization. The college of letters, the first mentioned, has two courses, a classical and a literary, the qualifications for entrance on the former being up to the highest requirements of the best colleges; those for the latter, somewhat beyond the requirements for entering the college of science. Candidates for advanced standing, in addition to the preparatory studies, are examined in those already pursued by the classes they propose to enter.

Young ladies have the same opportunities for study as young men, and the number availing themselves of these opportunities has increased with almost uniform steadiness from the beginning, 45 being found on the register for the current year.

The apparatus for illustration of the studies pursued appears, from the account given of it, to be unusually complete for so young an institution, and is receiving continual additions. The collections in the museums of archæology, ethnology, zoölogy, botany, geology, and mineralogy are also quite considerable and on the increase; while in the engineering department, besides a valuable collection of surveying instruments, is an excellent assortment of models in wood of the various bonds of masonry and of different walls, arches, gateways, &c., recently received from Shröder, of Darmstadt. These are supplemented from the same source by a large number of models of joists and fastenings in carpentry and framework. By the munificence of Mr. James Lick, provision has been made, too, for the erection and equipment of a first class observatory, ($700,000 being devoted to this purpose,) which, when completed, is to be turned over to the regents of the university.—(Register of the university for 1876–'77.)

OTHER COLLEGES.

College of St. Augustine, Benicia, (Protestant Episcopal,) is under the special care of the bishop of Northern California, with 11 assistants, and aims to give a thorough physical, mental, and religious training to the young men who enter it. As one means toward the first, a system of military drill has been connected with the daily duties.—(Catalogue for 1874–'75 and notice for 1876 in Protestant Episcopal Almanac.)

Franciscan College, Santa Barbara, (conducted by the fathers of the order of St. Francis,) has for its object to give a good English, mathematical, classical, and philosophical education at the lowest possible cost, which is put at $215 per session, music, French, and German being extra.—(Advertisement in Sadlier's Directory for 1877.)

Hesperian College, Woodland, (Christian,) for both sexes, has classical and scientific courses and no preparatory department.—(Return for 1876.)

Pacific Methodist College, Santa Rosa, both sexes. Candidates for a degree have the choice of four courses of study, the regular classical and scientific, and two special courses for women leading to the degrees of "mistress of arts" and "mistress of science." Those women who choose to do so, however, can pursue the regular classical and scientific courses and receive the usual degrees. There is also a department in pedagogics for those who wish to become teachers, and a commercial course designed to prepare for a mercantile life.—(Catalogue for 1875–'76.)

Pierce Christian College, Colusa County, opened in 1874 by the Christian Church at College City from means left by Andrew Pierce. Both sexes are admitted. Primary, preparatory, and collegiate departments have been organized. Music, painting, and the modern languages are optional studies.—(Catalogue 1875–'76.)

St. Ignatius College, San Francisco, conducted also by the Jesuit fathers. Incorporated and empowered to confer academic degrees in 1859. The course of study embraces the Greek, Latin, and English languages, poetry, rhetoric, elocution, history, geography, arithmetic, book-keeping, penmanship, mathematics, chemistry, and mental, moral, and natural philosophy. French and Spanish are optional studies.—(Catalogue 1875–'76.)

St. Mary's College, San Francisco, conducted by the Christian Brothers. The studies are divided into two courses, collegiate and commercial. The usual academic degrees are conferred. The Brothers are trained to the work of education, this being the sole object of their society. They live in the same house, sit at the same table, preside at the recreations, and, as far as possible, form a family circle with the students, in order the more easily to gain their confidence and the more successfully to direct their studies. –(Catalogue, 1875–'76.)

Santa Clara College, Santa Clara, under the control of the Jesuit Fathers. For young men exclusively. There are preparatory and collegiate departments, the latter embracing classical and scientific courses. The college reports a full staff of professors, a complete philosophical apparatus, a well supplied chemical laboratory, and an interesting museum of natural history. Practical lessons are given in telegraphy and photography.—(Catalogue 1875–'76.)

The University of the Pacific, Santa Clara, (Methodist Episcopal,) presents, as before, four courses: a preparatory, classical, Latin-scientific and scientific, to all which young women, as well as young men, are admitted. A special class in instrumental music also appears, while for those who wish to prepare for business there is a commercial department, in which are taught commercial calculations, book-keeping, banking, telegraphy, &c.—(Catalogue for 1874–'75.)

Washington College, Washington, is, like the State university, designed for both sexes, and its curriculum is so arranged as to accord in its main features with the university course, thereby making admission to that institution more easy to those who may wish to enter any of its classes. Moral and religious training goes hand in hand with the intellectual; but that training is, as far as possible, conducted on the broad general principles of Christianity, without reference to any sect or denomination. Honor is the central thought in the discipline, a sense of what is right, just, and true being constantly appealed to. Physical training is also provided for.—(Catalogue for 1874–'75.)

COLLEGES FOR WOMEN.

Only one institution claiming to be for superior instruction of young women exclusively reports itself from California for 1876, and that by circular alone. This is the Young Ladies' Seminary of Benicia, near Mount Diablo, of the Coast Range. It presents 10 instructors, but does not give the number or classification of its students. Vocal and instrumental music, drawing, painting in oil and water colors, French, and German are among the branches taught.

In Washington College, Alameda County; the University of the Pacific, Santa Clara; Pierce Christian College, Colusa, and in the University of California, Berkeley, women, as has been said, are admitted to equal privileges with men in the college courses, and a number of female names appear upon their lists. In the Pacific Methodist College, Santa Rosa, a special course for young ladies is arranged, comprising 3 years, in which, besides the higher English studies, Latin, French, German, and Spanish are taught, at least one of these modern languages being required. Ladies who wish to do so can also pursue the regular classical and scientific course, having the same teachers, with the same modes of instruction, and receiving the usual degree of B. A.—(Catalogues of these colleges.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The various scientific colleges of the university—as the colleges of agriculture, mechanics, mining, engineering, and chemistry—are designed to give their students a good introduction to the principles of modern science, together with special instruction in the particular departments they may choose. The first two years in all these colleges include nearly the same studies. A solid foundation is laid in these years for all higher pursuits by the careful study of mathematics and the elements of chemistry, natural philosophy, &c., as well as of English, French, and German. At the beginning of the third year the special subjects are made to predominate and general studies receive a subordinate degree of attention.—(Register of the university for 1876–'77.)

Scientific studies are pursued also at the University of the Pacific, St. Ignatius College, Santa Clara College, and Washington College.—(Catalogues of these colleges.)

PROFESSIONAL.

Theological instruction is given in the Pacific Theological Seminary at Oakland, established in 1869 by the Congregational Church, and in the San Francisco Theological Seminary, San Francisco, organized in 1871 under Presbyterian influences. The course in each is 3 years. The Golden Gate Academy, associated with the former of these two, offers a partial preparatory training to those candidates for admission who have not the means or time for a collegiate course. The latter of the two received in 1876 a bequest of $60,000 for the endowment of professorships. St. Augustine's College, Benicia, was originally instituted with a view to the preparation of students for the ministry of the Protestant Episcopal communion; but whether it has any theological classes in it does not appear. (Catalogues and reports to Bureau of Education.)

Medical instruction is cared for by the college of medicine connected with the University of California, but located in San Francisco; by the Medical College of the Pacific, formerly connected with the University of the Pacific, but now a department of University College, San Francisco; and, as far as pharmaceutical training goes, by the California College of Pharmacy, in the same city. The return of the second of these gives its course as "two years of lectures, three of study." The course of the other two appears, from the returns for 1875, to be 2 years.

Legal training seems thus far to have no special school for guidance of it in the State, and probably is mainly confined at present to lawyers' offices, except as far as it enters into the curricula of business colleges.

a State appropriation for new building. *b* Apparatus.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

There were, in 1875–'76, in the State institution at Oakland, 82 deaf and dumb pupils under instruction, 50 of them being males and 32 females. All the branches of a common school education are pursued here, and to a limited number a university preparation is given. The natural history museum, philosophical cabinet, and library were burned in 1875, and have not yet been replaced. An appropriation of $36,000 was made by the State for the erection of a building, and $36,000 were given for the support of this department and of that for the blind.

The number of blind pupils was 31. The mechanical department has been suspended since the fire.—(Special reports to United States Bureau of Education, 1876.)

SCHOOLS FOR THE CHINESE.

Statistics of these are not as full as could be wished. The schools of the American Missionary Association (Congregational) numbered 10 during the month of September, 1876, and had 19 teachers, with 498 scholars. The average attendance was 294. The changing character of the Chinese population and the fact that many who attend the schools are employed on river steamers, railways, &c., and can only come at intervals of leisure, sufficiently account for this small average attendance as compared with the enrolment.

The Baptists employ a missionary for the Chinese in the State, and he reported in May, 1876, 7 missions and Sunday schools, attended by about 500 Chinamen, 200 lay helpers aiding in the instruction of these. No statistics of week day schools appear in the report as given in the Baptist Year Book for 1877.

The statistics of the Methodist Episcopal Church, in possession of the Bureau, show 147 Sunday schools of that denomination in the State, with 1,533 officers and teachers and 11,802 scholars, but do not state how many of the latter are Chinese, nor how many day schools and scholars belong to this people.

The school of the Woman's Union Mission to Chinese Women and Children in San Francisco is reported by the missionary to have contained 15 pupils in February, 1876, and to have had 38 subsequently enrolled. The studies seem to have been mainly in English language and composition, with committing of moral and religious precepts, and in these directions considerable progress is said to have been made.—(Report for 1876.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' CONVENTION, INSTITUTE, AND ASSOCIATION.

In view of the advantages of teachers meeting with each other for social intercourse and educational discussions, Superintendent Hubbs called together the first State teachers' convention, which was held in the city of San Francisco, December 26–28, 1854, Superintendent Hubbs presiding. About 100 appear to have been present, and several essays on the management of schools, on the free school system, on the Bible in the public schools, and on phonography and elocution in the same, gave a practical and useful character to the assemblage. A kindred meeting was held in August, 1856, at Benicia, Superintendent Hubbs again presiding; but, only 60 members being present, the convention system seems then and there to have met its death.

In 1861, however, a State teachers' institute was organized, May 27, at San Francisco, under Superintendent Moulder, the mornings to be devoted to institute instruction for the improvement of the teachers in their school methods and school work, and the afternoons to free discussion. This met with considerably more success, partly from the better system fallen on, partly from liberal appropriation for it by the legislature, and successive sessions followed in successive years till 1871. This proved the last, not from failure of interest in it on the part of officers and teachers, but from failure of the legislature to make appropriation for securing lecturers.

On the call of the State board of education, a number of teachers assembled at San José, June, 1875, and organized a State teachers' association. What may come of this remains to be seen.—(Swett's History, pp. 96–106.)

LIST OF SCHOOL OFFICIALS IN CALIFORNIA.

Hon. EZRA S. CARR, *State superintendent of public instruction, Sacramento;* Mrs. E. S. CARR, *deputy superintendent, Sacramento.*

STATE BOARD OF EDUCATION.

Name.	Office.	Post-office.
His Excellency William Irwin	Governor of the State and ex officio president	Sacramento.
Hon. Ezra S. Carr	State superintendent of public instruction, secretary	Do.
Hon. Henry N. Bolander	Superintendent of San Francisco County schools	San Francisco.
Rev. W. F. B. Lynch	Superintendent of Alameda County schools	East Oakland.
E. Rousseau	Superintendent of Santa Clara County schools	Santa Clara.
S. G. S. Dunbar	Superintendent of San Joaquin County schools	Stockton.
F. L. Landis	Superintendent of Sacramento County schools	Sacramento.
A. L. McMeans	Superintendent of Sonoma County schools	Santa Rosa.
Charles H. Allen	Principal of the State Normal School	San José.

COUNTY SUPERINTENDENTS.

[Term expires Monday, March 4, 1878.]

County.	Superintendent.	Post-office.
Alameda	Rev. W. F. B. Lynch	East Oakland.

(From reports of Hon. Horace M. Hale, superintendent of instruction, for the years 1874–'75 and 1875–'76.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

School laws of Colorado to 1876; constitution of that year; reports of territorial superintendents, and a paper on the succession of these, from Hon. Joseph C. Shattuck.

LEGISLATIVE ACTION.

Lying in the line of the great migration toward the western coast, Colorado, by her splendid scenery, rich river valleys, and salubrious air, early attracted to her many of the passing emigrants. The subsequent development of mining wealth among its mountains brought in an active and energetic population, who, although often restless as to residence, put their whole soul into whatever work they undertook. By 1860 there were enough inhabitants to encourage territorial organization, which was effected in 1861. The first territorial legislative assembly, convened in the autumn of

that year, passed, with commendable promptness, a good school law, approved November 7, providing for a territorial superintendent of common schools, county superintendents, and boards of three directors for each school district, with the usual duties of such officers. The next year a further act was passed (approved August 15, 1862) making provision for the creation of a school fund by setting apart for that purpose claim 3 in every metallic lode discovered. The foundations of a school system were thus well laid at the beginning, county and district tax levies, fines, and funds arising from the sale of lost goods and estrays being relied on for its immediate support.

On February 10, 1865; January 23 and February 9, 1866; January 10, 1867; January 10, 1868; February 11, 1870; January 9, 1872; February 8, of the same year, and February 11, 1876, modifications of the provisions of these earliest laws were made and some additional enactments added; but the essential features of the excellent system first introduced were left unchanged, territorial, county, and district supervision of schools being provided for in all.

On the 1st of July, 1876, a constitution, on the basis of which the Territory was to become a State, was adopted by the people. This provided for a State board of education, State superintendent of public instruction, county superintendents, boards of education of school districts, (to consist of three or more directors, elected by the voters of the district,) and a uniform system of free public schools, open to all residents between 6 and 21 years of age, without distinction of race or color. Permission was given the general assembly to require by law that every child of sufficient mental and physical ability should attend the public school for a period of three years, unless educated by other means; but the power to make grants in aid of any sectarian schools or to prescribe text books for the common schools was explicitly withheld.

The university at Boulder, the agricultural college at Fort Collins, the school of mines at Golden, and the institute for the education of mutes at Colorado Springs were, on the adoption of the constitution, to become institutions of the State, with a management subject to its control; the management for the university being prescribed beforehand, and to consist of a board of regents of six members elected by the people, two of the six to be changed each year.

The school law of February 11, 1876, will doubtless be modified at the first meeting of the State legislature, to meet the new elements thus introduced into the school system.

ADMINISTRATION.

Under the act of 1861, Mr. William J. Custice was appointed superintendent of public instruction November 7 in that year, and held the office till November 13, 1863, when he was succeeded by Mr. William S. Walker. Mr. Walker's incumbency continued till the approval of the act of February 10, 1865, when Mr. A. W. Atkins, then territorial treasurer, became, by the terms of the new law, ex officio superintendent of instruction for the Territory. He was succeeded, January, 1866, by Mr. John Wanless, and he, January, 1867, by Mr. Columbus Nuckolls. Under Mr. Nuckolls the records show that the business of the superintendency was done mostly by deputies; during the first and greater portion of the time, by Capt. E. L. Berthoud; during the latter portion, by Mr. W. J. Martin.

Under the act of February 11, 1870, which restored the superintendency as a separate office, Mr. W. C. Lothrop was appointed superintendent of public instruction soon after the passage of the act, and continued in office till July 24, 1873, when he resigned, and was succeeded by Mr. Horace M. Hale. Mr. Hale, after a vigorous administration of three years, passed out of office November 13, 1876, yielding to Mr. Joseph C. Shattuck, who, under the constitution of that year, subject to which Colorado was admitted as a State, had been chosen to succeed him.

Mr. Shattuck says that the various acts of the territorial legislature with reference to schools seem to have well answered the wants of the people at the time of their passage, till the legislature of 1876, the last before the admission of the Territory into the Union as a State, passed the bill, prepared mainly by Mr. Hale, which constitutes the present school law, except as it may be modified by the provisions of the constitution or by any act of the legislature of 1876–'77. It provides for State and county superintendents of public instruction, both now to be elected by the people for terms of two years each; for boards of directors of school districts, also elected by the people; for joint school districts, to be formed from territory belonging to two or more contiguous counties; for union high schools, to be established by the school boards of two or more contiguous school districts, and to be free to all children in the county who are qualified for admission, and whose districts contribute to its support; and for the employment of only duly licensed teachers. One excellent feature of the law is the requirement that to be eligible to the office of county superintendent persons must possess a diploma from a university, college, or normal school, or a State or county certificate indicative of full qualification for the post, as well as a good moral character. The latter requirement is not unusual; it would be well for the schools if the former one were much more common.

ELEMENTARY INSTRUCTION.

INCREASE IN THE VALUE OF SCHOOL PROPERTY AND OF TEACHERS.

A generally prosperous condition of school interests in the State is indicated by the following facts, showing an increase in the value of school property and also in that of school teachers. The superintendent remarks:

"The value of school property has been materially increased by the erection of, and additions to, school-houses. The southern portion of the State has contributed largely to this end, Pueblo by the erection of a $20,000 building, Del Norte by an $8,000 building, and other districts by smaller ones. Very many of the rural districts throughout the State have built school-houses commensurate with their wants, and many of the old houses have been furnished with charts, maps, globes, dictionaries, &c., to an extent far exceeding that of any former year.

"As being more important than the foregoing, it is gratifying to be able to state that the standard of qualification in teachers has been raised. In several instances inferior and mediocre teachers have given place to their betters, and this without materially increasing expenses."—(Report of Superintendent Hale, 1876, p. 5.)

KINDERGARTEN.

A Kindergarten is kept in Denver by Emma C. Barrett, with an attendance of 8 pupils between 3 and 7 years of age. It was established in January, 1877. The city superintendent of schools, Mr. Gove, it is stated, is greatly in favor of the introduction of these schools into the public school system.—(Return to Bureau of Education.)

CITY SCHOOL SYSTEMS.

DENVER.

School officers.—These are a board of education of 6 members elected for terms of two years, 3 retiring each year, and a city superintendent of schools.

Statistics.—The number of pupils of school age is 2,995; number enrolled in school, 1,988; average daily attendance, 1,209; average number belonging, 1,290. Expenditure per capita of pupils enrolled, $16.70; of average daily attendance, $27.75; total expenditures for school purposes, $62,518.95; receipts, $66,432.79. In comparing the statistics of the present year with those of the one preceding, it appears that the increase in the number of pupils, 219 in enrolment and 80 in average attendance, is chiefly confined to the higher grades, from which fact much encouragement is drawn, as showing that the schools are growing more effective in holding older pupils.

Remarks.—The schools are divided into 9 grades, reaching from primary to high. The grade lines are fixed and positive, but the time required for the work is in no way limited; thus is avoided that great objection to graded schools, that their system is a rigid, cast-iron one, assigning to pupils of various degrees of ability the same amount of work in the same time.

The curriculum of the high school is claimed to be equivalent to that of the best eastern schools of the same grade. There are two courses of study, a general or English course, and a classical. The average number of pupils belonging in 1875–'76 was about 76.

A beginning has been made toward furnishing professional instruction for the teachers of the city by the establishment in the high school of a normal training class composed of those pupils belonging to the two higher classes of that school who are looking forward to teaching.

The study of the German language is provided for in the public schools, all pupils who have advanced in English to the third reader being permitted but not compelled to pursue the study.

Music, drawing, and penmanship receive special attention.—(Report for 1875–'76 of board of education, and of Aaron Gove, superintendent.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The school law of 1876 makes provision for union high schools, to be established whenever the school boards of two or more contiguous school districts shall deem it advisable. The concerns of such schools are to be under the direction of a committee of two persons elected at a joint meeting of the several boards interested, with the county superintendent as an ex officio additional member. For the first year or part of a year until the next regular apportionment of the county school fund, such high schools are to receive from each district uniting in them a share of the expenses proportioned to the number of pupils attendant from the district. Afterward each is to

be rated as a separate district, and to draw from the county fund its quota for attendance, the districts making up any deficit from their several funds, in proportion to the number of pupils from each attending in the school.

Whether any such schools have been yet established, the report of the superintendent for 1875–'76 could hardly show. We must wait till the issue of that for 1876–'77 for information on this head.

Meanwhile, however, we have information from the Boulder County News of June 16, 1876, that a high school class in the public school of Boulder, which has existed for three years past with varying numbers, graduated, June 9, 3 female and 2 male students. This high school is intended to prepare for a collegiate course or for business pursuits.

From district No. 1, Denver, we have also report of a high school with "a course equal to that of the best eastern schools of the same grade," an enrolment of 104 pupils, and an average attendance of 74, under 3 teachers. It has a chemical laboratory and several pieces of physical apparatus, among these an electrical machine, a good galvanic battery, and an air pump. The beginning of a geological collection has been made. Monthly written examinations are required and public examinations are held at the close of each term. A class will graduate in 1877.—(Report of principal in report for district No. 1, Denver, for 1875–'76.)

OTHER SECONDARY SCHOOLS.

Jarvis Hall, Golden, a Protestant Episcopal school for boys, reports, for 1876, a corps of 3 instructors and 16 pupils, 4 of them in preparation for a classical collegiate course and 2 for a scientific course, with the advantage of alibrary of 2,000 volumes, philosophical apparatus, and some means for physical exercise. Wolfe Hall, Denver, under the same church influences, returns 8 instructors and 62 pupils, 28 of these being in English studies only, 4 adding classical languages and 30 modern languages to the English course. Drawing and music are taught, the latter both vocal and instrumental, and means are possessed for illustrating the instruction given in chemistry and natural philosophy. There is also a library of 300 volumes.—(Return to Bureau of Education, 1876.)

From St. Mary's Convent School, Denver, and from 2 other Roman Catholic schools for girls, St. Joseph's, Trinidad, and Loretto, Pueblo, there are no statistics for the year.

SUPERIOR INSTRUCTION.

UNIVERSITY OF COLORADO, BOULDER.

The act to establish this institution as a university for the future State was introduced in the territorial legislature by a member from Boulder County and passed in 1862. Fifteen trustees were named to take charge of the interests of the school provided for and take the necessary steps toward its establishment. But the act remained a dead letter on the statute book till the session of 1870, when 5 new trustees, living in the vicinity of the proposed site at Boulder, were added to the first 15. A meeting was then held, an organization effected, and a committee authorized to select a site on which to erect a building. A lot of 40 acres in the neighborhood of Boulder was secured in 1871, and an additional one of 80 acres was given by Mr. Andrew Arnett. Efforts were then made to secure from the legislature of 1872 an appropriation for a building, but nothing was effected till 1874, when $15,000 were voted by the legislature on condition of a like amount being raised among the people. This having been accomplished by May, 1875, the $30,000 thus secured were placed to the credit of the university, and in April, 1876, the building provided for was completed on the plans of a good architect, with water and gas pipes, provision for drainage and sewerage, and fenced and planted grounds. A president has been since elected and the basis of a collegiate organization laid.

Under the constitution of 1876 the university becomes an institution of the State, under the control of a board of 6 regents elected by the people, and will have for its endowment the two townships of land given by the United States to each new State for such an institution.

OTHER COLLEGES.

From *Colorado College*, (Congregational,) at Colorado Springs, no statistics for 1876 have been received. A letter from a professor states that in the absence of the president he is unable to furnish these, the college then being in a transition, from which it was hoped that it would emerge with more perfect appliances and organization.

Respecting *Evans University*, Evans, (Presbyterian,) there is a similar lack of information. At the time of the last report, in 1875, it had 20 male and 15 female students in its preparatory department, but none in collegiate classes.—(See Report of Commissioner of Education for 1875, pp. 474 and 727.)

SCIENTIFIC AND PROFESSIONAL.

SCIENTIFIC.

Of the *State Agricultural College*, Fort Collins, Governor Routt, in his message for 1876, says: "This college was established by an act of the legislative assembly, February 11, 1870. The report of the secretary of the board of trustees shows that its affairs have been successfully managed. The property of the college, consisting of 240 acres of land, lying in a beautiful plateau within 1½ miles of Fort Collins, has been improved by the erection of a substantial brick building, the construction of irrigating canals, and the planting of trees. Its present value is about $5,000; and it is free from debt, with an unexpended balance of $457."

The *School of Mines*, Golden, as decided by the last legislature, is to be a free school of science for the youth of the new State. It is at present in a flourishing condition, but the smallness of the fund that has been heretofore appropriated prevents the adequate remuneration of the additional teachers imperatively required. The course of study includes chemistry, (theoretical and practical,) blowpipe analysis and assaying, mineralogy, drawing, civil and mining engineering, metallurgy, and geology. Ample provision is made for field work and for visiting mines and works for the treatment of ores. Telegraphy is also taught, but by a volunteer instructor, who is not controlled by the board; he uses his own instruments and receives for compensation whatever fees his pupils may be willing to give. A meteorological register is strictly kept under the rules and directions of the Chief Signal Officer of the United States Army, and is sent monthly to the Signal Office at Washington.

Six students were engaged in the studies of the school during the first term of 1876, while 20 attended the lectures, for which rooms had been prepared, new and complete apparatus and chemicals ordered, and text books purchased.—(Report of president to governor and of secretary to trustees, October 20, 1876.)

PROFESSIONAL.

Matthews' Hall, Golden, organized in 1870 for the training of students for the ministry of the Protestant Episcopal Church, has been closed for the present from deficiency of means for its support.

No institutions for medical or legal training appear to have been yet established in the new State.

Statistics of schools for scientific and professional instruction, 1876.

Schools for scientific and professional instruction.	Corps of instruction.	Endowed professorships.	Number of students.	Number of years in course.	Property, income, &c.				Number of volumes in library.

SPECIAL INSTRUCTION.

DEAF-MUTE INSTITUTE.

In January, 1876, the institution took formal possession of the new building erected on grounds donated by the Colorado Springs Company. This building has been constructed with a view to comfort and economy, and answers for the present the purposes for which it was designed, although it is intended to erect as soon as possible an

additional building, separate from the main building, for school rooms, printing office, library, and office for the meetings of the trustees.

The health and deportment of the pupils have been excellent. A marked improvement has been made by the girls in their work. Those who entered the school the previous year unable and sometimes unwilling to take a stitch learned to use a needle well in all plain sewing. The boys have continued to work in the printing office in the preparation of the index, their interest in the work remaining as great as formerly and their success in it good, notwithstanding the existence of serious obstacles, such as an injured press, inadequate to the work, and damaged type.

The number of pupils in attendance was 20, of whom 11 were boys and 9 girls. The branches of study pursued are language lessons, penmanship, English grammar, arithmetic, geography, United States history, Scripture lessons, and drawing.—(Report of President Steward and matron of the institute, 1876, pp. 1–14. Included in governor's message, 1876.)

LIST OF SCHOOL OFFICIALS IN COLORADO.

Hon. JOSEPH C. SHATTUCK, *State Superintendent of Public Instruction, Denver.*

STATE BOARD OF EDUCATION.

[Terms expire January, 1879.]

Members.	Post-office.
Hon. Joseph C. Shattuck, State superintendent, president	Denver.
Hon. William M. Clark, secretary of state	Do.
Hon. A. J. Sampson, attorney-general	Do.

COUNTY SUPERINTENDENTS.

[Term, 1875–'77.]

County.	Superintendent.	Post-office.
Arapahoe	W. A. Donaldson	Denver.
Bent	J. L. Merritt	West Las Animas.
Boulder	J. B. Groesbeck	Boulder.

(From report of Hon. Birdsey G. Northrop, secretary of the State board of education, for year ending August 31, 1875.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Sketch prepared by Rev. J. G. Baird, clerk of the Connecticut board of education, for the State report of 1876; sketch preceding the school laws of 1872, and Barnard's History of the Legislation of Connecticut Respecting Common Schools down to 1838; Mr. Baird's paper being mainly followed.

ESTABLISHMENT OF SCHOOLS.

The public school system of Connecticut is an outgrowth from schools established by the first English settlers in the two colonies of New Haven in the western and Connecticut in the eastern portion of the State, each town at first providing independently for the education of its children.

The first general law respecting schools was passed in 1650 for the eastern portion of the State and extended over the whole in 1665. It was substantially a copy of the Massachusetts law of 1647, requiring every town of 50 householders to appoint a schoolmaster to teach all children who should resort to him to write and read, and every town of 100 householders to "set up a grammar school," with a master competent to fit youths for the university. In the revision of the school law in 1671–72 the latter requirement was altered to one for a grammar school in every county town "for the use of the county," there being at that time four counties. The length of the school session was at first left undetermined, but in 1677 it was fixed at a minimum of 9 months, and in 1690 at a minimum of 6. In 1678 there was another modification of the law for schools, reducing from 50 to 30 the number of householders who should maintain a school in any town. In 1690 the general court ordered that the grammar schools in Hartford and New Haven should be of a higher grade and be made free.

The first year of the following century was the beginning of a new era, the "collegiate school," which afterward became Yale College, having at that time its foundations laid, and the laws relating to the schools in general receiving a complete revision. By this revised code, printed in 1702, a tax, instead of an uncertain voluntary payment, was to be levied in each town for the maintenance of its school; and towns with 70 householders were required to keep theirs open for 11 months; those with a smaller number, for 6 months. The grammar schools in each of the four "head county towns" were to be continued, two of them to be free, while for the "collegiate school" an annual appropriation of £120 was provided. Provision was also made for committing stubborn and rebellious children to a house of correction. This law of 1702 speaks of "committees for schools" as already existing in some of the towns—the first mention of such school officers. Where there were none the selectmen of the town acted as a school committee. In 1750 the law expressly provided for the appointment of such committees.

In 1712 it was enacted that all the parishes should be provided with funds for maintaining schools within their own limits, and in 1717 the obligation imposed on towns of 70 families to maintain a school for 11 months was extended to the parishes with that number; those with less than 70 to maintain one for 6 months. The majority of householders in any parish were also authorized to levy taxes for the support of the school. This was the beginning of a change from the town to the parish system. At first the parishes were only subdivisions of the towns, but in 1750 they became practically coördinate with towns, and at last, in 1798, they, as school societies, supplanted the towns in school affairs. Districts were first recognized in 1794 in a law allowing them to levy taxes to build a school-house, locate the same, and appoint a collector; but they were not fully endowed as bodies corporate till 1839. In 1856 the towns were restored to their original place in the school system.

MAINTENANCE OF SCHOOLS.

The funds for the support of public schools in Connecticut have been derived from taxes, tuition fees, or rate bills, and the income of invested funds. Taxation and tuition fees were resorted to from the first. In 1702 the law provided for a tax of 40 shillings on every £1,000 of taxable property. The Connecticut school fund began to yield an income for the support of schools in 1799, and in March, 1800, its dividends amounted to $23,651. From 1810 to 1825, under the excellent management of Hon. James Hillhouse, these dividends averaged $52,061. As this income gradually increased there was manifest a disinclination to levy taxes for maintaining schools, and in 1820 it was provided that "whenever in any year the interest arising from the school fund, and to be divided to the school society, shall exceed $62,000, the amount of such excess shall for said year so far diminish the sum appropriated from the avails of the State tax." This excess was reached the next year, and from that time the income of the fund was apportioned to school societies and districts according to the number over 4 and under 16 in each. From 1820 to 1854 tuition or rate bills were practically the only source of school

revenue aside from the interest of funds. The law, however, usually made provision for paying at public charge the rate bills of those unable to pay their own, so that no child needed to be excluded from school by the poverty of its parents. Rate bills were not finally abolished till 1868. The school tax, discontinued in 1821, was restored in 1854, in which year each town was required to raise annually, by taxation, a sum equal to 1 cent on the dollar on its grand list, (as made up at that time,) for the support of schools. In 1866 and in 1868 this amount was increased, and in 1869 it was made enough, with the income of funds, to maintain school 30 weeks in every district, and in 1870 to maintain school at least 30 weeks in districts enumerating 24 children or more between 4 and 16 years of age, and in all other districts at least 24 weeks—which is the present law, though most towns do more than it requires.

FUNDS.

The funds set apart for school purposes are of several kinds, namely: Town and society funds derived in the earlier times from gifts by charitable individuals, or from excise moneys, but afterward in large part from the "western lands," so called, *i. e.*, the lands now forming the northwest corner of the State. The Connecticut school fund was originally derived from certain lands in Rhode Island, New York, and New Jersey, and all west of New Jersey between north latitude 41° and 42° 2′ to the Pacific Ocean, given in the charter of Connecticut by Charles II, King of England, in 1662. The title to a portion of these lands was confirmed by Congress in 1786. After several years of discussion a bill was passed by the general assembly in 1795, providing that the principal of the moneys that should be received from the sale of the lands west of Pennsylvania should remain a perpetual fund, to be loaned on conditions to be fixed by law, and the interest to be appropriated to the support of schools in the several societies. A committee was at once appointed to dispose of the lands, and the following year they had been sold for the sum of $1,200,000, payable in five years, with interest after two years. The constitution of 1818 transferred the interest of the school fund from "the societies" to "the support and encouragement of common schools throughout the State, for the equal benefit of all the people." In 1849, under the good care of Hon. Seth P. Beers, 1825–1849, the principal of the fund had increased to $2,049,482.32, and the annual income from $72,418.30 to $133,336.50. Since that time the principal of the fund has varied little, and the annual income has been quite uniform. The rate of interest until 1872 was 6 per cent. It is now 7.

Since 1836 the Connecticut share of the United States surplus revenue fund, distributed among the towns and called the "town deposit fund," has come in to aid the State appropriation in connection with the school taxes of the towns. The amount of this distributed to the towns was $763,661, and the whole income from it is required to be appropriated to the support of schools.

SUPERVISION.

Schools had been maintained three-fourths of a century before any law existed providing expressly for their supervision. In 1714, an act was passed "for the encouragement and better improvement of town schools," requiring that the civil authority, together with the selectmen in every town, inspect the state of all schools in the town, inquiring into the qualifications and diligence of the masters and the proficiency of the children. The office of school visitor was created in 1798, and has never been discontinued. In 1856, when the school societies were abolished and their powers and duties transferred to the towns, it was enacted that boards of school visitors should be divided into three classes, one-third of the whole number to be chosen each year for the term of three years, a method of election which is still in force. In 1872, the principle of minority representation was introduced by the provision that no person should vote for more than half or a bare majority of the whole number to be chosen.

In 1838 was passed "An act for the better supervision of common schools," creating a board of commissioners of common schools, consisting of the governor and school fund commissioner ex officio, and eight other persons, one from each county, appointed by the governor, with the advice and consent of the senate. The board was authorized to appoint its own secretary, who was to be in fact, though not in name, the state superintendent of public schools. The secretary chosen by the board was Henry Barnard, esq., of Hartford, who thus became the first State school superintendent of Connecticut. His labors gave to public schools a decided impulse upward, and his name will always be associated with education in the State. This board of commissioners was abolished in 1842. In 1845 the commissioner of the school fund was appointed superintendent of common schools, and held the appointment till 1849. In that year the act establishing the State normal school provided that the principal of that school should be superintendent of common schools; but the attempt to connect the superintendency with another office limited its efficiency and did not prove satisfactory. In 1865 the State board of education was established, consisting of the governor and lieutenant-governor ex officio, and four other members, one from each congressional

district, chosen for a term of four years, one going out of office each year, but reëligible to the same position. This board chooses its own secretary, who devotes his time to the duties appropriate to a State superintendent of public instruction.

SUCCESSION OF SUPERINTENDENTS.

Mr. Baird, from whose Brief History of Public Education in Connecticut the preceding sketch has been mainly compiled, has kindly furnished the Bureau of Education with the following list of the gentlemen who, as secretary of the board of commissioners for common schools, commissioner of the school fund, principals of the normal school, or secretaries of the State board of education, have acted *ex officio* as superintendents of the public schools: As secretary of the board of commissioners, Henry Barnard, June 16, 1838, to May, 1842; interregnum of three years. As commissioner of the school fund, Seth P. Beers, June 13, 1845, to September 6, 1849. As principals of the normal school, Henry Barnard, September 6, 1849, to January 1, 1855; John D. Philbrick, January 1, 1855, to January 5, 1857; David N. Camp, January 6, 1857, to August 12, 1865. As secretaries of the board of education, Daniel C. Gilman, August 12, 1865, to January 1, 1867; Birdsey G. Northrop, January 1, 1867, to the present time.

ELEMENTARY INSTRUCTION.

GENERAL CONDITION OF THE SCHOOLS.

Respecting this, the board of education say in their report, (pp. 6, 7:) "The returns for the last school year (1875) indicate that the public schools were conducted during the year with at least their usual success. The total income for all school purposes was a few thousand dollars less than in the previous year, but the income for current expenses was increased—a satisfactory showing, considering the generally depressed condition of business affairs. A part of this increase was due to the greater dividend from the school fund, which added about $15,000 to the amount from the same source the previous year.

In practising the needed frugality of expenditure, school officials generally applied retrenchment where it would do least harm. The amount paid to teachers was greater than ever before, but the sum expended for erecting and repairing school-houses was smaller than in any one of the eight previous years, and less than half as much as in 1871 or 1872. When prosperity shall have returned to render productive the industry of the people, liberal expenditures for these purposes may be again expected.

ATTENDANCE.

"In the report of last year, the subject of irregular attendance was discussed at considerable length, and some suggestions were offered as to the causes and the remedies for this great evil. The returns now presented show a gratifying increase of regularity. This improvement is to be welcomed, not as the perfect attainment, but as the hopeful beginning of a change for the better. If there can be a continued advance in the same direction from year to year, the time will soon come when the large sums paid for school expenses will yield results more nearly equal to the highest possibilities of the case."—(Report of board of education, 1876, p. 7.)

As respects the hindrance of attendance in the schools from unlawful employment of children under 14, the secretary of the board says, (page 134 of State report:) "As a general rule our manufacturers have shown a just and liberal spirit in this matter. At the present time the trouble is not with the large manufacturers, but with the far greater number who employ one, two, or more children in small establishments, in shops, stores, on the farm, or in the family." To rectify this matter the agent employed by the board to attend to it has had copies of the law for compulsory attendance of children aged from 8 to 14 distributed in a number of the towns, with notices from the school visitors and himself to parents who suffer children within these ages to be absent from school; and the result appears to have been fairly satisfactory.—(See report of agent, pp. 135–139 of State report.)

KINDERGÄRTEN.

A Kindergarten, with an attendance of 75 pupils, is kept by Miss H. W. Ferry, assisted by 4 other teachers, at Bridgeport. The school was established in 1872. Children between 4 and 11 years of age are admitted. The number of hours for school exercises is 4½ each day for 5 days of the week. Another is kept in the same city by Miss J. Baldwin, but no statistics from it are at hand, nor are there any for the Kindergarten department of a school in New Haven, mentioned in report for 1875.—(Report to Bureau of Education, 1876.)

CITY SCHOOL SYSTEMS.

HARTFORD.

Organization.—A board of 9 school visitors chosen for terms of three years each, one third going out each year. The officers of the board are a president, secretary, and acting school visitor, all chosen from their own number.

Statistics.—Population of the city in 1870, according to United States census, 37,810; as now estimated, 45,000. Children of school age, (6–16,) 9,598; number of different scholars registered in public schools during the year, including 381 over the school age, 7, 637; average attendance, 4,737; number in private and parochial schools, 1,337. Teachers in public schools, 151, of whom 27 were males and 124 females; average wages of male teachers, including principals, $142.75 a month; of females, $44.45. Number of schools, 16; of school rooms, 119. Receipts for public schools, $180,723; expenditures, $166,009. These statistics include those of the high school, for which see "Secondary Instruction."

Notes.—The schools are divided into primary, intermediate, grammar, and high school departments, the last having a partial endowment of its own, and being thus, to some extent, independent of the city system, though linked with it and used by it. There is also a special German department of 6 grades. Two evening schools were opened in the autumn of 1875, as in former years, and continued 16 weeks, with a total enrolment of 465 males and 117 females and an average evening attendance of 183.49. The branches taught in these evening schools were reading, spelling, writing, arithmetic, and United States history. The interest manifested is said to have exceeded that of any previous winter.—(Report of board of school visitors for 1875–'76, through E. R. Hunt, acting school visitor.)

NEW HAVEN.

Organization.—A board of education of 9 members, elected for terms of three years each, one-third going out each year. Officers of the board, a president chosen from its own number, and a superintendent and secretary from without.

Statistics.—Population of the city in 1870, according to United States census, 49,621; present population, 57,136. Children between 4 and 16, enumerated January, 1876, 12,586; registered in public schools, 10,738; average daily attendance, 7,041. Teachers employed in public day schools, including one each for music and drawing, 199; in evening schools, 12; total, 211. Average annual salary of these, $617. Receipts for public schools, $215,048; expenditures, $168,884. Cost of school property, $501,400. Number of children attending other than public schools, 1,535.

Notes.—The number registered in public schools during the year added to the number attending private and parochial schools seems to leave only 313 not in any school during the year. The census takers, however, found in January, 1876, no less than 3,291 not then in any school. Truancy and needless absence from school are put down among the chief hindrances to effective education.

One new school-house, with dress closets attached to each school room and with ample provision for heating and ventilation, has been built during the year, and one additional school room has been opened.

The training school for preparation of new teachers, referred to in a preceding report, is still continued and forms an important source of supply for both temporary and permanent vacancies in the primary and intermediate departments. For high schools, see "Secondary Instruction."

Drawing is said to have made good progress and to be in a very satisfactory condition, the faculty for free hand work being especially cultivated.

The truant school on Whiting street has been kept up, but the rapid increase of truancy, not only in the other schools but especially in this, shows that it does not accomplish its intended work, the cases of truancy in this school itself being twofold greater than in 1874–'75 and seven times greater than four years ago.

Two evening schools for young men were maintained as usual, but with a smaller attendance than in former years. Two were also opened for young women, but the attendance was so small and irregular that they were not long continued.—(Report of Superintendent Ariel Parish for 1875–'76.)

MERIDEN.

Officers.—A board of school visitors of 9 members, of whom 3 go out of office each year.

Statistics.—Number of children of school age, (5–15 years,) 3,405; number enrolled in public schools, 3,084; average attendance, 1,535; number of teachers, 44; average salary of male teachers per month, $124.28; of female teachers, $61.50. Amount expended for public schools, including cost of new houses, etc., $48,581.98.

Remarks.—The public schools of the town were never before in so high a state of discipline and general efficiency as at present, and perhaps in no other year have so rapid strides in literary advancement and scholastic attainments been noticeable. The attendance in the schools, according to the report of the truant officer, has been better than ever before, and, while there is still room for improvement, truancy has steadily decreased.

There are about one thousand children in the Roman Catholic and private schools of the city.—(Report of board of education and Superintendent Henry E. Sawyer, 1875–'76.)

MIDDLETOWN.

Officers of the school system.—A board of education of 9 members, elected for terms of three years, one-third of the number retiring each year, and a city superintendent of schools.

Statistics.—Number of children of school age, (1875,) 1,326; number of pupils registered during the year, 1,279; decrease from 1875, 47; average attendance, 643; decrease, 25. Expenditures for public schools, $17,873; total for salaries of teachers, $14,064.

Remarks.—With the general depression in business the schools have suffered a diminution in the number enumerated the previous year, and, as a consequence, in the number attending school. There has been a slight gain in regularity of attendance, but the recorded absences still amount to 48 half days, or nearly 5 weeks on an average to each scholar, while the cases of tardiness average nearly 4 to each pupil. Truancy appears to be increasing a little. This and the often resultant evil of vagrancy cannot be adequately dealt with by the ordinary appliances of school discipline, and for their removal legal measures are recommended.

The senior department of the schools seems to comprise all the usual high school studies, and offers four courses, viz: English, Latin-English, commercial, and classical; in all of these 25 pupils graduated during the year.—(Report of board of education, 1876.)

NEW LONDON.

Officers.—A board of education of 9 members, of whom 3 go out of office each year. The secretary serves as acting school visitor.

Statistics.—Number of children between 4 and 16 years of age, 2,052; number of different pupils attending public day schools, 1,784; average daily attendance, 1,218; total attendance in day and evening schools, 2,070. Number attending private schools, 45; number of school age not in any day school, 176.

Remarks.—The enumeration of persons of school age and the number in attendance have decreased, but the proportion of pupils in the schools to the number enumerated is comparatively large and the average attendance has been scarcely ever equalled. The public schools possess in a very high degree the confidence of the community, and very few children attend private schools. The introduction of music into the course has met with very flattering success. There are two high schools, one of which is for boys, the other for girls, with a total enrolment in both of 112 and an average attendance of 96. Two evening schools were also in operation, one for each sex, the enrolment in them being 184; average attendance, 120.—(Report of board of education, 1875–'76.)

TRAINING OF TEACHERS.

THE NORMAL SCHOOL.

The question of "a school for teachers," to train them in the art of teaching, was discussed among the more advanced friends of education in the State sixty years ago, but the act establishing the normal school was not passed till 1849. The school was opened May 13, 1850, and was under the care of a board of trustees, one from each county, until 1865, since which time it has been in charge of the board of education. In 1867 the funds for its support were withheld, and the school was closed for two years. Since it was reopened in 1869 it has been continually improving, and thus has been of increasing benefit to the State. Two classes are graduated each year, the number in the two being usually about 50, while the yearly attendance has generally been a little over 200.

The board of education, in its report for 1875–'76, says of this school that it continues to serve effectively the object for which it was established, namely, to receive teachers already familiar with the ordinary studies and train them in the best method of teaching and conducting common schools, and that there is reason for rejoicing in the increasing number of pupils who continue a considerable time in the school and in the falling off of such as enter to remain for shorter periods. The whole number connected with the school during the year ended April 1, 1876, was 180. The number of graduates in June, 1875, was 28; in January, 1876, it was 15.—(Report 1875, pp. 7, 8, 133, 134.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

In his sketch of the school history of the State, published in the report for 1875, Mr. Baird says (pages 127 128) that the system of grammar schools for the several counties, established by the early laws, continued unchanged till 1798, these schools in their lower classes serving as town schools for their respective towns and in their higher ones as grammar or high schools for the counties in which they lay. When school societies, about the above-named period, took the place of towns in school affairs, any

such society had authority, by a two-thirds vote, "to institute a school of higher order." It was under this law that the first school society of Hartford instituted, in 1847, the high school in that town; but such action was exceptional, and society high schools were very few. In 1839 school districts were empowered to establish schools of different grades. This power, taken from them a few years later, was restored in 1856, and is now widely employed, giving rise to many graded schools, whose highest departments are really, though not nominally, high schools. Towns also, since 1856, have had authority to maintain high schools, though few of them have done so. A part of the larger towns provide in some way what may be called high school instruction, but in many towns of considerable population and wealth no such provision is made, and all education beyond that in the common branches is at private cost and must usually be obtained at a distance from home.

The two principal high school departments of public schools are still those at Hartford and New Haven. The former has a capacity for seating in its 7 rooms 390 scholars and was overcrowded in 1876 with 451, its registration for the year reaching 580. It has a classical and English division, the studies of the former preparing for a classical course in college, those of the latter for a scientific course. It has a good library of reference, containing 2,100 volumes, about 100 having been added in the past year. It has also 24 geographical wall maps, 14 astronomical wall maps, 15 physiological charts, and a philosophical and chemical apparatus worth about $5,500. German and French, as well as Latin and Greek, are taught.—(Report for 1875-'76.)

The New Haven High School, also with 7 rooms, has a seating capacity of 379, has registered during the year past 437, and has had an average daily attendance of 272. Its course embraces classical and scientific studies preparing for any college or scientific school, while a commercial department enables such as wish to engage in business to prepare themselves for it by study of book-keeping, penmanship, commercial law, correspondence, and arithmetic in one year from completion of the course in the lower schools. The examination papers published in the report indicate thoroughness at every point, and the studies include Latin, Greek, French, German, and music, besides the higher English branches. There were 41 graduates in 1876, of whom 8 were males and 33 females.—(Report for 1875-'76.)

ACADEMIES AND KINDRED SCHOOLS.

In 14 schools for boys, 11 for girls, and 16 for both sexes, outside of the public school system or only partially connected with it, there have been reported to this Bureau 1,764 pupils, under 159 teachers. Of these pupils 1,436 are in English courses, 669 in classical, 260 in modern languages, 107 preparing for a classical course in college, and 25 for a scientific course. Drawing (free hand or mechanical or both) is taught in 29 of these schools, vocal music in 21, instrumental in 27. Chemical laboratories are reported by 6, philosophical apparatus by 14, and libraries of 25 to 2,073 volumes by 16, the aggregate number of volumes being 12,653.—(Returns for 1876.)

PREPARATORY SCHOOLS.

Besides the above mentioned academies and high schools, 3 institutions especially aiming to prepare students for college report 16 instructors, 98 pupils preparing for a classica lcourse in college and 12 for a scientific course, with 274 other students, but only 8 that have entered college from them within the year. All 3 report chemical laboratories, but only 2 philosophical apparatus. No one of the 3 has a gymnasium for physical exercise, but intellectual improvement is provided for by libraries of 400, 1,200, and 3,000 volumes. All these schools have funds from endowments in addition to the revenue from tuition fees, the endowment fund of one, the Norwich Free Academy, reaching $125,000, and the income from this $10,000.—(Returns to Bureau of Education for 1876.)

SUPERIOR INSTRUCTION.

TRINITY COLLEGE, HARTFORD, (PROTESTANT EPISCOPAL.)

This college has no law, medical, divinity, or other professional school connected with it, but simply aims to give a liberal education. By a liberal education it explains that it means "A non-professional education, conducted without reference to any future particular profession, calling, or pursuit; but meant so to train the mental faculties as to put them into the most efficient condition, and to qualify a student to enter with success upon the study of any of the professions." Its course of study is similar to that pursued at Harvard, Yale, and other leading colleges, but somewhat more conformed to that of Oxford and Cambridge. Its requirements for admission are of the highest.

In addition to the studies of the regular course, the professors in the several departments give an opportunity for more advanced work to such students as prove themselves competent therefor, and courses of especial study have been marked out, for which arrangements are made. There is also provision for special students who wish to attend to certain lines of study without completion of the full collegiate course.

These, on finishing their studies, receive a certificate stating the studies pursued and the length of time that has been devoted to them; or, on completing the course prescribed for that purpose, may receive the degree of bachelor of science. This course includes all the subjects of the regular course, except the Greek, with special attention to differential and integral calculus, practical astronomy, natural history, mineralogy, and geology.

Besides the regular studies of the college, a series of lectures, embracing history, the sciences, ancient and modern literature, and the laws of health, runs through every year.—(Advertisement of the college and catalogues for 1875–'76 and 1876–'77.)

WESLEYAN UNIVERSITY, MIDDLETOWN, (METHODIST EPISCOPAL.)

The university presents to its undergraduate students the option of three regular courses of study, each extending through four years, the classical, scientific, and Latin-scientific courses. The classical course comprises that range of studies which is usually included in the college curriculum. The other two are designed to secure to those whose circumstances or tastes do not permit an extended study of the ancient languages an opportunity to acquire a sound mental training and liberal culture, as well as a good preparation for advanced courses of scientific or technical study. In each of these courses all studies of the freshman year are required. In the scientific course all studies of the sophomore year are also required; but in the last two years of this course and the last three years of the classical and Latin-scientific course, only a part of the studies are required, the student being allowed to make up his quota of work by selecting from a wide range of elective studies. Provision has also been made for special courses and for post graduate studies.

The library numbers about 27,000 volumes, and there is a fund of $27,000, the interest of which is devoted to its increase; the reading room contains a choice selection of more than 100 American and foreign newspapers, magazines, and reviews. The chemical and astronomical apparatus are quite complete, the latter including a valuable refracting telescope; the museum of natural history is extensive, comprising departments of mineralogy, geology, botany, and zoölogy.

Young women are admitted to equal privileges with young men.—(Catalogue for 1876–'77.)

YALE COLLEGE, NEW HAVEN.

The course of study comprises 4 departments, viz, theology, law, medicine, and philosophy and the arts. The last includes the undergraduate academical department, the under graduate section of the Sheffield Scientific School, the school of the fine arts, and courses for post graduate instruction, each department having a distinct organization.

The most important step taken by the college in 1876 was the adoption of an optional system for the last two years of the under graduate academical course. The required studies of those years are continued as heretofore, except that they are confined to the morning hours. The four afternoons of the week (Wednesday and Saturday remaining half holidays) are given up during those two years to recitations in optional studies. The optionals for the junior year are French, Greek, Latin, and mathematics; for the senior year, German, Greek, Latin, Sanskrit, history, mathematics, astronomy, and mineralogy.

At the request of a number of graduates living in the West, it has been determined to hold at Chicago an examination for admission to the college at the same time and with the same papers, used in the summer examination in New Haven. This, however, is regarded as only an experiment for the present year.

The new chapel has been completed and was dedicated in June, 1876. In consequence of the urgent demand for lecture and recitation rooms, the old chapel is to be converted into these; otherwise it would have been desirable to remove it, in view of its want of beauty and its being out of harmony with the present plan of disposing the buildings around a central space.

The instruction in the school of the fine arts, occupying three years, has for its end the cultivation and promotion of the arts of design, viz, painting, sculpture, and architecture, both in their artistic and æsthetic aims, through practice and criticism. The aim is to provide thorough technical instruction in those branches and to furnish an acquaintance with all learning relating to the history, theory, and practice of art. No provision has yet been made for instruction in the departments of sculpture and architecture, but it is hoped that before long this will be provided. Departments of painting and drawing are in operation, the latter embracing drawing from the flat, from the antique, and from the living model, and studies in anatomy and in perspective including descriptive geometry. In addition to the technical discipline of the studios, a course of 41 lectures on projection, drawing and perspective, 12 lectures on the principles and practice of art, and 6 on form and proportion were given during the year. The school is open to both sexes, but no one is admitted under 15 years of age.

The course of graduate instruction is intended for the benefit of graduates of this and other colleges, and for other persons of liberal education who are not less than 18 years

of age. They are received for longer or shorter periods, with or without reference to the attainment of a degree. Instruction is given partly by lectures, partly by recitations and by oral and written discussions, partly by directing courses of reading, and partly by work in the laboratories and with instruments. The degree of doctor of philosophy is conferred upon those who, having already taken a bachelor's degree, implying a course of undergraduate study equivalent to that pursued in the academical department, spend not less than two years in assiduous and successful post graduate study. It is not given, upon examination, to those whose studies are pursued elsewhere. The instruction includes political science, history, philosophy, English literature, philology, mathematical and physical science, and the fine arts.

The degree of A. M. is conferred on bachelors of arts of this college of two years' standing or upwards, who give evidence of having made satisfactory progress in liberal studies.

The sum of $11,000 and upwards, derived partly from permanent charitable funds, is annually applied by the corporation to the relief of students who need pecuniary aid, especially of those preparing for the Christian ministry. About 100 students thus have their tuition wholly or in part remitted.—(College catalogue, 1876-'77, and special statement of the college, June 1, 1876.)

COLLEGES FOR WOMEN.

Three institutions claiming to be for superior instruction of young women report, for 1876, a total of 27 instructors and 254 students, 2 of the instructors and 40 of the students being in a preparatory department at Grove Hall, New Haven, and 50 in a collegiate department there. The remaining 164, in the Hartford Female Seminary and the Seminary of Notre Dame, Waterbury, are unclassified.

None of these institutions is chartered and authorized to confer degrees. Their courses are from 4 to 8 years, the last probably including elementary instruction. In all the 3 are taught drawing, painting, vocal and instrumental music, and modern languages, as French, German, and Italian. Two report chemical laboratories; 1, some apparatus for philosophical instruction; 1, a collection of objects in natural history; but none has art galleries, astronomical observatories, gymnasiums, or apparatus for physical exercise.—(Returns to Bureau of Education, 1876.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

AGRICULTURAL AND SCIENTIFIC.

The Sheffield Scientific School of Yale College is devoted to instruction and researches in the mathematical, physical, and natural sciences, with reference to the promotion and diffusion of science, and also to the preparation of young men for such pursuits as require especial proficiency in these departments of learning. It is, in fact, the college of agriculture and the mechanic arts of the State.

The instruction is intended and arranged for two classes of persons: college graduates, and others who are qualified for advanced or special scientific study; and undergraduates who desire a training chiefly mathematical and scientific, in part linguistic and literary, for higher scientific studies, or for other occupations to which such train-

ing is suited. The advanced course for graduates leads to the degree of bachelor of philosophy, doctor of philosophy, civil engineer, or dynamic engineer. Special students are also received who wish to study without reference to obtaining a degree. In the undergraduate department courses of study are arranged to suit the requirements of various classes of students. The first year's work is the same for all; during the last two years the instruction is chiefly arranged in special courses. Those most distinctly marked out are in chemistry, civil engineering, dynamic engineering, agriculture, natural history, studies preparatory to medical studies, to mining and metallurgy, and to other higher studies.—(Yale College catalogue, 1876–'77.)

THEOLOGICAL.

The *Theological department of Yale College* (Congregational) offers a regular course of instruction lasting three years, and including, in addition to the regular theological curriculum, several courses of lectures and optional instruction in the German and Sanskrit languages. The conditions of admission are membership in some evangelical church or other satisfactory evidence of Christian character, and a liberal education at some college, or such other literary acquisitions as may be considered an equivalent preparation for theological studies.

Students whose circumstances require it receive $100 a year from the income of scholarships and of other funds belonging to the department. Besides this, aid to the amount of $100 annually is afforded by the American Education Society to its beneficiaries. A graduate scholarship or fellowship, affording $700 for two years, has been established in the seminary as a memorial of the late Mrs. Aurelia D. Hooker, of New Haven. It is offered, for the first time, to the class entering in 1876, and will be assigned at graduation to that member who shall be judged most worthy of it by the faculty. He will be expected to pursue a course of theological study, either as a resident at the seminary or, in case he may prefer to do so, in Europe and Palestine.—(Yale College catalogue, 1876–'77, and published statement of the alumni, 1876.)

The *Berkeley Divinity School*, Middletown, (Protestant Episcopal,) has a course of three years. Its plan of instruction embraces both lectures and recitations. Candidates for admission must be able to read the Hebrew text of the Old Testament. Tuition is free; so, also, are the rooms in the school buildings, where provision is made for about 30 students. Aid is, in certain cases, extended to persons who need it. Twenty-four of its 27 students have received degrees in letters or science.—(Catalogue of Berkeley Divinity School, 1876–'77, and return for 1876.)

The *Theological Institute of Connecticut*, at Hartford, (Congregational,) has a three years' course of study, 22 students, 4 endowed professorships, and a library of 7,000 volumes.—(Return for 1876.)

LEGAL.

The *Law department of Yale College* presents an undergraduate and a graduate course, each of two years. In the undergraduate course the exercises consist of lectures, recitations from standard text books, with oral explanations and moot courts. The graduate course is open to graduates from any law school having the degree of LL. B. The degree of master of law will be conferred upon examination at the close of the first year and that of doctor of civil law at the end of the second. The curriculum of the first year is particularly designed to supplement that of the undergraduate course, by affording further instruction in branches there pursued. That of the second year is designed to meet the wants of those who aim at acquiring a thorough acquaintance with jurisprudence and its affiliated studies as a means of completing their education, without confining themselves to such topics as are of the first necessity to the practising lawyer.—(College catalogue, 1876–'77.)

MEDICAL.

In the *Medical department of Yale College* there is a three years' course of instruction, divided into two terms each year. In the spring term instruction is given by means of recitations and lectures; in the winter term, by public lectures, daily examinations illustrated by hospital instruction, medical and surgical clinics, with abundant facilities for anatomical dissections.* Every candidate for a degree is required to possess, in addition to a good English education, a competent knowledge of the Latin language and of the principles of natural philosophy. He must have attended two full courses of public lectures, and must have pursued the study of physic and surgery for three

* The museum connected with the medical department is designed to illustrate anatomy, pathology, surgery, obstetrics, chemistry, and materia medica.

It contains the following anatomical preparations: Dry, 150 specimens; 2 papier mâché manikins; several articulated skeletons; 50 anatomical models of parts of the human body; 50 wax preparations; 100 maps and drawings, besides many printed charts and plates; 165 craniological casts; 250 pathological preparations in alcohol; 80 pathological paintings, and 5 large volumes of plates; 30 obstetric and embryological models; 16 obstetric paintings, and several volumes of obstetric plates; about 50 jars containing wet preparations, illustrating obstetrics and embryology; 17 casts, illustrating surgical operations; 44 models of skin diseases, colored.

Besides these, there are 95 plates (mounted in frames) illustrating botanical materia medica, 180

years; or, if he be graduate of a college, for two years, including the time spent in attendance upon medical lectures. He must be 21 years of age, and must present a thesis written by himself on some medical subject.—(College catalogue, 1876–'77.)

SPECIAL INSTRUCTION.

AMERICAN ASYLUM FOR THE DEAF AND DUMB, HARTFORD.

Of the 264 pupils present in the institution during the year 1876, instruction was given in articulation and lip reading to 38. The improvement of 18 who were semi-mutes was good, but a number of the deaf-mutes so taught made such slow progress that their further instruction on this plan seemed unadvisable. More attention was given in 1876 to lip reading than formerly. Some persons, it is found, learn this more readily than speech. Mr. Bell's method of visible speech is still used and is considered exceedingly valuable.

Since the foundation of this institution in 1817, it has afforded instruction to 2,107 pupils who remained in it an average of about 7 years, and 50 of its graduates have become teachers in similar institutions. The common English and some academic branches are taught. The trades taught are cabinet making, shoemaking and tailoring. The number of pupils in attendance supported by Maine was 60; by New Hampshire, 28; by Vermont, 25; by Massachusetts, 83; by Rhode Island, 8; by Connecticut, 56; and by friends, 4; making a total attendance within the year of 264. The average during the year was 218.

In April, 1876, the asylum received a legacy of $5,000, under the will of Mr. James S. Seymour, of Auburn, New York.—(Annual report of the asylum, 1875–'76, and return to the United States Bureau of Education.)

WHIPPLE'S HOME SCHOOL FOR DEAF-MUTES.

A report from Z. C. Whipple, principal of this school, states that he has devised a new method of teaching language to congenital deaf mutes, by which he has been

bottles vegetable materia medica; 250 bottles medicines, (chemically prepared;) 400 bottles containing chemical preparations for use in the chemical course, besides complete sets of chemicals and apparatus for laboratory work.

The museum also contains a small cabinet prepared by the Natural History Society, (now extinct,) in which are 170 birds mounted and preserved in glass cases; about 100 fishes and reptiles, and a case containing 300 insects.

There is no printed catalogue, nor is there any regular fund for enlarging this museum; but additions are made from time to time, as the limited fund for incidental expenses of this department will allow. About $1,000 have been spent in improvements within three years. Entire number of specimens, 3,500.—(Special report to the Bureau of Education, 1876.)

quite successful in training to articulate and read the lips pupils who had arrived at maturity and had received an education in the sign language. Even those who had passed more than thirty years in silence have in a few months been taught to articulate all the common words with sufficient distinctness to make themselves easily understood. It is claimed by Mr. Whipple that the new method comes nearer to the natural method by which hearing-children learn to talk than any other system of instruction with which he is acquainted. A diagram representing the organs of speech and used as the basis of the "natural alphabet" is explained to the pupil, and in a short time the connection between the letters of this "alphabet" and the organs to which they respectively correspond becomes so obvious to the child, that when any one of the elementary sounds is distinctly spoken, with the face of the speaker in a good light, the pupil will point at once to the corresponding letter of the "natural alphabet," just as he would point to the picture of a horse if the real animal were shown him. From the beginning the pupil is taught to read words written in the "natural alphabet," but at first no attempt is made to teach him to repeat the sounds. He is simply taught to understand. Sentences are written, and when he has learned them from the book or blackboard the words are repeated by the teacher. The pupil is required to watch the teacher's mouth, and he perceives with delight the same words formed by the lips that were written out for him to learn. In this way he learns to read the lips with scarcely a conscious effort, and he is placed in a position to receive ideas from any one who possesses the ability to speak.—(Report 1875–'76, pp. 140–143.)

CONNECTICUT SCHOOL FOR IMBECILES.

The number of pupils in attendance and under the treatment of this school during the year 1876–'77 was 74; of these 35 were beneficiaries of the State, from which were received $4,113 for their support. The institution has no endowment funds, all its revenue being derived from tuition.

Physical training and culture are the foundation of all the education here. Children are instructed, so far as their capacities will allow, in reading, writing, drawing, arithmetic, geography, and the other branches taught in public schools; but physical training and education take precedence. In this respect the children are found to be greatly lacking when they first come to the school. There is lack of coördination of muscles, lack of coöperation of will and muscle, lack of proper supervision by the senses over the ordinary matters of physical well-being, and lack of power to attend properly to bodily wants. It is found that improving the body and cultivating the special senses is the only way by which the imperfect and dormant mind can be reached.—(Annual report of the school, 1876–'77.)

LIST OF SCHOOL OFFICIALS IN CONNECTICUT.

STATE BOARD OF EDUCATION.

Name.	Post-office.
Ex officio.	
His excellency Richard D. Hubbard	New Haven.
His honor Francis B. Loomis	Hartford.
By appointment of the general assembly.	
George M. Woodruff, term expires 1877	Litchfield.
Thomas A. Thacher, term expires 1878	New Haven.
Elisha Carpenter, term expires 1879	Hartford.
——— ———, term expires 1880	
Hon. Birdsey Grant Northrop, secretary of the board	New Haven.

CITY SUPERINTENDENTS OF SCHOOLS.

Superintendent.	Post-office.

DELAWARE.

SUMMARY OF STATISTICS.

	1874–'75.	1875–'76.	Increase.	Decrease.
SCHOOL POPULATION AND ATTENDANCE.				
Number of children of school age, (5–21)	Not given.	Not given.		
Number enrolled in public schools	19,881	21,587	1,706	
Average number of pupils in each school	53.87	58	4.13	
TEACHERS AND THEIR PAY.				
Number of teachers in public schools	456	430		26
Number who received certificates		462		
Average monthly salary, out of Wilmington.	$29 52	$30 75	$1 23	
SCHOOLS.				
Number of public schools	369	370	1	
Average number of months taught		7.2		
Number of school-houses: log, 3; frame, 216; brick or stone, 49.		268		
Number of schools visited		276		
Number having blackboards		250		
Number having none		26		
Number having maps and charts		26		
Number having none		250		
Number having globes		13		
Number having none		263		
SCHOOL INCOME AND EXPENDITURE.				
Receipts from State appropriation	*$33,001	$29,285		3,716
Receipts from district tax	159,734	186,940	$27,206	
Total receipts	192,735	216,225	23,490	
Expenditure for pay of teachers	Not given.	114,028		
Expenditure for contingent purposes, rent, fuel, &c.	Not given.	102,198		

* This *appears* to be from State appropriation; that for 1875–'76 is specifically stated to be from this source.—(Report, p. 8.)

(From returns for 1874–'75 and first printed annual report for 1875–'76 of Hon. J. H. Groves, State superintendent of free schools.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

State constitution of 1792; revised edition of school laws, 1868; new school laws of March 24 and 25, 1875; Barnard's Journal of Education, vol. xxiv, p. 239; message of Governor John P. Cochran, January, 1877.

LEGISLATION RESPECTING SCHOOLS.

As early as 1792 the people of this State, by an amended constitution, required the legislature to provide by law for establishing schools and promoting arts and sciences. Four years afterward (February 9, 1796) an act was passed to create a fund sufficient to establish schools, the means relied on for it being the fees derived from marriage and tavern licenses until 1806, and thereafter such other money and estate as might be

granted for this purpose. Other sources of income were subsequently added, such as the interest of the United States deposit fund in 1837, and in 1867 the fourth of all the money arising from licenses for auctioneering; for foreign life and fire insurance agencies; for vending of goods, wares, and merchandise by samples; for keeping travelling jacks or stallions; for keeping eating houses, taking photographs, acting as brokers or real estate agents, exhibiting circuses, practising jugglery, and selling liquors. From these various sources has come a school fund amounting in the aggregate to $449,000 and yielding $29,284 for annual distribution. The State treasurer was constituted from the outset the trustee of this fund, and his powers and duties as such were defined.

In 1797, 1816, 1817, 1821, there was legislative action "to increase the fund or pay the tuition of poor children;" in 1829, "to provide for free schools;" in 1830, 1832, 1833, 1835, action supplementary to this; in 1837, to appropriate the income of the United States surplus revenue fund for the benefit of school districts; and in 1852, 1857, 1858, 1861, 1867, amendatory action with reference to the school law; that of 1861 being especially important, as requiring the school committee in each district to raise by tax a certain sum for the school of the district, irrespective of the action of the voters, who might, however, raise a further sum.

The defects in this somewhat frequent legislation were (1) that till 1861 there seems to have been no compulsion on the school districts into which the State had been divided, to raise by tax, for the support of schools, a sum additional to the distributable State fund of sufficient amount to maintain good schools for any reasonable length of time; (2) that, whether such a sum was raised or not, it appears to have been left optional with the districts to have or not to have a free school, the issue being that in some districts no such schools were established, the money received from the State fund and from the people going to aid in the maintenance of pay schools by either a bargain for a general lessening of tuition fees or an arrangement for the instruction of poor children amidst the pay scholars in the schools; (3) that, where schools were established, there was, except in Wilmington, no sufficient legal provision for examination as to the character and qualifications of the teachers that might be engaged for them, or for supervision of the work done by them in the schools, with a view to the securing of the best results; for, although county superintendents of free schools were provided for, no power to examine teachers or visit and inspect the schools was given them; (4) that, though county conventions of school officers and teachers were glanced at in the law and a small provision made for printing their proceedings, there was no requirement that such meetings should be held, no encouragement to teachers to attend them, and apparently no arrangement for securing that any instruction should be given to such as might attend; (5) that for one considerable element in the population of the State — the children of the colored people — there was, even after the liberation of the slaves, no provisions whatever in the school law. They were not included in the census on the basis of which the school fund was distributed, had no portion of that fund for the establishment of schools among themselves, and, if they sought instruction in any public school in their neighborhood, could be told by the teacher that it was not open to them. It was only "free to all white children of the district over 5 years old."

In view of these facts, perceived and felt by the best friends of public schools, an effort was made in March, 1873, to pass an act amendatory of existing school laws, and providing for an enforced district taxation for free schools; for county superintendents to examine teachers and visit and inspect the schools; for county boards and a State board to meet at certain settled times and places and attend to all matters connected with public school education; for an annual report from the latter to the governor, of the condition of the school system; and for a distribution to the colored people of their fair portion of the school fund, on their organization of a school in any district, with a proper number of pupils to attend it, and an amount of funds additional to the State fund sufficient to keep it in operation when commenced. The bill, as presented, passed the lower house of the legislature, but failed to pass the senate.

The friends of a better system did not accept this rebuff as final, but renewed, in due time, their efforts in the same direction, and on the 24th of March, 1875, succeeded in passing a bill which allowed the colored people of the State to have a tax of 30 cents on the one hundred dollars assessed upon themselves and appropriated, through the Delaware Association for the Education of the Colored People, to the support of schools for colored children. The next day, March 25, a general school law was passed, providing for a fixed tax to be raised annually in each district, for the support of schools therein; for the examination of the teachers to be employed in them; for meetings of these teachers each year in county institutes of at least three days each, with provision for instruction and exchange of views; for supervision of the schools by a State superintendent, who should visit each school and advise with the teachers once every year; and for a State board of education, to hear appeals from the action of school officers, to determine text books, and to prepare and issue blanks

for school returns; report to be made to the governor, on the first Tuesday of December in each year, of the condition of public schools.

This is the law under which the school system of the State is now being worked, and from the excellence of most of its provisions a great improvement in both the number and quality of the public schools may be reasonably hoped for.

ELEMENTARY INSTRUCTION.

GENERAL VIEW.

With much to remind one of the poor old days when schools were left to work themselves, with no supervision but what might come from the people, the new State superintendent finds, on the whole, a marked improvement growing out of the amended school law. The old idea of just "keeping school" is being supplanted by the better one of "teaching school." A genuine interest in public education is gradually overcoming the occasionally lingering prejudice against the new order of things brought in by the new law. The position of public school teacher is being elevated, and the hope of further and higher improvement is expressed and evidently entertained.—(First annual State report, for 1875–'76, p. 23.)

THE COUNTIES SEPARATELY VIEWED.

Beginning with New Castle County, where, save in such favored localities as Wilmington, school interests are said to be held too generally as less important than all others, the superintendent, in his visits, found many teachers using the old mechanical methods of instruction. The reading was, in such cases, without any regard to inflection, articulation, emphasis, or proper drilling in the vocal sounds; the writing, without even so much as a specific supervision of the exercise; the arithmetic, merely a ciphering out of sums. In grammar, there was a bare recitation of the text; in geography, eight or ten questions, and "take your seats." There was, in brief, too much of *hearing lessons*, and not enough of *teaching*. On the other hand, earnest men and women, full of enthusiasm, were discovered, to whom a blackboard was indispensable, whose schools showed that trained hands had put them in order, and by whom *things* were taught as well as *words;* the school-houses being, for the most part, comfortable, with apparatus for the teacher's use and grounds ample and shaded.

In Kent, next farther south, appeared, too, a lack of general interest in the free schools—a lack indicated by school-houses generally small, uncomfortable, and poorly furnished; the scholars being crowded into a narrow space, with little ventilation and no comforts, in some cases compelled to sit on benches without backs. In one school, 83 pupils were gathered in a school-room 15 by 20 feet, while the average was only 20 by 25 for 50 pupils. We find some noble work done and some excellent teachers, but poor schools and poor teaching the too common rule.

Respecting Sussex County, the farthest south, the report is still less cheerful, the teachers here being generally men who do not make teaching a profession, but only give it the time not occupied in other work, teaching for three months and farming nine. The period thus spent in teaching is so brief that, even with the best effort, little effective work can be accomplished. Consequently, though scholars were found well behaved and eager for instruction, the condition of the schools was not encouraging. In many of them neither grammar nor geography was taught. Reading, writing, and ciphering formed the staple of the daily work, with little attention to first principles and little instruction in fundamental rules. The school-houses, too, were found to be small and miserably furnished, long desks being stretched around the walls, and benches having neither backs nor stays. In many cases children were compelled to await their turns for writing, there not being desk room to accommodate all at once. The superintendent found neither maps, charts, nor globes in any of the school-houses of the county, while 19 schools had no blackboards. The only relief in this rather gloomy picture is the statement that "Sussex has teachers well qualified and doing as efficient work as will be found in the counties of this State or other States," the current condition, however, both of schools and school-houses, showing plainly that the new law was not passed too early and that State inspection did not come too soon.—(First annual State report, pp. 11–16.)

SCHOOLS FOR THE COLORED PEOPLE.

The jurisdiction of the State superintendent does not extend over these schools, they being still under the care of the Delaware Association for Education of the Colored People, but in answer to an inquiry whether the new law taxing Africans for support of their own schools has secured improvement in them, he says that he does not see any material improvement yet beyond the fact that larger means for carrying on their schools have been obtained. This must, however, issue before long in better school-houses, teaching of a higher grade, a longer school term, and thus more effective schools.

CITY SCHOOL SYSTEMS.

DOVER.

Statistics.—Population of the city, 2,400. Number of pupils enrolled in public schools, 402; in other schools, 56. Average daily attendance, 217; number of days taught, 204. Number of teachers employed, 6, 1 being a man. Salary of principal, $800. Total expended for teachers' salaries, $2,300. Estimated worth of school property, $10,000. Average annual cost for education of each pupil, $6.84.

Remarks.—The departments are classified as primary and grammar. Promotions from grade to grade are made at intervals on examination of pupils and recommendation by the principal. Corporal punishment in the higher departments has been abolished, with the most satisfactory result.—(Report of State superintendent, 1875–'76, p. 27.)

WILMINGTON.

School officers.—A board of education of 30 members, holding office three years, one third being changed each year, and a city superintendent of schools.

Statistics.—Number of pupils enrolled in the day schools, 5,947; decrease, 86. Average number belonging to the day schools, 4,102; increase, 289. Average daily attendance, 3,720; increase, 215. Number of teachers in the day schools, 97. Number of schools, 20. Number of pupils in the three night schools, 278; average attendance, 130.

Remarks.—The schools are graded as primary, grammar, and high and grammar combined. There are 14 of the first named, 4 of the second, and 2 of the last, 1 for boys and 1 for girls. These 2 have a total enrolment of 1,127 pupils, an average belonging of 828, and an average attendance of 770. The number of pupils actually engaged in studying the higher branches is 99. Of these, 61 are boys and 38 girls. The course of instruction lasts three years, and includes Latin, with the higher English branches.—(Report, for 1875–'76, of D. W. Harlan, esq., superintendent of public schools at Wilmington.)

TRAINING OF TEACHERS.

INSTITUTES.

The only means for the professional training of teachers, referred to by the State superintendent as existent, is the county teachers' institute, required by the new law to be held for three days every year in each county. Although no legal provision was made for meeting the expenses of such institutes, the superintendent has held them, according to the law, and through the aid of experienced instructors has been able to secure most satisfactory results. The attendance in the three counties during the school year 1875–'76 was 308. The exercises consisted of discussion of questions relating to the theory and practice of teaching, class exercises, instruction in the various branches to be taught, and public lectures in the evening. The effect has been a considerable awakening of enthusiasm among teachers, an improvement in their methods of instruction, and a promise of lasting good to all concerned.—(State report, pp. 16–19.)

An institute for the special benefit of the teachers in the schools of Wilmington has been wont to be held by Superintendent Harlan there, and although no notice of it for the year has yet appeared, it is supposed to be still continued.

SPECIFIC NORMAL TRAINING.

As has been stated in previous reports, a normal department is required by law to be maintained in Delaware College, in which free instruction must be furnished by the faculty to 10 students from each of the three counties of the State, whenever such students, on presenting themselves for admission, bind themselves to teach in the free schools at least one year. Whether this arrangement has proved effective or ineffective does not appear; but that the latter is the judgment of the State superintendent may be inferred from the fact that he speaks in his report as if there were "no means for the preparation of teachers who can use the progressive and modern methods of to-day," and from the further fact that he urges the establishment of a school in which such teachers may be prepared.—(State report, p. 20.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The only schools of this class of which any information has reached the Bureau are the boys' and girls' high schools of Wilmington, where, in the strictly high school classes, were 61 boys and 39 girls, in courses of study embracing three years, and including the higher English studies, with Latin to the fifth books of Cæsar and the Æneid. During the year two new studies were introduced into the boys' high school: chemistry

in the middle year and "the science of government in connection with American institutions" in the senior year. Since the last report, chemicals, chemical apparatus, and a laboratory and lecture room for general chemistry and physics, have been provided for the use of the same school, so that now facilities are possessed for performing nearly all the experiments which the text books require or the classes can comprehend. The girls' high school furnishes most of the new teachers required for the lower public schools.—(Report of city schools for 1875–'76.)

PRIVATE SECONDARY SCHOOLS.

In 2 schools for boys, 2 for girls, and 6 for both sexes, 10 in all, outside of the public school system, there have been reported to this Bureau 490 pupils, under 42 teachers. Of these, 113 are in classical studies, 91 in modern languages, 44 preparing for a classical course in college and 24 for a scientific course. Drawing is taught in 7 of these schools, vocal music in 5, and instrumental music in 6. A chemical laboratory is reported by only 1, philosophical apparatus by 2, and libraries of 180 to 2,000 volumes by 4, the aggregate number of volumes being 3,880.—(Returns for 1876.)

SUPERIOR INSTRUCTION.

DELAWARE COLLEGE, NEWARK.

In this institution, now under State direction, there is the customary classical course of 4 years, leading to the degree of A. B., with a literary course for ladies, extending through 3 years, omitting the higher mathematics and substituting one of the modern languages for Greek.—(Circular of college.)

COLLEGE FOR WOMEN.

One such institution, the Wesleyan Female College, Wilmington, reports for 1876 11 instructors, with 38 preparatory and 92 collegiate students. Music, both vocal and instrumental, is taught, as are also drawing, painting, French, and German. There is a chemical laboratory, sufficient for needed experiments, a philosophical cabinet, and a natural history museum; no astronomical observatory, art gallery, or gymnasium. The college is chartered and authorized to confer degrees.—(Return to Bureau of Education.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC DEPARTMENT OF DELAWARE COLLEGE.

In the scientific course of this college no Latin and Greek are required for entrance. But Latin, with either French or German, enters into the subsequent studies of the course, which reaches through 3 years and leads to the degree of Ph. B.

The agricultural course, also of 3 years, is largely devoted to practical agriculture and horticulture, with the mathematical and scientific studies related to these, French and German being optional.—(Circular of college.)

No schools for theological, medical, or legal instruction exist in the State, the near neighborhood of such in Philadelphia affording every needed facility for study in these lines.

Statistics of a college and school for professional instruction, 1876.

SPECIAL INSTRUCTION.

NO STATE PROVISION.

Partly from the comparative smallness of her population and partly from the convenient nearness of schools for special instruction in Philadelphia and its neighborhood, Delaware has no schools of her own for instruction of the blind, the deaf and dumb, the orphaned, the feeble-minded, or those who need reformatory training. Such are usually placed in the schools above referred to, thus securing greater advantages, at a slighter cost, than could be afforded them in their own State. For 1876 there were 7 in the Pennsylvania Institution for the Deaf and Dumb, 2 in the Deaf-Mute College of the District of Columbia, 3 in the Pennsylvania Institution for the Blind, and 2 in the Pennsylvania Training School for Feeble-minded Children.—(Governor's message, 1877, p. 15.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

This association, formed in 1875, held no meeting in 1876, probably because the teachers generally preferred to devote to the Centennial Exhibition in Philadelphia all the leisure hours that could be secured.

(The returns for 1874–'75 are those furnished for that year by Hon. W. Watkins Hicks, State superintendent of public instruction, to the Bureau of Education. Those for 1875–'76 are from the tables appended to his report to the governor, December 31, 1876.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Constitutions of 1839, 1861, 1865, and 1868; Thompson's Digest of the Statute Law of Florida; school law of 1869; reports of State superintendents from 1869 to 1876.

EARLY LEGISLATION RESPECTING SCHOOLS.

Made a Territory of the Union in 1819 and admitted as a State in 1845, Florida had the benefit of the congressional legislation which gave the sixteenth section lands in every township for the use of common schools, and four townships of land for seminaries of learning. For nearly sixteen years these noble grants appear to have received but slight attention. In December, 1835, however, the register of the land office was charged with the duty of selecting and securing the various lands granted by Congress

for schools, seminaries, and other purposes, and was required to keep the several grants distinct and separate in his accounts, so that the rights and interests of one should not be mixed with the rights and interests of others. By act of March 2, 1839, three school trustees were to be elected in each township, to take into their care the sixteenth section lands of the township, lease the same, and apply the rents or profits to the use of common schools in the township, which schools, if not in existence, they were to establish and support. March 15, 1843, sheriffs of counties were made commissioners for the care and lease of school lands and the appropriation of funds accruing from them to the education of poor children of the county; while for the care and lease of the seminary lands the governor was directed to appoint five trustees, who should protect the lands from waste or injury, lease them from year to year at auction or privately, as might best advance the interests of the seminary fund, eject tenants for non-compliance with contracts, and do such other acts as a corporate body may do in reference to the trust committed to it. These trustees were also to take charge of the fund obtained from Congress under the act for the distribution of the proceeds of public lands among the States, as well as of the seminary fund in the treasury and the sums due for rent and occupancy of seminary lands, and loan the same on unincumbered real estate, bond and mortgage, at 8 per cent. interest, payable annually.

In 1845 an act was passed authorizing the governor to employ an agent to locate such seminary lands as had not been previously located and to select other lands in place of any sixteenth section ones covered by private claims. He was also authorized to obtain from the United States Treasury the money to which the State was entitled under the congressional act of 1836 to regulate the deposits of public money, such money to be forever inviolably pledged to purposes of education in the State. By the same act, the net proceeds of all escheated estates were directed to be invested and applied to public education. By a further act, in 1849, the proceeds of the sales of sixteenth section lands, with 5 per cent. of the net proceeds of other lands granted by Congress for educational purposes, as well as of all escheated property and salvage, were to constitute a fund for the support of common schools.

In 1846 the law on this point was again changed, and the register of the land office made the custodian of the seminary lands and empowered to look also after the sixteenth section lands in townships uninhabited or whose inhabitants had failed to appoint trustees to take charge of the same. He was also empowered to recover arrears of rent or damage for all past use and occupation of such lands, succeeding in these respects to all the rights and powers previously vested in the sheriffs of the several counties.

Abundant legal provision seems thus to have been made for securing an ample public school fund out of the 908,503 acres granted the State for common schools. And yet the superintendent of instruction, in 1869, wrote that the interest of the fund derived from these sources never amounted to more than 50 cents a year for each of the children entitled to its benefits. Indeed, the census of 1850 shows that, of the 69 public schools then reported, with 73 teachers and 1,878 scholars, the receipts from public funds were only $250, out of $22,386 total receipts. Subsequently there was an improvement in this respect, $6,059 having been appropriated from State funds to the public schools in 1856 and $6,542.60 in 1858.

The legal organization of the school system, as it existed previous to the civil war, was substantially effected by the act of March 2, 1839, before referred to, an act subsequently amended in 1840, 1844, and 1845. This provided not only for township trustees to look after the raising of a revenue from the sixteenth section school lands, with application of this revenue to the establishment and support of common schools, but also for at least a partial supervision of the acts of these trustees by the judges of probate, who were to serve as superintendents of common schools in their respective counties so far as to give attention to the preservation of the sixteenth sections in their counties, the rightful appropriation of the money derived from them, and all matters connected with the advancement of common schools. The trustees were to report to the judges, on or before the first Monday in December of each year, the number of teachers employed in the township schools, the number of children, (male and female,) the different branches taught, and such other information as they might deem proper. The judges were to consolidate these returns, and forward the consolidated report to the secretary of state, to be communicated to the general assembly. Beyond the revision of these reports by the secretary, no State supervision seems to have been provided for; nor does there appear to have been any requisition that the schools established out of the proceeds of the township school lands should be free to all attendants, or any provision for a tax on property or persons for their support. They were, probably, in consequence, of brief annual duration, and attended mainly, if not wholly, by the children of the poor, unless where these were put into other schools and their tuition fees paid there out of the public school fund.

In 1851, January 24, an act was passed for the establishment in East and West Florida of the two seminaries, for which lands amounting to 92,160 acres had been granted by the General Government, their first purpose being, according to the law, "the instruction of persons, both male and female, in the art of teaching all the various

branches that pertain to a good common school education;" the next, "to give instruction in the mechanic arts, in husbandry and agricultural chemistry, in the fundamental laws, and in what regards the rights and duties of citizens." Each county was to be entitled to send pupils to one or other of these seminaries, in the ratio in which it should send representatives to the State legislature. The seminaries were established, the one in the western portion of the State, at Tallahassee, the other in the east, at Gainesville. With temporary interruptions, they have continued to the present time, contributing much to the education of the people and the preparation of teachers for the schools. In 1869 they were made free schools, with the exception of the classical department of the East Florida Seminary.

The census returns for 1860 showed the number of public schools in that year to be 97, with 98 teachers, 2,032 pupils, $75 income from endowment, $776 from taxation, $2,340 from public funds, and $16,908 from other sources, probably from tuition fees; total income, $20,099.

LATER LEGISLATION.

Florida, having expended during the civil war the principal of her common school and seminary funds for "arms, ammunition, and other purposes," came out of the great struggle without other means for the reorganization of her schools than what could be derived from the lands remaining still unsold and from taxation of her people for purposes of education. In 1868 a new constitution was adopted, which designated various sources from which a school fund should be derived; made the interest of this exclusively applicable to the support and maintenance of common schools, and the purchase of libraries and apparatus for these; devoted a special State tax of not less than one mill on the dollar annually to the same purpose, and required each county to raise annually, by tax, for the support of common schools, not less than half the amount apportioned to it in the year from the income of the school fund. This constitution required the legislature to provide for a uniform system of common schools and a university, tuition in which should be free; placed a State superintendent of public instruction among the cabinet officers; gave him the supervision of all matters pertaining to public schools, in connection with a State board of education; and provided for a county superintendent of common schools in each county. In accordance with this constitution, an excellent school law was passed in January, 1869, which, with slight subsequent amendments, has remained ever since the school law of the State. It declared that there should be established and maintained a uniform system of public instruction, free to all the youth residing in the State, between the ages of 6 and 21, its officers to be a superintendent of public instruction, a State board of education, a board of public instruction for each county, with a county superintendent of schools as its secretary, and local school trustees, treasurers, and agents. The powers and duties of these officers were clearly defined, as were also those of the teachers in the schools.

PROGRESS UNDER THIS SYSTEM.

At the close of the year in which this school law was passed, there were reported 250 public schools in operation, with a total of 7,575 pupils in attendance; a common school fund of $223,595, yielding $14,145, and a seminary fund of $73,933, yielding about $6,000. Organizations had been completed in 26 counties, and schools had been opened in an equal number, while private schools were generally merged in free schools, some of these doubling and some quadrupling the previous school attendance. Fifteen counties had levied no school tax, but in 9 of these schools were sustained by private contributions.

For the year ending September 30, 1871, the report was, "Instead of 15 counties that failed the year previous to levy a school tax, we have to report but 4. Instead of 13 counties wanting organized boards of instruction, we have only 1. Instead of 11 counties wanting superintendents, all but 2 are now supplied. Instead of 250 schools, with 7,500 pupils, we report 331 schools, with 14,000. And although the law limited the rate of taxation to one mill, several counties assessed a tax of one and a half, two, and even two and a half mills, and the people paid cheerfully."

The succeeding year showed 444 schools, with 16,258 pupils, although there had been failure of crops, an imperfect collection of school revenue, inadequate legislative appropriations, and great political excitement.

During the year ending September 30, 1873, there was an addition of 56 schools, making the whole number 500, with an average attendance of 36 pupils, or 18,000 for the entire State.

The only great hindrance to continued progress appeared to be that the payments of interest on the school fund were made in State warrants, which for two years had brought only about 60 cents on the dollar, thus greatly diminishing the aid rendered by the State to the school districts. The assistance given by the trustees of the Peabody fund, amounting to over $8,000 annually, had to some extent counterbalanced this disadvantage; but, as this was limited to the large schools in the populous towns, the country districts got from it no direct benefit. Hence poorly paid teach-

ers and necessarily short school terms. One decided step was taken this year toward a fostering of higher education in the institution of efforts to establish in Alachua County a State agricultural college, for the organization of which a law had been passed February 17, 1872. The prospect of success in this looked for a time quite promising, $50,000 in cash and 20,000 acres of land, with free transportation on the Florida Railroad for all the building materials required, having been offered in the county for the location of the college there. Financial and other difficulties came in to hinder the attempt, and the institution remains still unorganized, except in name.*

For 1873–'74 the enrolment in the public schools was 21,196, the number of teachers 590, implying an increase in the number of the schools, though the amount of that increase was not given, except in estimate, which set it at 46. For 1874–'75 the school enrolment reached 32,371; the number of teachers 796; number of schools not stated save in the case of high schools, of which 12 were reported, not including the 2 State seminaries, which continue at Gainesville and Tallahassee.

ADMINISTRATION.

The first State school superintendent was Hon. C. Thurston Chase, on whom devolved the institution of the new school system of the State constitution of 1868, under which he was elected. Exerting himself with great vigor to lay well the foundations of the system, he made the study of the different school systems of the older States a preliminary to his own sketch of the school law which he desired, and by consultation with eminent educators and school officers on the working of the several laws ascertained what were held to be the strong and weak points of the different State systems. The result was a school law which met with very general favor, and in which very few things have needed to be changed. This law, approved January 30, 1869, embodied the best features of the older laws with happy adaptations of improvements which experience had shown to be desirable. It remains still one of the best school laws of this country, though somewhat in advance of the region for which it was designed. Mr. Chase died before the expiration of his term of office, and after a temporary vacancy in the superintendency, Hon. Charles Beecher was chosen to fill the unexpired term, which he did with much ability, beginning his work in the spring of 1871 and serving till the latter part of 1872. He was succeeded by Hon. Jonathan C. Gibbs, a native of Philadelphia, partly of African descent, a graduate of Dartmouth College and of the theological seminary at Princeton, New Jersey, who had been sent South in 1865 as an agent of the Old School Presbyterian General Assembly, to organize schools and churches in its interest among the freedmen. In this capacity Mr. Gibbs had so commended himself as to be appointed secretary of state with Governor Reed in Florida, under the constitution of 1868. In this office he continued till his entrance, at the close of 1872, on the office of State superintendent of instruction. It was then a post of considerable difficulty, as the first enthusiasm for a new school system had subsided and political complications and embarrassment about school funds had come in to hinder progress. But by his energy and enthusiasm in the cause he so far succeeded that, in the month of August, 1873, he had the pride and pleasure of saying before the National Educational Association, "The census of 1860 — ante bellum — shows that Florida had in her schools 4,486 pupils, at an expense of $75,412. To-day Florida has 18,000 pupils in school, at an expense of $101,820; fully four times as many pupils, at an increase of only 33 per cent. expense."† Mr. Gibbs died August 14, 1874, at Tallahassee, before the expiration of his term, like Mr. Chase, and for a time, by appointment of the governor, Hon. S. B. McLin, secretary of state, acted as State superintendent, and made the very useful report of 1873–'74, respecting the defects of the school system, and the means of improving it without any changes in the law. He was succeeded by Hon. William Watkins Hicks, who again, at the election in the fall of 1876, was displaced by Hon. W. P. Haisley.

ELEMENTARY INSTRUCTION.

SCHOOL SYSTEM OF THE STATE.

This, as sketched in the report of the Bureau for 1875, includes among its officers (1) a State board of education, forming a sort of general council on educational affairs, with specified powers and duties; (2) a State superintendent of public instruction, who has the oversight, charge, and management of all matters pertaining to public schools, school buildings, grounds, furniture, libraries, text books, and apparatus; (3) county superintendents, who are secretaries of county boards of education and have

* Since the above was written it is understood that a partial organization has been effected.

† A reference to the census of 1860 shows that the figures here given by Mr. Gibbs refer not to the whole public school system, but merely to the attendance on academies in the State at that time, and the cost of the same. Florida also reported in her public schools 2,032 pupils at an expense of $20,099, making a total attendance of 6,518 pupils at an aggregate cost of $95,511. "Attendance," as used by Mr. Gibbs and in this note, means the number of individuals reporting themselves to the census takers as having attended school; for the same period the schools reported a total attendance of 8,503 pupils.

also the duty of visitation and inspection of the schools once in each term; (4) school trustees for districts, who have also to visit and inspect the schools of their special districts, their visitations, however, being once a month instead of once a term, and their inspections reaching to everything connected with the school property.

THE SYSTEM AS ADMINISTERED.

On this point Governor Drew, in his message to the legislature, January 1, 1876, uses the following language:

"Our public school system, though a good one in the main, is not without its faults and imperfections, among which may be named a tendency in its practical working to draw an undue portion of the funds to the towns and more densely populated localities, while the sparsely settled and remote portions of the large counties are deprived of the benefits. A plan is now under consideration which, it is believed, will lessen, if not remove, that defect. Other slight changes, with a view of lessening the expense of operating and increasing the fund for distribution, may be made when it can be done to advantage. But where there can be no change without crippling or destroying the efficiency of the system, no change should be attempted. There has been more injustice done by failure to comply with and faithfully carry out the provisions of the law than from any defect of the system itself. Section 13, paragraph 6, of the common school law requires the superintendent of public instruction to apportion, annually, the interest on the common school fund and the fund raised by the one mill tax authorized by sections 4 and 5 of article 8 of the constitution among the several counties of the State, in proportion to the number of children residing therein between the ages of 4 and 21 years. General provisions on schools, section 38, provide that it shall be the duty of the tax assessor of each county, at the time of assessing the taxes of his county, to take the census of all the children of the county between the ages of 4 and 21. It appears from the accompanying report of the superintendent of public instruction that the census has not been taken since 1873. The work was begun in 1876, but not completed. The census records of 23 counties only are found in the office of the department. There must have been a large increase of scholastic population since 1873; consequently an apportionment made on 74,228, the number at that time, is incorrect."

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The law requires the establishment of "schools of higher grades of instruction where the advancement and number of pupils require them," but from the excitement respecting political affairs, which shook the State in the latter part of 1876, no information respecting such schools has been procurable beyond what was given in a special report of high schools furnished by Superintendent Hicks for the Bureau report of 1875. That showed 12 such schools existent, 9 for white and 3 for colored children, the curriculum in them embracing Greek, Latin, chemistry, natural philosophy, astronomy, physiology, botany, and all the higher branches of arithmetic. The East and West Florida Seminaries, at Gainesville and Tallahassee, referred to in the preceding history, were not included among the schools thus reported.

PRIVATE SECONDARY SCHOOLS.

In 2 schools for girls and 4 for both sexes, outside of the public school system, there have been reported to this Bureau 496 pupils, under 34 teachers. Of these, 57 are in classical studies, 30 in modern languages, and 37 preparing for a classical course in college.

Drawing is taught in 3 of these schools, vocal music in 4, and instrumental music in 4. Chemical laboratories are reported by none, philosophical apparatus by none, libraries of 75 to 1,200 volumes by 3, the aggregate number of volumes being 1,575.—(Returns for 1876.)

SUPERIOR AND SCIENTIFIC INSTRUCTION.

STATE AGRICULTURAL COLLEGE.

Respecting this institution, the governor, in his message to the legislature at the opening session of 1877, reported as follows: "Section 12 of an act approved February 18, 1870, and amended 1872, to establish an agricultural college, provides that the trustees shall, within the time prescribed by Congress, determine upon the location of the college at some healthy and conveniently accessible point, which location shall be as near the centre of the State as possible.

"At a meeting of the board of trustees, held at Tallahassee, March 7, 1875, a committee was appointed for the purpose of examining proposed locations for the college. On the first day of May following, the report of the committee favoring Messrs. Gleason and Annos's proposed location, the only one submitted, was presented to the board. Subsequently the board accepted said location, and established the State Agricultural College at Eau Gallie.

"An executive committee was created and authorized by the board to proceed with the erection of suitable buildings carrying out the design."

The location referred to is at a point on the bank of Indian River, 6 miles from the head of the St. John's River, at Lake Washington, and about 3 miles from the Atlantic Ocean. It seems a remote position, out of the way of present communication with the world, and thus less favorable than the formerly chosen location in Alachua County. But considerable amounts of land were offered for it at Eau Gallie, and it was claimed that it would there have great advantages for the cultivation and development of semi-tropical plants and fruits. The long delay in the arrangements for the college, too, endangered the congressional land grant for it, and required prompt action for preserving this. Accordingly, a building for collegiate use has been erected at Eau Gallie; the lands there offered have been thus secured, and with the organization of the college, which probably will be at once proceeded with, the funds from the lands given by Congress will become available for endowment. It is hoped that there will thus at last be the beginning of an institution which has been long waited for and is much needed by the State.—(Report of superintendent of public instruction, December 31, 1876, and of the treasurer of the college, of the same date.)

LIST OF SCHOOL OFFICIALS IN FLORIDA.

Hon. W. P. HAISLEY, *State superintendent of public instruction and ex officio president of the State board of education, Tallahassee.*

STATE BOARD OF EDUCATION.

[Term, January 1, 1877, to January 1, 1881.]

Members.	Post-office.
Prof. W. P. Haisley, A. M., superintendent of public instruction, president	Tallahassee.
Hon. W. D. Bloxham, secretary of state	Tallahassee.
Hon. George P. Raney, attorney-general	Tallahassee.
H. N. Felkel, secretary	Tallahassee.

COUNTY SUPERINTENDENTS.

[Appointed for two years, 1877 and 1878.]

Counties.	Superintendent.	Post-office.
Alachua	Oscar A. Myers	Gainesville.
Baker	Stephen B. Williams	Olustee.
Bradford	J. M. McKinney	Starke.

(Reports of Hon. Gustavus J. Orr, State school commissioner, 1874–'75 and 1875–'76.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

The following statement respecting education in the State is taken almost wholly from the Handbook of Georgia, prepared under the direction of Thomas P. Janes, A. M., M. D., commissioner of agriculture of the State, and is probably from the hand of the commissioner of education, Hon. Gustavus J. Orr.

BEFORE THE WAR.

Georgia has from her earliest history been alive to the importance of educating the children of the State, although until of late years there was no free education for all. The people were, most of them, able and willing to educate their children, and the legislature made provision for paying for the tuition of all who were not thus able, from a fund derived from dividends on stock owned by the State in a number of the banks of Georgia. The war swept away the banks, and thus the source of this income was lost. Previous to this time, however, the people had begun to feel the need of free schools, and had taken the first steps toward the establishment of them. In 1858 the legislature set apart $100,000 annually of the net earnings of the Western and Atlantic Railroad (State property) for school purposes, together with the interest on any sums received by payment of the public debt of the State.

SINCE THE WAR.

The constitution adopted in 1868 required the establishment of a thorough system of general education, to be forever free to all the children of the State; but it was not until 1870 that a school law in accordance with this requirement was enacted. The law of 1870 established a State board of education, to be composed of the governor, the attorney general, the secretary of state, comptroller general, and State school commissioner. It required the trustees of schools, in their respective districts, to make

all necessary arrangements for the instruction of all the youth of the district, the whites and blacks to be in separate schools. They were to provide the same facilities for each; but the children of the white and colored races, it was provided, "shall not be taught together."

In 1871, the State school commissioner proceeded to establish public schools in the State. In October, 1871, the taxes arising from polls, shows, &c., by law belonging to the school fund, amounted to $327,083.09. The legislature, in July, appropriated this money to other purposes, and caused bonds of the State to be deposited with the State treasurer in lieu thereof, which were to be sold and the proceeds of their sale to be used to meet appropriations for school purposes. But these bonds proved to be worthless, and the fund was thus lost to the cause of education. Under these circumstances, the present State school commissioner, Hon. Gustavus J. Orr, commenced his administration. In that year no schools could be established for lack of means, but in 1873 funds sufficient had accumulated to establish schools for three months, and the same has been done every year since.

In 1875, the attendance was 169,916, of whom 114,648 were white and 55,268 black. The school fund for 1875 was $291,319; that for 1876 is about the same. The school population for 1875 was 394,037, of whom 218,733 were white and 175,304 black.

The present sources of the school fund under existing law are (1) poll taxes, (2) taxes on shows, exhibitions, &c., and (3) one-half the net earnings of the Western and Atlantic Railroad, which latter at present amounts to $150,000 per annum.

The present law requires that when any school fund is received, from whatever source derived, "it shall be kept separate and distinct from other funds," and be "used for educational purposes, and none other, and shall not be invested in the bonds of the State or in any other stock."

PRESENT ORGANIZATION OF THE SCHOOLS.

There are public schools established under local laws in seven counties, embracing the cities of Savannah, Atlanta, Augusta, Macon, Columbus, Griffin, and Brunswick, which are kept up continuously. In these there are 68 ungraded schools, 70 graded, and 9 high schools. There were in 1875 admitted to these schools—whites: boys 4,330, girls 4,428; blacks: boys 3,324, girls 3,633. The average monthly cost of tuition per scholar was $1.23.

In the same year there were 820 private elementary schools, having a total attendance of 25,451, of whom 21,275 were white and 4,176 black.

There were also 104 private high schools, having 171 tutors and 5,379 pupils, all white, of whom 3,087 were males and 2,292 females. Average monthly cost of tuition per scholar, $3.13.

ELEMENTARY INSTRUCTION.

PROGRESS OF THE PUBLIC SCHOOL SYSTEM.

The State school commissioner considers the results achieved during the last five years by the public schools as being very remarkable, in view of the limited monetary resources placed at command of the department. There has been a steady increase from year to year in the number of persons attending school, which, from 83,677 in 1873, has now reached 179,405. The entire school debt of 1871 has been extinguished in almost every county in the State, and no new debt has been created. It was determined at the outset of the present administration to use the annual school fund from year to year with the most scrupulous fidelity, and county school officers were instructed to incur no debts. As a consequence of this policy, not a single well grounded complaint of the non-payment of a claim during the last five years has ever reached the office from any portion of the State, although the amounts disbursed from time to time have aggregated the sum of $1,270,319. As a natural effect of this fidelity, universal confidence has taken the place of wide spread distrust, and many good citizens who, at first, were enemies to the public schools have become friends and patrons.—(Report of Commissioner Orr, 1876, pp. 6–8.)

LOCAL TAXATION.

The school system, says the State school commissioner, can never be made what it should be until there shall be obtained in some way an increase of funds. The most eligible method of doing this, he thinks, is by local taxation; but as measures providing for this have been repeatedly defeated by the State legislature, the commissioner suggests a different plan, which he thinks may be less objectionable to the people. It is that a law be passed giving the boards of education of the different counties the right to submit the question of a tax not to exceed a certain fixed per centum for the support of elementary schools to the voters of the county, no one being allowed to vote on this question except those who pay tax on a certain amount of property, the fund

thus raised to be added to that derived from the State and used to support elementary schools for both races. A further clause of the law is recommended providing for the similar submission to taxpayers of the question of local taxation for higher schools; in this latter case, however, the votes of colored and white are to be taken separately, and their funds be separately disbursed for the support of schools in which the higher branches shall be taught.—(Report, 1876, pp. 12, 13.)

PEABODY FUND.

Aid was received by public schools in the State from the agent of this fund, to the amount of $8,550, from August, 1875, to August, 1876. Of this sum $600 were applied to colored schools.—(Report of State school commissioner, 1876, p. 22.)

CITY SCHOOL SYSTEMS.

ATLANTA.

Officers.—The board of education consists of 12 members, elected by the mayor and common council, one-third going out of office every 2 years. The mayor is ex officio a member of the board. Its officers are a president, vice-president, treasurer and secretary, the latter being also city superintendent of schools.

Statistics.—Enrolment in public schools, 3,809; average daily attendance, 2,440. Enrolment in white schools, 2,558; in colored schools, 1,251. Number of teachers employed in all the schools, 56; number of pupils to a teacher, 47. Expenditures for public schools, $47,174.58.

Remarks.—The schools have passed through the first 5 years of their existence without suspension or serious interruption of any sort, and have now firmly established themselves in the affections of the people of the city. Since their establishment they have given instruction to about 6,000 children, more than twice the number, it is believed, that would have received instruction without the existence of a public school system. The schools have been steadily improving in the character of their management and discipline, the quality of instruction and the general results attained. The attendance during the past year has been more regular than that of any previous year, reaching an average of 93 per cent.

The schools are designated as grammar and high, the former comprising 8 grades of a year each, the latter intended to occupy 4. There are 2 high schools, 1 for boys and 1 for girls, having an attendance of 93 boys and 198 girls; total, 291. The course of study in both high schools includes Latin, and in the boys' the addition of Greek is optional; in the latter school, however, the course at present seems to occupy only 3 years, while in the former it is for 4, and takes Latin and French in addition to all the higher English branches.—(Report of the board of education, 1875–'76, B. Mallon, esq., superintendent of city schools.)

SAVANNAH.

Officers.—A board of education of 12 members, whose officers are a president, vice-president, treasurer, and a secretary, who is also city superintendent of schools.

Statistics.—Enrolment in schools for white children, 2,542; in schools for colored children, 1,860; total, 4,402. Average enrolment in schools for white children, 2,039; in schools for colored children, 1,393; total, 3,432. Average daily attendance in schools for white children, 1,814; in schools for colored children, 2,979. Number of teachers of schools for white children, 50; of schools for colored children, 23; total number of teachers, 73. Expenditures for public school purposes, $52,904.68.

Remarks.—A change has lately been made in the organization of the system, by which, in lieu of the arbitrary divisions of primary, intermediate, grammar, and high schools, there are to be 5 district schools for white children and 2 for colored children, in each of which there will be 7 distinct grades, beginning with the lowest primary and ending with the highest grammar, the high schools to continue as heretofore. In the lower schools boys and girls are to be educated together.

During the past year there has been commendable progress in the schools. Every year the standard is higher. More intelligent and less routine work is accomplished. A more rational method of conducting recitations is employed by the teachers, and, as a consequence, work which is less mechanical is done by the pupils. The discipline of the schools has ceased to be a subject of concern. Except in rare instances, teachers are able to control pupils without resorting to severe punishment; the instances in which it becomes necessary to inflict corporal punishment are diminishing every year, and it is believed that the time is not far distant when this objectionable mode of discipline will be abolished in the schools. The teachers have generally been successful in their work, and they have attended punctually the sessions of the normal class. There were graduated from the high schools in June, 1876, 28 pupils: 17 girls and 11 boys.—(Report for 1875–'76 of the public schools of Savannah, W. H. Baker, esq., superintendent.)

TRAINING OF TEACHERS.

The State school commissioner renews a recommendation made in his last annual report that $10,000 of the annual school fund be set apart and appropriated for the establishment and support of two normal schools for white pupils, one to be located in the northern and one in the middle or southern portion of the State; that the law appropriating $8,000 to Atlanta University be repealed, and that, in lieu thereof, $10,000 per annum be appropriated for the establishment and support of a normal school for colored pupils.—(Commissioner's report, 1876, pp. 20, 21.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Of 13 public high schools included in the State commissioner's report for 1876, besides 3 other schools having high school courses, the only ones whose statistics can be separated from those of the lower schools, through other reports, are the high schools of Atlanta, Columbus, and Savannah. The two in Atlanta had 6 teachers and 291 pupils, and graduated 26. The one in Columbus had 1 teacher and 40 pupils, with an average attendance of 29. The two in Savannah, 7 teachers; pupils, "about the same as last year," when they numbered 237; graduates, 28. Total of teachers in high schools of 3 cities, 14; of pupils, 568.

PRIVATE SECONDARY SCHOOLS.

In 14 schools for boys, 5 schools for girls, and 72 for both sexes, outside of the public school system, there have been reported to this Bureau 4,872 pupils under 180 teachers. Of these, 1,078 are in classical studies, 218 in modern languages, 402 preparing for a classical course in college, and 146 for a scientific course, while 148 had entered college in the preceding year. Drawing is taught in 19 of these schools, vocal music in 32, and instrumental music in 38. Chemical laboratories are reported by 7, philosophical apparatus by 10, and libraries of 50 to 1,500 volumes by 12, the whole number of volumes reported being 5,095. The very small proportion of these schools presenting libraries, philosophical and chemical apparatus, or other advantages beyond studies in English, modern languages, and the classics, shows painfully the depressed condition of the private seminaries which once flourished largely in this State.—(Returns for 1876 to Bureau of Education.)

The table in Commissioner Orr's report for 1876 devoted to "private high schools" shows 176 instructors in such schools, 4 less than the number reported to the Bureau, but 5,601 pupils, 829 more. Very many schools of this class that have existed in the past do not appear in either statement; whether from having gone out of being or from having sunk into such a condition that there is no heart left to report, does not appear.

PREPARATORY SCHOOLS AND DEPARTMENTS.

Only 1 school of the former class reports itself for 1876, showing 1 teacher and 30 pupils, with very little other information as to itself, while in the preparatory departments of 4 colleges were 5 teachers and 276 pupils; total, 6 teachers and 306 pupils. In 1 other college 2 teachers of a preparatory department are reported, but no preparatory pupils.

The preparatory departments of women's colleges are not included here, as formerly, many of these being devoted to elementary rather than secondary instruction.—(Returns to Bureau of Education.)

BUSINESS COLLEGES.

In 2 business colleges, so called, one being a department of Bowdon College, the other a private school in Atlanta, 5 teachers and 216 pupils are reported, the studies being simply book-keeping, penmanship, business arithmetic, and business forms.—(Returns for 1876.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF GEORGIA, ATHENS.

The departments of this university are (1) the academic department, (2) the State College of Agriculture and Mechanic Arts, (3) the law department, (4) North Georgia Agricultural College, and (5) the medical department. Only the three first mentioned of these are situated at the old site of the university in Athens, the North Georgia Agricultural College being located at Dahlonega and the medical department at Augusta. The academic department is divided into 10 schools, viz: Latin language and literature; Greek language and literature; modern languages; belles lettres; metaphysics and ethics; mathematics; natural philosophy and astronomy; chemistry, geology, and mineralogy; history and political science; and English literature. These schools are so arranged as to be combined into several, which thus offer systematic

courses of education of different types of culture. The course in each class is prescribed, the choice of the student only extending to the subject of study. Free tuition is offered to young men who design to enter the ministry of any denomination whatsoever, provided they are in need of this aid, and to 50 meritorious young men of limited means who will pledge themselves to teach a public or private school in the State during a term of years equal to the time they may receive this free tuition.—(Catalogue of the university, 1875–'76.)

OTHER COLLEGES.

Atlanta University, Atlanta, (non-sectarian,) embraces preparatory, collegiate, and normal departments, and is open to both sexes. The collegiate course is classical, and extends over the usual four years. There are no scholarship funds, but tuition is only $18 annually.—(Return for 1876.)

Bowdon College, Bowdon.—This college was suspended in 1875–'76, in consequence of the resignation of the president; but the exercises were to be resumed in 1877. It is non-sectarian, and is for both sexes.—(Report to the United States Bureau of Education.)

Emory College, Oxford, (Methodist,) reports preparatory and classical course, the latter of four years, and is apparently only for young men.—(Return for 1876.)

Gainesville Male and Female College, Gainesville.—This school, meant to be non-sectarian in its management, is under the care of the Gainesville city council. It makes a special point of the coeducation of the sexes. In addition to the collegiate there are to be high school, common school, and primary school courses, and also one in book-keeping.—(Circular and return to Bureau of Education.)

Mercer University, Macon, (Baptist.)—The university embraces three departments, the college of liberal arts, the department of theology, and the school of law. In the college of liberal arts the scheme of instruction includes two courses of study, the classical and the scientific, the latter requiring only 3 years. The library, containing about 6,000 volumes, embraces a choice collection of many of the latest and most valuable works of reference. The philosophical and chemical apparatus has been selected with great care.—(Catalogue, 1875–'76.)

Pio Nono College, Macon, (Roman Catholic.) The plan of instruction embraces three courses: preparatory, classical, and commercial. The commercial course is supposed to last 3 years, but may vary according to the talents and progress of the student. The classical course is completed in 6 years. In addition to the pagan classics, the Christian classics have been introduced into the curriculum.—(Catalogue, 1875–'76.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The State Agricultural College, a department of the University of Georgia, offers its students a choice of three distinct departments, viz: agriculture, engineering, and applied chemistry. The degrees conferred are bachelor of agriculture, master of agri-

culture, bachelor of engineering, civil engineer, civil and mining engineer, and bachelor of science. State scholarships, entitling to free tuition, are granted to as many students, residents of the State, as there are members of the house of representatives and senators in the general assembly. Every student is required to go through a course in military tactics, unless specially excused by the faculty.

The North Georgia Agricultural College, at Dahlonega, opened in 1873, is supported by a portion of the annual income derived from the national land grant, thus rendering it a department of the University of Georgia. Tuition is free. No special age nor qualifications are made necessary for admission.

THEOLOGICAL.

Mercer University, at Macon, announces a theological department as one of its courses of study, but this is not at present in full operation. The president, however, lectures regularly to those academic students who desire such instruction on systematic theology, ecclesiastical polity, and homiletics.—(Catalogue, 1875–'76.)

In *Atlanta University* (for colored people) special attention is given to instruction in the Bible, in order to prepare students for work in Sunday schools and for other forms of Christian service.—(Catalogue of Atlanta University, 1874–'75.)

The *Augusta Institute*, at Augusta, (Baptist,) organized in 1869, is a school designed for the special benefit of the freedmen who wish to become preachers and teachers, and is sustained by the charities of the friends of the enterprise. Of the 95 students in attendance, 50 are studying for the ministry.—(Return to the United States Bureau of Education, and American Baptist Year-Book.)

MEDICAL.

The *Medical department of the University of Georgia* offers a course of instruction consisting of two full courses of lectures, "in addition to the usual private readings in medicine." Among its means of instruction are included access to a library of about 5,000 volumes, an extensive and well arranged chemical laboratory, good anatomical facilities, a complete cabinet of materia medica, and extensive clinical resources, with access to the city hospital, the freedmen's hospital, and city dispensary. One student from each congressional district of Georgia is admitted gratuitously, and the same privilege is extended to students coming from the neighboring States.—(Catalogue of university, 1875–'76.)

The *Savannah Medical College* combines as much as possible clinical teaching with didactic lectures, the latter being delivered in the lecture room of the Savannah Hospital provided for that purpose. The trustees have authorized the faculty of the college to form a class in pharmacy; and this course will include the discussion of all the important elements and compounds, their natural history, preparation, and properties.—(Catalogue of Savannah Medical College, 1875–'76.)

LEGAL.

The course of studies in the *Department of law in the University of Georgia* is completed in one year, but there is no vacation, the whole year being employed. It embraces common and statute law, constitutional law, equity, medical jurisprudence, parliamentary law, rhetoric, and metaphysics and commercial jurisprudence. Instruction is given by text books, daily recitations, examinations, and expositions, with oral lectures.—(Catalogue University of Georgia, 1875–'76.)

In the *Law school of Mercer University*, instruction is given in equity jurisprudence, pleading, and practice, international and constitutional law, and common and statute law. The plan includes lectures, recitations, expositions, exercises in conveyancing and pleading and moot courts.—(Catalogue of Mercer University, 1875–'76.)

SPECIAL INSTRUCTION.

EDUCATION OF THE BLIND.

The Georgia Academy for the Blind opened in 1851, was incorporated in 1852, and $5,000 per annum for two years appropriated by the State to aid in supporting it. In 1854, the legislature appropriated $10,000, and afterward other amounts, to erect a suitable building, which was completed in 1860 at a cost of about $65,000. The average annual appropriation for the support of the institution is about $13,000. There are about 1,000 volumes in the library, including those in embossed print. Pupils are admitted between the ages of 8 and 20, but males over 20 are taken into the workshop to learn trades. There were, in 1876, 56 pupils in the academy. Since its opening, 145 have been admitted, of whom 75 have been discharged as educated in one or more of the departments, many of them with trades by which they can earn their support. Preparations are being made for receiving some blind negro children into the workshop. As yet, there is no general provision made for educating the colored blind.—(Handbook of Georgia, 1876, pp. 191, 192.)

EDUCATION OF THE DEAF AND DUMB.

From the year 1834 until 1845, such deaf and dumb youth of Georgia as could be induced to go there were educated in the Hartford institution at the expense of the State of Georgia. In 1845, the legislature required all the State's beneficiaries to be withdrawn from Hartford and educated in Georgia, and the next year a department for the deaf and dumb was added to the Hearn Manual-Labor School at Cave Spring. In 1847 the legislature provided the means for erecting a suitable building, which was completed in 1849. The annual appropriation made by the State for its support is about $16,500. The average number of pupils is about 50; the whole number received up to 1876 is 253. The legislature in 1875 made provision for receiving negro pupils. The value of the property is about $25,000. The library numbers about 1,000 volumes.—(Handbook of Georgia, 1876, pp. 192, 193.)

LIST OF SCHOOL OFFICIALS IN GEORGIA.

† This doubtless includes expenditures for sites, buildings, and furniture, and for libraries and apparatus.

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Colvin's Laws of the United States, volume vi; Barnard's Journal of Education, volume xxiv, pp. 243 246; statutes of Illinois from 1818; State edition of the school Law of 1872 with amendments to 1874; and report of the State superintendent for the years 1875 and 1876.

BEGINNINGS.

Illinois entered the Union December 3, 1818. The convention which framed the constitution under which it was admitted accepted on August 26th of that year a proposition made by Congress April 18, that section 16 in every township should be granted to the State for the use of the inhabitants of said township for school purposes; that three-sixths of 5 per cent. of the proceeds of the public lands within the State sold by Congress after January 1, 1819, should be appropriated by the legislature for the encouragement of learning, one-sixth to be applied to a college or university, and that 36 sections, or one entire township, with one previously reserved for that purpose, should be reserved for the use of a seminary of learning and be vested in the legislature to be appropriated solely to such seminary. From these reservations for schools, university, and seminary have grown: (1) The State school fund, consisting of the proceeds of the sales of public lands devoted to the encouragement of learning, less the sixth part above excepted; (2) the college or university fund, consisting of this sixth part; (3) the seminary fund, consisting of the sales of seminary lands, all which lands unsold in 1861 were given to the agricultural college of the State; (4) the township fund, resulting from the sales of sixteenth section lands. To these several funds, going to constitute the permanent fund for aid of education in the State, was added in 1835 the county school fund, composed of surplus moneys remaining in the hands of county commissioners, and in 1837 the surplus revenue fund, distributed among the States by act of Congress of 1836.

EARLY LEGISLATION RESPECTING SCHOOLS.

Ample as were the provisions made for the promotion of education, they were not fully available for a considerable time. The early settlers, too, were busy in providing homes, in clearing farms, and in establishing themselves in business. Seven years, therefore, passed before a general school law was enacted. Then, January 15, 1825, came one "providing for the establishment of free schools," with an admirable preface and with the following provisions: (1) That there should be established a common school or schools in each county of the State, to be open and free to every class of white citizens between the ages of 5 and 21, persons over 21 to be admitted on such terms as the trustees of the school district might prescribe; (2) that the county commissioners' courts should, from time to time, form school districts in their respective counties on the petition of a majority of the voters within a contemplated district, no district to have less than 15 families; (3) that the schools of each district should be superintended by three trustees, elected by the qualified voters at a called meeting, and have their interests cared for by a clerk, a treasurer, an assessor, and a collector, chosen at the same meeting, the trustees being empowered to examine and hire teachers and hold and lease property for the benefit of the district schools, and being required to make report annually to the county commissioners' court of the number of children of school age, the number attending school, and the time a school was held, with the probable expense of it; (4) that the schools should be sustained partly by local taxes on the property within and belonging to the people of the district, partly by the proceeds of the sixteenth section lands paid over by the county treasurer, and partly by a State apportionment derived from $2 out of every $100 received into the State treasury, and from five-sixths of the interest arising from the school fund; this State payment, however, not to be made till the next census should be taken. The care of this school fund was, by the same law, committed to the auditor and secretary of state, under the direction of the governor, and the inhabitants of each district were empowered to make at either their regular or specially called meetings all needful regulations for building or repairing school-houses, and for supplying them with furniture and firewood, while the clerk of each county commissioner's court was required to make out and forward to the secretary of state, by the 1st of December in every year, an abstract of the reports made by the trustees of school districts in his county as to the school population, school attendance, school term, and expense attending this.

The force of this law was greatly weakened by one approved February 17, 1827, which repealed the clause requiring 15 families for each new school district, made taxation for the full or half support of district schools optional with the voters of the district, and forbade the taxation of any individual for the support of any free school unless his or her consent had first been obtained in writing.

Laws for the care of the school lands and proper disposition of the proceeds of the sale of them through three township trustees of school lands and a county school commissioner seem to have been the only general ones relating to school interests from this time till March 4, 1837. Then, an act amendatory of the several preceding acts in relation to common schools made provision for the incorporation of townships; for the election of five township trustees of schools in place of the three trustees of school lands in case of such incorporation; for their subsequent superintendence of "the business and affairs of the township in relation to education and schools generally;" and for annual reports by them to the school commissioner of their county of the amount of

principal and interest of township school funds on hand or appropriated at the time of the report; of the number of schools kept and scholars taught within their township and length of the school term; of the amount of interest received from school commissioner of the county; and of the amount of money expended for any other purpose than paying teachers of schools, with specification of the object or objects of such payment. In this law appears the first requirement for a certificate of qualification from the township trustees before any teacher could be paid out of the school funds. An act slightly amendatory of this was passed January 18, 1840, and another February 3, of the same year.

February 26, 1841, came a complete revision of the school laws, restoring the three township trustees of school lands for the care of the sixteenth sections, confirming the system of a county school commissioner for sale of these lands and investment of the proceeds; and directing that all the profits arising from sales and interest from the invested funds should be applied to the support and maintenance of common schools. As many of these schools as the inhabitants should desire were to be established in each school district, and for each school organized three trustees were to be elected, to have a general supervision of its management and to see that a schedule of attendance was kept by the teacher. This schedule was to be closed and summed up every six months, and the teacher to be paid according to the attendance and the time the school was kept. In case of the incorporation of townships, the provisions of the preceding law as to five trustees of schools instead of three trustees of school lands were to hold, with some enlargement of the powers conferred, and especially the power of examining teachers before giving the certificate of qualification, without which no compensation could be drawn from the school fund. The rather anomalous provision, almost peculiar to this State, of three school directors to be elected in each district of an incorporated township for a term of two years was also introduced into this law; these directors to be additional to the three trustees of each school and to the five township trustees of schools, and to have the care of building school-houses, supplying them with furniture, employing teachers, visiting the schools, making regulations for them, and making out biennially for the township treasurer a schedule of the number of all white children in their district of 20 years old and under as a basis for the apportionment of the school funds. This act repealed all acts inconsistent with itself, including the objectionable one of February 17, 1827, and became for the time the one school law of the State.

PROVISION FOR STATE AND COUNTY SUPERVISION.

None of the preceding laws made any provision for supervision of the schools beyond what could be exercised by the officers of districts, who were often ignorant, narrow minded, and unfit for supervising school methods and school work. The need of something more than this of course became apparent as the schools increased. Accordingly, in an act approved February 26, 1845, an effort was made to remedy the defect by making the secretary of state ex officio State superintendent of common schools, and the county school commissioners ex officio county superintendents; the latter to visit and inspect the schools, examine and license teachers, and make annual report to the State superintendent; the former to act as their adviser, to recommend text books, maps, charts, and apparatus, to endeavor to reduce to a uniform system the means of supporting common schools throughout the State, and to make biennial reports respecting them to the governor. In other respects the provisions of the act were essentially the same as those of 1841, except that instruction in the schools was in the later act required to be wholly in English, and that the inhabitants of districts were authorized to determine by a vote of the majority, at their annual May meeting, whether they would tax themselves for the support of schools, for building or repairing school-houses, or for other school purposes, not to exceed 15 cents on every $100.

Supervision through a secretary of state, whose duties confined him almost wholly to the capital, did not meet the need, and February 18, 1854, the separate office of State superintendent of public instruction was created and directed to be filled at the general election in November, 1855, and biennially thereafter. The duties prescribed were kindred with those directed in the act of 1845, with the important addition that he should visit every county at least once during his term of office; should confer with school officers as to the manner of conducting schools; should deliver a public lecture on education to the teachers and people, if deemed practicable; and should perform such other duties as would tend to advance the interests of education. Until the election of the superintendent thus provided for, the office was to be filled by appointment of the governor, the incumbent to receive $1,500 annual salary and to report to the next legislative assembly a bill for a system of free school education throughout the State, as well as for a uniform ad valorem tax on property for the support of schools.

A FULL STATE SYSTEM.

Mr. Ninian Edwards, appointed by the governor the first State superintendent under

the above named act, had the honor of framing the bill for unification of the State school system. Meeting with ready acceptance from the legislature, it took the form of law February 15, 1855. This law deferred till November, 1856, the election of a State superintendent by the people; distinctly respecified and somewhat enlarged the duties he must perform and the powers he might exercise; retained the county school commissioners as county superintendents, with the same township and district school boards, but with improved provisions as to duties and reports; authorized the formation of district libraries; forbade the employment of a teacher for a public school without a legal certificate of qualification; prescribed a State tax of two mills on the dollar, to be added annually to the 6 per cent. revenue from the school funds, with such additional local tax as should be determined by the township board to be necessary for supplying deficiencies in the fund for paying teachers and for extending the terms of school, after the State and common school fund should be exhausted, till at least the six months' minimum required of them should be reached. For purchasing school sites, erecting school-houses, and repairing and improving these, the directors of districts were authorized to borrow money at not more than 10 per cent. per annum, and to issue bonds for the payment of the same in sums not less than $100 each.

The system thus inaugurated—the first which really made schools free by providing for a sufficient State and local tax for their support—continues substantially the State system to this day, with little alteration except in some details. The same State, county, township, and district school offices are continued, but the terms of State and county superintendents have been lengthened to four years; the township trustees, now consisting of three members, serve individually for terms of three years, one being changed each year; and the same is the case with the district school directors. The power of revoking, for immorality, incompetency, and other sufficient cause, the certificate granted to a teacher on examination, has been given the county superintendent in addition to his previous powers; and that of dismissing any teacher employed by them, for like cause, has been given the board of district school directors. Explicit permission for the establishment of high schools is given to townships on the petition of 50 voters 15 days before a regular election of trustees and on a vote of a majority in favor of a high school at the election. Two or more townships may coöperate in the establishment and support of such a school on such terms as they agree on between themselves. For school districts with not less than 2,000 inhabitants, not governed by any special act, there is provided a board of education of 6 members and 3 additional ones for every additional 10,000 inhabitants, the members individually to serve 3 years, and one-third to be changed by election each year. Such boards, and especially those of cities with over 100,000 inhabitants, have considerably larger powers given them than are possessed by the ordinary boards of districts.

The State institution for education of the deaf and dumb was founded 1839, that for the blind in 1849, that for feeble-minded children in 1865, all at Jacksonville.

Two normal universities and a county normal school have been added to the State system under acts of February 18, 1857, March 9, 1869, and March 15, 1869, and the Illinois Industrial University in 1867. A State reform school was established at Pontiac in 1871. The election of women to school offices was authorized April 3, 1873; and the rights of colored children to an education in the State schools, glanced at in a preceding law, were emphatically recognized March 24, 1874.

ADMINISTRATION.

The succession of superintendents of instruction has been as follows: Ninian Edwards, 1854–'56; W. H. Powell, 1856–'58; Newton Bateman, 1858–'62; W. H. Powell, second term, 1862–'64; Newton Bateman, again, 1864–'74; S. M. Etter, 1875–'79.

ELEMENTARY INSTRUCTION.

PROGRESS.

While it is admitted that apathy and ignorance prevail in some quarters, and remissness in duty and want of qualifications are recorded against the names of many school officers and teachers, the superintendent is convinced that the existing evils are fast disappearing and that the people realize the importance of supporting none but good schools and of employing none but good teachers. The teachers' institutes and teachers' drills in the various counties have had a very largely increased attendance and have continued for a longer time during the past two years than ever before in the same period. There is in all parts of the State an increasing demand for better teachers. The standard of the examinations, both State and county, has been raised to satisfy this demand, and the county superintendents have been more active and more vigilant in the performance of their duties than perhaps ever previously.—(Report for 1875–'76 of State superintendent, Hon. S. M. Etter, p. 6.)

SCHOOL EXPENDITURES.

The sum expended for public school purposes in 1876—$8,268,539.58—is greatly

larger than it was for 1875. In addition to this there is a large sum paid annually for the support of private schools, but it has been impossible, thus far, to obtain reliable information as to its amount. The State superintendent believes, however, that the money expended in many districts is far in excess of what is absolutely required for the support of efficient schools; that school directors frequently expend money unnecessarily for school houses, furniture, &c., while too often, anxious to curtail expenses, they reduce the pay of teachers, when they should economize in other directions. The tendency in the State, for some years, has been to erect large and expensive school buildings, often elaborately ornamented, thus creating an enormous indebtedness which, in many localities, has been the means of seriously affecting the efficiency of the schools by rendering it impossible to pay salaries large enough to secure well qualified teachers. The superintendent earnestly urges upon school officers the necessity of reducing the ordinary expenses of the schools to the lowest possible sum on which good schools can be maintained, and thinks that unless this is done speedily there is great danger of a reaction in school sentiment that will seriously affect the cause of education in the State.—(Report of State superintendent 1875–'76, pp. 15, 16.)

KINDERGÄRTEN.

Reports have been received from 7 Kindergärten, all located in Chicago. The oldest of them, organized in 1871, taught by Miss Sarah Eddy, in addition to its Kindergarten proper, admitting children from 3 to 7 years of age, has a school in which the primary English branches, with Kindergarten employments, are taught to children as old as 12 years. It is intended to make this a genuine industrial and technical art school, based upon Frœbel's developing method. Lessons in dancing are given, for the physical development of the children. The total number of children attending the 7 schools is 190; number of assistant teachers, 13. The age for admission in a majority of these schools is 3 to 7 years; the hours of daily study are generally about 3, sometimes 4.—(Returns and circular from Miss Eddy's school.)

CITY SCHOOL SYSTEMS.

BELLEVILLE.

Public school officials.—These are a board of education of 6 members, of whom one-third go out of office each year, and a city superintendent of schools, who is ex officio secretary of the board.

Statistics.—Population, 12,000; children of school age, (6–21,) 4,467; pupils enrolled in public schools, 1,834; increase for the year, 93; number of teachers employed: men, 13; women, 27—total, 40; average number belonging, 1,663; average daily attendance, 1,575.

Remarks.—An increased efficiency in the schools is reported. Notwithstanding the obstacle of a large debt, favorable results have been observed during the past three years. There is a more thorough discipline; the pupils like the schools better; in the primary grades the number of pupils is more equally divided among the teachers; the work of three years has been done in two, and the course of instruction is more uniform and systematic throughout. The natural sciences, music, drawing, and German receive their share of attention. Vocal music, with the aid of a special teacher, has become a favorite study with both teachers and pupils. The study of drawing was introduced two years ago and has proved advantageous. The study of German has been found to be not only not a hindrance to progress in other branches, but even a help. The high school numbers 88 pupils enrolled.—(Report of board of education and Superintendent Henry Raab, 1875–'76.)

CHICAGO.

Officers.—A board of education of 15 members, with a clerk, assistant clerk, building and supply agent, school agent, city superintendent of schools, assistant superintendent, superintendent of music, superintendent of drawing, and superintendent of German.

Statistics.—Population of city by census of October, 1876, 425,000; children of school age, (6–21,) 110,184; enrolled in public schools, 51,128, besides 27,637 in private and parochial schools; average attendance, 35,970; public school buildings, 71; sittings for study, 39,233; teachers, (male, 37; female, 680,) 717. Receipts for schools: from permanent funds, $108,372; from State tax, $120,581; from local tax, $620,842; total, $849,794. Expenditures for schools: for sites, buildings, and furniture, $94,403; for supervision and teaching, $588,721; for incidental expenses, $146,305; total, $829,429. Expense per capita, $19.78.

Notes.—A report of a special committee of the board of education on changes and retrenchment in school management, adopted June 20, 1876, recommended, among other things, the following: that principals should spend from one-third to two-thirds of their time in instruction; that in all school buildings with an average of 63 seats to a room there should be but one teacher; and that the normal school be made a depart-

ment of the high school and one or more of the teachers in the normal school be dispensed with. The salary of the superintendent it was recommended should be made $3,600; that of the assistant superintendent, $3,000; those of the superintendents of music and drawing, $1,500 each, and that of the superintendent of German, $1,200, with corresponding reductions in lower salaries. The report having been adopted, these changes seemed to be settled; but at a subsequent meeting of the board a further reduction of salaries was made in accordance with the wish of the city council, and the superintendencies of music and drawing cut away. The average reduction of salaries was 25 per cent.—(Return of Superintendent Pickard to Bureau of Education and reports in the Chicago department of Illinois Schoolmaster, July to October, 1876.)

DECATUR.

Officers.—A board of education of three members, one of whom goes out of office each year, and a city superintendent, who is also clerk of the board.

Statistics.—Population, 10,000; children of school age, (6–21,) 2,595; different pupils enrolled, 1,868; average number belonging, 1,449; average daily attendance, 1,363; teachers employed, 29; expenditures during the year, $25,718.86. The average per cent. of attendance was 94; number of tardinesses, 2,134; number of pupils neither absent nor tardy, 44; number not absent, 448. Cost per pupil on average daily attendance, $18.87; on average number belonging, $17.75.

Remarks.—The schools are classed as primary, intermediate, grammar, and high. The enrolment in the high school numbered 208; average number belonging, 159; average daily attendance, 153. The course of study lasts four years.—(Report of the board, 1876, E. A. Gastman, superintendent.)

ELGIN.

Officers.—A board of education of — members, with a superintendent of schools.

Statistics.—Estimated population, 9,000; children of school age, 2,426; sittings in the schools, 1,089; pupils enrolled, 1,037; average daily attendance, 933; per cent. of attendance each month, 95.12; receipts for school purposes, $33,243; expenditures, $17,464.

Notes.—The percentage of children enrolled is becoming less rather than greater, owing to lack of school accommodations and the rapid increase of school population. The high school had 77 on its list and about 70 in average attendance.—(Report of C. F. Kimball, superintendent, for 1875–'76.)

PEORIA.

Officers.—A board of school inspectors of 19 members, 2 from each ward, and the mayor of the city ex officio. There appears to be no city superintendent of schools, though one is provided for in the rules of the board.

Statistics.—Number of persons of school age, 7,222; number of persons enrolled in public schools, 4,104; average number belonging, 2,879; average daily attendance, 2,659; per cent. of attendance on number belonging, 92.36; number of pupils attending other schools, 1,508. The increase during the year in the enrolment was 91; in the average number belonging, 165; and in the average daily attendance, 146. Expenditures during the year, $49,884.38.

Remarks.—The schools are graded as primary, grammar, and high, each grade embracing 4 years, and the latter including both classical and scientific courses. The enrolment at the high school was 232; average attendance, 148, a greater number than ever before.

During the year no special teachers in music and drawing were employed, owing to the necessity for economy; consequently, the science of these studies has been somewhat neglected, though the exercises in them have not been given up.—(Peoria report, 1875–'76.)

SPRINGFIELD.

Officers.—A board of education of 9 members, holding for three years, one-third going out each year. The president of the board is elected from among the number; its secretary is superintendent of city schools.

Statistics.—Enrolment in public schools, 2,616; average number belonging, 2,034; average attendance, 1,977. Per cent. of attendance on average number belonging, 97.2; on number registered, 75.6. Expenditures for public schools, $33,751.59. Cost per capita, (on average attendance,) $1.71.

Remarks.—There is a gain over the previous year of 86 in the number registered, of 102 in the average number belonging, of 100 in the average attendance, and a decrease of 324 in the number of cases of tardiness. The average attendance is computed on the whole number registered. The schools below the high are divided into 8 grades, each occupying one year. In the high school two courses are provided, English and classical, each of 4 years. The number of pupils enrolled in this school was 193; average attendance, 162. A class of 22 was graduated in 1876, of whom 14 were young women. A general improvement in the public schools is reported. An attempt has

been made to raise the grade of instruction and perfect some improvements lately introduced.—(Springfield report, 1875–'76, Andrew M. Brooks, superintendent.)

OTHER CITIES.

For statistics of the school systems of other cities of the State, see their returns in Table II, in the appendix of this volume.

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

Illinois State Normal University, Normal, organized in 1857, has a three years' course of instruction in its normal department, in which were engaged, in 1876, 404 students, 181 men and 223 women, besides 260 in the high school department. Twenty students were graduated from the normal department in 1876, of whom all but 3 engaged in teaching; 1 of these went to college, 1 entered upon the study of medicine, and 1 died. The school has a philosophical cabinet and apparatus, a good chemical laboratory, a very large and well arranged museum of natural history, a model school, and a library of about 1,000 volumes. Tuition is free to normal pupils. The State appropriation for 1876 was $24,700.—(Return for 1876.)

Southern Illinois Normal University, Carbondale, opened in 1874, had its origin in an act of the State legislature of 1869. The course of study goes over the whole curriculum of school studies, from the alphabet to nearly the completion of a collegiate education. It gives especial attention to those branches which require the use of the observing and perceptive faculties, without neglecting those which demand the use of the imagination and reason. Practical attention is devoted to physics, chemistry, natural history, surveying, and language, and the student is not only taught to know but to do the work of the branches which he pursues. He is also required to give instruction in all that he learns. Lectures are given by the principal on the history and science of pedagogy and on the methods both of learning and teaching. There are classical and scientific courses, the former extending over 4 years, the latter 3. There were 196 students engaged in normal and normal preparatory studies in 1876, of whom 110 were men and 86 women, and 5 graduates, all of them now teaching. There is a library of 2,357 volumes, of which 376 are pedagogical works. Tuition is generally free. State appropriation in 1876, $19,350.—(Catalogue, 1875–'76, and return, 1876.)

Cook County Normal and Training School, Englewood, was established by the county of Cook for the purpose of furnishing competent teachers for the public schools, and the first class was received in 1867. Since then 608 students have been received into the normal department, of whom 169 completed the required course of study and received diplomas. The design of the school is strictly professional. The course of study lasts 3 years. Tuition is free to residents of the county. County appropriation received in 1876, $15,000; number of students, 215, (50 men and 165 women;) graduates, 29.

Peoria County Normal School, Peoria, was established under an act of the State legislature approved March 15, 1869. It is supported by annual appropriations by the board of supervisors of Peoria County and is governed by a board of education elected by them. The aim of the school is more especially to impart thorough instruction in the branches taught in the common schools, and in the best methods of teaching those branches. The school received an appropriation of $5,000 from the county in 1876 for its support. Tuition is free to residents of the county. Number of students, 98, (31 men and 67 women;) graduates, 10, of whom 9 are teaching.—(Catalogue and return for 1876.)

The German Evangelical Lutheran Normal School, now located at Addison, organized in 1847, at Fort Wayne, Ind., offers free tuition in a course of instruction covering 5 years. The normal students in 1876 numbered 136, (all men;) graduates, 21, all of them teaching.—(Return for 1876.)

Northwestern German-English Normal School, Galena, is a private institution under the auspices of the Northwestern Conference of the Methodist Episcopal Church, organized in 1868, having a three years' course of instruction and 71 pupils, (56 men and 15 women.) Graduates, 3, of whom 2 are teaching.—(Return for 1876.)

The normal department of the Chicago High School, organized in 1856, reports an attendance of 139 women upon its two years' course of study, and 35 graduates in 1876, all of whom were engaged in teaching.—(Return for 1876.)

The Northern Illinois Normal Institute, in connection with the normal department of Rock River University, offers an opportunity for teachers to pursue professional studies during vacation.—(Circular for 1876.)

Chicago Kindergarten Training School, Chicago, was opened in 1876 and had, at date of return, 10 pupils. It is under the management of 3 women, all principals of Kindergärten in the city. The course of study lasts from one to three years; tuition, $75 annually.—(Circular and return for 1876.)

SCHOOL JOURNAL.

The Illinois Schoolmaster, which had successively absorbed into itself the Illinois Teacher and Chicago Schoolmaster, after long and faithful service in the cause of education and in the improvement of the teachers of the State, ceased its publication with the December number of 1876, in order to form a union with the Educational Weekly, to be published in Chicago from the beginning of 1877.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The most minute official information received respecting this important class of schools for 1875–'76 is that given in printed reports from Belleville, Decatur, Elgin, Peoria, and Springfield, and in written returns from Alton, Bloomington, Chicago, Galesburg, Jacksonville, Quincy, and Rock Island. Of these, Alton and Galesburg return 5 high schools without statistics respecting them; Quincy 3, with only further mention of 6 teachers. The remainder present a total of 24 high schools with 64 teachers, 2,248 enrolled pupils, and an average attendance of 1,552, excluding Rock Island, where this last item is not given. Chicago alone had in her 4 schools in 1876 a total enrolment of 1,200, with 884 in average attendance, under 33 teachers.

In the report of Superintendent Etter, received after the preceding statement was prepared, there are said to have been 133 high schools in the State in 1875 and 110 in 1876. The number of teachers and pupils in these, however, is not given, nor is the course of study in them shown. If the same proportion should hold throughout the State as in the schools above given, we should have 12,458 pupils enrolled for 1875 and 10,303 for 1876.

PRIVATE SECONDARY SCHOOLS.

In 1 school for boys, 6 for girls, and 14 for both sexes, outside of the public school system, there have been reported to this Bureau 3,228 pupils under 161 teachers. Of these, 586 are in classical studies, 456 in modern languages, 134 preparing for a classical course in college and 62 for a scientific course. Drawing, mechanical or free hand or both, is taught in 13 of these schools, vocal music in 19, and instrumental music in 18. Chemical laboratories are reported by 8, philosophical apparatus by 12, and libraries of 100 to 3,000 volumes by 12, the whole number of volumes being 8,884.—(Returns to Bureau of Education for 1876.)

PREPARATORY SCHOOLS AND DEPARTMENTS.

Two preparatory schools report for 1876 a total of 21 teachers with 136 pupils, of whom 103 were preparing for a classical collegiate and 33 for a scientific course. Only 1 of the 2 has a chemical laboratory; but both report philosophical apparatus and libraries, 1 of these having 2,200 volumes, the other 3,000.

In 25 preparatory departments of colleges and universities appear 62 instructors, exclusive of the college professors, and a total of 3,905 students, 793 of them preparing for a classical collegiate course and 1,143 for a scientific.—(Returns to Bureau of Education.)

BUSINESS COLLEGES.

Fourteen of these institutions report, for 1876, teachers, 76; students, 2,778. Of these, 32 were studying telegraphy; 127, phonography; 153, German; 93, French; and 2, Spanish. Of the 14 institutions, 12 teach common English branches and correspondence; 13, penmanship and book-keeping; 3, higher mathematics; 2, surveying; 5, banking; 10, commercial law; 1, political economy; 2, life insurance; 7, phonography and telegraphy.—(Returns to Bureau of Education.)

SUPERIOR INSTRUCTION.

ILLINOIS INDUSTRIAL UNIVERSITY.

This institution is at once the State university and the agricultural and mechanical college of the State. It claims to be a true university in the best American sense, though not yet complete in all departments, and differing designedly in the character of some of its colleges from the older institutions of this country. It is divided into four colleges, these again being subdivided into schools, as follows: (1) The college of agriculture, including the schools of agriculture and horticulture; (2) college of engineering, including the four schools of mechanical, of civil, and of mining engineering, and of architecture; (3) college of natural science, with schools of chemistry and of natural history; (4) college of literature and science, with schools of English, and modern, and of ancient languages. There are, in addition to the foregoing, schools of military science, of commerce, and of domestic science and art. Vocal and instrumental music, telegraphing, photography, and designing are also taught, but not in regular courses. Tuition is free.

It has been a favorite aim of the university, from the outset, to allow as much freedom as possible in the selection of studies. Each student is expected to make a careful choice, after counsel with his teacher, of the branches he may need to fit him for his chosen career, and then to pursue them with earnestness and perseverance.

In the college of literature and science the plan of instruction embraces, besides the ordinary text book study, lectures and practical exercises in all the departments, including original researches, essays, criticism, proof reading, and other work intended to illustrate the studies pursued and to exercise the student's powers. It is intended to give all the students voice culture and a training in elocutionary practice. A prominent aim will be to teach the right use of books, and thus prepare the student for self directed investigation and study. With this view, constant use of the library will be encouraged and required; and, as a further aid in this direction, members of the advanced English classes are expected to act as assistant librarians.

In the school of the ancient languages and literature the methods of instruction, without swerving from their proper aim — to impart a sufficiently full and critical knowledge of the Latin and Greek languages and writings — will make the study of these tongues subservient, in a more than usual degree, to a critical and correct use of the English.—(Catalogue of university, 1875–'76.)

OTHER COLLEGES.

Abingdon College, Abingdon, (Disciples,) has preparatory, collegiate, commercial, and normal departments. It is for both sexes.—(Catalogue, 1875–'76.)

Augustana College and Theological Seminary (Swedish Evangelical Lutheran) has removed from Paxton to Rock Island. It embraces theological, collegiate, and preparatory departments.—(Catalogue, 1875–'76.)

Ansgari College, Knoxville, (Evangelical Lutheran,) was founded in 1875 by the gift of $10,000 from Hon. James Knox and of $5,000 by the citizens of Knoxville. The building was completed in 1876. The departments are preparatory, collegiate, and theological. Telegraphy and music taught as special studies. This college is apparently only for young men.

Blackburn University, Carlinville, (Presbyterian,) has preparatory, collegiate, and theological departments. The collegiate department embraces both classical and scientific courses; the latter is a four years' course and includes all the studies of the former, except Latin and Greek. Both sexes are admitted.—(Catalogue, 1875–'76.)

Carthage College, Carthage, (Lutheran,) comprises 2 departments, the collegiate and academic. The collegiate department offers 3 courses of study, classical, scientific, and philosophical, the first and last embracing 4 years of 35 weeks each, the classical lasting 4 years of 30 weeks each, the vacation being so arranged as to allow of students engaging in employment during the spring and summer months. The philosophical course adds to the studies of the scientific others, such as the history, structure, and laws of the English language, criticism, rhetoric, international and commercial law, instrumental astronomy, and practical surveying. Both sexes are admitted.—(Catalogue, 1875–'76.)

Eureka College, Eureka, (Christian,) embraces 5 departments: the collegiate, Bible, normal, business, and music. In the collegiate department three regular courses are offered, the baccalaureate, scientific, and academic, besides an elective course in modern languages. The baccalaureate course includes Greek and Latin; the scientific omits Greek altogether and one-half the Latin, and adds French and German. Students pursuing a regular course are not required to accomplish it in any given number of years. The time is made to depend entirely upon the health, faithfulness, and ability of the student. Both sexes are admitted.—(Catalogues, 1876.)

Ewing College, Ewing, (undenominational,) was incorporated as Ewing High School in 1867, and in 1874 was authorized to confer collegiate honors, and became Ewing College. Its course of study includes preparatory, academical, and collegiate departments, the whole extending through a period of 7 years. Both sexes are admitted.—(College catalogue, 1875–'76.)

Hedding College, Abingdon, (Methodist,) has preparatory and collegiate departments, the latter embracing classical, Latin-scientific, and scientific courses, requiring for their completion 4, 3, and 2 years, respectively. Both sexes are admitted.—(Catalogue, 1875–'76.)

Illinois Agricultural College, Irvington.—This is a literary institution, by reason of its amended charter, though the name would indicate otherwise. There are here offered preparatory, classical, commercial, and English courses. There is a normal class and a department of music. Both sexes are admitted.—(Catalogue, 1875–'76.)

Knox College, Galesburg, (Presbyterian and Congregational,) was founded by Christian benevolence in 1837 and fully organized as a college in 1841. Its departments are preparatory, collegiate, and a ladies' seminary. Its collegiate department embraces both classical and scientific courses of 4 years each, to which both young men and women are admitted. The seminary course is a full collegiate one of 4 years and the instruction is given by the professors of the college.—(Catalogue, 1875–'76.)

Lake Forest University, Lake Forest, (Presbyterian,) was opened as a college in 1876.

Its departments are collegiate, preparatory, (Lake Forest Academy,) and Ferry Hall, or young ladies' seminary. Young women are also admitted to the collegiate department. This embraces classical and scientific departments, the latter lasting only 3 years.—(Catalogue, 1875–'76.)

Lombard University, Galesburg, (Universalist,) affords to students of either sex equal opportunities in a full collegiate course of 4 years, such as is usually pursued in the best colleges of the country, embracing classical, scientific, and literary departments. There is also a preparatory department.—(Catalogue, 1875–'76.)

Lincoln University, Lincoln, (Cumberland Presbyterian,) embraces preparatory, collegiate, and theological departments, and a conservatory of music. In the collegiate department are classical and scientific courses and a ladies' course. Women are also admitted to the classical and scientific course.—(Catalogue, 1875–'76.)

McKendree College, Lebanon, (Methodist Episcopal,) is open to both sexes and comprises preparatory, academical, collegiate, commercial, and law departments.—(Catalogue, 1874–'75.)

Monmouth College, Monmouth, (United Presbyterian,) is for both sexes. Its departments are (1) collegiate, with classical and scientific course; (2) academical, with preparatory, high school, and normal courses; (3) musical; and (4) art. In the art department the course lasts two years and gives a thorough and practical knowledge of the subjects taught, embracing object drawing, drawing from the solid, pure form, light and shade, and perspective.—(Catalogue, 1875–'76.)

Northwestern College, Naperville, (Evangelical,) has collegiate, preparatory, theological, commercial, art, and business departments, the former with three courses, the classical and Latin-scientific lasting four years, and an English-scientific course of three years. Music, as well as drawing and painting, is included in the art department. Both sexes admitted.—(Catalogue, 1875–'76.)

Northwestern University, Evanston, (Methodist Episcopal,) was commenced in 1854, and has entered on full work as a university in the classical and professional departments of study. It gives thorough instruction in Greek, Latin, Hebrew, German, French, English literature, history, politics, pure and applied mathematics, science, polytechnics, music, art, theology, metaphysics, philosophy, law, and medicine. The departments of study are theology, law, medicine, and collegiate. In the latter are 6 parallel courses of four years each; 3 in the college of literature and science, viz: classical, Latin, scientific and modern literature and art; 3 in the college of technology, viz: chemistry, engineering, and natural history. Other courses may be made up from these by students not seeking degrees. The university recognizes neither race nor sex, but simply asks of the candidate "What do you know?"—(Catalogue, 1875–'76.)

Rock River University, Dixon, (non-sectarian,) designs in time to organize 8 departments, viz: classical, scientific, higher literature, normal, music, art, commercial, and preparatory. Both sexes are admitted.—(Circular, 1875.)

Shurtleff College, Upper Alton, (Baptist,) has been in existence nearly 40 years, and at present embraces an academic and preparatory department, Kendall Institute for young ladies, and collegiate and theological departments. Both sexes are admitted to the college and to the academic and preparatory departments.—(Catalogue, 1875–'76.)

St. Ignatius College, Chicago, (Roman Catholic,) is conducted by members of the Society of Jesus. It offers 2 distinct courses of study, the classical and commercial, and was incorporated and authorized to confer academic and honorary degrees in 1870; it possesses a library of 9,500 volumes, an extensive museum, and chemical and philosophical apparatus well adapted to the teaching of the physical sciences. The college is intended for day scholars only, and does not admit women.—(Catalogue, 1875–'76.)

St. Joseph's Ecclesiastical College, Teutopolis, (Roman Catholic,) is under the direction of the Christian Fathers, admits only boys, and those must be Catholics. There are preparatory and collegiate courses, the latter combining theological with the literary studies usually pursued in colleges.—(Catalogue, 1875–'76.)

St. Viateur's College, Bourbonnais Grove, Kankakee, (Roman Catholic,) is situated about fifty miles south of Chicago and near the village of Kankakee, and is under the charge of the priests of the congregation of St. Viateur. It was founded in 1865 and chartered in 1874. The courses of instruction are preparatory, classical, and commercial.—(Catalogue, 1875–'76.)

University of Chicago, Chicago, (Baptist.)—The departments are collegiate, preparatory, legal, and medical. There are classical and scientific courses, courses in astronomy and in practical chemistry. The Dearborn observatory forms the astronomical department of the university, giving instruction in the science to its undergraduate students in regular classes, and also to those special students who wish to give special attention to the subject with a view to prepare themselves for positions in observatories or other scientific establishments, or for professorships in mathematical departments of colleges. Several of its graduates have already taken high rank as astronomical observers and surveyors. Young women are admitted to the collegiate and preparatory departments on the same terms as young men.—(Catalogue, 1875–'76.)

Westfield College, Westfield, (United Brethren,) has preparatory, collegiate, and art departments, with a classical, a scientific, and a ladies' course, and a course for teachers. The art department includes, with its studies in drawing, vocal and instrumental music.—(Catalogue, 1875–'76.)

Wheaton College, Wheaton, (Congregational,) is devoted to Christian education, as distinguished from mere secular training. It offers collegiate, preparatory, fine arts, and business departments; the former includes a classical course and a ladies' collegiate course. Young women are also admitted to the regular classical course.—(Catalogue, 1875–'76.)

COLLEGES FOR WOMEN.

Eight colleges for women report a total of 112 professors and instructors and 1,125 students. Of the latter, 187 are pursuing preparatory studies, 447 are in regular collegiate classes, 75 in partial, and 15 in graduate courses. The courses of instruction cover from 4 to 7 years. The aggregate number of volumes in libraries was 8,600.

d Also 23 graduate students.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The agricultural and scientific department of the Illinois Industrial University offers the usual course of studies found in agricultural and mechanical colleges, and, in addition, a school of domestic science and art, the institution being intended equally for young men and women.

It has been the aim to give the college of agriculture the largest development practicable, and agricultural students are specially invited. The college has, for the illus-

tration of practical agriculture, a stock farm of 410 acres, with a large and well furnished barn, several breeds of neat cattle, swine, and sheep, to illustrate the problems of breeding and feeding. There is an experimental department, aided by a special appropriation, about 60 acres of the farm being devoted to this purpose. Young women can engage, not only in the studies, but also in the practical exercises.

The school in mechanical engineering is designed to supply a class of men competent to invent, design, construct, or manage machinery in the various industrial pursuits. That in civil engineering includes in its technical studies the higher mathematics, drawing, natural science, engineering, and projects. In the school of mining engineering, training is given in theoretical and applied chemistry, chemical and blowpipe analysis, assaying, metallurgy, and the engineering operations of mining. In the school of architecture the prominent features are instruction in design, in the application of scientific principles to building, and in the work of the various building trades. Drawing is studied throughout the course. In the school of chemistry the student learns how to apply the principles of the science to any of the related arts, and is fitted for the business of the druggist, the pharmaceutist, and practical chemist. The school of natural history educates students to be practical geologists, collectors, and curators of museums of natural history and superintendents of scientific explorations and surveys.

The school of domestic science and art provides a full course of instruction in the arts of the household and the sciences relating to them, including the architecture of the dwelling-house, with the laws of heating and ventilation; the principles of physiology and hygiene as applied to the sick and the well; the nature, uses, preservation, and preparation of animal and vegetable food; the chemistry of cooking; the proper material and hygiene of dress; the principles of taste as applied to ornamentation, furniture, clothing, and landscapes; culture of both house and garden plants; the laws of markets, the usages of society and the laws of etiquette and social life. A spacious gymnasium has been fitted up for young women, and instruction in calisthenics is given to two or more classes daily. Lectures on health and its conditions are given, and great pains taken to secure physical vigor and a graceful carriage.—(Catalogue, 1875–'76.)

The department of natural science of Westfield College (Prof. E. Whipple, teacher) reports a method of instruction in zoölogy believed to be new and original. Its purpose is to secure study of specimens by students in such a manner as to be under the direction of the teacher and to furnish evidence of work done without encroaching too much upon the teacher's time. One branch, one class, several orders, families, genera, and species are studied with a view to develop an understanding of the plan of structure characteristic of classes, the general resemblances of families, and the details of special parts in different genera. The students are then required to make out analyses of specimens studied, which are handed to the teacher for criticism, like all other written exercises.—(Letter from Rev. S. B. Allen, A. M., president of Westfield College, January 10, 1877.)

THEOLOGY.

Catalogue reports have been received from four independent theological schools, viz: the Chicago Theological Seminary, (Congregational,) the Baptist Union Theological Seminary, Chicago, the Presbyterian Theological Seminary of the Northwest, at Chicago, and Garrett Biblical Institute, Evanston, (Methodist Episcopal;) also from the Augustana College and Theological Seminary, now located at Rock Island, (Evangelical Lutheran,) and St. Joseph's Ecclesiastical College, at Teutopolis, (Roman Catholic,) which last two seem to be intended mainly as theological schools, while also affording collegiate instruction. In addition to these schools, theological departments exist in Eureka, St. Joseph, Shurtleff, Ansgari, and Northwestern Colleges, and in the Blackburn, Illinois, Wesleyan, and Northwestern universities. It is not possible to give the full courses in all these. They vary much both in the quantity and quality of the instruction given.

MEDICINE.

Bennett Medical College, Chicago, (eclectic,) gives a three years' course of instruction in every department of medicine and surgery. The system of practice taught is elective, in the legitimate sense of the word. Adopting improvements, by whomsoever made, the aim is to follow wherever truth and science lead, and no other inflexible creed is inculcated.—(Annual announcement, 1876–'77.)

The Woman's Hospital Medical College of Chicago also requires for graduation three years' study, two full courses of lectures, and at least one term of dissection and attendance on hospital clinics. A good English education is required for admission to the college.

Hahnemann Medical College and Hospital, Chicago, (homœopathic,) admits both men and women and demands of its graduates attendance on two full courses of lectures and a satisfactory examination in each of the eight following departments: Diseases of

women, surgery, theory and practice of medicine, materia medica, obstetrics, physiology, chemistry, anatomy.—(Catalogue, 1876–'77.)

Rush Medical College, a department of the University of Chicago, demands of its graduates a three years' course of study of medicine, at least two full courses of lectures, at least one college term of clinical instruction, and the study of practical anatomy, under the direction of a demonstrator, to the extent of having dissected each region of the body.—(Annual announcement of Rush Medical College, 1876–'77.)

The Chicago Medical College, the medical department of the Northwestern University, offers a graded course of instruction lasting three years and demands of its graduates this amount of study, besides attendance upon two or more courses of lectures, dissection, and hospital attendance. It also requires, in common with all the foregoing, that the graduates shall have attained the age of 21 years and be of good moral character.

PHARMACY.

The Chicago College of Pharmacy gives instruction in the branches of chemistry, pharmacy, botany, materia medica, and toxicology. The course consists of forty lectures in each department. The student, in order to graduate, is required to have attended two full courses of each of the lectures and have had an experience of at least four years in a pharmacy or drugstore.—(Prospectus, 1876–'77.)

LAW.

Law departments exist in connection with the Chicago and Northwestern, the Illinois Wesleyan, Lincoln Universities, and McKendree College. The course of instruction occupies only 2 years in all but the department of Lincoln University, which has a three years' course.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

This is attended to in the Illinois Institution for the Education of the Deaf and Dumb, at Jacksonville, and in the Chicago Day School for Deaf-Mutes. The last named is under the control of the city board of education, and reports an attendance of 24 pupils, (20 males and 4 females.) English language, arithmetic, writing, geography, drawing, &c., are taught. The institution at Jacksonville is under the control of the State, and has educated 1,133 pupils since its foundation in 1839. For the last eight years considerable attention has been given to instruction in articulation with good results. The present attendance is 421 pupils, (237 males and 184 females.)—(Return of 1876, and report of State superintendent, 1875–'76.)

EDUCATION OF THE BLIND.

The Illinois Institution for the Education of the Blind, at Jacksonville, controlled and supported by the State, has educated, since its foundation in 1849, 519 pupils, and reports an attendance of 86. The employments taught are broom and brush making, cane seating of chairs, beadwork, and needlework. There is a library of 609 volumes.—(Return, 1876.) The school is divided into preparatory, junior, and senior departments, and the pupils are said by the principal to have made rapid advancement in the various branches of study pursued, both literary and musical. Four teachers appear in the department of literature, 3 in that of music, 1 in that of manual labor. The labor department brings no profit to the institution, but pays its way and trains for future self-support. Ten hands have worked in the shop, 6 of whom were pupils from the literary department, who were about to leave the school and were training themselves to labor.—(Report of superintendent for 1874–'75 and 1875–'76.)

ASYLUM FOR FEEBLE-MINDED CHILDREN.

This asylum was established in 1865, as an experiment, under the management of the trustees of the Institution for the Education of the Deaf and Dumb. In 1871 it was granted an independent existence, and in 1875 the sum of $185,000 was appropriated for the erection of buildings. The number of pupils in attendance in 1875 was 119; in 1876 it was 86. The average daily attendance during 1875 was 102; during 1876 it was 80. The aggregate number of applications for admission, made to the authorities in a formal manner, since the establishment of the institution is 803, of which only 290 were granted. Of the 290 instructed 52 were discharged able to perform useful labor, 55 to admit a better grade of pupils, and 44 improved. A much greater proportion of applicants will be admitted when the new buildings at Lincoln are ready for occupation. The average age of pupils admitted during the last 22 months was 12$\frac{1}{2}$ years. The school studies are reading, spelling, geography, writing, the simpler rules of arithmetic, drawing, and singing. Calisthenic exercises form an important part of the training. The girls are taught sewing and embroidery and the boys farm work.—(Report of State superintendent, 1875–'76, pp. 298–307.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

This association was organized in 1853, under the name of the State Teachers' Institute, by a few earnest men who determined to inaugurate some policy through which the educational interests of the State should receive proper attention. At this time there was scarcely a permanent teacher in the State, and a large number of the people were unprepared to support a system of free schools. The influence of this association has been felt in all branches of the educational forces of the State, public schools, private schools, colleges, and seminaries, and it has, to a large extent, shaped and directed the school legislation of the State. Since its first organization it has continued to increase in power and influence. The meetings are looked forward to with great interest, not only among teachers, but also among a large class of people who consider the cause of education to be of paramount importance to the best welfare of the State. The exercises are of the most practical character, relating to the efficiency and usefulness of the school system. The colleges, normal schools, universities, academies, private schools, law schools, charitable institutions, and public schools are usually represented, and all participate in the various discussions relating to school work.

The twenty-third annual meeting was h ld in Champaign on the 27th, 28th, and 29th days of December, 1876. The president of the association, E. C. Hewitt, delivered a very able and practical address, in which were considered many important points connected with school affairs, but especially the need for and means of securing a better preparation of teachers for the common schools. The committee appointed in 1875 to consider the subject of the coöperation of the high school and college reported at this meeting. The report stated that in their judgment colleges should substantially agree upon requirements for admission and should insist upon at least a required minimum. The committee also submitted a scheme of preparatory studies with equivalents and suggestions as to the arrangement of the collegiate course. The report of the committee was adopted.—(State superintendent's report, 1875–'76, pp. 331–347.)

COUNTY SUPERINTENDENTS' ASSOCIATION.

This association was organized some 12 years ago, and has held meetings since then at various times, the effect of which has been to largely unify the work of supervision and to create an enthusiasm among these officers which could not otherwise have been obtained. The annual meeting for 1876 was held at Champaign, December 26 and 27.—(State report, 1875–'76, p. 349.)

LIST OF SCHOOL OFFICIALS IN ILLINOIS.

Hon. S. M. Etter, *State superintendent of public instruction and member ex officio of State board, Springfield.*

[Term, January, 1875, to January, 1879.]

STATE BOARD OF EDUCATION, IN CHARGE OF NORMAL UNIVERSITY.

Members.	Expiration of term.	Post-office.
Hon. Samuel W. Moulton	1881	Shelbyville.
Hon. R. S. Canby	1881	Olney.
George W. Clark	1881	Chicago.
William H. Hill	1881	Pontiac.
J. C. Knickerbocker	1881	Chicago.
Hon. Charles F. Noetling	1881	Belleville.
Hon. William H. Greene	1879	Cairo.
Dr. Calvin Goudy	1879	Taylorville.
Thomas R. Leal	1879	Urbana.
E. A. Gastman	1879	Decatur.
Joseph Carter	1879	Normal.
B. G. Roots	1877	Tamaroa.
E. L. Wells	1877	Oregon.
N. E. Worthington	1877	Peoria.

List of school officials in Illinois—Continued.

COUNTY SUPERINTENDENTS.

[Term, January 1, 1873, to December 1, 1877.]

County.	Superintendent.	Post-office.
Adams	John H. Black	Quincy.
Alexander	Mrs. Phœbe A. Taylor	Cairo.
Bond	Rev. Thomas W. Haynes	Pocahontas.
Boone	Mrs. Mary E. Crary	Belvidere.
Brown	James P. Amonett	Mount Sterling.
Bureau	Jacob Miller	Princeton.
Calhoun	James McNabb	Hardin.
Carroll	James E. Millard	Lanark.
Cass	John Gore	Virginia.
Champaign	S. L. Wilson	Champaign.
Christian	Robert W. Orr	Taylorville.
Clark	Edward Pearce	Marshall.
Clay	George W. Smith	Louisville.
Clinton	Philip Bottler	Carlyle.
Coles	T. J. Lee	Loxa.
Cook	George D. Plant	173 East Randolph street, Chicago.
Crawford	Presly G. Bradberry	Robinson.
Cumberland	Thomas C. Killie	Greenup.
De Kalb	Horace P. Hall	Sycamore.
De Witt	Miss Mary S. Welch	Clinton.
Douglas	J. W. King	Newman.
Du Page	Charles W. Richmond	Naperville.
Edgar	Rufus S. Cusick	Paris.
Edwards	Levinus Harris	Albion.
Effingham	Owen Scott	Effingham.
Fayette	Benjamin F. Shipley	Vandalia.
Ford	R. N. Gorsuch	Button.
Franklin	J. W. Ross	Benton.
Fulton	Vincent M. Grewell	Ipava.
Gallatin	Thomas J. Cooper	Shawneetown.
Green	Mrs. Catherine L. Hopkins	Carrollton.
Grundy	Rev. John Higby	Gardner.
Hamilton	John P. Stelle	McLeansboro'.
Hancock	Rev. William Griffin	Carthage.
Hardin	Marshall Rose	Elizabethtown.
Henderson	Rev. James McArthur	Olena.
Henry	Benjamin F. Barge	Geneseo.
Iroquois	David Kerr	Gilman.
Jackson	L. H. Redd	De Soto.
Jasper	Calvin S. James	Newton.
Jefferson	John D. Williams	Mount Vernon.
Jersey	William H. Lynn	Jerseyville.
Jo Daviess	Robert Brand	Galena.
Johnson	Thomas G. Farris	Vienna.
Kane	Charles E. Mann	St. Charles.
Kankakee	Miss Nettie M. Sinclair	Kankakee.
Kendall	John R. Marshall	Yorkville.
Knox	Miss Mary A. West	Galesburg.
Lake	John P. Manchester	Waukegan.
La Salle	Rinaldo Williams	Farm Ridge.
Lawrence	F. W. Fox	Bridgeport.
Lee	Daniel Carey	Rochelle.
Livingston	M. Tombaugh	Odell.
Logan	James G. Chalfant	Lincoln.
Macon	Simon P. Nickey	Oakley.
Macoupin	John S. Kenyon	Virden.
Madison	A. A. Suppiger	Highland.
Marion	James W. Primmer	Sandoval.
Marshall	Charles S. Edwards, jr	Sparland.
Mason	Solomon M. Badger	Mason City.
Massac	Henry Armstrong	Metropolis.
McDonough	John M. Dunsworth	Colchester.
McHenry	William Nickle	Ringwood.
McLean	W. H. Smith	Bloomington.
Menard	R. D. Miller	Petersburg.
Mercer	Miss Amanda E. Frazier	Aledo.
Monroe	William H. Hilyare	Chalfin Bridge.
Montgomery	Rev. Francis Springer	Hillsboro'.
Morgan	Henry Higgins	Jacksonville.
Moultrie	James K. P. Rose	Sullivan.
Ogle	Edward L. Wells	Oregon.

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

The Indiana Schools, and the Men Who Have Worked in Them; edited by James H. Smart, A. M., State superintendent of public instruction; constitutions of 1816 and 1851; school law of 1873. The first named work has been freely drawn upon.

EARLY VOLUNTARY FREE SCHOOLS.

The school system of Indiana is the result of a growth of less than 25 years. The few common schools scattered over the State prior to the adoption of the constitution of 1852 depended mainly on local voluntary enterprise, and formed in no sense a State system. The people were permitted to open and maintain schools, but were not compelled to do so. No State tax was levied and no officers were made responsible to the State for the establishment and supervision of a general system of schools which should be supported by all and open to all.

LEGISLATION UNDER THE FIRST CONSTITUTION.

The first State constitution, adopted in 1816, made it the duty of the general assembly "to provide by law for a general system of education ascending in a regular gradation from township schools to a State university, wherein tuition shall be gratis and equally open to all." The founding of such a system, however, was delayed until many years after this by want of money, sparseness of population, mismanagement of school funds, opposition from a few, and indifference on the part of many. Between the years 1816 and 1820 several laws were passed for the incorporation of academies and seminaries, and in 1821, by a resolution of the general assembly, a committee was appointed to draft and present to the next legislature a bill for a general system of education, in which they were to guard particularly against "any distinction between the rich and poor." The suggestions of the committee thus appointed went to mould the first general school law of the State. This law provided for the election by the people of school trustees, who were vested with the general control of school lands and schools and the examination of teachers. Under it schools were occasionally established, continuing two or three months and sustained by rate bills; but the attainment of the much desired object, the establishment of free schools, was not reached until after the adoption of the new constitution in 1851. Until then, school officers could do little more than encourage schools. They possessed neither means nor authority to build school-houses or to establish schools. They could not levy a tax to build school-houses except by special permission of the district, and even then the amount of money appropriated was limited by the legislature of 1834 to $50 for each school-house.

LEGISLATION UNDER THE SECOND CONSTITUTION.

The new constitutional provision for the establishment of "a general and uniform system of common schools, wherein tuition shall be without charge and equally open to all," was accepted in 1851 by a majority vote of more than 80,000. The first law which made it possible to build up a system of State schools worthy the name was approved June 14, 1852. This law was exceedingly liberal and, in many respects, wise. It embodied the principles that the property of the State should educate the children of the State, and that all common schools should be open to the pupils thereof without charge. Trustees were given full charge of the educational affairs of the township. They were empowered to build school-houses, establish graded schools, and employ teachers, as circumstances seemed to require. The law provided for levying and collecting a property tax of 10 cents on each $100; for the consolidation and general management by the State of the school funds; for the election of a State superintendent of public instruction; for the organization of a State board of education, and for the purchase of township libraries, under the direction of the board, levying for that purpose a property tax of a quarter of one mill on each dollar and a poll tax of 25 cents. By section 130 power was given the voters of any township to vote a tax for establishing and sustaining schools and continuing them after the public funds were expended, such tax being limited in amount to 50 cents on each $100 of property and 50 cents on each poll. Another section declared incorporated cities and towns to be school corporations, independent of the townships in which they were situated, entitled to a proportionate amount of school funds, and authorized them to appoint independent trustees, with power to establish graded schools and to levy taxes for their support after the public funds should be exhausted, to build school-houses, etc. These two sections at once charged the whole educational machinery of the State with a new life. School-houses, large and commodious, were erected in the larger cities; graded schools were established in rapid succession; and everywhere enterprise, activity, and the true spirit of educational progress prevailed. Unfortunately, however, in a few years the progress of the schools was checked by contentions concern-

ing the constitutionality of these very sections, and, the supreme court deciding adversely, a blight was left upon the schools for more than a dozen years. It was decided that these sections were repugnant to the constitution, in that they provided for a taxation which was not general and uniform. The graded schools, of which many had gone into successful operation in the larger towns and cities, were too young to withstand such opposition, and were discontinued for a time; but by the energy and determination of teachers and friends of education a movement was inaugurated which in time removed the disturbing elements and secured a reinvigoration of school life.

ADMINISTRATION OF THE SYSTEM.

The first State superintendent of schools, Hon. William Larrabee, was elected in 1852, and began his service November 8 of that year. He served two terms, having been reëlected to the office in 1856. About the close of his first term, in 1854, the Indiana State Teachers' Association was organized, an event which marked the dawn of a new era in educational affairs in the State. The association was organized for the determined purpose of discussing the great fundamental principles of an educational system and the appropriate instrumentalities to be employed, and the results of the discussions and deliberations of this body in the various forms of memorials, petitions, resolutions, and advisory committees have so influenced and guided legislation that for practical wisdom the present Indiana school system has no superior among the States.

The second State superintendent was Hon. Caleb Mills, a zealous advocate of free schools, November 8, 1854, to February, 1857. Mr. Mills had for many years taken an active part in the educational agitation which at last resulted in the establishment of the free school system. During his official term of two years and three months, Mr. Mills made three reports, in which were elaborately discussed many topics of vital importance to the success of the public school system. About the close of his term of office, at the second meeting of the State Teachers' Association, was established the Indiana School Journal, a periodical which has always advocated the fittest legislation for common schools and persistently pressed lawmakers to a sense of duty.

Mr. Larrabee, as before stated, succeeded him, serving for two years, from the second Tuesday of February, 1857.

Hon. Samuel L. Rugg, a native of Oneida County, New York, was superintendent of public instruction for the State from the second Monday of February, 1859, to 1861, and again from November 21, 1862, to 1865, under a new school law changing the time of assuming office. Near the close of his last term he united very cordially with his successor in efforts to increase the usefulness of the school system by securing proper legislation.

Hon. Miles J. Fletcher, a native of Indiana, succeeded Mr. Rugg to the office of State superintendent, February 14, 1861. Entering upon his duties with the enthusiasm for which he was noted, he bade fair to accomplish much valuable work; but during the civil war was called away much of his time to assist in organizing regiments that were preparing for the field. He was killed in a railroad accident, May 10, 1862, while on an errand of mercy to sick and wounded soldiers. The unexpired term made vacant by his death was filled by Hon. Samuel K. Hoshour, Mr. Rugg, as before said, succeeding him.

Hon. George W. Hoss, a native of Ohio, and a graduate of Greencastle College Indiana, was elected in 1864 and reëlected in 1866 as State superintendent of public instruction, serving from 1865 to October, 1868, when he resigned. Mr. Hoss had been constantly engaged in educational work in various capacities since his graduation in 1850. He was one of the pioneer institute workers of the State and an active member of the State Teachers' Association, which he helped to organize in 1854. He was also editor of the Indiana School Journal from 1862 to 1871. As State superintendent, he aided in securing the passage of the normal school bill and the reënactment of the law permitting local taxation for the support of the public schools.

During the superintendency of Mr. Hoss a great change for the better was wrought in the prospects of the free public schools of the State by the passage of the school law of 1865, a result due to the long continued efforts of the friends of education, and which breathed life and hope into the whole educational system. One of its sections provided for the establishment of teachers' institutes, and required the appropriation of the sum of $50 annually in each county for their support. This provision gave a new impulse to the cause of education, and one which, reaching the entire system of State schools, excited energetic activity along its course. The county teachers' institute in Indiana has proved to be the engine of power by which the teachers, the common schools, and the State have been elevated. No other one instrumentality, it is believed, has done so much as this to raise the standard of teaching, to popularize the public schools, to establish among the masses a healthy educational sentiment, and to create a thirst for knowledge.

In this connection it may be proper to remark that important measures did not always originate with those who stood at the head of the school system, though gen-

erally seconded by these. The most important measures in the school legislation were organized by the teachers of the State. In 1855 their association appointed a committee to memorialize the legislature with reference to the establishment of normal schools, and this was followed by repeated discussions, resolutions, and the appointment of conference committees at almost every annual session of the association for ten consecutive years. The several and successive State superintendents of public instruction, for an equal number of years, presented in their annual reports elaborate and exhaustive arguments and statistics urging upon the general assembly the necessity of making some provision for the better education of teachers. By the gratuitous efforts of individual teachers a State normal institute was organized in 1865; and this one was followed by others, which did much to stimulate the sentiment in favor of normal schools. In December, 1865, the general assembly, assenting to the demands of this sentiment, established a State normal school, locating it at Terre Haute, where, in buildings that cost $179,000, it has since been in successful operation.

The successor of Mr. Hoss in the office of State superintendent was Hon. Barnabas C. Hobbs, a native of the State and a life-long teacher. At the time of his election Mr. Hobbs was president of Earlham College. He was an early member of the State Teachers' Association and a strong advocate of normal schools. During his term of office — October, 1868, to March 15, 1871 — he advocated and succeeded in securing the establishment by the State of a reform school for juvenile offenders. Other important legislative enactments during this term were the provision of 1869 for the separate education of colored children and the law of the same year empowering school trustees to issue bonds for building purposes.

Mr. Hobbs was succeeded, March 15, in the office of superintendent by Hon. Milton B. Hopkins, a native of Kentucky, but for many years one of the prominent educators of Indiana. Mr. Hopkins had been for 38 years engaged in the kindred professions of teacher, preacher, and editor. He was a man of great sociability, courtesy, and politeness, and was eminently successful in enlisting county officers in the work of education. He was elected superintendent in 1870 for the term reaching from 1871 to 1873, and reëlected in 1872 for that from 1873 to 1875. He died August 16, 1874, and his son, Hon. A. C. Hopkins, filled the unexpired term so caused, from August 20, 1874, to March 15, 1875, when Hon. James H. Smart came into office.

In 1873 the office of county superintendent was created and the general management of the county schools placed under the control of this officer. The same law provided for a county board of education, to consist of the county superintendent, the trustees of the townships, and the school trustees of the towns and cities of the county. It also made provision for holding township institutes or model schools for the improvement of teachers, setting apart for this purpose at least one Saturday in each month; a provision which results in much good for the schools.

Hon. James H. Smart, M. A., the present incumbent of the office, is a native of New Hampshire, where he was educated with especial reference to the profession of teaching, in which he has been engaged nearly 18 years. He was for 10 years superintendent of public schools for Fort Wayne. He was also a member of the State board of education, and in 1873 was president of the State Teachers' Association. In 1874 he was elected State superintendent of schools, entering on duty, according to the law, March 15, 1875, and in the same year Dartmouth College conferred on him the honorary degree of master of arts. In the autumnal election of 1876 he was chosen for a second term.

OFFICERS AND INSTITUTIONS OF THE SCHOOL SYSTEM.

The officers of the Indiana school system at present are as follows:

(1) State superintendent of public instruction, elected by the people for a term of two years from March 18 succeeding the general election.

(2) State board of education, composed of the State superintendent, the governor of the State, the presidents of the State university and of the State normal school, and the superintendents of public schools in the three largest cities in the State.

(3) County superintendents, appointed by the county commissioners biennially, in June.

(4) Township trustees, elected by the people for terms of two years, at the general election.

(5) City and town trustees, composing boards of three members each, appointed by the city council or town trustees, one member retiring annually in June.

(6) School commissioners for cities above 30,000 inhabitants, elected by the people at an election held for the purpose annually on the second Saturday in June, one for each ward or school district.

The State University, at Bloomington, organized in 1834, stands at the head of the public school system. It is liberally endowed by the State, and maintains a law and a medical school. The agricultural school, which is in its infancy, is located at Lafayette. and is called the Purdue University.

THE SCHOOL FUND.

The early founders of the school system in Indiana planned more wisely than they knew in providing for a cumulative school fund, which is now larger than that possessed by any other State by more than $2,000,000. This immense fund, now approximating $9,000,000, and which is the solid rock in the centre of the foundation of the school system, has accumulated from the following sources:

(1) The congressional township fund, derived from the sale of sixteenth section lands in each township; (2) the bank tax fund and (3) the sinking fund, both which are derived from moneys set apart by the State for educational purposes in the law which chartered the State Bank of Indiana in 1834, the former having yielded about $80,000 and the latter over $5,000,000; (4) the surplus revenue fund; (5) the saline fund, obtained from the sale of salt springs and the lands belonging to them; (6) the swamp land fund, the proceeds of the sales of swamp lands granted by Congress to the State and by it set apart for common schools; (7) the seminary fund, resulting from a sale of all county seminaries and property, ordered by the legislature in 1852; and (8) the contingent fund, derived from fines, forfeitures, escheats, etc.

The magnificent fund resulting from these various sources, in the words of the law, "may be increased but shall never be diminished; and the income thereof shall be inviolably appropriated to the support of common schools, and to no other purpose whatever."

ELEMENTARY INSTRUCTION.

REPORT OF SUPERINTENDENT SMART.

The report of the State superintendent of instruction for the years 1874-'75 and 1875-'76, an interesting document in all respects, has one especially noticeable feature. This is a series of statistical maps, exhibiting by counties (1) the number and distribution of the schools, 9,307 in all; (2) the enumeration of children in each county, 679,230; (3) the pupils admitted to the schools, 516,270; (4) the number of teachers employed, 13,411; (5) the number of school-houses, 9,434; (6) the number of school districts, 9,310; (7) the average length of the school year in each county, the lowest figure being 97, the highest 165, the average for the State 123 days; (8) the number of new school-houses erected, 14 in 1 county, 12 in another, 11 in 2 more, and so on down through 10, 9, 8, &c., to 1 and 0, this last, however, marking but 2 counties in the State, and the total reaching 454; (9) the location of higher institutions, such as normal schools, polytechnic institutes, colleges, and universities; (10) the distribution of 49 cities and 206 towns, in which especially the graded system of instruction flourishes. The series gives a bird's-eye view of almost everything connected with education in the State, and it is much to be hoped that a like plan may be adopted generally, as a means of showing, much better than mere columned figures can, which are the dark spots, which the bright ones, in the educational condition of each State.

Another somewhat kindred feature of the report is a set of comparative tables, showing by semi-decades the growth of education in each county since 1855 in such particulars as the length of school in days, the number of teachers, the amount paid these, and the attendance at school. The exhibition is a very creditable one, almost every county being shown to have advanced, with great steadiness, to quite a gratifying point.

TOPICS DISCUSSED IN THE REPORT.

Among the topics to which Mr. Smart devotes attention, besides the ones embraced in the statistical summary first given, are the following:

(1) *The amount of illiteracy in the State.*— Under this head it is shown that whereas the census of 1870 presented 26,783 children between 10 and 21 who could neither read nor write, a separate enumeration of all illiterates between these ages in 1875 made out only 4,922 in all the State; a result which, the superintendent argues, indicates either that the census did Indiana great injustice or that its school teachers have been doing right royal work in the years since it was taken.

(2) *Schools for colored children.*— Respecting these, Mr. Smart says that 14 counties out of 92 enumerated no colored children, and 13 others less than 10 each; that nearly two-thirds of all the colored children are found in 10 counties, lying mostly along the southern border of the State; that in these 10 counties the per cent. of enrolment in the schools is 66, while elsewhere in the State it averages 72; and that a comparison of statistics shows that 76 per cent. of all the white children and 68 per cent. of all the colored children of the State were enrolled in public schools in 1876. The law requires that, where enough colored children can be found in any locality to form a separate school, one shall be organized for them. But where there are not enough for this the appropriation to them of their proportion of the school funds rarely results in any effective education. And as the State and the community cannot afford to have any portion of its children grow up in ignorance, Mr. Smart recommends an alteration of the law to allow the colored children of school age to attend the established schools

where there are not a sufficient number within reasonable distance to warrant the opening of a separate school for them.

(3) *The means of making country schools more effective.*— Admitting that country schools labor generally under necessary disadvantages which must keep them in many things below the grade of town or city schools, Mr. Smart still urges that much may be done toward giving country boys and girls school privileges more nearly equal to those enjoyed in towns. The means to this are, in his judgment, (1) consolidation of sparsely settled or small districts, which he proposes to effect by closing a portion of the schools during at least a part of the year and distributing the pupils among the remaining ones for that time, thus making possible a better grading and instruction without increase of cost; (2) longer terms of school, to be effected by increased local taxation, which will enable country districts to have a lengthened winter term for the benefit of older children who must work in summer, and a lengthened summer one for the benefit of younger children who cannot brave the cold and snow of winter on the way to school; (3) township graded schools, by means of which in a central position in a township scholars more advanced than others may be collected into one large class under one teacher, instead of distracting the attention and using up the time of many teachers in the primary district schools; (4) better teachers, who may be secured by greater care on the part of trustees in selecting, and be retained by having fuller wages paid them; (5) more effective county supervision, which should extend not only to the character and quality of the instruction in the country schools, but also to the condition of the buildings, the supply of furniture and apparatus, and the proper fencing and keeping of the grounds, since only in comfortable and well ventilated buildings, duly supplied with good furniture and apparatus, can pupils be expected to study to advantage, and only in grounds well cared for and kept clean can they be induced to take exercise needful for healthful studying power.—(Report, pp. 78–102.)

COUNTY SUPERINTENDENCY.

Great credit is due to Mr. Walter S. Smith, of Marion County, for carrying through the courts the question of the constitutionality of the law of 1875, which substantially abolished the county superintendency. After a long contest the law was declared by the supreme court of the State unconstitutional, and thus the superintendency remains intact under the previous law of 1873.—(Reports in Indiana School Journal for July and August, 1876, and State report for 1875–'76, p. 94.)

KINDERGARTEN.

One school of this class, established in 1875, at Indianapolis, conducted by Alice Chapin and an assistant, reports an attendance of 16 pupils from 5 to 7 years of age. The effect of this training upon the mental and moral development of her pupils, the teacher reports, has been astonishing; the perceptive faculties have been much quickened; accuracy of thought and expression has been remarkable; language good, and kindness to each other uniform.—(Return, 1877.)

STATE EDUCATIONAL EXHIBIT AT THE CENTENNIAL.

Among the products sent by Indiana to the Centennial Exhibition were, from the schools of the State, 175 volumes of examination papers, specimens of drawing and penmanship, collections in natural history, and a great variety of other work, from at least 15,000 school children. Ten models and many photographs of representative school buildings were also sent. This material was supplemented by a great number of statistical charts, representing the condition and growth of the school system of the State and of the higher institutions of learning. Fifty cities and towns, 40 counties, and 13 colleges were represented in the exhibit.

The success of the exhibit was quite marked, and it was commended as being one of the best in the Exposition. Of the value of the exhibit to the schools there can be but one opinion, and it has developed a just State pride in the school system on the part of the citizens of Indiana while doing much to remove the erroneous opinion that the State is behind other States in educational advantages. But the reflex influence of the exhibit upon the teachers and schools is one of its most valuable results. The effort made by the children in the preparation of the material for exhibition was alone worth many times the cost of the exhibit, furnishing to pupils, as it did, an incentive that produced their best efforts, and showing teachers what good work is possible.—(Report of State superintendent, pp. 141, 142.)

CITY SCHOOL SYSTEMS.

HUNTINGTON.

Officers.— A board of school trustees of 3 members, and a city superintendent of schools.

Statistics.— Population of city, 4,500; children of school age, 1,267; enrolled in city public schools, 579; in other schools, 336; not attending any school, 352. Average

number belonging in city schools, 456; average daily attendance, 436; per cent. of attendance, 95.6; increase, 2.6. Number of cases of tardiness, 66; decrease, 143. Total cost of the schools, $6,566.70.

Remarks.—The regularity in the attendance of pupils during the year 1875–'76 has been remarkable. There were only 66 cases of tardiness against 209 the previous year. Parents of pupils and the citizens generally have manifested an interest in the schools by frequent visits. The whole number of these visits during the year was 1,318, an average of about 7 each day.

No spelling books nor copy books are used in these schools, and, after two years' trial of this plan, the results have been found to be highly satisfactory. Any school which uses copy books is challenged to produce specimens from all its pupils which will excel those of Huntington scholars in neatness, beauty, and legibility.

Owing to the crowded condition of their room, the pupils of grade G were divided into two classes, one to attend in the morning, the other in the afternoon. The result was an improvement of 21 per cent. in the attendance and an increase in the advancement of the pupils of at least 10 per cent.

The condition of the high school is not so satisfactory as that of the lower grades. A variety of causes, which it is hoped may be removed next year, have hindered the progress of the pupils. The number in attendance was 25.—(Report for 1875–'76 of board of school trustees and of Superintendent James Baldwin.)

INDIANAPOLIS.

Officers.—A board of school commissioners of — members, one-third changed each year, and a city superintendent of schools, with assistant superintendents, male and female.

Statistics.—Estimated population of the city, 100,000; children of school age, (6–20,) 21,255; enrolled in public schools, 11,392, besides an estimated enrolment in private and parochial schools of 2,100. Average daily attendance, 8,121. Number of school buildings, 25; of rooms for study and recitation, 188; of rooms for recitation only, 25; sittings for study, 10,100; teachers employed in primary schools, 112; in grammar schools, 54; in high schools, 16; in normal school, 1; in evening schools, 20; total, 203. Salaries of teachers, from primary to high school, including principal of the latter, $400 to $2,000; of superintendent, $2,800; of male assistant superintendents, $1,900; of female assistants, $1,200. Receipts for city schools, $357,519; expenditures, $287,731. Expense per capita, based on average monthly attendance, $21.

Notes.—Special teachers of music, drawing, and penmanship have been employed at liberal salaries, implying skilled and systematic teaching in these lines; but no published report has come to hand indicating the progress made. Evening schools under the charge of 20 teachers have had in them 872 enrolled pupils, with an average attendance of 576. The high schools, which have employed 16 teachers, including principals, have had in them 198 enrolled male pupils and 300 female, (total, 498,) with an average attendance of 435.—(Return of Superintendent George P. Brown to Bureau of Education for 1876.)

The Indiana School Journal for March, 1876, mentions the death, February 7, 1876, of Miss Kate Steere, who had been for several years the respected and efficient principal of one of the largest graded schools of the city system. At a subsequent meeting of the teachers, Superintendent Brown spoke in exalted terms of her work and worth.

LAFAYETTE.

Officers.—A board of trustees of 3 members and a city superintendent of schools.

Statistics.—Population of city, 20,000; children of school age, (6–20,) 6,041; enrolled in public schools, 2,770; average number belonging, 1,773; average daily attendance, 1,631; per cent. of attendance, based on average number belonging, 92. School buildings, 6; sittings in these, 1,681. Teachers employed in primary grades, 20; grammar grades, 22; in high school, 7; total, 49; pay of these, $400 to $1,500; of superintendent, $1,900. Total receipts for schools, including balance of $41,009 from previous year, $102,521; expenditures, $43,905. Cost per capita, based on average daily attendance and including all expenses, $22.57; including supervision and instruction only, $14.75.

Notes.—In a written return from the superintendent, there appear evening schools taught in 4 rooms and apparently under the charge of 4 teachers; but no other information concerning these is given. In the same return appear special teachers of music and drawing, implying that these are systematically taught, though here again there is no further information.

In the high school 7 teachers in all have been employed, including the principal, and 92 pupils have been enrolled.*—(Return of Superintendent J. T. Merrill and report of trustees for 1875–'76.)

* The Indiana School Journal for May, 1876, says, page 237: "Prof. J. A. Blackburn" [principal of this high school] "died recently at the home of his parents in Michigan. He was highly respected by all who knew him, and leaves many warm friends in Lafayette and other cities of the State."

OTHER CITIES.

For statistics of the school systems in other cities of the State, see their returns in Table II, at the close of this volume.

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL.

This school for the professional training of teachers, organized in 1870 and located at Terre Haute, is under the control of a board of 5 trustees, 4 of whom are appointed for 3 years by the governor, with the consent of the senate, the fifth member being the State superintendent of public instruction ex officio. It has property valued at $250,000; no endowment, but an annual appropriation of $17,000 from the State.

The enrolment for the year 1876 in the normal department was 404, these students representing between 80 and 90 counties of the State. The model or training school, embracing 8 grades, had an enrolment of 183. Since the organization of the school, 1,130 persons have received instruction in the normal department. To secure admission, it is required that applicants pass a fair examination in reading, spelling, geography, and in arithmetic through percentage. They must write a legible hand and be able to analyze and parse simple sentences. Of the 1,130 students admitted under these conditions, 65 have graduated and are rendering efficient service in the State, while hundreds of undergraduates are doing likewise, according to the measure of their ability.—(Report of State superintendent, pp. 109–123.)

Provision for the establishment of this school was first made by the legislature of the State in 1865, after 11 years of continuous effort by the friends of education to secure such action. It was located at Terre Haute in consideration of the donation to it by that city of $50,000 in money and a site worth $25,000. The cost of the building was over $200,000. The school opened in 1870, with 21 pupils, and its total enrolment since has been 1,160; number of graduates, 49. During the five years of its existence, it made itself felt powerfully among the educational appliances of the State.—(The Schools of Indiana, pp. 126, 127.)

Other normal schools have been established by private enterprise. There is a large one at Valparaiso, and there are also several training schools connected with high schools. The State university has had, at several times, what was called a normal department, but such classes were finally abandoned in 1870, upon the opening of the State normal school.—(The Schools of Indiana, pp. 126, 127.)

NORTHERN INDIANA NORMAL SCHOOL.

The Northern Indiana Normal School, at Valparaiso, organized in 1873, is now the largest normal school in the United States. The total attendance during the year 1877 was 2,300, of whom 1,400 were men and 900 women, and there were 33 graduates, of whom 24 engaged in teaching. The school has a library of 3,000 volumes, a collection of models, casts, apparatus, and examples for free hand drawing, a chemical laboratory, a philosophical cabinet and apparatus, a museum of natural history, and a gymnasium. In consequence of the great demand for German and drawing these branches have been placed, during the last year, with the regular studies. Instrumental music, telegraphy, and phonography are extra branches. Tuition is $32 a year. Good board and furnished room cost $2.50 a week. Many years of careful study have been given to the organization, classification, and furnishing of every department of the school, the aim having been to supply it with every convenience necessary for the acquirement of a first class education, and yet place the expense within the reach of all. The course of study is completed in 3 years.—(Catalogue and circulars, with return to the United States Bureau of Education, 1876–'77.)

OTHER NORMAL SCHOOLS.

Elkhart County Normal and Classical School, Goshen, organized in 1874, reports an attendance in its normal department of 140, of whom 80 are men and 60 are women. Graduates in 1876, 5. Number of years in course, 4.—(Return for 1876.)

There are also normal departments belonging to the course of instruction in Bedford, Smithson, Fort Wayne, and Union Christian Colleges and Indiana Asbury University, affording a more or less complete course of training for teachers.—(College catalogues and circulars.)

TEACHERS' INSTITUTES.

County institutes.—The law requires the various county superintendents to hold an institute in their respective counties once at least each year for the instruction of the teachers therein. These institutes generally remain in session 5 days. Instruction is given in the various branches required by law, and this is supplemented by lectures and discussions upon various educational topics. There were 91 of these insti-

tutes held in 1875, at which there was an attendance of 11,159 teachers and persons preparing to become such, of whom 6,059 were men and 5,100 were women. The total cost of these institutes was $5,725.27; aggregate length of session in days, 456; number of evening lectures delivered, 206.—(Report, pp. 39, 40, 89.)

Township institutes.—The school law provides that at least one Saturday in each month shall be devoted to township institutes, or model schools for the improvement of teachers, and they may be held during two Saturdays, at the discretion of the township trustee. Teachers must attend these institutes, unless prevented by sickness, or forfeit one day's wages for every day's absence therefrom. These institutes are largely attended, are rapidly growing in favor, and, the State superintendent believes, will ultimately prove to be an important agency in the advancement of the country schools. The number held in 1875 was 4,080; in 1876 it was 4,375.—(Report, pp. 40, 90.)

Private normal institutes.—In addition to the county and township institutes already mentioned as provided for by law, private normal institutes were held in 52 counties of the State, and had an enrolment of 2,685 members, of whom 1,336 were men and 1,349 women. The average attendance was 2,084; number of instructors, 136; aggregate length of sessions in weeks, 346; average length of session, 5½ weeks; average cost per pupil per week, 93 cents; number of public or evening lectures, 136.—(State superintendent's report for the years 1875 and 1876, p. 40.)

SCHOOL JOURNALS.

The Northern Indiana Teacher, after a useful existence of about 3 years, was merged in the Indiana School Journal, July, 1876. The latter journal, resisting an effort made at the close of that year to consolidate all the northwestern school papers into one, continues its work, and remains the official organ of the State Teachers' Association and of the superintendent of public instruction.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Public high schools are reported in 45 cities and towns in the State, with a total enrolment of 3,145 pupils, under 115 regular and 25 special teachers. As far as the sex of pupils was reported, 1,106 were boys and 1,599 girls. The high school at Indianapolis, with 440 pupils, did not report this item. The course in most of these schools is of 4 years; in 15 it continues only 3; and in 2, Bloomington and Greencastle, only 2 years. Arrangements are made between a number of these schools and the State University, by which graduates of the schools are admitted to the freshman class of the university without further examination than that sustained at the close of the school course.—(State report for 1875–'76, pp. 112, 113, with statement xii of appendix.)

PRIVATE SECONDARY SCHOOLS.

In 1 school for boys, 2 for girls, and 9 for both sexes, outside of the public school system, there have been reported to this Bureau 1,308 pupils under 50 teachers. Of these only 70 are returned as engaged in classical studies, 60 as in modern languages, 16 as preparing for a classical course in college, and 7 for a scientific course. Drawing is taught in 3 of these schools, vocal music in 6, and instrumental music in 4. Chemical laboratories are reported by 3, philosophical apparatus by 7, and libraries of 17 to 2,000 volumes by 8, the whole number of volumes in such libraries reaching 5,317.—(Returns to Bureau of Education for 1876.)

PREPARATORY SCHOOLS AND DEPARTMENTS.

No schools especially devoted to the preparation of students for college report their statistics for 1876, except the preparatory departments of 15 colleges and universities. In these were 42 instructors, exclusive of college professors, having under them 1,444 pupils, 594 of them in preparation for a classical collegiate and 217 for a scientific collegiate course.—(Returns to the Bureau of Education for 1876.)

BUSINESS COLLEGES.

Five of these report to the Bureau 18 teachers and 1,574 pupils, of whom 50 were in phonography, 127 in telegraphy, 84 in German, and 12 in French. Two of the institutions teach common English and correspondence; 3, penmanship and book-keeping; 2, banking; 3, commercial law; 1, political economy; 2, life insurance; 2, phonography, and 4 telegraphy.—(Returns to Bureau of Education for 1876.)

SUPERIOR INSTRUCTION.

INDIANA STATE UNIVERSITY, BLOOMINGTON.

The university comprises collegiate, preparatory, law, and medical departments, the first embracing classical and scientific courses. It is under the control of a board of 8 trustees, appointed to serve four years by the State board of education; has property

valued at $140,000, and an endowment of $120,000, yielding an annual income of $7,000, and receives from the State $23,000 annually. No tuition fee is required of any student in any department of this university, and board and lodging can be had for $3 or $4 per week. Young women are admitted on the same terms as young men and are entitled to the same rights and privileges.

The university buildings are in the collegiate Gothic style, simply and truly carried out. The building fronting College avenue is 145 feet front, and consists of a centre building 60 feet by 53, with wings, each 38 by 26, the whole 3 stories high. The new building recently completed, fronting the west, is 130 by 50 feet.

By the purchase of the Owen cabinet, containing about 85,000 specimens, and of the entire university series of casts from Professor Ward, of Rochester, N. Y., the museum now numbers about 100,000 specimens, and claims to be equal in value to any in the West. Nearly all European countries are largely represented by suites of characteristic rocks and fossils. There are at present over 6,000 volumes in the library, with an annual appropriation for its increase. The law library included in these has been largely increased by purchase and by a valuable gift from a citizen of Fort Wayne.—(State superintendent's report, pp. 109–119.)

OTHER COLLEGES.

Bedford College, Bedford, (Christian,) has six courses of study, the classical, scientific, normal, commercial, Bible course, and course for women. The latter is as good as that afforded by the best seminaries. In the normal course, a thorough preparation is given for teaching. There is also an extra normal class of five weeks held during vacation.—(Circular, 1876–'77.)

Concordia College, Fort Wayne, (Evangelical Lutheran,) has an arrangement of studies peculiar to German schools, uniting with the common and high school English branches such an amount of training in Greek, Latin, Hebrew, French, and German as, in this country, is found only in a collegiate curriculum. The course lasts 7 years, and is especially intended to fit pupils for the Theological Seminary of the Lutheran Church at St. Louis.—(Catalogue, 1875–'76.)

Earlham College, Richmond, (Friends,) is for young men and women, and embraces preparatory and collegiate departments, the latter with classical and scientific courses.—(Catalogue, 1875–'76.)

Fort Wayne College, Fort Wayne, (Methodist Episcopal,) is for both sexes, and has collegiate, normal, commercial, art, academic, and music departments.—(Circular, 1875–'76.)

Franklin College, Franklin, (Baptist,) admits both men and women to its classes and its faculty. The departments are preparatory, music, painting, and collegiate, the latter including classical, scientific, and English courses.—(Catalogue, 1874–'75.)

Hanover College, Hanover, (Presbyterian,) admits only young men to its course, which includes preparatory and collegiate departments, with classical, scientific, and irregular or elective courses. The scientific now requires for completion the same length of time as the classical, (four years,) all the studies of that course being included except Greek and advanced Latin. In the classical course calculus and German are elective; in the scientific, in the junior year, calculus, Latin, and German are elective.—(Catalogue, 1875–'76.)

Hartsville University, Hartsville, (United Brethren,) admits both sexes. Its departments are collegiate, preparatory, theological, commercial, and musical, the former with classical and scientific courses.—(Catalogue, 1875–'76.)

Indiana Asbury University, Greencastle, (Methodist Episcopal,) embraces in its regular collegiate department a classical and philosophical course, both requiring four years for their completion. The philosophical course has been framed on the basis of the former scientific course, but embraces a more extended study in natural science, Latin, and modern languages, and leads to the degree of bachelor of philosophy. An optional course, composed of studies selected from the two regular courses, may be pursued by students if they so elect. There are also normal and biblical courses. No mention is made this year of the law department which has hitherto existed here. Both sexes are admitted.—(Catalogue, 1875–'76.)

Moore's Hill College, Moore's Hill, (Methodist Episcopal,) offers collegiate, preparatory, and musical departments, the former with classical and scientific courses. Both sexes are admitted.

Northwestern Christian University, Irvington, (Christian,) admits both sexes to its classes. The colleges are of literature, science, business, and the Bible. There is a preparatory department.—(Catalogue, 1875–'76.)

Ridgeville College, Ridgeville, (Free Will Baptist,) offers to both sexes preparatory, classical, scientific, and practical courses. Both classical and scientific courses occupy four years, and the studies of the first two years are identical in both. A peculiarity of the classical course is that the study of languages is attended to later than is usually the case, the first part of the course being largely occupied with studies of a more practical nature and which will be found more useful in case the course be not

completed. Another point is that some of the studies in the departments of mental and moral philosophy and belles lettres, usually crowded into the senior year, are here placed throughout the course from the beginning of the freshman year.—(Catalogue, 1875–'76.)

Smithson College, Logansport, (Universalist,) offers equal privileges to both sexes in its classes and includes in its faculty three women. It claims to be non-sectarian, on the ground that students are permitted to attend the church of their choice. The courses of study are collegiate, preparatory, commercial, philosophical, and normal. The best instruction has been secured in music, painting, and drawing, which are taught as extras.—(College circular, received 1877.)

Union Christian College, Merom, (Christian,) includes in its curriculum academic, classical, scientific, normal, and music departments. The scientific course, as well as the classical, requires 4 years for its completion, its studies being the same as those of the classical, with Latin or French optional and Greek omitted.—(Catalogue, 1876.)

University of Notre Dame, Notre Dame, (Roman Catholic,) is exclusively for young men. Its departments are preparatory, collegiate, commercial, law, and fine arts. A partial course in medicine is provided. The collegiate department embraces classical and scientific courses, the latter requiring for its completion only 3 years. The university is well prepared to give instruction in art. The famous painter Gregori, of Rome, has been engaged to give instruction in oil painting. There are 5 professors of music, an orchestra of 15 pieces, and a brass band of 25 instruments.—(Catalogue, 1874–'75.)

Wabash College, Crawfordsville, (Presbyterian,) is, apparently, only for young men. There are preparatory, collegiate, and English mercantile courses. By an agreement between the legislature of Indiana and the trustees of the college, each county receives a free scholarship for 5 years. There are several other scholarships to aid young men who need help.—(Catalogue, 1875–'76.) Edwin J. Peck, of Indianapolis, lately deceased, has given to this college $15,000 for a library, $50,000 as a permanent endowment fund, $20,000 in trust for the professorship of chemistry, $15,000 for that of natural philosophy and astronomy, and $18,000 to be used in erecting suitable buildings for these departments, making a total of $118,000.—(The Wabash, November, 1876, p. 11.)

The Educational Weekly, of April 26, 1877, states that "De Pauw College, of New Albany, graduates 8 students this year." No further information from this college is at hand.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

PURDUE UNIVERSITY.

This institution, located at La Fayette, is a school of science, as applied to the practical industries of life, including architecture, mining, civil engineering, agriculture, &c. It is under the control of a board of 6 trustees, appointed by the governor for 3 years, 2 of them being nominated by the State board of agriculture and 1 by the State board of horticulture. The institution has property valued at $250,000, and an endowment of $380,000, yielding an annual income of $20,000.

Purdue University as reorganized embraces three departments, the university academy, the college of general science, and special schools of science and technology. The academy has the twofold object of preparing students for admission to the college of general science and of providing elementary instruction in the sciences for those who cannot take a more extended course. The college of general science aims to give a thorough scientific education as a general preparation for industrial pursuits and as an adequate preparation for the special courses in applied science. The special schools which the university is at present prepared to organize are those of agriculture, horticulture, civil engineering, industrial design, physics and mechanics, chemistry, and natural history.—(State report, pp. 109, 128, 129.)

THEOLOGY.

St. Meinrad's Theological Seminary, St. Meinrad, (Roman Catholic,) has a course of study requiring 4 years for its completion, grounds and buildings valued at the sum of $100,000, and a library of 7,000 volumes.—(Return, 1877.)

There are also either theological departments or Bible classes in Bedford College, (Christian,) Hartsville College, (United Brethren,) Indiana Asbury University, (Methodist,) and Northwestern Christian University, (Christian.)

LAW.

The *law department of the State University* has a course of instruction requiring 2 years for its completion, given by means of text books, lectures, and moot courts. Tuition is free in this as well as in all other departments of the university. Students are allowed to attend the recitations and lectures of the collegiate department.—(University catalogue, 1875–'76.)

The *law department of the University of Notre Dame* also offers a 2 years' course of instruction, embracing chiefly ethics, political economy, constitutional and international law, municipal law, law of contracts, equity jurisprudence, criminal law, evidence, pleading, and practice. Students who may not have previously obtained a classical training will have the opportunity to supply this deficiency without extra charge.—(Catalogue, 1874–'75.)

MEDICINE.

At the *Indiana Medical College*, Indianapolis, a course of study is furnished requiring 3 years for its completion. This college has broken off the relationship heretofore existing with the State University, and tuition is no longer free. The college building is centrally situated, convenient and complete in all its appointments, well lighted and well ventilated, and will accommodate over 200 students.—(Catalogue, 1876–'77.)

Medical College, Evansville, also requires a course of 3 years for graduation. Among the advantages enumerated here are the abundant supply and cheapness of anatomical material, extensive hospital and other clinics, a healthful location, and cheap living.—(Annual announcement, 1876–'77.)

College of Physicians and Surgeons, Indianapolis, organized in 1874, has a 2 years' course of study and an attendance of 72 students, of whom 19 have received a degree in letters or science.—(Return, 1877.)

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

The Indiana Institute for the Deaf and Dumb was established by an act of the general assembly in 1844. Large and commodious buildings have been erected, costing not far from $225,000. The annual State appropriation for the institution is about $45,000. The attendance of pupils ranges from 200 to 300 each year. This is an institution of learning, and not an asylum, and all the facilities of the institution have been devoted with marked success to the intellectual improvement of inmates.—(The Schools of Indiana, pp. 170, 171.)

EDUCATION OF THE BLIND.

The Indiana Institute for the Education of the Blind, at Indianapolis, was founded and opened in 1847. The present buildings were erected at a cost of about $100,000, and afford ample accommodations for a large class of pupils; every appliance that modern benevolence can suggest or skill contrive has been brought into requisition for the benefit of pupils. There are two departments: (1) the school in which are taught, in addition to the elementary English branches, algebra, physical and descriptive geography, history, physiology, anatomy, botany, mental, moral, and natural philosophy, and vocal and instrumental music; and (2) the industrial school, where brooms, brushes, carpets, mats, chairs, and baskets are made by the males, while the females are engaged in making bed comforts, spreads, ticks, table covers, and wearing apparel, and in doing all kinds of bead and fancy work.

The entire number of pupils received since the beginning is 521, (283 males and 238 females.) The cost of maintaining the institution is only about $20,000 a year, while the amount of good accomplished in sending out young men and women well prepared to earn a competence is inestimable.—(The Schools of Indiana, pp. 171, 172.)

EDUCATION OF SOLDIERS' ORPHANS.

The Indiana Soldiers' Home, (established just after the close of the war for the care of disabled soldiers, afterwards taking in also sailors and the orphans of these and of soldiers,) is now devoted entirely to the care and education of the orphans. There are in the home 250 children between the ages of 6 and 15 years, who are provided for at the expense of the State and receive a good common school education.—(The Schools of Indiana, pp. 174, 175.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

The Indiana State Teachers' Association was organized at Indianapolis, in December, 1854, on which occasion addresses were delivered by Horace Mann and other eminent educators. The enrolment was 178, representing 33 counties. Up to 1859 the sessions were biennial; after that, annual. The attendance has ranged from 40 to 482 members. The establishment of this association was the dawn of a new era in education in the State. Teachers were aroused and energized. All the advanced movements of the State were here discussed and encouraged, and in many cases directed by the association, not a few originating with it. Institutes, the normal school, the Journal, reform school, colored schools, superintendency in county, city, and State, taxation, school architecture, and almost all possible phases of professional work here received attention and some their chief impulse.—(The Schools of Indiana, pp. 118, 119.)

COUNTY TEACHERS' INSTITUTES.

The institute is an outgrowth of the association. It is professional and technical, while the association is discursive and legislative. The first institute held in the State is believed to have been the one held in Lagrange County in 1846 and presided over by Prof. Rufus Patch. It was attended by 30 members. This was the seed corn of institutes in Indiana, and Mr. Patch brought it from the East.

The Northern Indiana Teachers' Institute held its first session in 1849, about 125 teachers being in attendance. A permanent organization was effected in 1851. In 1853 the name of the organization was changed to the Northern Indiana and Southern Michigan Teachers' Institute. During the next ten years much valuable work was done by this and other voluntary associations of teachers. Among other efforts the State association of the years 1860 to 1864 appointed an institute committee for each congressional district, whose duty it was to hold an institute in each county in the district and report the result to the next session of the association. Until 1865 all this work was voluntary; there was no law requiring the holding of institutes, nor was money appropriated for the purpose. In 1865 a law was passed requiring one to be held in each county at least once a year, and making a small appropriation from the county treasury in aid of them. When attended by 20 teachers, or persons preparing to become such, each institute was allowed $35; when 40 were in attendance, $50 were given. This was the opening of the institute period in Indiana. The first year after the passage of the law 58 counties held institutes, with an aggregate attendance of 3,533. The result was in all parts of the State increased efficiency among teachers as well as a quickening of educational sentiment. They produced, in the opinion of the State superintendent of that period, Mr. Hoss, both larger and better results in proportion to cost than any other agency in the system.—(Schools of Indiana, pp. 120, 122.)

TOWNSHIP INSTITUTES.

Township institutes, like the county gatherings, were at first voluntary efforts. They were first held in 1866, and, continuing to grow in favor and strength, the legislature, in 1873, required them by law to be held at least one Saturday in each month during which the public schools are in progress.—(Schools of Indiana, pp. 122, 123.)

STATE INSTITUTES.

A State institute was first held in 1865, continuing three weeks, with an aggregate attendance of 131. During the three years following, four similar meetings were held in the four quarters of the State, the attendance aggregating 1,469 teachers. The institutes were under the management of a State central committee, appointed by the State Teachers' Association. In 1873 the State board of education held institutes similar to the above.—(Schools of Indiana, p. 123.)

COLLEGIATE ASSOCIATION.

In response to a circular sent them by State Superintendent Hoss, the various college faculties of the State met in conjunction with the State Teachers' Association in 1867 and organized a collegiate association, electing Dr. Cyrus Nutt, of the State university, president. The association held annual meetings from that time until December, 1874, but it never accomplished the work contemplated in its organization, for the reason that college faculties never engaged with any heartiness in its plans. It was, therefore, in 1874, merged in the general association.—(The Schools of Indiana, pp. 119, 120.)

OBITUARY RECORD.

HON. JOHN PURDUE.

John Purdue, benefactor of Purdue University, was born in Pennsylvania, in 1804. At an early age he moved to Ohio, and for several years spent his winters in teaching.

He then removed to Lafayette, Indiana, to engage in trade, and for nearly forty years was connected with important business enterprises in that thriving city. He soon amassed a large fortune and was honored with the appointment of county judge.

When the question of the erection of the State agricultural college, endowed by Congress, was before the general assembly of Indiana, Judge Purdue offered to give $150,000, to be paid in ten equal annual instalments, and to secure the donation of 100 acres of suitable land, on condition that the institution should be located at Lafayette and bear the title of Purdue University. This proposition being accepted, the college was opened under that name in September, 1874. Judge Purdue was connected with it first as trustee and next as advisory trustee until his death, which occurred September 14, 1876, the first day of the third college year, and the first under the administration of President White. He visited the college in the morning of that day, expressing much gratification at the large increase of the number of students; then, returning to his home, died suddenly, probably of heart disease. He was never married, and left no will, but has built himself an ample monument in the institution which bears his name.—(Paper by President E. E. White.)

PROF. THOMAS OLCOTT.

This gentleman, one of the veteran teachers of the State, died suddenly at his home in North Vernon, on the 19th of September, 1876, aged 52. Born in the State in 1824, he made the most of slender early advantages, began to teach at the age of 18, followed the profession for 34 years, rose from district and private schools to a professorship in Moore's Hill College and the principalship of several important city schools, and ever made teaching the delight of his life.—(Indiana School Journal, October, 1876, p. 482.)

PROF. HERBERT E. COPELAND.

Born at Stony Creek, Mich., May 7, 1849, this brilliant youth prepared for college in the high school at Ypsilanti, and in 1868 entered the University of Wisconsin. He here received from Professor Chadbourne a bent in the direction of natural history and botany, and thenceforth gave his mind largely to these studies. Drawn in 1870 to Cornell University by the advantages for scientific study offered there, he graduated with high honor in 1872 and took charge of Ravenswood Academy, near Chicago. He went thence to the State Normal School of Wisconsin, at Whitewater, as professor of natural history in 1873, resigned in 1875 to take charge of the same work in the schools of Indianapolis, and continued there till his death, December 12, 1876. He discovered one of the most beautiful of our river fishes, published many interesting papers on his favorite sciences, and incurred his death at last in his eager pursuit of these.—(Indiana School Journal, January, 1877, pp. 38-40.)

LIST OF SCHOOL OFFICIALS IN INDIANA.

Hon. JAMES H. SMART, *State superintendent of public instruction, ex officio president.*

[Second term, 1877–'79.]

STATE BOARD OF EDUCATION.

Members.	Post-office.
His excellency James D. Williams, governor	Indianapolis.
Hon. James H. Smart, State superintendent of public instruction	Indianapolis.
Rev. Lemuel Moss, D. D., president of State University	Bloomington.
Hon. Emerson E. White, president of Purdue University	Lafayette.
William A. Jones, president of State Normal School	Terre Haute.
George P. Brown, superintendent of Indianapolis public schools	Indianapolis.
John M. Bloss, superintendent of Evansville public schools	Evansville.
John S. Irwin, superintendent of Fort Wayne public schools	Fort Wayne.

COUNTY SUPERINTENDENTS.

[Term expires June, 1877.]

County.	Superintendent.	Post-office.
Adams	William M. Walters	Decatur.
Allen	Jeremiah Hillegass	Fort Wayne.
Bartholomew	John M. Wallace	Columbus.
Benton	B. F. Heaton	Fowler.
Blackford	J. H. McEldowney	Hartford City.
Boone	D. H. Heckathorn	Jamestown.
Brown	John M. McGee	Nashville.
Carroll	Thomas H. Britton	Burlington.
Cass	Harry G. Wilson	Logansport.
Clark	A. C. Goodwin	Charlestown.
Clay	Allen R. Julian	Martz.
Clinton	Harrison Kohler	Frankfort.

List of school officials in Indiana — Continued.

(From report of State Superintendent Abernethy for 1874 and 1875, with returns made by him and by State Superintendent C. W. Von Coelln for 1874–'75 and 1875–'76.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

In the last report of State Superintendent Alonzo Abernethy, for the years 1873–'74 and 1874–'75, an account is given of the progress of the State school system from its beginning to the date of the report. From this, in great part, is condensed the following abstract of the history, with such assistance from successive State reports as could be had.

LEGISLATION TOUCHING THE GENERAL SYSTEM.

The ordinance of 1787 determined for Iowa, as for other States formed from new territory of the Government, that, "knowledge being necessary to good government, schools and the means of education should be forever encouraged." Accordingly, its first legislative assembly, while it was yet a Territory, enacted, January 1, 1839, a law providing for the formation of school districts, the establishment of schools, and the levying of taxes for support of them. The schools provided for were to be "open and free for every class of white citizens between the ages of 5 and 21," and were to be maintained for at least three months each year. The districts formed under this law were to be governed each by a board of three trustees, whose duties were to examine and employ teachers, superintend the schools, and collect and disburse the taxes levied for their maintenance. The territory for which this incipient school system was designed (embracing not only what is now called Iowa, but also what has since become the State of Minnesota) stretched over a space of 138,576 square miles, and had, throughout this whole vast region, larger than Great Britain and Ireland both, only 7,500 white persons of school age. The difficulty of making any school law bear effectively on so dispersed and sparse a population may be readily perceived. Yet, the next year, when the census marshals were around, collecting statistics for the Government of the United States, they found 63 primary and common schools with 1,500 scholars, besides an academy with 25.

In January, 1841, with a view to further improvement of the schools, a territorial superintendent of instruction was provided for, to be appointed by the governor and to hold office for three years, receiving $250 annual salary. The gentleman appointed to the place reported in December an increasing interest in schools and the school law; but his office was so greatly in advance of the region and the time that it was abolished in little more than a year after its origination, and district inspectors were directed to report annually to the clerk of the county commissioners the condition of the schools. This proved a death blow to the publication of school statistics.

The superintendent had argued earnestly for a system of education that should be public, not in name only, but in the full sense of the word; one that should make the schools free the year round to every child. But so little were his counsels heeded that, by a later territorial enactment, the date of which is not at hand, the rule that the schools should be *free* was altered, and rate bills on parents sending to them were allowed to be assessed when the funds obtained from taxes were insufficient to maintain the school for a three-months' term or more.

In 1846 Iowa came into the Union as a State shorn of almost half her dimensions as a Territory, but with a population of 100,000, of whom 20,000 were of school age, in about 400 organized school districts. The constitution under which she was admitted required the general assembly to provide for a system of schools, by which a school should be sustained in each school district at least three months in every year; for the election, by the people, of a superintendent of public instruction, to hold office for three years; and for the encouragement, by all suitable means, of intellectual, scientific, and agricultural improvement. Under this constitution four successive State superintendents were elected, and the number of school districts and of schools connected with them rapidly increased, reaching 1,000 in 1849; the next year, 1,200; and at the end of six succeeding years, 3,265. By that time the inconveniences and disadvantages of these minute subdivisions of the State began to be perceived and urged by the best educators, and, heeding this, the general assembly passed, March 12, 1858, a revised school law. This made each township a school district and each district already organized a subdistrict, and provided that each incorporated town or city of not less than 1,000 inhabitants, with so much territory as might be annexed for school purposes, should be a separate school district. This law took effect within eight days, and at once reduced the number of districts from about 3,500 to 900, the former number, however, remaining as subdistricts.

By the same law a county superintendency was created, and by a happy balancing of accounts it was found the next year that the reduction in the number of school districts had saved, in the item of compensation to district officers, more than enough to pay the salaries of the county superintendents.

By a new State constitution, adopted in September, 1857, provision had been made for a State board of education, to have general charge of the school system, with power to make all needful laws and regulations in respect to common schools, except such as

looked to the levying of taxes and making appropriations of money. The board was to consist of the governor, lieutenant-governor, and one member from each judicial district in the State; the lieutenant-governor being president. Its members were elected October 12, 1858. At its first session, in December of that year, it exercised in full the powers committed to it, enacting laws for a system of common schools; for the government of the State university; for the abolition of the office of State superintendent of instruction and the election of a secretary to itself, who should perform the duties of superintendent; for the creation of separate school districts in towns and cities, and for the retention of the reading of the Bible in the schools. At its second session, in December, 1859, amendments were made to some of the laws enacted at the previous meeting, and acts were passed providing for appeals and for encouragement of teachers' institutes. At its third session, besides further amendments to preceding acts, it passed new ones creating a State board of examiners and authorizing the teaching of German in any school district on the vote of the electors in favor of it. This was the last act of the board, the general assembly having, by an act passed March 31, 1862, deferred to June, 1864, the time for its next meeting, and, in the early spring of that year, voted it out of existence, in accordance with a clause in the constitution permitting such action after 1863. The objection to it seemed to be its large legislative powers and action.

On the same date with the abolition of the board the office of State superintendent was re-created, and has been continued to the present time.

LEGISLATION TOUCHING PORTIONS OF THE SYSTEM.

As early as 1848 the subject of graded schools received attention. Superintendent Benton, in his report of that year, recommended the creation of different departments in which the several grades of studies should be pursued, and in a new school law adopted January, 1849, permission was given to the electors in the districts to determine at their annual meetings whether schools above the primary grade should be established. The law of March 12, 1858, contained substantially the same provision, and in the amendment of this law by the board of education in December of that year, the following wording, which is still continued, was adopted: "The board of directors may establish graded or union schools wherever they may be necessary." But, large as was the liberty thus given, the formation of such schools proceeded slowly. During the almost twenty years from the passage of the law authorizing union schools to the collection of the first statistics regarding them, in October, 1868, only 212 had been established. In 1871 there were 289; and in 1875 appear 407. Most of the villages and larger towns now have them, and all schools in which more than one teacher is employed are graded.

The same wave of progress which brought the graded school system on its crest brought permission for county high schools also. Superintendent Fisher, in his report for 1857, had recommended the establishment of these as a means of training teachers for the lower schools, as well as for the usual secondary training. In the law of March 12, 1858, the recommendation bore its fruit, a provision being embodied allowing the board of presidents of school districts in any county to determine whether such a school should be established, and, if it were thought best to do so, requiring the board to elect 9 persons, who, with the county superintendent, should constitute a board of high school trustees, with power to lease or erect a building, provide books and apparatus, prescribe studies, engage teachers, and draw from the county treasury $3,000 annually for six years, and afterward $1,000 annually, for the purpose of establishing and maintaining the school. One such school was at once established under the law; but the plan appears to have been too far in advance of public sentiment and to have threatened too heavy a draught upon the public purse to meet with general favor; and at the revision of the law by the board of education in December of the same year, the clauses relating to county high schools were omitted. The matter was revived, however, in 1870, and on April 30 of that year a bill providing that any county with a population of 2,000 or more might establish a county high school for the purposes above indicated became a law. With slight modification it still remains such, but only one county is known to have availed itself of it.

By act of the State board of education, December 20, 1861, a State board of examiners was created for the examination of school teachers who desired a license to teach in any of the public schools throughout the State, without further proof of their qualifications, such licenses to be perpetual unless revoked for cause. The board, consisting of the faculty of the State University, with the professor of the normal department as chairman, held annual examinations from June, 1862, till 1873, when it was legally relieved from further duty. During its existence it granted State certificates to 9 out of 17 applicants, besides graduates of the normal department of the university and a few persons holding first grade State certificates from other States.

ADMINISTRATION OF THE SYSTEM.

As respects the State at large, the school system has been administered by the following persons, besides Dr. William Reynolds, who served as territorial superintendent from January, 1841, to February 17, 1842, when the office was abolished:

Under the first State constitution, as State superintendents of public instruction, came in succession (1) James Harlan, from April, 1847, to April, 1848, he then retiring because of a decision that the law creating the superintendency had not taken full effect at the time of his election; (2) Thomas H. Benton, jr., from May 23, 1848, to June 7, 1854, two successive terms of three years, and until his successor was chosen and qualified; (3) James D. Eads, from June 7, 1854, to March 3, 1857, when he was suspended from office for mismanagement of school funds; (4) Joseph C. Stone, by appointment to fill the remaining month of Mr. Eads's term, and to attend to duty till his successor was chosen and qualified, March 3, 1857, to June 9 of the same year; (5) Maturin L. Fisher, from June 9, 1857, to the abolition of the State superintendency by act of the State board of education in December, 1858.

Under the second State constitution came as secretaries or acting secretaries of the State board of education, serving as State superintendents, (1) Thomas H. Benton, jr., former superintendent, secretary from January 14, 1859, to some period in 1863, when he went into the war at the South as colonel of the Twenty-ninth Iowa Infantry; (2) H. A. Wiltse, acting secretary for a portion of the year 1863; (3) Oran Faville, ex-lieutenant governor, acting secretary till the close of 1863, and then secretary till March 23, 1864, when the board of education was abolished.

Under the same constitution, as State superintendents, were (1) Oran Faville, by election of the general assembly, from March 28, 1864, to January 1, 1866; then, by election of the people, to March 1, 1867, when he was compelled by sickness to resign. (2) D. Franklin Wells, by appointment of the governor, from March 9, 1867, to January 1, 1868, the remaining portion of Governor Faville's term; then, by election of the people till his death, November 24, 1868. (3) Abraham S. Kissell, by appointment of the governor, from January 28, 1869, to the close of Mr. Wells's term, with a second term by election of the people, from January 1, 1870, to January 1, 1872. (4) Alonzo Abernethy, by election of the people, for three successive terms, from January 1, 1872, to the autumn of 1876, resigning in the midst of his third term to take the presidency of the University of Chicago, Ill.* (5) C. W. Von Coelln, the present incumbent, first by appointment and afterward by election, for the remainder of Colonel Abernethy's term. Eleven different persons have thus held the office, and three of them for three separate times.

As respects minor divisions of the State, there has been in the counties supervision by county superintendents since April, 1858, the superintendents being elected biennially by the people. Under a law enacted by the general assembly March 12, 1858, the duties of these officers were to examine and license teachers, to visit and inspect schools, to examine plans for new school buildings and modify the same when necessary, to hold meetings of the presidents of school districts, and to make annual report to the State superintendent. Under a modification of this law passed December 24, 1859, by the board of education, these superintendents were relieved of the duty of visiting and inspecting schools; but this was again imposed by act of the general assembly, April 1, 1864, and continues to the present time, the visits being required to be at least once in each term to each State school in the county and to cover at least half a day each time. In the districts the supervision has been and is by boards of directors, who, with a general management of the schools of their respective districts, have it as their duty to visit these at their discretion, aiding the teachers in the enforcement of due discipline and seeing that they make correct reports.

ELEMENTARY INSTRUCTION.

THE PUBLIC SCHOOLS.

The report of the State superintendent in Iowa is presented at the biennial sessions of the legislature, and the next session being set for January, 1878, no full account of school affairs for 1875–'76 and 1876–'77 can be expected till that time. The statistical summary at the head of this abstract contains, therefore, the total information available for 1875–'76 in relation to public schools, except what comes meanwhile from city school boards.

KINDERGARTEN.

A Kindergarten school at Cedar Rapids is reported by its principal, Miss J. E. Shelton, to have been organized in 1876, and to have secured an attendance of 50 children,

* The Common School, published at Davenport, Iowa, says in its issue for August, 1876: "Mr. Abernethy's administration has been one of the most successful in the history of public instruction in the State. Progress, animating and salutary, has taken place. Measures have been adopted and securely put in practice, normal institutes and the State normal school at Cedar Falls, for examples, which must reflect great credit on the officer under whose superintendence they were enacted. These measures, of course, did not all originate with Mr. Abernethy; but he is especially to be commended for his prudence and tact in securing the requisite legislation on the part of the general assembly. And it was his persuasive, gentlemanly manners, always supported by a convincing honesty of purpose, which chiefly characterized his management as superintendent, while his legal opinions and decisions on questions submitted to him on all matters relating to school management were generally regarded as correct and just."

taught by the principal and 3 assistants. Pupils are admitted from 3 to 8 years of age and are kept at their occupations 3 hours daily. A marked development in respect to perception, comparison, judgment, and memory is reported as resulting from the first year's training. The muscles of the arms and hands are also said to be strengthened by the exercises and made more ready servants of the will.—(Return to Bureau of Education for 1876.)

CITY SCHOOL SYSTEMS.

CHARITON.

Officers.—A board of directors of 6 members holding office 3 years, 2 going out each year, and a city superintendent of schools, who is also principal.

Statistics.—Enrolment in public schools during the year 1875–'76: girls, 354; boys, 322; total, 676. Average enrolment per month, 496; percentage of attendance for the year, 91; percentage of punctuality, 99.2.

Remarks.—The schools are graded as primary, intermediate, grammar, and high, the last including in its course of 3 years the higher English branches and Latin. There were 71 pupils in attendance during the year, under 2 teachers.—(Manual of Public Schools, 1875–'76.)

DAVENPORT.

Officers.—A board of directors of 6 members holding office 3 years, 2 going out each year, and a city superintendent elected by the board.

Statistics.—Population of city, 24,000; children of school age, 5–21, (census of 1875,) 8,280; enrolment in schools, 4,284; average number belonging, 3,233; average attendance, 2,924. School buildings, 11; school rooms, 77; sittings, 4,056. Teachers of English branches, 77; of German, 12; of penmanship, 2; of drawing, 1. Pay of teachers, $300 to $1,500.

Remarks.—The schools are graded into primary, intermediate, grammar, and high, the latter school having a normal department, from which there were 10 graduates during the year, while in the classical and scientific courses, out of an enrolment of 211, there were graduated 18. The grammar schools during the year sent to the high school 112 pupils, a gain of 29 over last year.

The course in drawing has received special attention, resulting in marked improvement in some departments. The work in penmanship has been improved by it and is in good condition, while the instruction in German is said to be no longer an experiment but a success.—(Annual report of independent school district of Davenport, 1875–'76.)

WEST DES MOINES.

Officers.—A board of education of 6 members, who hold office 3 years, one-third being changed each year. Its officers are a president, secretary, treasurer, and city superintendent of instruction.

Statistics.—The population of the West Side is nearly 12,000. Children between 5 and 21 years of age, (in 1875,) 3,191. Pupils enrolled in public schools in 1875, 1,831; in 1876, 1,924. Average daily attendance in 1875, 1,097; in 1876, 1,245. Average of pupils to a teacher, 57 in 1875, 53 in 1876. Schools, 29; seats for pupils, 1,955. Teachers: men, 3; women, 29; total, 32. Cost of tuition per capita on number enrolled, $11.42; on enumeration, $6.88.

Remarks.—The schools are graded as primary, grammar, and high, each grade occupying 4 years. Music and drawing are taught throughout the course. In the high school there was an enrolment of 124 pupils, of whom 54 were boys and 70 girls, and 15 graduates in the summer of 1876, of whom 8 were girls and 7 boys. The course includes Latin. The year 1875–'76 was a prosperous one for the schools; the teachers labored with renewed interest and the attendance has fully kept pace with the rapid increase of population.—(Report of West Des Moines public schools, 1875–'76, J. H. Thompson, esq., superintendent.)

OTHER CITIES.

For the statistics of the school systems of other cities of the State see their returns in Table II of the appendix of this volume.

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

The Iowa State Normal School, at Cedar Falls, was organized in 1876, and had an enrolment during that year, in its normal department, of 96 students—27 men and 69 women—and in other studies of 10, making altogether 106 pupils. There are 3 courses of study, an elementary course, requiring 2 years; a scientific course, embracing 2 additional years; and a 2 years' course in languages, which is elective, and may take the place of the scientific course. Tuition is free in the normal department.—(Circular and return, 1877.)

Eastern Iowa Normal School, Grandview, was organized in 1874 by a corporation under State authority, but the State exercises no control over it and gives it no support. The annual charge for tuition is $28 without the classics and $34 with them. There are normal, scientific, and business courses of study, the first requiring 4 years for completion. Number of students in normal department in 1877: men, 47; women, 59; total, 106.—(Catalogue, 1875-'76, and return, 1877.)

The State University has an optional course in didactics for such academical seniors as propose to engage in teaching, and for such special students as may be prepared for it.

The normal department of Whittier College, Salem, has for its object the preparation of young men and women for teaching successfully in high schools and academies. There were 77 pupils in attendance.—(Catalogue, 1875-'76.)

Normal departments also exist in connection with Algona, Amity, Iowa, Cornell, Oskaloosa, and Tabor Colleges.

Normal institutes, for the specific preparation of those who desire to teach in the public schools and for fuller training of those already teaching, are held in each county by the county superintendent with such assistance as may be necessary. The course of study presented for these institutes in a syllabus prepared by Superintendent Abernethy embraces a well digested series of important themes the consideration of which can hardly fail to be improving.

SCHOOL JOURNAL.

The Common School, a useful monthly, was continued during 1876, under the experienced editorship of Prof. W. E. Crosby, with able helpers, and did good service. It was merged in the beginning of 1877 in the New-England Journal of Education, and will be missed in Iowa and at the Bureau.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Although the law provides for the establishment of schools of this class, their existence has thus far been limited almost wholly to the cities and chief towns. In the absence of a State report for 1875-'76, we have official information of only 3 such, in Chariton, Davenport, and West Des Moines, the enrolment of pupils in the 3 reaching, for that year, 418. The course of study in Chariton covers 3 years; in the others, 4. Latin is included in the studies of all the 3. In Davenport there is a choice between it and German. In West Des Moines the committee on examinations says: "In geology, outlines are written on the board and rocks are inspected. Practical experiments are given daily in natural philosophy. In chemistry * * a portion of each day is spent in analyzing such substances as bone, soil, &c."—(Reports of board of education.)

The Osceola Sentinel of December 28, 1876, reports in the high school of that city an enrolment of 45 pupils, of whom 10 were in the senior class.

PRIVATE SECONDARY SCHOOLS.

In 1 school for boys, 4 for girls, and 36 for both sexes, 41 in all, outside of the public school system, there have been reported to this Bureau 5,291 pupils, under 162 teachers. Of these 397 are in classical studies, 340 in modern languages, 224 preparing for a classical course in college and 125 for a scientific course. Drawing is taught in 15 of these schools, vocal music in 21, and instrumental music in the same number. Chemical laboratories are reported by 7, philosophical apparatus by 10, and libraries of 9 to 6,000 volumes by 16, the aggregate number of volumes in the 16 libraries being 10,336.—(Returns to Bureau of Education for 1876.)

PREPARATORY SCHOOLS AND DEPARTMENTS.

Two preparatory schools, with 8 teachers and 17 pupils, report themselves for 1876. Of the pupils, 14 were preparing for a classical course in college and 3 for a scientific course. Both institutions have chemical and philosophical apparatus and libraries aggregating 7,707 volumes.

Seventeen preparatory departments of colleges report, for the same year, 35 teachers, with 2,348 pupils, of whom 265 were preparing for a classical and 261 for a scientific course.—(Returns to Bureau of Education.)

BUSINESS COLLEGES.

Eight of these institutions, with 22 teachers and 1,674 pupils, report their statistics for 1876, showing 2 pupils in phonography, 7 in telegraphy, but none in either German, French, or Spanish. Six of these schools teach common English and commercial correspondence; 7, penmanship; 7, book-keeping; 3, banking; 7, commercial law; 1, political economy; 1, life insurance; 1, phonography, and 3, telegraphy. Two have libraries, 1 of them containing 82 volumes, the other 250.—(Returns to Bureau of Education.)

SUPERIOR INSTRUCTION.

STATE UNIVERSITY.

The university comprises four separate departments: academic, legal, medical, and civil engineering. The programme of study in the academical department covers a period of 6 years, including a preparatory course of 2 years and the usual collegiate curriculum of 4, in which there are 3 courses of study: classical, philosophical, and scientific. Students who do not wish to take a regular course may, under the direction of the faculty, select from these 3 such studies as they prefer. Provision is also made for special students who wish to pursue the single line of study taught by any professor. An optional course in didactics is offered to those academical seniors who intend to become teachers, or to any special students who may be qualified for it, the design being to prepare teachers for advanced schools. In the department of civil engineering the studies occupy 5 years, 1 of which is given to preparatory branches. In addition to a thorough training in mathematics and surveying, French, German, history, chemistry, and drawing are taught, the instruction in the latter branch embracing the fundamental principles of the science and their application to the various kinds of drawing included in the course.—(Catalogue, 1875–'76.)

OTHER COLLEGES.

Algona College, Algona, (Methodist Episcopal,) has classical, scientific, and business courses and courses for teachers and ladies. The scientific course, as well as the classical, requires four years for its completion. A specialty is made of normal work. The business course is 1 year in length. Superior facilities are furnished for the study of music, both vocal and instrumental. French, German, painting, and drawing are taught.—(Catalogue, 1875–'76.)

Amity College, College Springs, (non-sectarian,) offers preparatory, classical, and normal courses, the latter requiring two years for its completion. Both sexes are admitted.—(Catalogue, 1875–'77.)

Cornell College, Mount Vernon, (Methodist Episcopal,) admits both sexes and numbers among its faculty several women. Its courses of instruction are preparatory, classical, scientific, civil engineering, and normal. Superior facilities for obtaining a musical education are afforded; also for thorough instruction in free hand drawing, crayon, pastel, and painting in oil and water colors. Military drill and tactics are among the branches taught.—(Catalogue, 1875–'76.)

Humboldt College, Humboldt, (non-sectarian,) was organized in 1869 by the Humboldt College Association for the education of youth in literature, science, and enlightened Christian morality, without regard to sex, race, or religious sect. The courses of study appear to be preparatory, classical, and English.—(Catalogue, 1875–'76.)

Iowa Wesleyan University and German College, Mount Pleasant, (Methodist,) embraces five departments, viz: liberal arts, theology, law, pharmacy and anatomy, and technology. The department of the liberal arts embraces preparatory, classical, and scientific departments, the two last requiring four years for their completion. Both sexes are admitted. The German College, incorporated in 1873, is the theological institution of the German Methodists. It is independent of the university in finances and control, but intimately connected with it in instruction.—(Catalogue of Iowa Wesleyan University and German College, 1875–'76.)

Iowa College, Grinnell, (Congregational,) offers a regular collegiate course, with classical and scientific studies, a ladies', a normal, and a preparatory course. The scientific course has been extended to 4 years, and is now fully coördinate with the classical. Women are admitted to all the privileges of the institution, and can pursue any of the college courses, but as a majority of them do not do so a seminary course somewhat less extensive is established. Tuition is free in the collegiate department to those whose circumstances require it.—(Catalogue, 1876–'77.)

Oskaloosa College, Oskaloosa, (Christian,) has collegiate, preparatory, ladies', Bible, normal, and commercial departments. Women are admitted to all departments. Students are not allowed to substitute the modern for the ancient languages, but it has been arranged to let the French alternate with the Latin for a part of each week during the sophomore and junior years, and in like manner the German with the Greek. It is believed that this amount of time devoted to the German and French, after a good foundation has been laid in a knowledge of Greek and Latin, will give a better understanding of these modern languages than double the time spent on them without such previous preparation, and will not materially detract from proficiency in the ancient languages.—(Catalogue, 1875–'76.)

Parsons College, Fairfield, (Presbyterian,) embraces preparatory and collegiate departments, the latter with classical and scientific courses. The classical course extends over the usual 4 years and has the studies in its first two prescribed, while those of the junior and senior years are elective to some extent. The scientific course lasts only 3 years. The preparatory department embraces a normal course.—(Catalogue, 1875–'76.)

Simpson Centenary College, Indianola, (Methodist Episcopal,) has preparatory, collegiate, and law departments, the collegiate embracing classical, scientific, and special

courses. The scientific requires but 3 years for completion. There are several optional studies in both courses. Both sexes are admitted.—(Catalogue, 1875-'76.)

Tabor College, Tabor, (Congregational,) embraces collegiate, teachers', preparatory, and music departments. A thorough musical education is given here, the class or conservatory system being used. The regular teachers' course requires 2 years for completion.—(Catalogue, 1876-'77.)

Upper Iowa University, Fayette, (Methodist Episcopal,) includes collegiate, preparatory, English, commercial, music, and fine arts departments. The collegiate embraces classical and scientific departments, each requiring 4 years for completion. Women are admitted to all the classes and also to the faculty.—(Catalogue, 1875-'76.)

Western College, Western, (United Brethren,) has collegiate, preparatory, commercial, and ladies' departments, the former with classical and scientific courses, each requiring 4 years for completion.—(Catalogue, 1875-'76.)

Proposed affiliation of a college with the university.—The trustees of Griswold College, Davenport, meaning to reopen that institution in 1877, propose to the regents of the State university a plan whereby, on the graduation of students in arts and science in Griswold, the degree of A. B. or B. S. shall be conferred, on the terms established by the university professors, and after examinations, written or oral, conducted by the university faculty, or in accordance with instructions from them. Griswold would then sustain to the university the relation that the various colleges at Oxford or Cambridge, England, do to their respective universities. The proposition is evidently from the fruitful mind of Bishop Perry, and looks to a unification, much to be desired, of the whole collegiate education of the State; for, if one college thus conforms its standard to that of the university and receives degrees for its students from that source, the other colleges must soon come into the same plan.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

AGRICULTURAL COLLEGE.

The courses of study offered here are agricultural, mechanical, engineering, civil engineering, normal, military, both tactics and engineering, and a course in general science for women. During the junior and senior years, students who wish to attain a high degree of proficiency in any branch of industrial science or art are permitted to devote special attention to that branch, omitting other specified studies. Two kinds of manual labor are required of students, viz, uninstructive labor, which is paid for at the rate of from 4 to 9 cents an hour, and instructive labor, the compensation for which is the instruction given and the skill acquired. The theoretical study of agriculture proper occupies 2 years. Instruction in agricultural chemistry, analysis of soils, rotation of crops, care of domestic animals, etc., is given during the junior and senior years. The department of civil engineering embraces the study and practice of land surveying, in

the class room and in the field, the various methods of laying out railway curves, putting in switches and side tracks and setting slope stakes, the construction of railways, canals, water works, &c., with the higher problems of engineering, such as the stability and strength of arches, suspension bridges, etc. The department of mechanical engineering is intended to instruct men who will be skilful in inventing, designing, constructing, or managing machinery in any of the industrial pursuits. Domestic economy is taught to the young women by lectures on house furnishing, ventilation, water supply, cooking, sewing, management of help, care of the sick, training of children, dress, etc.—(Statement of the college for 1876.)

THEOLOGY.

Instruction in theology is given in the German Theological School of the Northwest, at Dubuque, (Presbyterian,) in the German College connected with Iowa Wesleyan University, (Methodist,) in Oskaloosa College, (Christian,) and in Griswold College, (Protestant Episcopal.) These courses are usually of 3 years.

LAW.

Law departments exist in connection with the State University, which offers a course of 1 or of 2 years at the option of the student, and in Simpson Centenary College, where the course is completed in 1 year, students being received without examination.—(Catalogues, 1875–'76, and returns, 1877.)

MEDICINE.

The College of Physicians and Surgeons, at Keokuk, chartered in 1849, has given instruction to over 4,000 students and has graduated over 800. The college building is large, centrally located, and well adapted to its purpose. Its 2 lecture halls will each comfortably seat over 300 students. The course of instruction requires 3 years for completion.—(Circular and catalogue, 1876.)

The medical department of the State University also offers a three years' course of instruction, with special clinical advantages in the university hospital, located within two blocks of the university, and at which from 400 to 500 cases of disease are exhibited to students during one year. An abundant supply of dissecting material is afforded. Both sexes are admitted.—(Catalogue, 1875–'76, and return, 1877.)

A department of pharmacy and anatomy is connected with the Iowa Wesleyan University.—(Catalogue, 1876–'76.)

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

The Iowa Institution for the Deaf and Dumb, at Council Bluffs, has, since its foundation in 1855, given instruction to 433 pupils, each remaining an average of more than 4 years at the institution. Number at present under instruction: males, 98; females, 83; total, 181. There is a library of 450 volumes. Cabinet work, dressmaking, and shoemaking are the employments taught.—(Annals of the Deaf and Dumb, January, 1876, and return, 1877.)

EDUCATION OF THE BLIND.

The Iowa College for the Blind, at Vinton, organized in 1853, has given instruction since its opening to 339 pupils and numbers at present 112. The employments taught are cane seating, broom and mattress making, work on sewing and knitting machines, and fancy work.—(Return, 1877.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

This intelligent body held its meeting for 1876 at Grinnell on the 26th, 27th, and 28th of December. Besides a considerable attendance of the citizens, 176 members were present and enrolled, and the proceedings were of marked and decided interest. The president, Mr. C. P. Rogers, of Marshalltown, presented, in a very able opening address, a sketch of reforms to be considered, touching both the material and the working of the State school system, such as (1) A better union of the educational forces of the State through an educational congress composed of delegates from the various associations, and sitting long enough each summer to give full consideration to all matters brought before it; (2) a fuller recognition of high school instruction as a needful link between the lower schools and the university; (3) an improvement of the supervision of the whole school work by having county superintendents chosen for high qualifications, not for political reasons in the least, by the presidents of the several township boards, constituting a county board particularly for this end; (4) a reform in the methods of examining and certifying teachers through State and county boards of examination, with power to bestow on well qualified and fully proven teachers certificates that would hold for a considerable time. These proposed reforms were referred to committees, and, after a hearing of their reports, met with a substantial indorsement from the meeting, but, with wise caution, were referred to the next annual meeting for fuller debate and consideration of them before legislative action should be invoked.

More than one able paper on the unification of the State system, through high schools, linking all others with the university, fell in with the president's suggestions under the second head, and brought out a report from a committee that teachers' certificates should be graded according to the grade of schools, and that all who are to be teachers in high schools should be proven competent to prepare students for the university. A system similar to that of Michigan was evidently favored and was commended to the individual action of the members and to the consideration of the association of principals and city superintendents.

An admirable paper by Principal Young, of the Davenport high school, on "The responsibility of the school for the personal development and culture of its pupils," with others on "The school library," "The spelling reform," "The curse, cause, and cure of text book change," "Political science in the schools," and "The state and school," received and well rewarded the attention of the members, all being prepared with most conscientious care and some being marked by unusual ability. The meeting altogether was a memorable one, alike from the importance of the subjects treated and the power with which they were discussed.—(Published proceedings of the association.)

IOWA ASSOCIATION OF PRINCIPALS AND CITY SUPERINTENDENTS.

Of the proceedings of this association in the year past no information has reached the Bureau beyond the facts noted in the December number of The Common School. These were that at a meeting at Des Moines, in the summer of 1876, a constitution was adopted and some resolutions, one of which looked to a new and fuller arrangement of the statistics of school reports. This arrangement, as presented, is an improvement on the bare skeletons too often presented, but has the serious fault of not corresponding with the plan proposed by the committee of the National Educational Association.

OBITUARY RECORD.

REV. ORLANDO CLARKE.

This gentleman, late principal of the Iowa College for the Blind, was born November 6, 1825, at Geneva, Jennings County, Indiana. His parents died when he was a small child. At the age of 17 he entered college at Hanover, Ind., intending to prepare himself for the legal profession. While there he accepted Christ as his Saviour, and chose the gospel ministry instead of the practice of law as his life work. After a further course at Hanover, he sought the advantages of the university at Bloomington, Ind., where he was graduated. His professional studies were then commenced at Princeton, N. J., and concluded at Yale College, New Haven, Conn.

He and his now widowed companion were married in 1856 in the Presbyterian church of Edinburgh, Ind., of which at the time he had charge as pastor.

They moved to Iowa in 1857, since which time he has endeared himself to several Congregational churches of the State as their able and affectionate pastor, and held a high place in the ministry of Iowa.

He took charge of the Iowa College for the Blind, at Iowa City, in 1862, about ten years after its establishment. He was instrumental in its removal to Vinton and superintended the erection of its original buildings.

Returning to the work of the ministry in 1864, he preached with marked success for nearly twelve years, and then again assumed the duties of superintendent of the College for the Blind at the opening of the collegiate year, June, 1875. His administration was characterized by impartiality, kindness, and a deep interest in those committed to his charge. It has been to the entire satisfaction of the trustees, the community, and the State authorities, as well as to the prosperity of the institution. He died on Sabbath evening, April 2, 1876, at the age of 50 years, 4 months, and 26 days. —(J. B. Parmelee, superintendent of Iowa College for the Blind.)

LIST OF SCHOOL OFFICIALS IN IOWA.

Hon. C. W. Von Coelln, *State superintendent of public instruction, Des Moines.*

[Term, 1876 to 1879.]

COUNTY SUPERINTENDENTS.

[Terms, January 3, 1876, to January 7, 1878.]

County.	Superintendent.	Post-office.
Adair	M. W. Haver	Stuart.
Adams	William W. Roberts	Corning.

(Reports and returns of Hon. John Fraser, State superintendent of public instruction, for 1874–'75 and 1875–'76.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

The following history having been kindly prepared for this report by Hon. Allen B. Lemmon, State superintendent of public instruction, no reference to other authorities than those which he had the opportunity to consult has been thought necessary.

TERRITORIAL ORGANIZATION.

Kansas was organized as a Territory June 30, 1854, and admitted into the Union January 29, 1861. In 1855 the first school law of the Territory was enacted. It provided that schools, to be "open and free for every class of white citizens between the ages of 5 and 21 years," should be established in every county. Three years later the word "white" was stricken from the school law. At the same time it was provided concerning her free common schools that "no sectarian instruction shall be allowed therein."

Territorial superintendent.— Hon. James N. Noteware was the first territorial superintendent of common schools. He was appointed by the governor and confirmed by the council February 12, 1858, and entered on the duties of his office March 1.

These duties were to visit every county for the purpose of inspecting schools and awakening an interest in the cause of education; to recommend approved text books, and, as far as practicable, secure a uniformity of text books throughout the Territory; to discourage the use of sectarian books in the schools; to open correspondence with other States and countries, and embody the information received relative to the system of common schools and its improvements in his annual report to the legislature; to prepare for the use of school officers forms for making reports and conducting proceedings; to cause the school laws and forms aforesaid to be printed, together with a suitable index, in pamphlet form, at the expense of the Territory, and have the same distributed among school officers; to examine and determine appeals from the decision of district meetings or county superintendents; to prepare each year a report to be submitted to the legislature, bearing date the last day in December; and to apportion by the 10th day of February in each year the school money to be distributed among the counties according to the number of children of school age, (5–21,) as shown by the returns in his office for the preceding year.

His compensation was $1,500 per annum, with an allowance for postage, office rent, and travelling expenses. Mr. Noteware retained the office but a few months. At the election October 4, 1858, Hon. S. W. Greer was chosen territorial superintendent. He took charge of the office the 2d day of the next December, and continued therein until January 1, 1861.

County superintendents.—The laws of 1858 provided for the choice, at the general election each year, of a county superintendent, who should receive for his services such compensation as might be allowed by the tribunal transacting county business.

His duties were, after giving bond in double the amount of all school moneys to come into his hands during the term of his office, to divide the county into school districts and to regulate and alter such districts; to file the descriptions and numbers thereof in his office; to receive all moneys for the use of common schools in his county; to apportion these on the first Monday in April, in each year, to the several districts and parts of districts within the county, in proportion to the number of children of school age in each, provided that no money be apportioned to any district in which a school had not been taught by a qualified teacher for at least three months in the year preceding; to see that the annual reports of clerks of districts in his county were made correctly and in time; to sue for and collect, in the name of his office, certain penalties and forfeitures; to transmit between the 1st and 15th days of October, in each year, to the territorial superintendent a report in writing, bearing date on the 1st day of October; to examine annually all candidates proposing to teach in his county, and give to each candidate found qualified a certificate, to be in force for one year from the date thereof, unless sooner revoked; and to visit and examine into the condition and management of all the common schools in his county.

Township trustees.—The laws of 1860 provided that the township trustee should divide his township into districts, see to a proper application of all moneys belonging to his township for roads, *schools*, or other purposes, and should have the care and management of all property belonging to the township.

Independent district system.—This system was adopted at an early day. Each district had four officers to elect annually, viz, three trustees and one inspector.

The trustees had general control of the school affairs of the district. They constituted a body corporate, and were the agents of the school district subject to general directions, to be given by the voters of the district at an annual or special meeting. The laws in 1855 provided that the trustees should make an annual report of the condition of the school to the secretary of the Territory. In 1857 this report was directed to be made to the clerk of the board of county commissioners, and in 1858 to the county superintendent of common schools.

Final territorial details.—The laws of 1855 provided that before any teacher could

receive compensation from the free school funds, he should secure from the inspector "a certificate of his qualifications and morality."

Mr. Greer's report for 1859 contains valuable statistics. But, soon after that report was made, the county superintendency was abolished. This left no one responsible for reports from the counties. For this reason his report for 1860 contains but meagre statistics.

But in this second report, made a short time before Kansas became a State, he estimates that there were then in the Territory more than 18,000 persons of school age, more than 10,000 of whom had attended school that year. His estimate of the sum of money raised for school purposes is $35,000. He puts the value of the school-houses in the Territory at $57,600.

Hon. John C. Douglas was the third territorial superintendent. He was elected in November, 1861, and entered upon his duties the 7th of the next January. He retained the office only a few weeks, passing out with the conclusion of the territorial system in December.

FIRST STATE SUPERINTENDENCY.

On the organization of the State government Hon. William R. Griffith qualified as superintendent of public instruction. His annual report, December 31, 1861, contains school statistics from but 12 counties. The State gave no aid to education that year, and most of the schools taught were private enterprises or were sustained by subscriptions.

SECOND STATE SUPERINTENDENCY.

Mr. Griffith was superintendent only about a year. He died February 12, 1862, and Mr. S. M. Thorp was appointed his successor, for the unexpired portion of his term.

In Mr. Thorp's report, December 31, 1862, are returns from 28 counties. All these had school organizations and had sustained common schools a part of the year. Under the laws of the State a tax of one mill to the dollar was levied upon all taxable property for school purposes. No record has been left of the amount of this tax collected and distributed in 1862.

THIRD STATE SUPERINTENDENCY.

Hon. Isaac T. Goodnow was elected State superintendent in 1862, and reëlected in 1864, holding his office from January, 1863, to 1867. In the early part of his work he had to contend with the hindrances that had crippled previous administrations. The civil war continued, and Kansas people lived in constant dread of attacks from guerrilla bands. One-seventh of the population of the State was in the Army; nearly all of the six-sevenths remaining were old men unable to take the field, women, and children. The young men who remained at home were not of the kind who take the lead in building school-houses and supporting schools.

The last two years of Mr. Goodnow's administration were, however, characterized by decided progress in educational affairs. The disbanding of the Army at the close of the war threw a great many of the best men of the nation out of employment. While they had been in their country's service others had taken their places on the farms and in the shops, stores, and offices in all the States. The communities they had left on entering the Army had learned to get along without them. On their return they found themselves strangers in their old homes. It was like beginning life anew. Many of them at once determined to make new homes in the West. Kansas was historic ground. Upon her soil the first blood had been shed for freedom's sake. For years the troubles of the young Commonwealth had been subjects of conversation at every fireside in the land. Every one naturally desired to see the State that had been the "apple of discord" in American politics, and nearly all who came to see remained. For a time it seemed that Kansas was to become a grand camp of Union soldiers. The population of the State was doubled in two years. These emigrants were the enterprising, plucky people of other States. They had been reared in the best communities and trained in the best district schools of the nation. They knew the value of these schools, and recognized them as the only agency that could reach and educate the great mass of the children. As rapidly as new settlements were made, school districts were organized and free schools established.

A law enacted in 1864 authorized the issue of district bonds for the purpose of building school-houses. This enabled districts to erect comfortable school buildings and provide good school accommodations, leaving the same to be paid for, year by year, as they were able to do so. It was not an exception for the school-house to be the best building in the neighborhood, village, or city. The plan adopted at that time has been pursued ever since. The citizens of almost every town or community in the State point with pride to their school-houses. Visitors are surprised to see on these western prairies far better school accommodations than exist in many of the older States.

Many of the Kansas settlers have been successful teachers in other States. Their attention is now turned to something else as a vocation; but they know the difference between good and poor work, and they have required better methods of instruction than are usually found in the schools of young States. To this, in some degree, may be ascribed the rapid rise of educational institutions from this time on.

The first teachers' institute of Kansas was held at Emporia in 1863. In that year such meetings of teachers were held in six counties. In connection with the institute at Leavenworth, September 29, the State Teachers' Association was organized.

The agricultural college at Manhattan was first opened for students September 2, 1863, with Rev. Joseph Dennison as president. There were 52 students in attendance the first term.

The school law of 1864 provided that the State superintendent should hold a teachers' institute in each senatorial district in the State.

The Kansas Educational Journal was started in January, 1864, under the auspices of the State Teachers' Association; Prof. H. D. McCarty, principal of the Leavenworth city schools, and afterward State superintendent, was its first editor.

The State normal school at Emporia began its educational work February 15, 1865. Prof. L. B. Kellogg was the principal of the school and sole teacher until September 13, when Prof. H. B. Norton became assistant. Forty-two students were in attendance during the first term of the school.

The first building for the State university was erected in 1865. It is located upon Mount Oread, a sightly eminence adjoining Lawrence, and was first opened for students September 12, 1866. Prof. E. J. Rice was the first president. At the opening there were 3 professors and 40 students. Before the expiration of the first term the number of students had increased to 60.

At the commencement of Mr. Goodnow's administration the value of public school-houses did not exceed $20,000; at its close their value was nearly $320,000. The school population increased from 15,000 in 1862 to 55,000 in 1866, and the average length of the annual school term had been increased one month. In 1863 the amount paid for teachers' wages was $14,000, in 1866 it was $116,000. Surely Mr. Goodnow must have felt gratified at the wonderful educational progress made while he was State superintendent of public instruction.

FOURTH STATE SUPERINTENDENCY.

Hon. Peter McVicar was Mr. Goodnow's successor. He was twice elected to the office, and served as State superintendent from January, 1867, to 1871.

Previous to this time but a small amount of the school lands of the State had been sold, though such sale had been authorized in 1864. As the proceeds arising from the sale of these lands constitute by far the greater part of the State permanent school fund, that fund had continued small and of little benefit to the schools. Efforts were now made to dispose of these lands. They were sold rapidly and the proceeds invested in State bonds, the interest of which was distributed annually for the support of schools. The interest of this fund and the proceeds of the one-mill tax amounted in 1870 to $1.50 to every person of school age in the State.

In 1868 the law requiring the State superintendent to conduct a teachers' institute in each senatorial district in the State was so amended as to require him to hold only one institute in each judicial district. This reduced the number of institutes he was required to hold about one-half. Also it was provided that each county superintendent should have an annual teachers' institute in his county; that while it was in session all the schools in the county should be closed, and that the teachers should be required to attend the institute.

In 1869 an act was passed providing that county superintendents should receive ample compensation for their services, and in the more populous counties must spend their entire time in looking after the school interests of their respective counties.

At this time the examination of teachers was taken from the county superintendent and given to a board of county examiners of three members, the county superintendent being chairman of the board.

An amendment to the school law enacted in 1870 provided that each school district might vote a tax to be expended for the purpose of purchasing a district library.

The Leavenworth State Normal School was established in this year. The commissioners designated in the law which provided for the organization of the school located it May 4, 1870. It was opened for students the 7th of the following September. Prof. P. J. Williams was the first principal of the school.

To show the educational growth of the State during Professor McVicar's term, the following summary is introduced:

	1866.	1870.	Increase in four years.
Number of organized school districts	986	2,068	1,082
Number of children of school age	54,728	109,244	54,516
Number of children enrolled in public schools	31,258	62,218	30,960
Amount paid teachers	$115,914	$318,596	$202,682
Annual school fund distributed	31,054	139,957	108,903
Value of school-houses	315,898	1,520,041	1,204,143
Permanent school fund	30,071	441,125	411,054

FIFTH STATE SUPERINTENDENCY.

Hon. H. D. McCarty, for several years superintendent of the schools of the city of Leavenworth, was the fifth State superintendent of instruction. He also was twice elected, holding his office four years from January, 1871.

In 1872 Colonel McCarty prepared and issued a "Course of study for district schools." It was a work of real merit, and received the commendation of leading educators throughout the United States. Several State superintendents copied it entire into their reports. Wherever introduced and followed in district schools it resulted in great good.

The most important school law of 1873 was an act to create a State board of education. It provided that the State board should consist of the State superintendent of public instruction, the chancellor of the State university, the president of the agricultural college, and the principals of the State normal schools. The law authorizes this board to hold examinations of teachers, to grant State certificates, valid for three or five years, and to issue State diplomas, valid during the lifetime of the holder, unless revoked by the State board.

A State normal school was located at Concordia, March 10, 1874. Prof. E. T. Robinson was elected principal. The school began its educational work September 16.

The school interests of the State continued to prosper throughout Professor McCarty's administration. County superintendents were well paid for their services, and generally did good work. Normal institutes were held in each judicial district annually, the State superintendent being generally present to take a prominent part in the exercises. County institutes were also held in nearly all the organized counties of the State each year.

Many of the larger towns and cities erected very fine school-houses. These were generally built from the proceeds of bonds issued by the municipality, in accordance with the law of 1864. In nearly all these buildings thoroughly graded schools were organized, able teachers were secured, and the schools were kept in operation nine or ten months in each year.

In 1871 a new building for the State university was commenced. The city of Lawrence inaugurated the enterprise by donating $100,000 toward it. This munificent gift has been supplemented by appropriations made by the State legislature almost every year since the structure was commenced. The building is very complete in its appointments, and is now almost finished. It has been occupied by the school for four years.

In 1872 an appropriation was made by the State for the erection of a new normal school building at Emporia. The enterprise was carried forward rapidly, and for several years that school has occupied one of the finest buildings for the purpose to be found in the West.

At the close of Superintendent McCarty's term the number of children of school age had reached 199,010; the enrolment in public schools, 135,598; average attendance, 77,386, while the value of public school buildings in the State amounted to almost $4,000,000. Rapid progress had been made in nearly every department of school work.

SIXTH STATE SUPERINTENDENCY.

Hon. John Fraser was elected State superintendent of public instruction in the fall of 1874. He had been for several years at the head of the State university. His ripe scholarship and thorough acquaintance with the school system of the State made his services specially valuable as superintendent. He threw his whole soul into the work. The judicial district institutes held during his term were intensely interesting. He took strong ground in favor of reform in the course of study and methods of instruction pursued in district schools. Had he been called to the office at any other time in the history of the State, his administration would have been preëminently successful. The legislation of 1875 and 1876 was, however, in several instances prejudicial to school interests. The county superintendency was crippled greatly by a law reducing salaries and leaving the duties of the officer so poorly defined that he was required to do scarcely anything in order to be able to draw the pittance which the law left him. In 1876 an attack, induced by local jealousies, was made upon the State normal schools. It resulted in the refusal of the legislature to make an appropriation to pay the running expenses of any of them. In consequence of this refusal the one located at Concordia was closed the 18th of March, 1876. The one at Leavenworth was closed soon after. The school at Emporia was continued as a private enterprise, and has been conducted as such ever since. This institution has a land endowment, which, when it shall be sold and the proceeds invested, will yield an annual revenue sufficient to pay the running expenses of the school.

The State agricultural college has an endowment resulting from the sales of lands, the interest of which has supported the school for some time.

The State university has a land endowment of only about 40,000 acres. Unless another donation of land is secured this institution will always have to depend upon State appropriations for its support.

Quite a number of denominational institutions of learning have been from time to time located at different points in the State. Several of these had but a brief existence; others have been sustained and are now growing in importance and usefulness.

In the fall election of 1876 Prof. Allen B. Lemmon was chosen to succeed General Fraser, entering upon office January, 1877.

ELEMENTARY INSTRUCTION.

CURRENT SENTIMENT UPON IMPORTANT TOPICS.

In order to obtain specific information as to the views of the people upon certain points of school policy, State Superintendent Fraser requested in his blank reports remarks on the following topics from county superintendents: (1) the township plan of districting the county; (2) the purchase of text books by school districts; (3) the operation of the compulsory education law; (4) the provision that the State should make for the normal training of teachers; (5) the manner in which accounts of public moneys are kept in the several districts. The following paragraphs indicate the result of this inquiry:

On the township plan of districting replies were received from 45 superintendents, 31 per cent. of whom considered the plan not feasible, while 69 per cent. heartily indorsed some system of township districts.

On the purchase of text books replies came from 49 superintendents. Of these 78 per cent. recommended that the district purchase and own the text books on the ground of economy to the parent and efficiency in the school. They believe this the best method of settling the vexed question of text book uniformity and of avoiding the expense of frequent changes of text books. Twenty per cent. oppose the plan and 2 per cent. consider it, though desirable, not feasible. Of the districts actually owning their books, 67 per cent. report in favor of the plan and 33 per cent. do not consider it an entire success.

On compulsory education.—In respect to the operation of the compulsory education law 44 replies were received, of which 70 per cent. report it either "inoperative," "deficient," or a "dead letter," while 30 per cent. report it as causing an increased attendance of pupils who, otherwise, would have remained at home.

On State provision for training of teachers, replies were received from 47 superintendents to the question as to what provision the people of the county desire the State to make for the training of teachers for the district schools. Forty-eight per cent. of them report the people in favor of State appropriations to support the three normal schools established, and as many more as may be needed to meet the wants of the remaining parts of the State; 30 per cent. report the people in favor of county normal institutes, either in addition to or exclusive of the normal schools; 10 per cent. are indifferent to the subject; 4 per cent. wished only one central normal school, and 8 per cent. report the people as opposed to State aid for normal instruction.

Accounts of public school moneys.—Fifty-six superintendents make report upon the manner in which accounts of public school moneys are kept. Of these, 4 per cent. represent that the accounts are kept in a good condition; 2 per cent. in a fair condition, and 94 per cent. report them "deficient," "incomplete," "kept in memory," or "entirely unreliable." Forty per cent. recommend some change in the law, suggesting that the county treasurer keep the accounts and distribute the funds on the order of the district board; 8 per cent. recommend that the office be abolished; 26 per cent. recommend the payment to district officers of $5 to $10 each for making their annual reports.—(State report, 1876, pp. 12, 13.)

RECOMMENDATIONS OF THE SUPERINTENDENT.

In view of these replies the State superintendent recommends, among other measures, that school districts be empowered by law to purchase text books for use in the schools; that a uniform system of county normal institutes be established, one to be held annually in each county in the State for at least a four weeks' session, and that the law providing for the present system of county and judicial district institutes be repealed; that some change be made in the present law with a view to raising the standard of qualification for the county superintendency and so increasing its efficiency; that a uniform system of examining teachers be established, and that the county treasurer, instead of the present district officer, be made the custodian of the school moneys belonging to school districts.—(State report for 1876, pp. 13-15.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

As already mentioned, in consequence of the failure of the legislature to appropriate the necessary funds for their support, the normal schools at Leavenworth and Concordia were closed during most of the past year. By resolution of the board of regents,

the school at Emporia, where 300 pupils had been enrolled, continued in operation, but not at the expense of the State. A tuition fee was paid by normal pupils, which, after deducting current expenses, was shared by such of the teachers as had been willing to remain at the greatly reduced salaries which these slender means afforded. Thus, with large sacrifices on the part of both teachers and pupils, the school was kept open through the summer term, and, though seriously crippled and reduced in numbers, much earnest and valuable work was done. Over 100 students were in attendance during the term, and 14 were graduated in the elementary and 5 in the normal course. For the winter term all officers except the president were released from duty, and the whole charge of the school committed to the president, with power to charge tuition fees and engage such assistants as he pleased. On this basis 100 students were enrolled, and the educational work accomplished was, in many respects, the most satisfactory and successful in the history of the school.—(Report of superintendent, pp. 11, 158-162.)

NORMAL COURSE IN STATE UNIVERSITY.

The normal class in the State University at Lawrence consists of three parts, an elementary, high school, and collegiate course. It numbered, in 1875-'76, 98 students, of whom 48 were in the first year of their course, 24 in the second, and 26 in the third. Several of the third class are also pursuing studies with reference to the higher normal course.—(Report of superintendent, pp. 84, 88.)

At an adjourned meeting of the State Teachers' Association, held in December, 1876, a large attendance of teachers and educators from different parts of the State being present, a plan for a uniform system of normal schools for the State was thoroughly discussed, and, among other conclusions arrived at, it was resolved that the State should make provision for the ultimate establishment of several free normal schools exclusively for the preparation of teachers for the common schools, the course to extend only over a period of two years.—(Report of superintendent, pp. 7, 8.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Within the last year a committee of the regents of the University of Kansas was authorized to prepare a plan and course of study to be sent to all the organized public high schools of the State. This arrangement provides that any high school adopting the plan suggested shall be recognized as a preparatory school and its graduates admitted to the freshmen classes of the university without reëxamination.—(Report of superintendent, p. 84.)

Except the above, no information respecting high schools is received, save that in returns from Atchison and Lawrence 3 such schools appear. No statistics are given for that in Atchison beyond the fact that it has a principal with $600 annual salary. In Lawrence there appear to be 2 schools, 1 for boys and 1 for girls, with a common principal and 2 assistants, the students being 46 boys and 91 girls.

In a table of graded schools, appended to the State report for 1876, there appear 5 whose grades are of such a number as to indicate the existence of high school departments, but no explicit statement to that effect is made, nor is any number of high school pupils given.

PRIVATE SECONDARY SCHOOLS.

In 1 school for girls and 1 for both sexes, outside of the public school system, there have been reported to this Bureau 11 teachers and 118 scholars, with no indication of any studies beyond English. In both schools drawing is taught, as well as vocal and instrumental music, and both have libraries, one of 40, the other of 600 volumes.—(Returns to Bureau of Education.)

PREPARATORY SCHOOLS AND PREPARATORY DEPARTMENTS.

Of the former class of institutions none is reported from Kansas for 1876. Of the latter, 8 present 5 teachers additional to the college faculties, having under them 309 pupils, of whom 88 were preparing for a classical collegiate course and 327 for a scientific course.—(Returns to Bureau of Education, 1876.)

BUSINESS COLLEGES.

Two of these, 1 at Leavenworth and 1 at Topeka, report 4 teachers and 177 students, of whom 4 were in phonography, the others unclassified. The former of these teaches common English branches and correspondence, penmanship, book-keeping, commercial law, and phonography; the latter, penmanship, book-keeping, banking, and commercial law. The former has a library of 86 volumes; the latter reports none.—(Returns to Bureau of Education for 1876.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF KANSAS.

The year past has been one of prosperity to this institution. Progress has been shown in the efficiency of the general management, the promptness of the faculty, the excellent deportment and proficiency of the students, and the large increase in attendance over the number of the previous year. A normal department was opened in April, 1876, with 35 students, a number which, by the following November, had increased to 98. The university now offers seven fully organized courses of study, namely, classical, general scientific, normal, modern literature, civil and topographical engineering, natural history, and chemistry.—(State report, pp. 81–112.)

OTHER COLLEGES.

Baker University, Baldwin, (Methodist Episcopal,) admits both sexes to its preparatory, classical, and scientific courses. Two ladies are also members of its faculty.—(Circular, 1876.)

Highland University, Highland, (Presbyterian,) has a preparatory and a collegiate course of 4 years. Most of its students are in preparatory branches; only 7 are pursuing the collegiate course; of these, 6 are young men.—(Returns, 1876.)

Lane University, Lecompton, (United Brethren,) has preparatory and collegiate departments, most of its students being engaged in the former. Both sexes belong to its classes.—(Return for 1876.)

Ottawa University, Ottawa, (Baptist,) was suspended in 1874, and only the preparatory department appears to be now in operation.—(Return, 1876.)

St. Mary's College, St. Mary's, (Roman Catholic,) reports a total of 130 students, but no division of them as to preparatory and collegiate studies. There is the usual collegiate course of 4 years.—(Return for 1876.)

Washburn College, Topeka, (Congregational,) reports preparatory and collegiate departments, the latter with classical and scientific courses. Both sexes are admitted.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

STATE AGRICULTURAL COLLEGE.

The attendance at this institution during the past year has been 28 per cent. greater than ever before, 61 per cent. of the pupils being men and 39 per cent. women. The course includes instruction in farm work, botany and practical horticulture, chemistry and physics, elementary English and mathematics, higher mathematics, German and French, industrial drawing, mechanical employments, printing, sewing, telegraphy, and instrumental music. The lecture course in household chemistry, introduced the previous year with gratifying success, is continued as a regular feature of the chemical instruction in the woman's department. These lectures embrace a full consideration of the nature, constitution, and means of preparation and preservation of various kinds of food. A kitchen laboratory is being prepared, which, it is hoped, will add much to the practical value of this course. In the mechanical department there were from 50 to 60 students practising daily in carpenter, cabinet, wagon, turning, paint-

ing, blacksmith, and scroll sawing classes. This department has a little more than paid its own expenses during the year. The printing department continues to prove a success; during the first term of the year there were 73 students engaged in it. The telegraph and sewing departments each enrolled about 60 students.—(Report of State superintendent, pp. 113-157.)

THEOLOGY.

The Kansas Theological School, Topeka, (Protestant Episcopal,) has only recently been organized; two students are reported; no course of study has as yet been marked out.—(Return, 1876.)

SPECIAL INSTRUCTION.

EDUCATION OF THE BLIND.

The Kansas Institution for the Education of the Blind, at Wyandotte, is accomplishing all that its most sanguine friends have hoped, both in its literary and industrial departments. The boys have been employed in broom and brush making in this, as in most other institutions of the kind, but no remunerative employment for the blind girls had been found until recently one of the teachers in this school suggested the making of straw hats, an article always salable and in which nearly the whole cost is the labor. During the year thirteen girls were employed in this, and the experiment has proved a success. The literary studies pursued are reading in New York point and Boston type, writing in New York point and with grooved cards, spelling, geography, grammar, arithmetic, algebra, United States history, and modern and ancient history, botany, rhetoric, natural philosophy, English history, physiology, civil government, vocal and instrumental music. The number of pupils enrolled was 54; average daily attendance, 42.—(Catalogue and return, 1876.)

EDUCATION OF THE DEAF AND DUMB.

The Kansas Asylum for the Deaf and Dumb, at Olathe, instructs pupils in the elementary branches of a school education, but, appears to have not yet made arrangements for teaching trades or handicrafts. Number of pupils in attendance, 115; males, 59; females, 56; number who have received instruction since the foundation of the institution in 1865, 163.—(Catalogue, 1875, and return, 1876.)

LIST OF SCHOOL OFFICIALS IN KANSAS.

Hon. ALLEN B. LEMMON, *State superintendent of public instruction, Topeka.*

STATE BOARD OF EDUCATION.

[Term, that of the official status of members in their several offices.]

Members.	Post-office.
Hon. Allen B. Lemmon, State superintendent of public instruction	Topeka.
Chancellor James Marvin, of State University	Lawrence.
President John A. Anderson, of State Agricultural College	Manhattan.
President C. R. Pomeroy, of State Normal School	Emporia.

List of school officials in Kansas—Continued.

COUNTY SUPERINTENDENTS.

[Term begins second Tuesday of January, 1877; expires second Tuesday of January, 1879.]

County.	Superintendent.	Post-office.
Allen	Frank Root	Iola.

(Returns and reports for 1874–'75 and 1875–'76 from Hon. H. A. M. Henderson, State superintendent of public instruction.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Constitution of 1850; Collins's History of Kentucky; Littell and Swigart's Digest, 1822, pp. 1120–1127; Wickliffe and Turner's Revised Statutes of Kentucky, 1852, pp. 599–609; Stanton's Revised Statutes, 1860, vol. 1, pp. 196–7; vol. 2, pp. 720–725; Myers's Digest, 1866, pp. 432–461; annual volumes of laws from 1838; State superintendent's reports, 1868 to 1875; act to establish a uniform system of common schools for colored children, approved February 23, 1874.

EARLY ACTION WITH RESPECT TO SCHOOLS.

Kentucky—originally a part of Virginia and admitted as a State of the Union in 1792—came in without any constitutional provision in favor of education; nor did her amended constitution of 1799 contain such provision; still, educational interests were not neglected by her early population. An act of the legislature, approved February 10, 1798, set apart, for the benefit of academies and seminaries, a very large tract of the public lands of the Commonwealth, lying south of the Cumberland River, five academies and seminaries receiving each 6,000 acres. January 27, 1808, the provision of 6,000 acres for an academy or seminary was made to extend to all the counties of the State, and this was confirmed by a general act of February 4, 1812.* As in too many other cases, these large grants were wasted by those into whose hands they came, and speculators got the good of what had been intended for the schools; but this was the fault of the trustees of the county seminaries, not of the legislators who made such liberal provision for them.

December 18, 1821, the foundation of a general school system was attempted by the appointment of a committee to confer with eminent educators, collect information, and prepare a plan for a State system of common schools. For the support of such a system, provision was made that half the net proceeds of the Bank of the Commonwealth should be set apart as a literary fund, to be distributed in just proportions to the counties of the State, while half the net profits of three branch banks were to be given to Transylvania University, Centre College, and the Southern College of Kentucky. The committee to whom the work of preparation was referred made an elaborate report in 1822, and the governor seconded it with a message favoring the system they proposed; but sufficient changes had occurred meanwhile in the composition and feeling of the legislature to prevent for that time the adoption of the plan.

The next effort of the friends of common schools was to secure, through the Kentucky Senators and Representatives in Congress, a bill for distributing among the older States some such proportion of the public lands as had been given to the newer ones "for purposes of education." This effort failed, and the million acres hoped for by Kentucky were not obtained. But when, by act of Congress, June 23, 1836, the surplus revenue of the United States which had accumulated in the Treasury was distributed among States willing to receive it, the legislature, by act of February 23, 1837, set apart $1,000,000, out of the $1,433,757 falling to Kentucky, to form the basis of a permanent school fund. This was a welcome boon, the proceeds of the stock of the Kentucky Bank having been lost through the failure of that institution.

A SCHOOL SYSTEM ESTABLISHED.

Encouraged by this establishment of a school fund, the favorers of general education bestirred themselves again, and succeeded in securing, February 16, 1838, the passage of a bill providing for the school system they desired. The main features of this system were as follows:

(1) The State was to be divided up into school districts of convenient size, to contain not less than 30 nor more than 100 children of from 7 to 17 years of age. In each of these districts was to be held an annual district meeting, at which should be elected by the qualified male voters 5 school trustees, whose duty it should be to organize the district schools. In order to such organization and to the subsequent carrying forward of the schools, they were to purchase or lease a site for a school-house; to build, hire, or purchase, keep in repair, and furnish such school-house; to provide it with the necessary fuel and appendages; to have the custody and care of it; to employ teachers for the school or schools to be held in it; to pay these their wages; and to make annual report to the county commissioners of schools of the time school had been kept, the amount of moneys received for it, the manner in which these had been expended, the number of children taught, and the number of school age (then 7 to 17) within the district.

(2) In the counties, the county courts were to be availed of first to take measures for the initiation of the school system. Afterward, other duties were imposed on them. Under this earliest school law, on receiving notice of the amount of school moneys that could be given to their counties, they were required to take the sense of the people in the various districts as to the adoption of the school system and as to the propriety of levying a district tax to supplement the fund received from the State for the support of common schools, this to consist of such amount as the district should determine, with a poll tax of 50 cents on each white male over 21.

On the supposition that the system would be more or less adopted 5 competent persons, to be styled commissioners of common schools, were to be appointed in each county, to continue in office twelve months and, with the aid of the county surveyor,

* These seminary lands were also, for a long time, exempted from forfeiture and taxation; but in 1816 there was a restriction of such exemption to the buildings of such institutions, with their libraries, apparatus, and 5 acres of surrounding land.—(Wickliffe and Turner, pp. 446 and 560.)

to divide their county into the school districts before spoken of. This done, they were to receive from the State superintendent of instruction the State school allowance, and from the sheriff of their county all local moneys for the public schools, apportion these among the districts in the proportion of their school population, make report to the central school authorities, and examine and license teachers for the schools.

(3) For the State there was a central board of education, composed of the secretary of state, the attorney-general, and a State superintendent of instruction, who should be appointed by the governor and approved by the senate. The superintendent was to be president, and all bonds, notes, and other instruments of writing made by the board must have his signature in order to their full effect. This board was to hold property of every kind for the use of schools, to have a general supervision of the interests of the school system, and to have power to sue and be sued and perform all corporate acts.

The superintendent was to hold his office for two years; to receive a salary of $1,000; to give bond in $25,000 for the faithful discharge of duty; to apportion, with the advice and aid of the other members of the board, the State school moneys; and to make to the legislature annually a report of the amount and condition of the school fund, with such other matters relating to his office and to the common schools as he should see fit to communicate.

Louisville, Lexington, and Maysville were exempted from the provisions of this law as respected the districting of their territory, were to be considered as within the public school system so long as they supported public schools by taxation, and were to be entitled to all the benefits of the act on making annual report of the number of children of school age within their bounds.

SUBSEQUENT CHANGES.

The main features of this original school system—such as the division of school control between district, county, and State officers—have been continued till the present time. But, as experience has developed difficulties in the working of the system, these have been met by alterations.

For instance, the State having failed during several years to pay the interest due on its bond for the school fund and having levied no State tax in aid of this interest, Rev. Robert J. Breckinridge, D. D., superintendent of public instruction from 1847 to 1853, secured an act, February 29, 1848, directing the governor to issue a new bond for all arrears of interest due and to submit to the people the question of adding to the annual interest the proceeds of a State levy of 2 cents on the $100 for the benefit of public schools. The people voting in favor of the tax, its levy was ordered by act of February 26, 1849. Even this aid, however, proved insufficient to keep pace with the increase in the number of school children, and, in 1855, it was increased to 5 cents. In 1867 Superintendent Smith showed that the distributable fund had still run down in ten years from $1.20 per capita to only 80 cents. He therefore recommended the submission to the people of a proposition to increase the ad valorem State tax to 20 cents on the $100, as the indispensable condition of success, while various additional improvements were recommended. The proposition for an increase of the tax was carried, and on March 21, 1870, a law embodying this, with a consolidation of the school fund into one State bond for $1,327,000, bearing interest at 6 per cent., was passed.

As to the school age, too, there have been changes from the 7–17 of the law of 1838 to 5–16 in 1849, to 6–18 in 1858, and to 6–20 in 1864.

The number of trustees in school districts, originally 5, appears as 3 in the revised law of 1870 and 1 in that of 1873. That of county commissioners of schools, also originally 5, was limited to 3 in 1850, and brought down to 1 in 1864.

The salary of the State superintendent of instruction, made only $1,000 in 1838, appears in the law of 1864 as $1,500, with necessary office and travelling expenses; in 1870 as $2,000, and in 1873 as $3,000. His duties also, as well as those of the commissioners and trustees, have been gradually modified and in many respects enlarged. Since 1864, too, he has been allowed a clerk.

The powers of the State board of education—at first little more than a sort of general care for the school system, with a holding of school property and an aiding of the superintendent in apportionment of the school fund—have, since 1864, been extended to the making of rules and regulations for the schools, the prescription of the forms of return to be made by subordinate school officers, the recommendation of a course of study and of text books, and the organization and keeping in existence of a State teachers' association. Since 1873, too, there have been two professional teachers associated with the three preceding members; thus bringing practical experience in school work to supplement the legal knowledge of the attorney general and the large acquaintance with the people and their affairs possessed by the State secretary and the superintendent of public schools.

For examination of teachers, county commissioners have been allowed, since 1864, to select two competent persons, a certificate from one of whom or from the commis-

sion was at first sufficient warrant for engagement in any public school in the county. Since 1870 the three have constituted a county board of examiners, and without a certificate of qualification from a majority of this board, or a State certificate, no one can be engaged to teach in any county public school. Since 1873 there has been also a State board of examiners, composed of the State superintendent and two professional educators appointed by him, and certificates from this board, or from a majority of its members, are valid throughout the Commonwealth.

Taxation for school purposes in the districts was at first entirely optional, the people determining, at a district meeting, the question alike of the expediency of a levy and its amount. In 1865 the amount was restricted by law to 5 cents on the $100. In 1873 the amount was raised to 30 cents on the $100, beyond which, with a capitation tax of 50 cents for fuel and contingent expenses, to be laid upon the patrons of a school, it may not go in any one year.

Teachers' institutes, as a means of preparing teachers more efficiently for their work, were directed, by a law of March 21, 1870, to be organized in each county, and by the same law district libraries were also provided for.

Public schools for colored children — asked for by the colored people at least as early as 1870, with the proposition that they should be taxed independently for their own schools — were not sanctioned by the State till February 23, 1874, when a law was passed for the institution of a separate school system for the benefit of the colored race. The school age fixed for these schools is 6 to 16. The taxes for their support come from the colored people. The white commissioners have the supervision of the schools.

ADMINISTRATION OF THE SYSTEM.

The successive State superintendents of instruction who have presided over the inauguration and development of the school system are given in the State report for 1873–'74, as follows: Joseph J. Bullock, D. D., 1837 to 1839; Hubbard H. Kavanaugh, D. D., 1839 to 1840; Benjamin B. Smith, D. D., 1840 to 1842; George W. Brush, 1842 to 1843; Ryland T. Dillard, D. D., 1843 to 1847; Robert J. Breckinridge, D. D., LL. D., 1847 to 1853; John D. Matthews, D. D., 1853 to 1859; Robert Richardson, A. M., 1859 to 1863; Daniel Stevenson, D. D., 1863 to 1867; Zachariah F. Smith, 1867 to 1871; Howard A. M. Henderson, D. D., 1871 to 1875; then reëlected for a new term.

On March 1, 1842, B. B. Sayre, A. M., was appointed to fill a vacancy, but soon declined; and on April 26, 1842, Robert Davidson, D. D., was appointed, but declined May 15 following.

Of the incumbents above named, it cannot be invidious to mention Dr. Bullock as worthy of memory for his initiation of so good a system at so early a day as 1838; Dr. Breckinridge, for his manful efforts to secure to the school fund the arrears of interest due to it from the State, with a tax of 2 cents on the $100 to increase the annual revenue; Mr. Smith, for his rejuvenation of the system by the new law of March 21, 1870, with its large increase of the annual tax for schools; and Dr. Henderson, for his instrumentality in accomplishing a new and excellent revision of the school law, December 1, 1873, as well as the measure for the education of the colored people, which Mr. Smith had advocated before him.

ELEMENTARY INSTRUCTION.

REMARKS UPON THE STATISTICS.

In consequence of the failure of many county commissioners to furnish him the necessary reports, the State superintendent omits, in his report for 1875–'76, any arrangement of statistical tables, and instead of such tables gives an approximate estimate based on the reports received from 4,223 districts, about 2,000 failing to report.

All the public schools, numbering 6,500, were taught, save 47. The highest number of children attending reached 228,000, and the average fell as low as 160,000. Besides about 700 private schools in the State there are 4,830 public school-houses, valued at $875,000. This does not include the elegant buildings in 10 of the principal cities of the State, the cost of which would aggregate a sum probably twice the value of all country school-houses, or more than a million and a half of dollars. There were built during the year 112 school houses, aggregating in cost $21,000. There were raised in the common school districts of the country about $80,000 by local taxation and about $61,000 by subscription. Thirteen of the principal cities raised by local taxation $437,000 for the education of 28,000 pupils, an average of $15.50 to the pupil; and the people of the country districts pay, by taxation and other means, (over and above the State apportionment,) $141,000 for the education of 200,000 pupils, or 70 cents to the pupil. In the 13 cities mentioned nothing is heard of "the inefficiency of the school system," and the public here are found almost unanimous in favor of public school education.

The school census has advanced since 1872, the year the present superintendent

assumed office, from 405,840 to 459,395; an increase of 53,555 during the four years and of 11,253 during the last year. Owing to this large increase of the school census, the amount expended per child remains the same as for the previous year; otherwise it would have been considerably increased. Under the old régime the interest was so small that a large number of children were not reported, whereas now the trustees of the various districts are diligent to hunt up and report every child entitled to the benefits of the common school.—(Superintendent's report, 1875–'76, pp. 13, 14, 94, 95.)

SCHOOLS FOR COLORED CHILDREN.

The general assembly having passed, in February, 1874, a school law for the benefit of the colored people, measures were at once taken to organize the system. The fund at immediate command furnishes only 55 cents for each pupil child, an increase, however, during the year, of 25 cents, and that too, with a considerably increased census. The fund for colored schools consists of all taxes levied on colored persons, with all fines, penalties, and forfeitures collected from them. It is also to include all moneys hereafter donated by Congress from the sales of public lands, the pro rata share to each pupil not to exceed that to the whites. In other words, all the taxes paid by colored citizens are allowed them for the education of their children. They enjoy the benefits of the State government, but are not required to contribute to its support. In many country neighborhoods too, employers, from considerations based on the permanency of labor and the satisfaction of laborers, are aiding in the support of schools for the colored race. Several cities also have added to the State apportionment all municipal taxes paid by colored people, and excellent schools are maintained for them in the larger centres of population. Superintendent Henderson recommends to all the cities and towns a like course, the elevation of this class being a matter of prime importance, since a ballot in the hands of a black citizen is quite as potent as in the hands of a white one. To the 40,000 white voters unable to read their ballots have been added, he remarks, more than 50,000 negroes, making an aggregate of more than 90,000 illiterate electors, or one-third of the entire voting population of the Commonwealth.

It is suggested that the colored people may in time secure larger aid for their schools from the general assembly, if they will make the best use of what they already have; and colored teachers and trustees are advised to take immediate steps to organize county institutes and a State teachers' association, that they may combine for larger influence and be taught the arts and agencies of education, in which work the superintendent pledges himself to afford them all the personal and official aid within his power.—(Report of Superintendent Henderson, 1875–'76, pp. 18, 21, 70.)

OBSTACLES IN THE WAY OF IMPROVEMENT.

The greatest obstacle noted by the superintendent in the way of the improvement of the schools is a lack of funds. He says: "The system can never grow until provisions are made for more money. Every limitation to the liberality of the people of any district should be removed. All necessity for special legislation, when a community aspires to a system of graded schools, should be obviated, and a statute provided so broad that the end might be speedily compassed without asking any further law making on the subject. Provisions should be made by which each district could readily supply itself with a school-house and furniture adequate to its best means and noblest wishes. All difficulties relating to taxes levied by the vote of the electors of a district should be gotten out of the way. Everything that is obscure with regard to the prerogatives and duties of officers connected with the system should be made clear. A plan should be devised for the election of a school commissioner who is qualified for the office and scrupulously concerned to advance the cause of education. Permanency should be given to district boundaries. The revenue and school laws should be so harmonized that there need be no delay in the prompt payment of teachers and no opportunity for unscrupulous brokerage in their claims. And, finally, some discretion should be given to courts to determine how far the county levy may be made to aid in the organization and support of common schools."—(Superintendent's report, 1875–'76, p. 10.)

KINDERGÄRTEN.

Three schools of the above class, 2 of them in Louisville and the other in Georgetown, the latter only commenced in 1876, report a total attendance of 77 pupils, taught by 3 principals and 2 assistants. Children are admitted in one from 3 to 7 years of age, in another from 4 to 7, and in the last from 6 to 9.—(Returns, 1876.)

CITY SCHOOL SYSTEMS.

COVINGTON.

Officers.—A board of education of 5 members, including the city superintendent of schools.

Statistics.—Number enrolled in public schools, 3,354; average number belonging, 2,565; per cent. of attendance, 94.

Remarks.—The schools are graded, and include a high school with a course of 4 years, embracing Latin and the higher English branches. The students in this grade numbered 195 during the year, the average number belonging being 166; per cent. of attendance, 95.7.—(Report of Superintendent J. W. Hall, 1875–'76.)

LOUISVILLE.

Public school officers.—A board of trustees of 24 members, 2 for each ward, a city, superintendent of schools, and a German assistant superintendent.

Statistics, 1874–'75.—Number of children of school age, 44,827; number enrolled in public schools during the year, 17,593; average daily attendance, 11,551; average number of teachers employed, 315; total cost of the schools, $255,529.02; increase in cost over the previous year, $2,360.54.

Remarks.—The public schools of the city comprise a boys' high school, a girls' high school, a training school, 22 ward schools, and 5 schools for colored children. In addition to these the board established night schools for boys who were unable to attend day schools; and in these there was an enrolment of 1,353 pupils and an average attendance of 610. The enrolment in the two high schools was 645, an increase of 48 over that of the previous year. The number of graduates in the training school was 29 and in the girls' high school it was 56. The German language is taught in all the ward schools except 2, in which the small attendance will not justify the expense. The colored schools are reported to be making steady and substantial progress, and all belonging to the city were in a healthy condition on the whole, as evinced by the increase of 607 in attendance, notwithstanding the depression of business, and by the fact that the results of the examinations for promotion show a marked improvement over the previous year in the scholarship of the pupils.—(Report of the board and of the superintendent, George H. Tingley, for 1874–'75.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

The Kentucky Normal School at Carlisle, a private enterprise, organized in 1873, provides 7 different courses of study, viz: professional, language and literature, mathematics, natural sciences, elocution and rhetoric, debating and composition, and business. In the professional course are taught the laws pertaining to the development of the physical and mental organization, the relation of different branches of study to one another, the laws of culture, and methods of instruction. The buildings are new and well furnished, and will give ample room for over 300 students. The number of normal students in 1876 was 100, of whom 65 were men and 35 women.—(Catalogue, 1875–'76, and return, 1876.)

Glasgow Normal School, Glasgow, organized in 1875, already reports an attendance of 150 in its normal department — 90 men and 60 women — and 75 in its 2 other departments, scientific and commercial. The full course of study requires 3 years for its completion. Graduates of this school, as also those of the school at Carlisle, are authorized by law to teach in the common schools of the State without further examination.—(Catalogue, 1876–'77, and return, 1876.)

The Louisville Training School and a school for teachers at Morgantown report, respectively, (by return, 1876,) 45 and 22 pupils. Normal classes or departments also exist in connection with the Kentucky University and Berea and Georgetown Colleges.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

From the State superintendent's report it appears that most of the cities and larger towns have graded schools. In only 9 cities, however, are public high schools or departments distinctly reported, including Louisville, in which there are 2, 1 for each sex, with an enrolment of 221 boys and 424 girls. No further statistics are given respecting any of these schools, except that the enrolment at the Owensboro' high school was 169.—(State report, 1876, pp. 58–70.)

PRIVATE SECONDARY SCHOOLS.

Of schools of this class, 6 for boys, 13 for girls, and 23 for both sexes, 42 in all, report 206 teachers with 3,256 pupils, 678 of them in classical courses and 457 in modern languages, the remainder in English studies only. It was understood that 183 were preparing for a classical course in college and 104 for a scientific course, while 62 had entered college the preceding year. In 16 of the 42 schools drawing was taught; in 29, vocal music; in 31, instrumental music; in 10, a chemical laboratory aided the instruction in chemistry; and in 12 there was apparatus for illustration of natural philosophy. Sixteen had libraries of 68 to 3,200 volumes each, the total number of volumes in the 16 being 11,868.—(Returns to Bureau of Education for 1876.)

PREPARATORY DEPARTMENTS OF COLLEGES.

Twelve of these, not including colleges for women, present a total of 18 teachers, besides those in the college proper, and 930 pupils, 216 preparing for a classical and 131 for a scientific collegiate course.—(Returns to Bureau of Education, 1876.)

BUSINESS COLLEGES.

Two such schools report 6 instructors and 357 students, without stating in what branches they are engaged. One of the two undertakes to teach political economy and phonography, besides common English branches and correspondence. Both teach penmanship, book-keeping, and commercial law.—(Returns for 1876.)

SUPERIOR INSTRUCTION.

KENTUCKY UNIVERSITY, LEXINGTON.

The existence of Kentucky University is due chiefly to the efforts of John B. Bowman, its founder and present regent. In the year 1855, while yet a young man, he dedicated his life to the work of building up a university which was to cheapen and widen the system of higher education so that the humblest youth in all the land could enter it and receive such education, general or technical, as would qualify him for any business of life; an institution which, while under the auspices of the Christian church, was to be unsectarian and unsectional. He secured, by donations of money and property and by legislative acts of consolidation and confederation, assets to the amount of about $750,000, which constitute the present basis of the university. These assets were secured from about 1,000 individual donors, from the United States Government, from the State, and from the trustees of Bacon College and Transylvania University.

The university embraces several colleges, each under the immediate government of its own faculty and presiding officer. Each college is divided into several schools or departments of study, and each school is under the immediate government and instruction of a competent professor, assisted, when necessary, by subordinate instructors and tutors. The colleges of the university are (1) the college of arts, (2) the agricultural and mechanical college, (3) the college of the Bible, (4) the commercial college, (5) the college of law, (6) the college of medicine. A normal college is embraced in the plan, but it has not yet been organized. While the course of study and instruction in each college is complete, the four first named are so associated that a student regularly matriculated in any one of them may have the benefit of instruction in the others without additional charge for tuition. The college of arts embraces 10 schools, viz: English language and literature, mental and moral philosophy, mathematics, Greek language and literature, Latin language and literature, sacred history and evidences of Christianity, chemistry and physics, natural history, civil history, and modern languages. Graduation in all these schools, except in that of modern languages, is required for admission to the regular degree of bachelor of arts; the candidate, however, being permitted, with the consent of the faculty, to substitute for calculus or senior Latin, or junior and senior Greek, a course in the French or German language, or to substitute for calculus and senior Latin the course in Hebrew taught in the college of the Bible.—University catalogue, 1876.)

OTHER COLLEGES.

Berea College. Berea, (Congregational,) embraces collegiate, normal, and preparatory departments. Both sexes are admitted and no race is excluded.—(Catalogue, 1875.)

Bethel College, Russelville, (Baptist,) admits only young men. There are 8 independent schools, 6 of which form a full collegiate course, requiring, in regular graduation, 5 years or sessions for its completion. The theological school is independent of the collegiate course, but, by substituting its grades for corresponding grades in other schools, the student becomes equally entitled to the diploma.—(Catalogue, 1875-'76.)

Cecilian College, Cecilian Junction, (Roman Catholic,) is an institution exclusively for young men; has commercial and classical departments; admits those who are not Catholics and permits attendance upon other places of worship.—(Catalogue, 1876.)

Central University, Richmond, (Southern Presbyterian,) was established in 1873, and embraces colleges of science and literature, of medicine, and of law.—(Catalogue, 1874-'75.)

Centre College, Danville, (Presbyterian,) embraces preparatory, scientific, and classical departments. Only young men are admitted.—(Catalogue, 1876.)

Concord College, New Liberty, (Baptist,) admits both sexes to its preparatory and collegiate departments.—(Catalogue, 1874-'75.)

Eminence College, Eminence, (Christian,) admits both sexes to its preparatory, scientific, and classical departments. A special course, corresponding to that usually furnished in ladies' seminaries, is provided for such young women as do not wish to take the collegiate course. The two sexes do not live in the same building, but recite together where their studies are the same.—(Catalogue, 1876-'77.)

Georgetown College, Georgetown, (Baptist,) appears to be exclusively for young men. In 1872 the course of study was remodelled, and the elective or university plan adopted. The departments are English literature, Latin, Greek, modern languages, mathematics, physical sciences, history and political economy, and mental and moral philosophy; altogether, it is stated, this course covers more ground than the ordinary college curriculum. There are also normal and theological departments.—(Catalogue, 1875–'76.)

Kentucky Military Institute, Farmdale, (non-sectarian,) exclusively for young men, has preparatory, collegiate, civil engineering, and commercial courses. The degrees conferred are bachelor of arts, bachelor of commercial science, bachelor of literature, and bachelor of mathematics. The organization is military, as the name of the school implies. The design of this feature is to bring about a just discipline and to direct to a high purpose the aimless energies of youth.—(Catalogue, 1875–'76.)

Kentucky Wesleyan University, Millersburg, (Methodist Church South,) reported in 1874–'75 a regular collegiate course of 4 years, with classical and scientific departments. No later information.—(Catalogue, 1874–'75.)

Murray Institute, Murray, (non-sectarian,) embraces primary, preparatory, and collegiate departments. There is a ladies' course which omits Latin and Greek, substituting for them music and the usual ornamental branches.—(Catalogue, 1875–'76.)

St. Joseph's College, Bardstown, (Roman Catholic,) is exclusively for Roman Catholic young men. There are two courses of study, the classical, for such students as desire to prepare for the ministry or the learned professions, and the commercial.—(Catalogue, 1875–'76.)

St. Mary's College, St. Mary's, (Roman Catholic,) also exclusively for young men, has a classical course of 4 years and a commercial one of 3. French and German are optional studies.—(Catalogue, 1875–'76.)

Warren College, Bowling Green, (Methodist Episcopal South,) apparently admits only young men, and has preparatory and collegiate departments, the latter with an optional course of study.—(Catalogue, 1875–'76.)

COLLEGES FOR WOMEN.

Besides the several colleges above mentioned into which women are received, 18, especially designed for them, report themselves for 1876 as having 124 teachers and 1,769 students, 396 of these in preparatory departments, 770 in regular collegiate studies, 91 in partial courses, and 6 in post graduate ones, leaving 506 not accounted for. Music, vocal and instrumental, drawing, and painting are taught in all these institutions; French in 13; German in 11; 12 have chemical laboratories and more or less philosophical apparatus; 4 some collections in natural history or geology, and 1 an art gallery.—(Returns for 1876.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

AGRICULTURAL AND MECHANICAL COLLEGE.

This institution, located at Lexington and organized in 1866, offers a course of study divided into 9 distinct schools, viz: English language and literature, mental and moral philosophy, mathematics, chemistry and physics, natural history, civil history, modern languages, civil engineering and mining, and military tactics. A signal service station of the War Department has been established on the college grounds, where instruction is given in meteorology. Students desiring to pursue Latin and Greek or other branches of the college curriculum have access to such classes in the college of arts, without charge for tuition. Each county or legislative district is entitled to send 3 properly prepared students free of charge for tuition, making 300 State scholarships. Tuition to others is $30 annually. The course of study is completed in 4 years.—(Catalogue of university and return, 1876.)

THEOLOGY.

Instruction in theology is given in Danville Theological Seminary, Danville, (Presbyterian,) which has a three years' course of study; in the Western Baptist Theological Institute, a department of Georgetown College, where tuition is free and the course can be pursued concurrently with studies in the college; in the Bible College of Kentucky University, which is non-sectarian; and in the school of theology, Bethel College, (United Baptists,) which has a three years' course of study.

LAW.

The College of Law of Kentucky University provides a thorough course of instruction, except in merely local law, for young men preparing for the bar in any part of the United States. The course is completed in 2 years. No examination or particular course of previous study is required for admission.—(Catalogue of university, 1876.)

The College of Law in Central University also provides a two years' course of study. Instruction is given by text books, lectures, and moot courts. The course embraces international and constitutional law, common law and evidence, and criminal, commercial, and mercantile law.—(Catalogue of university, 1874-'75.)

MEDICINE.

Transylvania Medical College, a department of the State University, offers free of charge a two years' course of instruction in medicine, which may, if desired, be pursued in connection with the collegiate studies of the university.

The Hospital College of Medicine, a department of Central University, claims to offer superior facilities for the study of medicine, from its proximity to the Louisville Hospital, which contains accommodations for 400 patients and has, besides, an out-door department numbering over 5,000 cases annually. No less than 14 clinics are held during each week. There are, also, superior facilities for obtaining anatomical material. Course of study, 2 years.—(Catalogue and circular of university, 1874-'75, and return, 1876.)

The Kentucky School of Medicine, at Louisville, and the *Louisville Medical College*, organized in 1869, have each a course of instruction covering 2 years.

The *medical department of the University of Louisville* reports a course of study lasting one year and a present attendance of 273 students.—(Return, 1876.)

c Apparatus.

SPECIAL INSTRUCTION.

INSTITUTION FOR THE BLIND.

This is located in the neighborhood of Louisville. The buildings are magnificent and well furnished with all the appliances of comfort; the grounds are fertile and the landscape picturesque. The State charges the parents of the pupils nothing for board or tuition, and, in cases of destitution, provides clothing while they are in school. The course of instruction embraces everything taught in the common schools, with the addition of music and various branches of handicraft. The boys are taught to make brooms and mattresses, to do general upholstering work, and to cane chairs. The girls are taught to knit, sew, do various kinds of fancy work, and use the sewing machine. There were 95 pupils under instruction during the year 1876.—(Centennial Exhibit, by Superintendent Henderson, pp. 29, 30, and report of the institution, 1876.)

INSTITUTION FOR THE DEAF AND DUMB.

This school is located at Danville, was established by legislative enactment in 1823 and has been in successful operation for 53 years. Every deaf mute child in the State of Kentucky, of sound mind and body, is privileged to receive all the benefits of this institution, without charge for board or tuition, for a term of 7 years. The branches of study pursued are reading, writing, arithmetic, grammar, geography, history, natural history, physiology, and the Bible.

Attendance in 1876: males, 55; females, 56; total, 111.—(Centennial pamphlet by Superintendent Henderson, p. 30, and return to United States Bureau of Education, 1876.)

INSTITUTION FOR THE EDUCATION AND TRAINING OF FEEBLE-MINDED CHILDREN.

By act approved February 23, 1874, this institution was reconstructed and its purpose defined as being not an asylum for the custodial care of unimprovable idiots, but a school for the education of feeble-minded children. Such children, between the ages of 6 and 18, are entitled to the benefits of the institution without charge; and in the case of those who have not the means of transportation the expense is defrayed by the State. Special attention is paid in this institution to gymnastic training. Calisthenic exercises are engaged in daily, when every muscle of the body is brought into play. It is frequently found that as vigor of body is imparted activity of mind is excited, and that thus a complete recovery may result from this hygienic treatment. In the rudiments of learning, the pupils, says Superintendent Henderson, will pass any day as creditable a review and examination as the pupils of any ordinary common school in the Commonwealth.—(Centennial Exhibit, by Superintendent Henderson, pp. 31, 32.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

The annual convention of the State Teachers' Association for 1876 was held in Bowling Green, August 7. The address of the president, Dr. H. A. M. Henderson, was on "The political economy of higher and technical education," showing its value in all industries and its capacity for increasing power and wealth. After the address of welcome by Dr. J. G. Wilson, and an appropriate response by the president, remarks were made and papers read by Professor Bartholomew on "Normal schools;" by Prof. J. W. Dodd, on "The Centennial;" by Prof. J. H. Gray and Prof. S. T. Lowry, on "Graded schools;" by Professor Joynes, of Vanderbilt University, on "The study of English;" by M. P. Caldwell, superintendent of the Louisville House of Refuge, on "Reformatory schools and reformatory education;" by Col. R. D. Allen, superintendent of Kentucky Military Institute, and Professor Stark, of Russellville, on "Coeducation of the sexes," the former taking ground against the plan and the latter in favor of it. Among other interesting exercises were singing and reading by ladies and gentlemen present, with recitations by Professor Kidd, a distinguished elocutionist from Indiana.

After the adoption of several important resolutions, among which were those favoring the establishment of normal and reformatory schools, the association adjourned to meet the next day at Mammoth Cave. At the close of a pleasant day spent in exploring its wonders, addresses were delivered to those who assembled on the verandah of the hotel by Superintendent Trousdale, of Tennessee, Maj. William J. Davis, editor of the Home and School, Prof. J. R. Hodges, of Texas, and Dr. H. A. M. Henderson. Thus ended one of the most delightful and profitable reunions ever enjoyed by the teachers of Kentucky.—(Report of the State superintendent, appendix, pp. 1–108.)

OBITUARY RECORD.

WILLIAM L. BRECKENRIDGE.

Dr. William L. Breckenridge, formerly president of Centre College, Ky., died December 26, 1876, on his farm at Raymore, Missouri, in the seventy-third year of his age.—(Ohio Educational Monthly, February, 1877.)

Rice, p. 119; Barnard's Journal of Education, vol. 24 1873, p. 256.

EARLY LEGISLATION RESPECTING SCHOOLS.

Louisiana was admitted as a State of the Union in 1812 on the basis of a population of 76,556, reported in the census of 1810. While in its territorial condition, in 1808, authority had been given to institute elementary schools in each parish, (a division of the State answering to counties elsewhere.) In 1819 these schools were placed under police juries for general care of interests, and in 1821 under 5 trustees appointed by the police jury in every parish from the resident land owners, $800 being appropriated from the public funds to each parish for such schools, with liberty of increase by a local tax on the property of the parish. In 1833 the secretary of state was made superintendent of public education, and was required to submit annually to the legislature a report of the condition of schools, academies,* and colleges. In 1839 special authority was given to the second municipality of New Orleans to establish a system of public schools supported by a tax on property, on a plan prepared by Hon. Henry Barnard, of Connecticut, to whom the position of superintendent of these schools was tendered.

LEGISLATION UP TO THE WAR.

In the constitution of 1845 it was provided that there should be a superintendent of public education, who should hold office for two years, receive such compensation as the legislature should direct, and perform such duties as should be prescribed by law. This, in 1852, was amended to read: "*Provided*, That the general assembly shall have power, by a vote of a majority of both houses, to abolish the said office of superintendent whenever in their opinion it shall be no longer necessary."

The general assembly was also to establish free public schools throughout the State and provide for their support by general taxation or otherwise; amended in 1852 as follows: "All moneys so raised or provided shall be distributed to each parish in proportion to the number of free white children between such ages as shall be fixed by the general assembly."

The proceeds of all lands granted by the United States for schools, and of all such as should be subsequently granted without restriction to some other purpose, were, with the proceeds of estates of deceased persons falling to the State by law, to be held by the State as a loan, and be a perpetual fund, on which interest at 6 per cent. should be annually paid; which interest, together with [that of the trust funds deposited with the State under the act of Congress of June 23, 1836, and†] all the rents of unsold school lands should be appropriated to the support of such schools and be forever inviolable.‡

In accordance with these constitutional provisions, a law was passed in 1847—amended in 1852, 1853, 1855, 1857, and 1859—for the institution of means to educate the white youth of the State between the ages of 6 and 16 years, in such manner as should be prescribed by the directors of each district; any white person under 21 to have also the right to two years' tuition at the least. For this purpose there was to be levied in each parish annually one mill on the dollar of all taxable property, to be collected by the State tax collectors in the same manner as other State taxes. The State superintendent was to apportion the school fund thus collected, augmented afterward by a capitation tax of $1 on each free white male inhabitant over 21 and by the interest of a fund derived from the proceeds of United States land grants and other sources, for the support of free schools in the several parishes, in proportion to the number of white children in each parish of legal school age, and was forthwith to notify the parish treasurers of the amount apportioned and due their respective parishes. The treasurer was in his turn to notify the directors of each school district in his parish of the amount subject to their draft, the warrant of a majority of them to be his authority for the payment to them of the fund. The directors, 3 for each school district, were to appropriate to the support of free schools the moneys thus received by them for their districts, together with those derived from rent or interest on the proceeds of their school lands, determining how and when they should be expended. They were to establish a sufficient number of schools, employ teachers for them, and pay these

* One academy and one public library in each parish, to be supported by $50,000 raised annually, had been planned for while the State was yet a Territory.

† Added in 1852 to the provisions of 1845.

‡ The moneys arising from the sale of lands granted by the United States to this State for a seminary of learning, or from any kind of donation that should be made for that purpose, were also to remain a perpetual fund, the interest on which, at 6 per cent., should be appropriated to the support of a seminary of learning for the promotion of literature and of the arts and sciences, and never be legally diverted to any other use. Out of this provision grew eventually, after various constitutional and legislative changes with respect to it, the University of Louisiana.

out of the funds belonging to the district, establishing such rules and regulations as might be deemed proper for the government of the schools, and determining the different periods of the year when they should be taught.

For the building and furnishing of school-houses the directors were allowed — with consent of the majority of the voters of the district, obtained after due public notice — to levy a tax on the property in the district, and to the schools thus established all white children of the lawful age within the district were to have free admission. Other free whites not over 21 years old might also be admitted, provided that no claim should thence ensue to any further amount of public funds than the district would be regularly entitled to.

If no public schools were established in a district, the teacher of a private school in which any of the children of such district should attend was entitled to the same compensation for each child taught as if he had charge of a public school, and was to be paid in the same manner, *i. e.*, by a warrant on the parish treasurer, drawn by the directors of the district.

There was also provision for the payment of tuition for children who might attend school beyond the limits of their district, but within those of the parish in which the district lay; the directors of the district in which the school was attended drawing their warrant on the parish treasurer for the tuition money, and this being charged to the district to which the children belonged.

The district directors were, at each annual district meeting, to make report to the meeting of the amount of school funds apportioned to the district for the year and the ways in which these had been expended; of the number of schools taught, and the time for which they had been held; of the number of pupils attendant in each school and the number of school age not in any school; of the branches of study taught in school; and of the amount of money raised by district tax for purchasing, repairing, building or renting school-houses, or for other purposes, with an account of all disbursements. Their warrant to the parish treasurer, too, for the payment of teachers' salaries was to be accompanied with a statement from them showing the number of schools in the district in which children were taught by aid of the public funds, the number of children taught in them through such aid, the number who did not attend school, and the monthly rate of compensation for each teacher.

The parish treasurer was annually, in November, to make report to the State superintendent showing (1) the amount of school money he had received from all sources, designating each source; (2) the amount of money paid each district for school purposes; (3) the number of children who had attended school on the public foundation; (4) the average time the schools had been taught during the year. Originally it was a parish superintendent of schools, elected by the people and commissioned by the governor, who, acting as treasurer of funds intended for the districts, came between the district directors and the State superintendent, visiting the schools, examining and licensing teachers for them, filling vacancies occurring in boards of directors, appointing a board where there was failure to elect one, and making the report above indicated with reference to the schools. This useful office was abolished March 18, 1852.

The State superintendent, who by the law of 1847 was charged with the visitation of every parish once a year for the inspection of schools and awakening an interest in education, was annually, in the first week of the session of the general assembly, to report to it the condition of the public schools, the expenditures of the school money, plans for improvement of school funds, number of schools, number of children in them, times they were taught in each parish, payments for tuition in them, sources whence means for these payments were derived, number of school-houses, amount expended in erection of them, and all other matters he might deem important with reference to the working of the school system.

Quite careful guards were placed by the revised law around the sales of school lands and the expenditure of the annual school moneys, any surplus of which, with the proceeds of the sale of State school lands, was to form a "free school accumulating fund," to be invested in bonds of the State or of the city of New Orleans, bearing not less than 6 per cent. interest per annum. This fund, in 1859, November 1, amounted to $899,500. The amount of public money apportioned among the several parishes in March of that year was $303,324.34.

The effect of the system thus established was shown to some extent in the returns of the United States census for 1850, in which were reported, for Louisiana: public schools, 664; teachers, 822; pupils, 25,046; income from all sources, $349,679. In 1860 the returns were: public schools, 713; teachers, 856; pupils, 31,813; income from all sources, $469,210. Of this income about one-sixth in 1850 and one-eighth in 1860 appears to have been from tuition fees; most of the remainder from taxation and public funds.

LATER LEGISLATION.

The school system of the State was, of course, to a large extent prostrated by the war, and only partially revived at the conclusion of it. As to the children to be entitled to its benefits, an important change was made by the constitution of 1868.

Adopting, with reference to education, the main provisions of the preceding constitutions, it added: "All children of this State between the years of 6 and 21 shall be admitted to the public schools or other institutions of learning sustained or established by the State in common, without distinction of race, color, or previous condition;" and "there shall be no separate schools or institutions of learning established exclusively for any race by the State of Louisiana." This was so radical a change, and went so much beyond a very extensive public sentiment, that opposition to it on the part of a large portion of the formerly dominant white element was immediately aroused and has been in various ways since manifested. A law was passed, however, March 10, 1869, in conformity with the constitutional provision, making it a misdemeanor, punishable with fine and imprisonment, for any municipal, parish, State, or school officer, or any teacher of a public school to refuse to receive into a school any child of lawful age entitled to admission into the same; such causes to have preference before other criminal cases on the docket of the courts, and such persons so offending to be also liable to an action for damages by the parent or guardian of the child so refused.

Under this law the whole school system had to be reorganized, and with a view to the working of it in these novel circumstances the act provided for a State board of education, to consist of the superintendent of public instruction, of one member to be appointed from each congressional district in the State, and two from the State at large, under the management of which board all schools established and maintained by the State were placed.

The act further provided for a division of the State into six districts, corresponding with the congressional districts, and for the appointment over these of six division superintendents, to whom should be intrusted the supervision and general management of public schools in their respective districts, subject to the direction and control of the State board. For local management provision was made for the appointment, by the State board of district boards of school directors for each school district in the State, who were empowered to establish and control the schools in their respective districts, subject to the supervision of the district superintendents.

To raise the funds necessary for carrying out the new scheme of establishing and maintaining schools, a tax of two mills on the dollar of all taxable property in each parish was authorized and directed, it being left to the electors in each school district to raise what further local tax was necessary for building, hiring, and furnishing school buildings, provided that this local tax should not exceed five mills on the dollar in any year.

It was supposed by those who planned this law that it would secure the prompt establishment of an efficient system of public education in the State. But, with the most earnest endeavors put forth by those to whom the administration of the system was committed, much less was accomplished in the first year than had been hoped for. This was due probably to three causes: (1) An unusual centralization of authority in the State board, which, appointing all the local boards, took from the people the power of determining by whom their local schools should be controlled; (2) an insufficient provision for the support of schools, the increase of the State tax for this purpose from one mill to two mills on the dollar not even approaching the increase of school population to be provided for, now that every colored child was entitled, equally with every white, to the privileges of the schools; and (3) an indifference, and even sometimes bitter opposition, to a system which only offered education in the public schools to the children of the whites, who had been always free, on condition of its being shared in each instance with the children of the colored people, who had recently been slaves. These causes, strongly operative at first, have continued since to act in a great, though somewhat lessening, degree, impairing the full efficiency of the school system and inducing sometimes painful conflicts over the race question in the schools.

March 16, 1870, the second of these hindrances to progress was removed by an act which authorized parishes to double the amount for their schools by levying annually a parish tax of two mills on the dollar in addition to the State tax. The overcoming of the third hindrance was also provided for by a direction, in the same act, that the State superintendent should withhold its portion of school fund from any district failing to provide at least one public school, and that a board of parish directors, now first provided, should establish schools in such districts and maintain them out of the State or parish school taxes of the districts failing to do this themselves. A further improvement was made by constituting the 6 division superintendents and State superintendent the members of the State board of education, thus giving to its councils the benefit of the personal experience of members in the subjects that were to engage their attention.

The next year, March 16, 1871, the law was again altered, making it *obligatory* on the corporate authorities of parishes and school districts to raise an annual tax of not less than one mill on the dollar, nor more than two, for the lease, purchase, building, and furnishing of school-houses; while in any parish, city, or town where a board of school directors should fail to establish schools within sixty days after their appoint-

ment, the division superintendent was authorized to establish and maintain them out of the school funds of the parish, city, or town.

April 9, 1873, another amendment was made empowering school boards to *demand* of the local authorities the levy of an extra tax for that year and for each succeeding year, for the improvement and extension of the school system; such demand to be enforced by the imposition of a fine of not less than $100 nor more than $500, on any recusant officer after ninety days' neglect, as well as by removal of the recusant from office for his neglect.

This increasingly mandatory character of the law distinctly indicates the indifference of at least a large portion of the people to the public school system as presented to them. And the returns show that this indifference has not been overcome by the provisions of the law, those for 1871–'72 presenting an enrolment in the schools of 91,500 out of a school population of 246,290; those for 1874–'75 an enrolment of only 74,846 out of a school population 28,398 greater than in the former year; those for 1875–'76 an enrolment smaller still.

ELEMENTARY INSTRUCTION.

NO PRINTED REPORT.

The political convulsions by which the State was shaken during the latter part of 1876 so much affected the administration of the school system that no report of its operations for the year has been published up to the date at which this abstract goes to press. The summary of statistics which heads the abstract embodies, therefore, all the information to be had respecting public schools in Louisiana for that memorable year.

The late arrangement by which the Nicholls government comes into power places Hon. Robert M. Lusher in the chair of State superintendent of instruction, in place of Hon. Wm. G. Brown, who, according to the republican count, had been reëlected to the place. Mr. Lusher has been at the head of the Peabody Normal Seminary in New Orleans, and possesses enough of active energy and personal favor with the present ruling class to infuse new life into the partially paralyzed school system. It is hoped that he may do this.

TRAINING OF TEACHERS.

NORMAL SCHOOL AND DEPARTMENTS.

The Peabody Normal Seminary for Louisiana, at New Orleans, is sustained by local contributions and the Peabody education fund. It provides a three years' course of study, with preparatory and normal departments and a model school. Tuition is free to normal students. There were in 1875–'76, in the normal department, 45 students, all women. Drawing and vocal music are among the branches taught.—(Return for 1875–'76.)

Normal departments have existed in connection with New Orleans and Straight Universities, and Minden High School, Minden. No return from any of these departments for 1875–'76 is at hand.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Information in respect to the public high schools of the State is even more than usually lacking for the year 1875–'76. Such schools have existed in New Orleans, Baton Rouge, and in the parish of Iberville, but no information is at hand from any of them for 1876, save that found in the city school return for New Orleans; this simply gives the fact of the continued existence of the 3 high schools of that city, which had 465 enrolled pupils in 1875.

PRIVATE SECONDARY SCHOOLS.

Of this class of schools, 3 for boys, 3 for girls, and 1 for both sexes, 3 less than in 1875, report an aggregate of 42 teachers and 621 pupils, 46 of them in a classical course and 459 in modern languages. Out of the whole number, 51 were said to be preparing for a classical collegiate and 15 for a scientific collegiate course, while 23 were put down as having entered college from these schools in the preceding year. Instruction in drawing was given in 4 of these schools, in vocal music in 3, and in instrumental music in 2. Only 1 had, at the time of the report, a chemical laboratory, and only 2 any philosophical apparatus. Four report libraries of 200 to 1,600 volumes, the total number of volumes reaching 2,650.—(Returns to Bureau of Education, 1876.)

PREPARATORY SCHOOLS AND DEPARTMENTS.

Of the former of these classes no school appears to be existent. Of the latter, 6 report 9 instructors, exclusive of the college faculty, and 387 pupils, of whom 15 were preparing for a classical collegiate course.—(Returns to Bureau of Education, 1876.)

BUSINESS COLLEGES.

Two of these institutions for training youth for business make return of 12 teachers and 279 pupils, 3 of them in telegraphy, 13 in German, and 20 in French. Both schools teach the common English branches and correspondence, penmanship, bookkeeping, banking, and commercial law. One teaches, also, the higher mathematics. One has a library of 514 volumes.—(Returns to Bureau.)

SUPERIOR INSTRUCTION.

UNIVERSITY OF LOUISIANA, BATON ROUGE.

This institution appears to be still laboring under the embarrassing difficulties growing out of the loss of its original buildings, its consequent occupancy of those belonging to another institution, and the inability or disinclination of the State to meet its engagements to it. This last led, a year ago, to the necessary discharge of its large class of State students, and for a time endangered the loss of its able superintendent, Col. D. F. Boyd, who, as stated last year, had made up his mind to accept a position offered under the Khedive of Egypt. A letter from Colonel Boyd, dated January 6, 1877, indicates that this danger has been averted and that he still fills the place which he has done much to honor. Probably with a view to utilize the teaching force and apparatus of the university, recent legislation has united with it the Agricultural and Mechanical College of the State, which was last located in the outskirts of New Orleans. This gives it a scientific department in addition to its previous classical, legal, and medical ones. The statistics show, however, that the loss of the State students has greatly thinned the classes of the university, only 3 students appearing in its collegiate department and 20 in the preparatory, exclusive of those in the Agricultural College.—(Returns to Bureau of Education.)

OTHER COLLEGES.

Centenary College of Louisiana, Jackson, (Methodist Episcopal South,) reports preparatory and collegiate departments, the latter having classical and scientific courses with 4 years in each. It is apparently exclusively for young men.—(Catalogue, 1875-'76, and return.)

Jefferson College, St. James, (Roman Catholic,) is under the direction of the Marist Fathers, who regard education as one of their principal objects. The departments are preparatory, classical, and commercial. The French language is taught in all.—(Catalogue, 1875-'76, circular and return, 1876.)

Leland University, New Orleans, (Baptist,) excludes no pupils from its privileges on account of race, color, sex, or sect. Courses of study, preparatory, academic, collegiate, and theological. There is no additional information to that of last year except that $11,103 are stated in the Baptist Year Book to be the income of the university for 1876.

New Orleans University, New Orleans, (Methodist Episcopal,) with 4 departments, classical, scientific, normal, and theological, has a commanding influence among the colored people and a strong hold upon their confidence. It is second among schools of its class in New Orleans, as regards number of students.—(Report of State superintendent, 1875, and eighth annual report of the Freedmen's Aid Society of the Methodist Episcopal Church.)

St. Charles College, Grand Coteau, (Roman Catholic,) reports classical, scientific, and preparatory departments; 4 or 5 years in the collegiate course. It is conducted by the Fathers of the Society of Jesus. Only young men in attendance.—(Return, 1875-'76.)

Straight University, New Orleans, (Congregational,) under the auspices of the American Missionary Association, and devoted to the education of the colored race, in March, 1876, suffered the loss of its buildings by fire, supposed to have been the work of an incendiary. The school, however, lost but one day in consequence of this disaster, going on with the work in a rented building.—(American Missionary, April, 1877.)

COLLEGES FOR WOMEN.

Two institutions for the superior training of young women, one more than in 1875, report 8 instructors and 96 students, 29 of them in the regular collegiate course, the rest unclassified. The course in each is 4 years. One, the Silliman Collegiate Institute, at Clinton, is chartered and authorized to confer degrees. Both undertake to instruct in vocal and instrumental music and drawing, 1 in painting also, and 1 in French. Both report chemical laboratories and philosophical apparatus, and 1 a natural history museum. Both have libraries, one of 300, the other of 400 volumes.—(Returns for 1876.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

LOUISIANA STATE AGRICULTURAL AND MECHANICAL COLLEGE.

This college, located at present in New Orleans, was organized and chartered in 1874. Its grounds and buildings are valued at $40,000; its income from productive funds is $13,734. Only young men are in attendance. The curriculum is divided into 2 schools or courses, requiring 4 years to complete either. The studies in these two, the agricultural and mechanical schools, are the same for the first two years, after which the student may select for himself the school in which he desires to graduate. The institution is reported as being in a very prosperous and satisfactory condition.—(Catalogue and return, 1876.)

LAW.

The law department of the University of Louisiana, at New Orleans, has a two years' course of study, embracing the law of nature and of nations, admiralty and maritime law, the common law, equity, constitutional law, and civil law.—(Catalogue and return, 1876.)

THEOLOGY.

Instruction in theology is given to some extent in Leland University, (Baptist,) in New Orleans University, (Methodist,) and in Straight University, (Congregational,) mainly to members of the colored race. New Orleans University reports a theological class of 8. Special contributions to a small amount, in aid of students for the ministry, have been received by the last mentioned institution.—(Report of Freedmen's Aid Society, Methodist Episcopal Church, and American Missionary Association.)

MEDICINE.

The Charity Hospital of New Orleans is a continuation of the New Orleans School of Medicine, which latter was organized and chartered in May, 1856. The course of study covers 3 years.

The medical department of the University of Louisiana, New Orleans, claims unusual facilities for affording medical instruction from the opportunity offered to observe disease in the Charity Hospital, which received, during 1874-'75, 4,845 patients. The course of study requires 3 years for completion.—(Catalogue and return, 1875-'76.)

DENTISTRY.

At the New Orleans Dental College the curriculum has been raised to meet the demands of the age for higher professional attainments. With the view of giving the largest scope and efficiency to the philosophical and scientific branches of the profession, an arrangement has been effected between the Charity Hospital Medical College and this institution for dental students to attend at the former the lectures on chemistry, descriptive anatomy, surgical anatomy, and physiology. The course includes 2 years of office pupilage and 2 courses of lectures.—(Announcement of college, 1876-'77.)

SPECIAL INSTRUCTION.

EDUCATION OF THE BLIND.

The Louisiana Institution for the Education of the Blind, at Baton Rouge, suspended in May, 1875, from want of legislative appropriation, has been enabled to resume its work, and reports an attendance in 1875–'76 of 17 pupils, and the receipt from the State of $4,000 for their support. Its course of study is meant to embrace 7 years.

The employments taught are broom and mattress making, seating of chairs, bead work, &c. There is a library of 200 volumes.—(Return for 1876.)

EDUCATION OF THE DEAF AND DUMB.

The Louisiana Institution for the Education of the Deaf and Dumb at Baton Rouge, has, since its organization in the year 1852, given instruction to 218 pupils, during an average term of about 5 years for each. The present attendance numbers 40, of whom 24 are males and 16 females. It would reach at least 60 if those were present who were unable to return because of the want of means. The branches taught are language, scripture lessons, geography, physical geography, physiology, arithmetic, history, natural philosophy, drawing, penmanship, grammar, astronomy, and chemistry. It has not been practicable to provide a teacher whose method of instruction would lead to what is generally called visible speech. There is a library of about 300 volumes.—(Catalogue and return, 1875–'76.)

LIST OF SCHOOL OFFICIALS IN LOUISIANA.

Hon. ROBERT M. LUSHER, *State superintendent of public instruction, New Orleans*

STATE BOARD OF EDUCATION.*

[Term, 3 years from January 1, 1877.]

Name.	Post-office.
Hon. Robert M. Lusher, State superintendent, ex officio president	New Orleans.

*The State board is composed by law of the State superintendent of public instruction, and of the six division superintendents, to whom is intrusted the supervision of public schools in the six congressional districts of the State. The names of the division superintendents for 1877–'80 have not been received.

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Laws of Maine; report of Hon. W. H. Corthell, State superintendent, 1876.

EARLY ACTION.

Maine, from the time of its first permanent settlement till 1820, was a dependency of Massachusetts. Hence the famous Massachusetts laws of 1642 and 1647 took effect in

her as in the parent State: the former compulsory as to the teaching of children and apprentices to read the English tongue and have knowledge of the capital laws; the latter imperative as to every town of 50 families setting up a school for elementary instruction, and every one of 100 families setting up one for higher secondary training. That these laws were not intended to be mere advice is evident, since both had decisive penalties affixed to any violation of them. And there is little doubt, from the records which have been transmitted to us, that they and the revised school law of 1789 met in Maine, as in Massachusetts, with a very general observance, for such laws were not, in that region, so much guides to public sentiment respecting education as exponents and indications of it.

FIRST STATE ACTION.

Admitted into the Union March 15, 1820, Maine, in the constitution with which she entered it, required her legislature to oblige the several towns to make suitable provision for the support of public schools. Accordingly, at the same date, in 1821, a law was passed requiring that every town and plantation should annually raise and expend for the maintenance of schools therein a sum of money (including the income from any incorporated school fund) not less than 40 cents for each inhabitant. These schools were to be taught by school masters duly qualified; but a part, not exceeding one-third, of the money allotted to any school district might be applied to the support of a school taught by a mistress, while, if the sum so allotted to a district in any year should not exceed $35, the whole might be expended in the same manner.

In each town and plantation there was to be chosen, at the annual meeting, a superintending school committee, to consist of not less than 3 nor more than 7 persons, whose duty it should be to examine school masters and mistresses proposing to teach school, licensing only such as should present evidence of good moral character and sustain a creditable examination. The committees were empowered to visit and inspect the schools of their respective towns or plantations, to dismiss incompetent or unfit teachers, and to direct what school books should be used in the schools.

For each school district there was to be chosen at the annual town meeting an agent, whose duty it should be to hire duly licensed school masters or school mistresses for their respective districts and to provide the necessary fuel and utensils for the schools.

The several towns and plantations were authorized to determine the number and assign the limits of school districts, and each district was made a body corporate, with power to sue and be sued and to take and hold real or personal estate for the support of schools therein. Districts were to determine for themselves, at a duly called meeting, as to the erection, repair, furnishing, purchasing, or removing a school-house, subject, however, to revision of their action by the annual town or plantation meeting, on appeal of the selectmen or assessors.

The assessors of each town and plantation were to assign to each school district in it a proportion of the money raised each year for the support of schools according to the number of children of school age, (4–21,) provided that, when any town or plantation should raise a sum beyond the 40 cents required from each inhabitant, the surplus might be distributed among the districts in such manner as the town or plantation might determine; and if any town or plantation should fail to raise and expend annually for the support of schools the minimum sum above required, it must forfeit and pay annually from twice to four times the amount of such failure or deficiency.

Treasurers of towns or plantations were to have authority to enforce the collection of a regularly voted tax for schools, the same as in the case of any other tax.

AMENDATORY ACTION.

Under the law thus enacted there was no penalty for a town neglecting to choose a superintending school committee; this was amended in 1825 by imposing a fine of $30 to $200 for such neglect. There was no authority given the committee to expel unruly scholars; this authority was conferred the same year. There was no specification when or how often they should visit the schools; this was defined to be twice during the session, once within 3 weeks after the beginning and once within 2 weeks of the close. There was no statement when the census of school children, on which the distribution of school money should be based, was to be taken; this was fixed for May 1 in each district. There was no permission to appropriate any portion of the school money to fuel and repairs; this permission was accorded and 10 per cent. fixed as the amount. There was no direction for collecting and preserving school statistics; this in 1825 was required to be done by the selectmen of the town once in three years, reporting to the secretary of state the number of school districts, number of scholars in each, number usually attending school, length of school sessions, and money expended for the same.*

In 1827, February 16, authority was given to form districts out of two or more towns,

*From 1839 to 1842 it was required that these returns be published and distributed throughout the State, the making of them being called for every year instead of every three years.

to grant outlying settlements on islands and elsewhere their due proportion of school money, and to determine, in any district where schools were kept for part of the year by a master and part by a mistress, what description of scholars should attend each school. This was, substantially, the beginning of a graded system.

In 1834 there was a general revision of the school laws, with a reënactment of the revised code as one statute. In this revision, town school committees were made to consist of 3 to 5 members, instead of 3 to 7. The committees were required to perform their duties under oath and to make to the annual town meeting a written report of the condition of the schools under their supervision. Districts were allowed to admit to their schools pupils from other districts, if they chose. A general permission was also given towns to avail themselves of a mode of school organization which had been granted by special acts, in 1822, 1828, and 1832, to Portland, Bath, and Bangor. This was, in substance, to abolish the school districts in the town and confer on the town committee all the powers conferred by law on district agents and superintending school committees, thus unifying the school system of the town throughout.

In 1841 another revision of the law required school committees to make the town school returns to the selectmen 14 days prior to the annual town meeting, granted each committeeman $1 a day for services, and added somewhat to the slender qualifications previously required of school mistresses.

All these amendments, however, struck at minor defects, and left still untouched the main one, which was the lack of any central influence to bind together in a common union the hundreds of towns and thousands of school districts throughout the State. Intelligent men, both in the legislature and the schools, began now to perceive that this want was the one thing to be supplied, and from this time for some years we see

EFFORTS TO UNIFY THE SYSTEM.

First in this line was a proposition from Hon. E. M. Thurston, in the legislature in the winter of 1843, to create a board of school commissioners, to consist of one from each of the 13 counties in the State, and to be appointed by the governor and council. These were to form centres of unity for their respective counties, harmonizing the labors of the school committees and school agents, and acting as mediums of communication between them and the State. The measure, after a full discussion, which brought out the evils of the existing irresponsibility and isolation of school districts, passed the house, but was defeated in the senate.

In 1845 Hon. Stephen H. Chase, of Fryeburg, then chairman of the committee on education in the State senate, brought up the matter again, and introduced a bill providing for a board of 3 to 5 State school commissioners, to be appointed by the governor and council. This also failed to pass.

The debates upon these bills brought out distinctly the fact that teachers and school officers all over the State were working independently of one another, without any opportunity for comparison of efforts or results, without any association to bring them together for this end, and without any centre of unity whatever. The consideration of these things told upon the minds of those most interested, and in January, 1846, a State convention of teachers and friends of education met at Augusta to consider how these evils could be best amended. The result of their deliberations was the appointment of a committee to memorialize the legislature as to the means to this amendment. The means suggested was the creation of a State board of education. The memorial asking for this met a welcome from the joint committee on education in the legislature, of which Hon. E. M. Thurston was happily the chairman, and through him a bill for establishing such a board was reported, passed, and became a law by approval of the governor July 27, 1846.

STATE BOARD OF EDUCATION.

The board provided for was to consist of one member from each county, elected by the school committees of the several towns and clerks of the several plantations in it for a term of service of one year, with a secretary chosen by the board at its first meeting in each year. The members of the board and secretary were to be severally sworn to the faithful performance of their duties. These duties were to assiduously examine the practical operation of those parts of the constitution and laws of the State which provided for public education; to collect and disseminate information as to the location and construction of school-houses, as to the arrangement of school districts and the use of the best school apparatus, as to the best and cheapest method of introducing uniform school books, as to the practicability and expediency of establishing school district libraries, as to the advantages of normal schools or other schools for educating teachers, as to the best means of promoting education in new settlements, as to improvements in teaching the branches of study pursued in common schools and introducing other useful branches. In pursuance of these objects, they were to consult with school committees, school agents, and other authorities for the purpose of ascertaining, recommending, and promoting all such improvements in the common school system as should be consistent with the constitution and laws of the

State and promotive of the welfare of the people. The secretary, whose salary was made $1,000, was to be the active agent of the board, prosecuting continually these inquiries, attending the county meetings for election of members of the board, and consulting with the school committees there assembled and with the friends of public education generally, and preparing a report embodying the results of the investigations made during the preceding year. With a view to thorough unification of statistics he was authorized to furnish, under the direction of the governor and council, such blank forms for returns respecting schools as the board of education should recommend.

Here was, at last, a central influence for good, around which and through the agency of which the elements of an effective State school system might be crystallized and from which might emanate all improving suggestions needed.

The board met first at Augusta, December 16, 1846, and chose as its secretary William G. Crosby, of Belfast. It remained in session five days, and appointed committees to attend to various branches of its work and make report at its next session. That was held May 5, 1847, and for some days following, when the reports of the various committees were received and the secretary read his annual report, which was afterward submitted to the legislature, showing the number of children of school age to be 201,992; the number enrolled in winter schools, 94,217; the number in summer schools, 96,127; the average length of schools, 21 weeks 1 day; the average wages of teachers, exclusive of board, $16.71 a month for males and $1.52 a week for females. These were the first reliable statistics respecting the schools of the whole State.

The first fruits of the action of the board were the establishment of teachers' institutes in every county, in accordance with its recommendation and with a law which was passed at its request. These institutes brought together for instruction and mutual improvement 1,686 teachers the first year. They were trained in classes and by lectures, as in a normal school. Recitations were held in all the branches usually taught. New methods of teaching were exemplified; new ideas as to classification, government, and management were propounded; thought was quickened, errors were corrected, methods of instruction and discipline improved. These institutes, under the agency of the State board, became the means of infusing a new life into the school system, and soon resulted in the formation of teachers' associations for voluntary debating of practical questions and interchange of sentiments as to all school affairs.

As a further result of the influence of the board the school laws were considerably improved. School committees were reduced to 3 in number, instead of 3 to 5; were to hold office in each case three years, one being elected annually; and were permitted to locate a school-house when a district could not agree on a location. Districts were authorized to determine what part of the school money should be used for a school taught by a master and what part for one taught by a mistress. Two or more districts were allowed to unite for the support of graded schools. Towns were accorded larger powers for the organization of their local school systems and were authorized to make by-laws against truancy. Teachers were required to add several additional studies to those in which they had been wont to be examined. The powers and duties of school agents were more thoroughly defined and those of school committees were increased.

But, useful as the board thus proved itself, its existence reached through only six years. In 1852, in the midst of its work of improvement and unification of the school system, it was abolished, Superintendent Corthell says, "because it was not a political power, and could not be used to reward political favorites."

COUNTY COMMISSIONERS.

In place of the abolished board came at once, April 26, 1852, county commissioners of schools, appointed annually by the governor and council, one for each county, to hold office for a year; each one to spend not less than 50 days, during the term of winter schools, in visiting the towns in his county for the purpose of promoting, by addresses, inquiries, and other means, the cause of common school education. Each was to also make annually to the legislature a report of his doings under the act, of the character of the teachers of his county, and of the order and condition of the schools and school-houses.

Under this organization, the school system went on for two years, from April, 1852, to April, 1854, without any central head to guide and influence its movements. The need of such a head became continually more apparent, and in the last named month a law was passed providing what had long been wanted,

A STATE SUPERINTENDENT OF SCHOOLS.

This new officer was to be appointed by the governor and council, was to hold office three years, was to have essentially the same duties to perform as had been discharged by the State board and its secretary, was to give his whole time to these duties, and was to receive as compensation $1,200 annually, with expenses. He was to issue forms for school returns; to receive all printed ones from school officers; to embody the substance of them in an annual report, with the returns made to the State secretary; and was to hold each year in each county of the State a teachers' convention, for mutual consul-

tation, discussion, and instruction, being allowed $2,000 for defraying the expense of such conventions. Four years afterward a new law substituted teachers' institutes in each county for these county conventions, and made it the duty of the superintendent to hold a State educational convention once each year, with a view to bringing together the teachers, school committees, and friends of education generally, for consultation with reference to the interests of common schools and the most approved methods of instruction. The salary of the officer was by the new act, raised to $1,800, with expenses not to succeed $500 more, and an office was given him at the seat of government.

County supervisors of schools were authorized in 1869 by a law which was repealed in 1872. A compulsory school law in 1875 required that every child between the ages of 9 and 15 years should, unless excused therefrom by the school officers, attend school at least three months in each year.

The successive occupants of the State superintendent's chair have been — not all continuing for the full term — Charles H. Lord, June 12, 1854, to March, 1855; Mark H. Dunnell, March, 1855, to the close of that year; J. P. Craig, for the year ending December 31, 1856; Mark H. Dunnell, once again, from January, 1857, to March, 1860; E. P. Weston, from that date to 1863, when he was reappointed for a second term, resigning, however, at the close of 1864. In his place Rev. Edward Ballard was appointed, in May, 1865; his successor, from March, 1868, until 1876, being Warren Johnson; and his, the present State superintendent, Rev. William J. Corthell.

ADJUNCTS TO THE SYSTEM.

School funds.— In 1828 the first movement toward a permanent school fund was made by the legislature setting apart 20 townships of public land as a basis for a school fund. In 1834 these were directed to be sold and the proceeds paid into the public treasury. The 20 townships netted only $110,000, though the sales covered nearly 15 years. By act of 1848 the interest of this fund, at 6 per cent., was directed to be annually distributed in aid of local funds for the support of schools. In 1856 there were set apart 24 half townships more for the same purpose, and in 1864 the timber on 10 townships besides; but what has been derived from these sources is not stated beyond the fact that the fund now amounts to $400,558. An act of March 4, 1833, required that a bank tax of one-half of 1 per cent. on the capital stock of each bank in the State should be reserved for public instruction and apportioned annually on the basis of the number of children of school age. This, with the interest of the permanent fund, sufficed as a State aid to the local tax of 40 cents for each inhabitant till the establishment of national banks, when the bank tax so diminished as to compel the raising of the local rate, in 1865, to 75 cents for each inhabitant, and in 1868 to $1. This still proving insufficient to meet the growth and increased expense of schools, a State tax of one mill on the dollar of all property was ordered to be annually assessed and distributed for school purposes, in addition to the income from previous sources. The total income, State and local, reached, in 1875–76, $1,090,445.

Normal schools and institutes.—The rise of institutes for fuller training of teachers already in the schools has been already noticed. They had a somewhat fitful existence from 1847 to 1875, when, from lack of attendance, they were given up. A training of those proposing to teach was undertaken, through normal departments in 18 academies, in 1860, but it failed, and was relinquished in 1862. The next year a law for the establishment of two State normal schools was passed, and these, opened one at Farmington in 1864 and one at Castine in 1867, have, with two auxiliaries at Pittsfield and Vassalboro', done much to improve the teaching force.

Educational associations.—The voluntary educational convention of 1846, which led to the establishment of a State board of education, resulted in no permanent teachers' association at that time. Some county and town associations of the kind were formed in 1848 and subsequently, and their exercises, continued through annual, quarterly, or monthly meetings for several years, are said to have aided greatly in enlarging the views of teachers and improving the educational interests of the towns in which they were held. The first State teachers' convention to adopt an organization for continuance of its work met at Waterville November 16, 1859, adopted a constitution, and provided for future meetings. These were held in 1860, 1861, 1862, 1863, and 1864, were then intermitted for two years, and have since been annually continued, bringing together teachers, school officers, and friends of education, for discussion of the various topics growing out of school work.

Educational journal.—The Maine Teacher, established by Superintendent Dunnell in 1858 and continued, with some changes of name and purpose, till 1875, was in that year united with the New-England Journal of Education, in which a department was assigned to Maine.

Graded and high schools.— Graded schools have grown up mainly in the cities and populous towns, Portland leading with one in 1823, till now more than 150 towns report such schools; the full graded course reaching generally in the cities through 4 primary, 5 grammar, and 3 high school years. The high schools, coming in place of the old academies for the imparting of secondary training, have since 1873, under a law

passed in that year, received most of the academies into their ranks under the title of free high schools; the motive to the change having been a subsidy offered by the State, not to exceed $500 a year, for such as should surrender their property to the places in which they were kept, submit to town supervision, and receive pupils for high school instruction on a fund raised by the town beyond the regular amount for common schools.

ELEMENTARY INSTRUCTION.

NO ROOM FOR DETAILS.

The space given to the school history forbids the introduction of any matter under this head, except that which relates to cities. The summary of statistics at the outset of this abstract contains the chief elements of information. For Kindergärten, see Table V.

CITY SCHOOL SYSTEMS.

AUGUSTA.

Officers.—The schools in a portion of the city are under the supervision of a superintending school committee, those of the "village district" are under that of a board of directors.

Statistics.—Whole number of children in village and city districts, 2,269; registered in summer schools in city districts, 542; average number attending, 445; number registered in winter schools, 576; average number attending, 449. Number of men teaching in winter, 7; women, 14. Number of women teaching in summer and fall, 41. Average wages of men per month, $32.91; average wages of women per week, $4.97. Average cost of teacher's board per week, $2.37. In addition to the foregoing there was in the village district an enrolment of 1,180 pupils, a maximum attendance of 691, and an average attendance of 537, making a total enrolment in all the schools of about 1,739 and an average attendance, winter and summer, in city districts of 447, and in village districts of 537; total, 984.

Remarks.—The schools of the village district are graded as primary, intermediate, grammar, and high, the first three grades occupying each 3 years. The high school course lasts 4 years, and comprises English, classical, and mixed departments, the latter including the study of Latin, and the classical both Latin and Greek. The largest number belonging to the high school at any one term was 71, the total average being about 61.—(Reports of Supervisor of Schools G. E. Weeks, and of directors of village district for 1875–'76.)

BANGOR.

Officers.—A superintending school committee of 7 members, with a school agent and a truant officer.

Statistics.—Population, 18,500. Youth of school age, 5,123; attending public schools during winter term, 3,367; during summer term, 3,092; average attendance for the former, 2,744; for the latter, 2,592; for the year, 2,668. Percentage of average attendance to the school census, 52; to the number registered, about 80. Teachers regularly employed, 78; whole number, 94. School-houses, 36; rooms, 75. Receipts for public schools, exclusive of $6,600 for furniture and heating apparatus for a new building, $38,349; expenditures, exclusive of the same, $40,052. Attendance on private schools, about 300.

Notes.—The attendance has averaged nearly 100 in excess of the preceding year, and would have been still larger but for the prevalence of contagious sickness. The schools are graded as primary, intermediate, grammar, and high, the high school course covering four years and including both Latin and Greek. The primary course appears to be of 1 year, the intermediate of 2, the grammar 4. A new and handsome schoolhouse, well arranged, well ventilated, and provided with all necessary conveniences, adds much to the school accommodations.—(Reports of school committee and agent for 1875–'76.)

LEWISTON.

Officers.—A school committee of 15 members and a city superintendent of schools, who acts as secretary to the board.

Statistics.—Estimated population, 20,000; children of school age, (4-21,) 6,479; number from 4 to 15 years of age, 4,044; different pupils registered, 3,560. Average number belonging, 2,200; average attendance, 2,056; per cent. of attendance to average belonging, 93.4. Number of schools, 53; teachers: men, 3; women, 65; total, 68. Expenditures for teachers' salaries, $25,812.33; for all purposes, $44.169.89.

Remarks.—The organization of the schools consists of Kindergärten, primary, intermediate, grammar, and high. Of the 27 primary schools, 4 are Kindergärten. There is also a normal practice class, sustained by the school board, for training young women, residents of the city and graduates of the high school, who wish to become teachers. Nearly half the teachers employed in the city are graduates of the high

school and also of the normal practice school. The course of study in the high school includes four years, there being an English, an English and classical, and a college preparatory department, the latter including the study of Latin and Greek.—(Report, 1875–'76, of school committee and Thomas Tash, superintendent.)

PORTLAND.

Officers.—A superintending school committee of 7 members, 1 for each ward, and a superintendent of city schools.

Statistics.—Estimated population, 36,000; children of school age, (4-21,) 10,101; number 4–16 years of age, 7,479; pupils enrolled, 5,290; average number belonging, 4,578; average attendance, 4,268; per cent. of average attendance on enrolment, 80.7; on average belonging, 93.2. Number of schools, 22; of teachers, 111, including special teachers of penmanship, drawing, music, and French. Expenditures for public schools, $83,688.

Remarks.—The schools are graded as primary, grammar, and high. Some modifications which have seemed to be advisable have been made in the course of study. In the primary schools, reading by Leigh's type, music, and geometry without reasoning, (to cultivate the imagination with simple and useful geometrical conceptions,) were introduced. In both primary and grammar schools great attention is paid to reading and writing. In the high school the English course has been made as full and complete in its range as the time given to it will allow. There were during the year, on an average, 407 pupils belonging to this school, the per cent. of attendance on enrolment being 94.

The results in drawing, after only 20 weeks' instruction, under 2 successive special teachers, have been highly gratifying, it seeming almost incredible that so much progress could be made in so short a time.—(Report of school committee and of Superintendent of Schools Ephraim Hunt.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOLS.

The Western State Normal School, Farmington, established in 1863 for the purpose of training teachers, has a regular course of 2 years. It includes the common English branches in thorough reviews, and such of the higher branches as are especially adapted to prepare teachers to conduct the mental, moral, and physical education of their pupils. The art of school management, including the best methods of government and instruction, has a prominent place in the exercises. Tuition is free to students of the required age—17 for young men and 16 for young women—pursuing the regular course of study and pledging themselves to teach in the public schools of Maine for as long a time as they remain connected with the normal school. During the 12 years of the existence of the school up to 1876, more than 1,200 young men and women were connected with it, and 241 had been graduated from the complete course. The attendance in 1876 was 194, (52 men and 142 women;) number of graduates, 31. (Catalogue and return, 1876.)

The Eastern State Normal School, at Castine, like that at Farmington, was devoted, by the law establishing it, to the work of training teachers for their labors; but such is the low condition of common school education in the State that much of the work of the school is necessarily preparatory. The professional course of study covers two years, but there is a preparatory course of one year which those must enter who cannot pass a satisfactory examination. Tuition is free; so, also, are most of the text books. The attendance of normal students in 1876 was 300, of whom 120 were young men and 180 young women. Graduates during the year, 22.—(Catalogue for 1874–'75 and return for 1876.)

NORMAL DEPARTMENTS.

The normal department of Maine Central Institute, Pittsfield, was organized in 1871; has a ccurse of two or two and a half years; charges $22 annually for tuition; received an appropriation of $600 from the State in 1876; and had in that year an attendance of 17 normal students, of whom 2 were graduated and are now engaged in teaching.—(Return for 1876.)

The normal department of Oak Grove Seminary and Commercial College, Vassalboro', organized in 1857, has a four years' course of study; received $600 from the State in 1876, during which year there were 90 normal students, 40 young men and 50 young women; annual charge for tuition, $18.—(Return for 1876.)

SECONDARY INSTRUCTION.

FREE HIGH SCHOOLS.

The present free high school system of the State, established in 1873, provides for the payment by the State of one-half the expense for instruction in free high schools, (the

sum not to exceed $500 to any town,) provided that towns and districts desiring such schools shall make for their support (exclusive of the amounts required for common school purposes) special appropriations covering the remainder of the expense, and that tuition shall be free to all residents of the towns or districts in which these high schools are located.

Although the proposed schools are termed high schools, it is not expected that they will come up to the full grade of classical schools, or even the ordinary academy, at first. They are to be the people's high schools for a superior English and scientific education, excluding at first simply all primary classes, and affording the general culture demanded by the increasing business, manufacturing, and mercantile wants of the times. The wisdom of the State in establishing this system has already been conclusively demonstrated. Besides opening to large numbers of youth sources of culture not otherwise attainable, they have had a marked influence upon the common schools in giving them better teachers and inspiring their pupils with new incentives to work. Since 1873 schools have been established under this law in 210 out of the 421 towns of the State and there has been an attendance upon them of 38,585 pupils. The cost to the State has been only $107,737; entire cost, $322,100. The number of towns in which high schools were in operation in 1875 was 157; number of pupils registered, 13,469; average attendance, 11,444; cost to the State, $38,633; entire cost, $118,296. Number of pupils engaged in the study of ancient languages, 2,842; of modern languages, 1,148; of the natural sciences, 4,066.—(State school report, 1875, pp. 36-45.)

PRIVATE ACADEMIES.

In 1 school of this class for boys and in 23 for both sexes there are reported, for 1876, instructors, 76; pupils, 2,560. Of these, 463 were in classical courses, 178 in modern languages, 185 preparing for a classical course in college and 88 for a scientific course, while 39 had entered college at the close of the studies of the previous year. Drawing was taught in 6 of these schools, vocal music in 11, instrumental in 14. In 12, chemical laboratories were possessed; 18 reported apparatus for illustration of natural philosophy; while 16 had libraries of 75 to 2,000 volumes, the whole number of volumes being 8,290.—(Returns to Bureau of Education.)

PREPARATORY SCHOOLS.

Seven schools claiming to be specially engaged in preparing students for college report, for 1876, 32 teachers and 219 students, 215 of whom were preparing for a classical collegiate course and 4 for a scientific course. Entered college the preceding year, 47. Three of the 7 schools have chemical laboratories; 5, more or less apparatus for illustration of studies in natural philosophy; 3, halls or appliances for physical exercise; and all the 7, libraries of 50 to 2,000 volumes, the whole number of volumes being 3,345.—(Returns to Bureau of Education.)

BUSINESS COLLEGES.

Two of these—1 at Augusta, 1 at Portland—report 6 teachers and 378 pupils for 1876, without remark as to the studies in which these were engaged. Both, however, undertake to teach common English branches and correspondence, penmanship and bookkeeping, and 1 adds to these commercial law.—(Returns to Bureau of Education.)

SUPERIOR INSTRUCTION.

Bowdoin College, Brunswick, (Congregational,) was originally presented for charter as "Maine College," but it changed its name in honor of Gov. James Bowdoin, of Massachusetts, from whom it received considerable gifts of lands and money during his life, besides a library, mineralogical cabinet, gallery of paintings, and apparatus after his death. In the date of its charter, 1794, it ranks sixteenth in order among the colleges of the United States, though its organization was not effected till 1802. Its medical school was established in 1820; its scientific department, in 1872.

The classical department has the usual 4 years' course of study, in which, however, are several optional branches from the third term of the sophomore through the three terms of the junior year.

To those who wish to pursue special studies and to graduates who propose to study after graduation, with or without a view to a degree, facilities are afforded either for private study or study in connection with classes in the college or medical school.—(State report for 1875-'76, pp. 103-105, and catalogue for 1876-'77.)

Bates College, Lewiston, (Free Baptist,) embraces preparatory, collegiate, and theological departments. There are 19 scholarships for the purpose of aiding needy students. Ten of these are State scholarships, and in bestowing them preference is given to the children of those who fell in defence of their country. One of the 9 private scholarships, endowed by the late Hon. Asa Redington, LL. D., of Lewiston, is for a lady student. The philosophical and chemical apparatus is sufficient for a full course of illustrative lectures, and is increased yearly by a fund devoted to the purpose. A large

collection of New England birds has recently been added to the department of ornithology. The institution has been, from the first, open to young women, in this respect taking the lead of all the New England colleges. The scale of expenses is low, and it is intended to keep it thus.—(Catalogue and return, 1876–'77.)

Colby University, Waterville, (Baptist,) provides a course of study substantially identical with that of the best New England colleges. Its departments are those of Greek language and literature, Latin language and literature, modern languages, chemistry and natural history, natural philosophy and astronomy, mathematics, rhetoric, intellectual and moral philosophy and political economy, and history. A course of reading germane to the course of study is recommended and, in part, prescribed to the students. The college is rapidly regaining that position in respect to numbers which it lost by the war, the number of students increasing steadily from year to year. Most of them are earnest men with a high purpose in life, who are paying their way by their own exertions. The cost of an education here, it is claimed, is lower than in other first class New England colleges, ranging from $225 to $300 annually, including all expenses. There are 62 scholarships for the aid of needy and deserving students, yielding from $36 to $60 annually. Both sexes are admitted.—(Catalogue and return, 1876–'77, and circular, 1876.)

COLLEGE FOR WOMEN.

The Maine Wesleyan Seminary and Female College reports, for 1876, instructors, 11; students, 120; of whom 24 were in regular collegiate classes.* It is chartered and authorized to confer degrees; has a collegiate course of 4 years; has a library of 2,500 volumes; teaches drawing and painting, vocal and instrumental music, French and German; and possesses facilities for illustration of studies in chemistry, natural philosophy, natural history, and geology.—(Return to Bureau of Education.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

Maine State Agricultural College, Orono, provides, at moderate cost, the advantages of a liberal and practical education, and furnishes the student facilities of defraying a part of his expenses by his own labor. Five full courses are provided, viz: in agriculture, in civil engineering, in mechanical engineering, in chemistry, and in science and literature. There is also a special course for the benefit of those who cannot complete one of the regular courses, which requires 4 years. The special course does not lead to a degree, but certificates of proficiency may be given students who pursue it. The studies in the several regular courses are essentially the same for the first two years. Those who complete the course in agriculture will have attained a good knowledge of mathematics, French, and German, and a fair acquaintance with English literature, besides the studies in natural science that have a direct bearing upon agriculture. This course, slightly modified, so as better to adapt it to those wishing a good practical education for other employments, is called the course in science and literature. The student of civil engineering, in his junior year, commences his professional studies, including the theory and practice of constructing roads, railroads, bridges, canals, dams, and other structures; and those taking the course of mechanical engineering enter upon the study of machinery, mill work, steam engines, water wheels, estimates and specifications for machinery, etc.—(Catalogue, 1876–'77.)

The scientific department of Bowdoin College has a four years' course, which aims to lay a substantial foundation for the practice of engineering, to make young men familiar with the sciences underlying that profession, and to instruct them in the practical application of these sciences.—(State report for 1875–'76, p. 105.)

* There were also 179 male students in the institution during the year.

THEOLOGY.

Bangor Theological Seminary, Bangor, (Congregational,) offers its privileges to Christians of every denomination who have sufficient collegiate or other literary training to pursue its course of study. This extends over a period of 3 years and includes the Hebrew language, Hebrew and Greek exegesis, systematic theology, church history and polity, pastoral theology, homiletics, vocal culture, and oratory. Tuition, furnished room, use of library, &c., are free; the price of board also has been materially reduced by means of the students' boarding association, which has been provided by the trustees with a large and commodious boarding house free of rent. The students hire a matron, make their purchases, and assess the expense on themselves. Aid is afforded to needy students by the Washburn and other funds and by the American Educational Society.—(Catalogue of seminary, 1876.)

The Theological School of Bates College (Free Baptist) was established in 1870. It occupies Nichols Hall, a four-story brick building about a quarter of a mile from the college buildings. The course of study lasts 3 years. Those applicants for admission who are not college graduates must be able to pass an examination in the studies usually required for admission to college. There are two courses of study, a regular and an English course, and students who may be precluded from entering either are admitted to the school for such a period as their circumstances will allow, and permitted to pursue elective studies.—(College catalogue, 1876–'77.)

MEDICINE.

The statistics of the table below show all the needful points respecting the only medical school thus far established in the State, except that a new professorship of physiology has been established, with a course of lectures on public health.—(Catalogue for 1876–'77.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

The annual session of the State Teachers' Association for 1876 was held at Bath during three days, beginning December 27. Papers were presented and addresses delivered by Mr. Charles G. Fish, A. M., of Oldtown, on "Educational reform;" by Arthur B. Morrill, of Portland, on "Grammar school work;" by Horatio O. Ladd, of New Hampshire Normal School, on "Elementary science in public schools;" by Mr. D. A. Robinson, of Bangor, on "The language;" by Mr. A. C. Perkins, of Phillips Exeter Academy, on "The teacher a student;" by G. F. Fletcher, of Castine Normal School, on "Teaching geography;" by Professor Barbour, of Bangor Theological Seminary, on "The rights of the taught;" by Rev. Dr. Hill, of Portland, on "Arithmetic;" by W. F. Bradbury, of Cambridge High School, on "The metric system," and by Mr. Keyes, of the Biddeford High School, on "Rhetorical drill."

Mr. Fish maintained that elementary science should be introduced into the lower schools; that the present course of study is not in accord with the natural order, which first attends to the development of the perceptive faculties.

Mr. Morrill spoke of the lack of thoroughness in elementary work, and advocated the expediency of introducing lessons from science.

Mr. Ladd considered the question as to how elementary science can be best taught to the average pupil and advanced work to those in high schools. He thought books too technical and too full of rhetoric, and that teachers should present science incidentally, rather than methodically, to young pupils.

Mr. Robinson urged that in the study of language time should not be wasted upon rules and forms, but devoted to criticism and right usage; that the book should be thrown out of school, and its place supplied by exercise in expression, and that parsing and analysis be deferred to the high school.

Mr. Fletcher maintained that, as a beginning in geography, the child should study the world as he can observe it in his own vicinity; should draw diagrams of such portions close at hand as he knows, and thus learn of other places beyond his reach.

Mr. Hill expressed the conviction that little children should not be forced to do heads work. In arithmetic, he thought, reasons for processes should be kept from pupil until they are 14 years of age, written arithmetic being commenced at 10.—(New-England Journal of Education, January 4, 11, pp. 10, 22.)

ASSOCIATION ON A PROFESSIONAL BASIS.

At a meeting held in Lewiston, February 4, 1876, to take measures for the organization of a teachers' association on a professional basis, a committee was appointed, styled a committee on instruction, representing various sections of the State and all grades of schools, from the primary to college. This committee met in Augusta on Friday, February 18, and organized in two sections: a section on elementary education, comprehending primary and grammar schools, and one on higher education, comprehending high schools and colleges. The committee propose to hold meetings in various sections of the State, at intervals of two or three months, for observation of the working of schools, for conference with teachers, and for the mutual consideration of topics relating to the interests of education in the State. They invite the coöperation of all teachers who can meet with them, and trust that these meetings may do something to arouse an interest among teachers, and thus increase the influence and profit of the meetings of the general association.—(New-England Journal of Education, May 6, 1876, p. 226.)

OBITUARY RECORD.

JOSEPH LITTLEFIELD.

Mr. Joseph Littlefield, who died at Bangor, Maine, February 24, 1876, had been for 40 years preceding 1870 closely identified with the educational interests of Bath and Bangor. Commencing his career as teacher in the former place in 1822, he removed to Bangor in 1832, and opened a private school for girls on Billings avenue. After teaching this 4 years, he advised the school committee to open a girls' high school, and in 1836 such a school was opened, at first as an experiment, Mr. Littlefield, in his zeal for it, undertaking to pilot the attempt at a salary of only $6 a week. The experiment proved successful, and the attendance so increased that at the end of the first term the experimental school was definitely adopted as a permanent institution, a settled teacher appointed, and Mr. Littlefield allowed to return to the duties of his private school.

This he continued to teach until, in 1839, it was adopted by the school committee as a girls' select public school, of which he was made the principal. With a persistency unusual in America, he remained at the head of the school for more than a quarter of a century, retiring only when the several select schools were consolidated in 1869, and then for some years serving on the truancy committee.

As a teacher, Mr. Littlefield was an enthusiast in his profession, achieved high success, and gained in an unusual degree the love and respect of those he taught. This was abundantly proven by the fact that, first, on his retirement from school teaching, his pupils presented him with a handsome set of silver plate and his fellow citizens with a purse of $800; and, next, that on May 25, 1873, the alumni of his schools, at a grand reunion held in Norombega Hall, united in presenting him with $1,000, a generous testimonial of their high estimation and regard, the occasion drawing together multitudes from abroad, as well as from the city, and proving one of the most interesting of its kind there known. A year or two of quiet rest from labor, and the end of a well spent life was reached.—(The Bangor Whig and Courier, February 25, 1876, and a letter from City Superintendent C. P. Roberts, Bangor, December 23, 1876.)

HON. WARREN JOHNSON.

Notice of the death of this gentleman, long the energetic and efficient State superintendent of the schools of Maine, has been received as this report goes to the press, but a full record of his life and services must be deferred till the publication of the report for 1877, in which year his decease occurred.

CHIEF SCHOOL OFFICIAL IN MAINE.

Hon. W. J. Corthell, *State superintendent of common schools, Augusta.*

MARYLAND.

SUMMARY OF STATISTICS.

	1874–'75.	1875–'76.	Increase.	Decrease.

(Returns from Hon. M. A. Newell, State superintendent of public instruction, for the two years indicated.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITY.

The single authority used by the Bureau is a sketch prepared for it by the courtesy of Hon. M. A. Newell, State superintendent, his examination of the original documents being entirely relied on. From want of space his article has necessarily been much condensed, but may be found in full in the Maryland School Journal for June, 1877.

COLONIAL ACTION FOR FREE SCHOOLS.

The charter of Maryland granted by Charles I to Lord Baltimore made no provision for education nor any allusion to it.

At a session of the colonial assembly in the sixth year of William and Mary, (1695,) two acts were passed, one "for the encouragement of learning," another "A supplicatory act to their Sacred Majesties for the erecting of free schools." The latter, however, was repealed in 1696 and the former in 1704, and if any action was taken under either of them no record of it remains. In 1696, however, another "petitionary act for free schools" was passed, looking to the erection of a succession of free schools of high character, till there should be one for every county in the State. The only immediate result of this was the establishment of King William's School at Annapolis, which is still in existence, under the name of St. John's College; but the policy thus declared and inaugurated of founding one free school in each county guided the educational efforts of Maryland for nearly a century, and may be seen to-day in the academies, of which nearly every county has one, and in the academic donation, from which each county receives $1,200 a year out of the State treasury.

Additional steps looking to the same end were taken in 1715 and 1723, the latter aiming at the formation of a fund for the erection and support of a free school in each county, as near the centre as might be and as might be most convenient for the boarding of children. Trustees, called visitors, appointed for each county, were authorized to fill vacancies in their own number, to have perpetual succession forever, and to have full power to make all necessary rules for the schools proposed. Out of the fund provided for, the visitors of each school were to purchase 100 acres of land for the use of the school, one-half to be cleared for the benefit of the master, the other half to remain as woodland ground, the wood on which must be used only for firewood and repairs. A visitation of the school four times a year by the members of the board was also required. For refusal to accept the office of school visitor or perform the duties of it, a fine of 500 pounds of tobacco was imposed, the proceeds to go to the county school.

But it seems that the fine was too light, or, as is more probable, that the law was not enforced, for five years later (1728) a supplementary act was passed, because, as the preamble states, "no provision had been made for turning out and supplying the place of any visitor or visitors wilfully neglecting or refusing to act in the duty and office of a visitor, by which means several inconveniences and much damages have and may happen to the schools."

After making provision for supplying the place of recusant visitors, the act proceeds to direct that "The master of every public school within this province shall and is hereby required to teach as many poor children gratis as the visitors shall order, or be immediately discharged and a new master put in." It may be inferred from this section that the original idea of a free school system had already begun to be obscured. Probably the income from public sources was insufficient to support the master and his assistant, and was at first supplemented by tuition fees. In the course of time, all pupils were expected to pay for their tuition, and the rights of the public were in danger of being lost, when the general assembly interfered to assert the rights of the people and ordered the masters to receive as many poor children gratis as the visitors may direct.

This seems, at first sight, to have been only just; but in reality it gave up the whole principle of free public schools, on which all the earlier legislation rested, and substituted for it a pay school with a charity attachment. Instead of an open highway, where all, rich or poor, have exactly equal rights, we have a private park owned by a few who are rich enough to pay for the luxury, but to which a few poor children may be admitted as a charity.

The subsequent history of education in Maryland will show that no success was possible until the element of charity was discarded and the principle of public right, duty, and interest placed in its stead.

From this date till the Revolution, the allusions to education on the statute book are few and uninteresting. Each county was struggling to keep up a free school (so called, but in reality a pay school with charity scholars) on insufficient means. Occasionally, the half of certain fines was added to the school fund. But, all this, and the whole of the fine for allowing hogs to run at large, was evidently insufficient, for we find that the visitors of Kent County school applied to the general assembly for

permission to sell half their land for the benefit of the school; and in 1750 an act was passed authorizing the visitors of King William's school to sell certain lands and houses belonging to them.

That the schools were languishing for want of funds is evident from the fact that on the petition of citizens of Somerset and Worcester Counties the schools of the two were in 1770 allowed to be consolidated into one, because the funds provided for a school in each county did not provide enough for proper masters. For the same reason, in 1774, authority was given to unite the three free schools of St. Mary's, Charles, and Prince George's Counties into one, and erect for it a house at Cool Springs, in St. Mary's County, to be called Charlotte Hall; while that for Calvert County, with its land, was permitted to be sold at auction and the proceeds given to the Lower Marlboro' Academy, "because the free school in said county did not afford sufficient encouragement for a master."

POST REVOLUTIONARY ACTION.

The war of the Revolution had hardly ended and peace spread its wings over the land again, before the Kent County Free School, with its lands and funds, was turned over to Washington College, Chestertown, chartered in 1782 and organized 1783. In the same year, 1782, the lands and funds of Talbot County Free School were transferred to the same college, which had £10,000 subscribed for its establishment and was promised by legislative enactment, 1784, £1,250 annually toward its support.

At the same session, (1784,) and as a part of the same measure, was passed "An act for founding a college on the western shore of this State, and constituting the same, together with Washington College on the eastern shore, into one university by the name of the University of Maryland."

The new college was to be called St. John's, was desired to have its location at Annapolis, and, like the other, was to afford equal privileges to all religious denominations, either as students or professors. Before its organization it was to have £13,000 subscribed and paid to it, and, if Annapolis was chosen as its site, was to have 4 acres of public ground within the city, and was promised £1,750 of public money annually for salaries.

It was further enacted "that the said two colleges, viz, Washington College on the eastern shore and St. John's College on the western shore, shall be, and they are hereby declared to be, one university, by the name of the University of Maryland, whereof the governor of the State for the time being shall be chancellor, and the principal of one of said colleges shall be vice-chancellor, either by seniority or election, according to such rule or by-law of the university as may afterward be made in that case."

Now begins the policy of dispersion, which has been so prejudicial to the educational interests of the State. Had the original plan been kept up, there might have been two good, efficient, well endowed colleges, one on the eastern and one on the western shore, and one first class academy in each county, all supported by the State; and when, in the fulness of time, the common school system came into operation, we should have had a harmonious system, every link in the chain complete. Unfortunately the opposite counsel prevailed, the interests of the State being subordinated to local demands, conveniences, and prejudices. Thus, in 1799, £500 were withdrawn from the donation of £1,250 granted "annually forever" to Washington College, and an annual donation of $800 made to each of the academies named: Washington Academy, Somerset County; Talbot County Academy, not yet established, but incorporated by an act passed in the following session; Charlotte Hall School, Frederick County School, and an academy to be erected in Baltimore or Harford County. This is the origin of the "academic donations" still paid in the State under one form or other.

Following up the dispersion and starvation policy, commenced in 1799, the general assembly, in 1805, repealed the law by which Washington College drew £1,250 (it had previously been reduced to £750) and St. John's College £1,750 annually from the public treasury; and ordered that said sum should "remain in the treasury, subject to the appropriation of the legislature to literary purposes, and for disseminating learning in the several counties of the State."

The same act also repealed the act by which the two colleges named were united in one university. So ended what promised to be "the University of Maryland," although the name may be found on paper to this day. In 1812 a new charter was granted to the College of Medicine of Maryland, authorizing the college to annex to itself three other colleges or faculties, divinity, law, and arts and sciences, and constituting the four faculties into a university, to be known as the University of Maryland; but without money the new university had a hard struggle for existence. Two of the faculties are still alive, medicine and law, but there is no university.

THE LOTTERY MANIA.

For years after the dispersion of pledged funds there seems to have been no general educational movement of any importance. Academies and charity schools started up

here and there, as circumstances demanded, flourished for a season, and then expired. Appropriations were made by the Legislature, reduced, increased, withdrawn, according to the whim of the moment. Finally the lottery mania took possession of the public mind, and dozens of schools sprang up under the delusive prospect of getting value without giving an equivalent.

The first lottery authorized by the State of Maryland was for the purpose of enabling the Zion Church congregation of Baltimore County to complete their house of worship. On the same day, December 31, 1801, was passed an act empowering the trustees or visitors of the Frederick Academy to raise $3,500 by lottery for the benefit of that academy.

The purposes to which such lotteries were applied were wonderfully varied: to build a church, to found a school, to purchase a fire engine, to dispose of town lots, to build wharves, to improve streets, to dig a well, to build a bridge, to rebuild a steeple, to lay out a road, to build an arsenal, to endow a dispensary, to purchase church bells, to purchase a library, to "finish and complete the Roman Catholic Cathedral in the city of Baltimore." Among the schools founded or aided by lottery schemes may be named, in addition to the Frederick County School already mentioned, Charlotte Hall School, (1801 and 1817,) Washington Academy, Somerset County, (1802,) Baltimore College, (1803,) Rockville Academy, (1806,) the private school of Rev. Samuel Knox in Baltimore, (1806,) St. Mary's College, in Baltimore, (1806,) Elkton Academy, for purchasing philosophical apparatus, (1807,) Denton School, Caroline County, (1808,) Emmittsburg School, Frederick County, (1808,) The Baltimore Female Academy, (1809,) Boonsborough School, Washington County, (1811,) Coxe's town school, Baltimore County, (1812,) Hagerstown Academy, (1813,) Taneytown School, Frederick County, (1815,) Ballinger's Creek School, Frederick County, (1815,) West Nottingham Academy, Cecil County, (1815,) the University of Maryland, for chemical and other apparatus, (1816,) Washington College, (1816,) Cecilton school, (1816,) Bladensburg Academy, (1817,) Free School in Prince George's County, (1817.)

The most ambitious of these schemes was "An act for the encouragement of literature," by which it was enacted, February 5, 1817, "that for the increase of the school fund of this State there shall be raised by lottery the sum of $50,000 a year for five successive years, if practicable." The school fund, however, never seems to have profited by the scheme, nothing from this source belonging to the State.

A SCHOOL FUND CREATED.

In 1812 and 1813 an important step toward a school system was taken by the creation of "a fund for the establishment of free schools." This consisted of a tax imposed upon the banks at the rate of 20 cents on every $100 of the capital stock of each bank actually paid in. This yielded at one time an average of $20,000 annually, and was by the law to be invested in bank stock, to form the basis of a permanent fund. To this source was, in 1825, added the interest received by the State from the United States on advances made by Maryland during the war of 1812. And finally, in 1836, the $274,451 received and to be received on account of the State's proportion of the surplus revenue of the United States, was, after paying the interest on the public debt and the expenses of the government, directed to be deposited in bank at an interest of not less than 5 per cent., and have its interest distributed among the counties and the city of Baltimore for the support and encouragement of common schools. In 1839 a change was made by substituting $34,069 of the annual revenue derived from the Baltimore and Washington Railroad for the interest on the surplus revenue. The fund thus created was not held by the State permanently for annual distribution of its proceeds, as seemed to be contemplated by the law of 1836, but was distributed among the counties and the city of Baltimore in the shape of bank stocks, some counties drawing their full quota at once. Some, however, preferred to leave theirs in the treasury, and draw the dividends only.

This was the condition of things up to 1856. Two years later the State received from the United States, for moneys advanced in the war of 1812, $160,929, which, with accumulated interest, amounted to $173,559 when invested. This, by authority of an act of 1858, was devoted to the school fund, the interest to be annually distributed among the counties and the city of Baltimore, according to their representation in the two houses of the general assembly.

A GENERAL SCHOOL LAW.

On the 28th of February, 1826, was passed the first general and uniform public school law of the State, a measure of great practical merit and complete in all its details, but destined to fail because it had to be submitted to the popular vote in every county for approval and after that was dependent on district taxation for its support. Some of the details are interesting even now. There was to be a State superintendent of public instruction appointed by the governor. The superintendent was to digest and prepare a plan for the public instruction of youth throughout the State, for the organization of the system and the collection and management of the revenues, and to give

information to the legislature on all matters appertaining to his office. The justices of the levy court were to appoint 9 citizens in each county as commissioners of schools and 18 others as inspectors of primary schools. The commissioners were to divide their respective counties into a convenient number of school districts. The citizens of each district were to meet once a year to elect by ballot a district clerk, a district collector, and 3 school trustees, and also to vote a tax on the resident inhabitants of the district sufficient to purchase a school-house site, build or repair the house, and furnish it with fuel, books, stationery, and appendages. The duties of the clerk, collectors, and trustees, respectively, were strictly defined. It was provided that no teacher should be employed who should not have "received the certificate of approbation from the inspectors of schools." The trustees were also to make a report semi-annually to the commissioners of schools, showing the length of time the school had been kept open, the amount of money received by them, the number of white children taught, and the number of white children between the ages of 5 and 15 residing in the district. The money received from the State treasury as a quota of the free school fund by each county was to be distributed by the commissioners among the school districts in proportion to the number of children between the ages of 5 and 15 in each. And this money was to be applied to the payment of teachers' salaries, and to no other purpose. The certificate of qualification was to be given to teachers only after examination, and the form of the certificate was prescribed. If trustees employed a teacher without a certificate he could claim no salary. It was made the duty of the inspectors to visit the schools once a quarter, or oftener, to examine into their condition, and to give advice and direction to the trustees and teachers. This act was to apply to the city of Baltimore, if the mayor and city council did not establish a system of education for the city within five years. The act was to be submitted to a vote of the people at the next general election, and if a majority of votes in any county should be against it, then it was to be null and void as to that county.

The superintendent of public instruction appointed under this act was Littleton Dennis Teackle. He made a report to the legislature, which was far in advance of the times, for he was a man of great intelligence and of progressive views, and then disappeared, having received apparently only $500, by legislative act of March 15, 1828, "in full compensation for his services and expenditures as superintendent of public instruction."

For nearly forty years after this the counties continued to flounder in a sea of uncertainty, every year amending, repealing, or reënacting the school law of the previous year. To make bricks without straw, to have an efficient school system without adequate taxation, was their unacknowledged desire. Occasionally a county emancipated itself from the delusion, but in 1864 there was no effective system beyond the limits of the city and the county of Baltimore. It was reserved for a time of revolution, political, national, and social, to lay the foundation of a uniform and permanent free public school system.

A SECOND GENERAL LAW.

The constitutional convention of 1864, for the first time, placed the subject of education in the organic law of the State. The eighth article of this instrument required the governor to appoint a State superintendent of public instruction, one of whose duties it was to report to the general assembly a uniform system of public schools. This report was to be the law of the State in case the general assembly, at its first session after the adoption of the constitution, should fail to provide a uniform system of free public schools. The constitution required a school to be kept open and supported, free of expense for tuition, in each school district for at least six months in the year, and for this purpose the general assembly was required to levy an annual school tax of not less than 10 cents on each $100 of taxable property throughout the State. It also provided that the general assembly should, for the purpose of forming a permanent school fund, levy an annual tax of not less than 5 cents on every $100 of taxable property, which should be invested by the treasurer until it should amount to $6,000,000, but this clause was never carried into effect.

Rev. Libertus Van Bokkelen was appointed superintendent of public instruction under this constitution. He reported to the general assembly the draft of a public school law, which was adopted as the basis of legislation, and, with some alterations, became the law of the State July 10, 1865.

Under this system, the supervision of public education was vested in a State board of education, consisting of the governor, the State superintendent appointed by the governor, the lieutenant governor, and the speaker of the house of delegates; and in boards of school commissioners for the city of Baltimore and for each county, the school commissioners of the city to be appointed by the mayor and city council and those of the counties to be appointed by the State board of education. The State board was authorized to supervise all colleges and schools receiving State donations, to select a uniform series of text books for use in public schools and high schools, and to make contracts for the purchase of the same; to issue a uniform code of by-laws for the government

of county school boards and public schools; to appoint the professors of the State normal school, and to appoint and remove (for cause) the county school commissioners.

The State superintendent was required to visit each county annually, to confer with the school commissioners, to inspect schools, to hold teachers' institutes, and to address public meetings on educational topics. He was required to make an annual report to the governor of the condition of the schools and colleges and all matters relating to his office. He was authorized to give certificates of qualification to teachers, to annul the same for cause, and to decide all controversies and disputes arising under the school law.

The school commissioners of each county (appointed by the State board of education) were to hold office four years, each commissioner to have the special charge of a number of school districts, not less than 15. A president of each board was to be appointed by the State board of education, to perform the general duties of county superintendent. Each school commissioner, acting for his own district, was to employ teachers, to visit the schools, to take charge of the school property, to purchase fuel, and to cause instruction to be given in each school district for at least six months in every year. The schools were to be free to all white youth between the ages of 6 and 15. Ample provision was made in this law for high schools, a State normal school, teachers' institutes, and teachers' associations. To set this machinery going and keep it running, an annual State tax was levied of 15 cents on each $100 of taxable property throughout the State. This law, which went into operation on July 10, 1865, continued till the 1st of April, 1868.

STILL ANOTHER LAW.

The school law of 1865 was regarded by many as a revolutionary measure, and, though its merits were acknowledged by all candid and intelligent persons, yet when a change took change in the politics of the State the dominant party demanded its repeal; but the constitution of 1867, equally with that of 1864, guaranteed to the people of Maryland "a thorough and efficient system of free public schools," and a new law to this effect was passed the next year.

The aim of the law of 1868 was to accomplish the same results as the preceding law, but by means of different machinery; many of the differences were more apparent than real. If any principle governed the legislature, it seemed to be a desire to bring the schools nearer to the people by making the offices elective. The board of county school commissioners (which had formerly been appointed by the State board of education) was composed of one commissioner for each election district, to be elected by the people thereof at each general election for members of the general assembly. For the purpose of appointing teachers and taking care of school property, a new board was created called "the board of school-house district trustees." It consisted of three members, of whom one was the school commissioner of the election district and the other two elected by the legal voters of the school district. The State board of education was discontinued, but some of its functions were assigned to the trustees of the State normal school. The State superintendency was abolished and most of the duties of the office transferred to the principal of the State normal school, who was ordered to have the general superintendence of all the public schools in the State. The office of county superintendent was continued under the name of "examiner," and the duties of treasurer and secretary combined with it. The State school tax was changed from 15 to 10 cents on the $100, but the amount of revenue was not diminished, because the basis of assessment had been increased in the same proportion.

The appropriation to the State normal school was raised from seven to eight thousand dollars, and appropriate provision was made for teachers' institutes and teachers' associations. Under this law the schools were required to be kept open ten months in the year, and if the State school fund proved insufficient for this purpose in any county, "the county commissioners in such county are authorized and required to levy and collect such a tax upon the assessable property of the county as the board of county school commissioners shall designate as sufficient to make good the deficiency." The city of Baltimore is practically exempted from the operation of the law, except so far as taxation is concerned. This law, like that of 1865, makes no provision for the education of the colored people, except appropriating the total amount of taxes paid for school purposes by the colored people to the founding of schools for colored children. Any school district or any county is authorized to levy taxes for the erection of school-houses, for the establishment of high schools, or for any other purpose that may tend to the increase of educational facilities.

The administration of the school system under this law was weaker than under the preceding, owing to the lack of a strong central authority; but it raised more money, educated more children, kept the schools open a longer time, and excited a more general popular interest in public education. The general assembly of 1870 repealed the law of 1868, and reënacted it, with some amendments which were improvements and some which were not. By the new law the State board of education was restored under the name of State school commissioners. This board consisted of the principal of

the State normal school and four persons selected by the governor from among the presidents and examiners of the several county boards. The duties of the county school commissioners remained the same, but the number and mode of appointment were changed. In place of a popular election they were appointed by the judges of the circuit court, and instead of one commissioner from each election district there were to be five commissioners in the large counties and three in the small. The school district board was also changed. It consisted of three persons appointed by the county school commissioners annually. Thus the elective features of the law of 1868 were abolished and the method of appointment substituted. The duties of the State school commissioners were similar to those of the old State board of education, with the exception of the appointing power. The State school tax remained the same, but the power of the county school commissioners to levy a county school tax was limited to 10 cents on the hundred dollars, "unless the county commissioners shall approve and sanction an additional tax." Provision was made for the first time for giving life certificates to qualified teachers. The duties of the county examiner were more clearly defined than in the preceding law. The appropriation to the State normal school was increased by $1,500 a year. The provision for teachers' institutes and teachers' associations was continued.

THE FINAL FORM TAKEN.

This law was repealed in 1872 and reënacted with unimportant amendments. The board of State school commissioners is continued under the name of the State board of education, and the board of district school commissioners under the name of district school trustees, but no change is made in their duties or the mode of appointment. The only new feature of the law worthy of notice is the provision for schools for colored children. It is made the duty of the county school commissioners, in each county, to establish one or more public schools in each election district for all colored youth between 6 and 20 years of age, to which admission shall be free, which shall be kept open as long as the other public schools of the same county, which shall be subject to the same laws and furnish instruction in the same branches as the schools for white children. For this purpose the legislature appropriated $50,000 annually.

The general assembly of 1874 amended several sections of the school law passed by its predecessor. The governor of the State is made a member ex officio of the State board of education. The State board of education is authorized to enact by-laws for the administration of the public school system, and to suspend or remove any examiner or teacher who may be found inefficient, incompetent, or immoral. It is authorized to add to the subjects in which teachers are required to be examined such other branches, from time to time, as may seem necessary. Teachers' certificates are limited to six months when first issued, but may be extended to 3 years, if the county examiner, at the end of the six months, approves of it. The power of appointing teachers remains in the board of district trustees, but with the proviso that the appointment must be confirmed by the board of county school commissioners. The appropriation for the support of the State normal school is raised to $10,500. The annual appropriation for the support of colored schools is raised from $50,000 to $100,000. This provision is not in the school law, but in the regular appropriation bill.

The legislature of 1876 made no change in the school law. A bill for the purpose of making some important alterations (not improvements) was passed by the house of delegates, but was not acted on in the senate.

ELEMENTARY INSTRUCTION.

SCHOOLS FOR COLORED CHILDREN.

It appears from a table of the State report that there were, for the colored race, 309 schools in 1875-'76, with 347 teachers and 18,134 enrolled pupils. The amount received from appropriations for these schools was $80,049; less, by $1,121, than in the previous year. The expenditures for these schools amounted to $119,285, an increase of $206.

THE SCHOOLS IN GENERAL.

The State board say, at the close of their report, that, while unable to point to any special triumph in educational work to mark the close of the centennial year, they yet are glad to put on record that in a period of unexampled industrial depression, when a feeling of distrust and a desire for retrenchment marked every private business and every institution, the schools of Maryland took no step backward. On the contrary, though there may have been some backsliding in particular places, a survey of the whole field shows that more progress has been made and larger results obtained than in any previous year in the history of the State.

KINDERGÄRTEN.

Three schools of this class, all in Baltimore, report their statistics for 1876. These may be found in Table V, at the end of this volume.

CITY SCHOOL SYSTEM.

BALTIMORE.

Officers.— A board of public school commissioners of 20 members, one from each ward of the city, elected apparently for 4 years, one-fourth retiring each year. Its officers are a president, secretary, superintendent, and assistant superintendent of the city schools.

Statistics.— Population, 302,839; children of school age in 1870, 77,737; number of pupils in school during the year, 47,194; average attendance, 24,381. Number of schools, 119. Number of teachers, 731. Number of pupils to a teacher, based on enrolment, exclusive of special teachers, 44. Per cent. of enrolment on population, 10.3; per cent. of average attendance on enrolment, 81.8. Receipts for school purposes, $629,832.13. Expenditures for schools for white children, $637,411.64; for colored, $40,575.18. Total current expenditures, $582,467.08; total expenditures, including amount for buildings, $677,986.82.

Remarks.—The system of instruction is symmetrically graded, consisting of primary, grammar, and high schools, in a generally satisfactory condition. The number of pupils has increased during the year, and the grade of scholarship has advanced; the teachers generally performed their work with zeal and fidelity; new school buildings were erected; some of the defects of the past were removed, and progress was made toward the removal of others. A higher standard of examination and greater proficiency in the work of teachers and pupils were exacted, and merit and success received a proper recognition.

Music.—The importance of music as a study in the public schools was recognized more than 30 years ago, when it was placed upon the schedule of studies. In 1875 a course of instruction was adopted in the primary, grammar, and high schools and the normal class, which has given thoroughness and uniformity to this department. It is supervised by 5 music teachers, who regularly visit the schools assigned them, review and instruct each class, and give such information to the regular teachers as may be necessary.

Drawing.—The subject of drawing also received the early attention of the commissioners of schools. In 1845 it was introduced as a study in the high school for boys, and in 1865 in that for girls, one teacher attending to the recitations in both schools. In 1871 four teachers were appointed for the grammar and primary schools; but up to 1875 the study had but a subordinate place, instruction in it being given only by the special teachers. From that time the same system was applied to drawing that had been successfully adopted with reference to music, instruction being given in all grades of the schools by the regular teachers, under the supervision and instruction of special teachers. Good progress has since been made in the study; the system, during its trial year, has been successful and satisfactory, and the expense moderate.

Schools for colored children.— During the year, 12 schools for colored children, having an attendance of 3,143 pupils, were taught by 60 white teachers. The large majority of the pupils were in the primary department, and the promotions to the grammar school were not as numerous or rapid as was desirable, owing to the irregular attendance of the pupils and their inattention to study. These schools are classified in the same manner as those for white children, and are under the charge of competent and faithful teachers. Although they have not fully accomplished the purpose for which they were organized, owing to the obstacles mentioned, yet, it is remarked, they are undoubtedly of great benefit both to those who attend and to the community at large, and should, therefore, be liberally sustained.

Evening schools.— Only two evening schools were opened last year, one for white, the other for colored children. Owing to the irregular attendance at these schools the previous year and their generally unsatisfactory condition, it was proposed to discontinue them entirely for a term; but finally these two were opened under more rigid rules, and both proved very successful, the attendance of the pupils being regular and their conduct good. The enrolment was 333, of whom 200 were colored and 133 white; the average attendance was 228, of whom 141 were colored and 87 white.

German.—There are in the system 5 English-German schools, with an attendance during the year of 2,963 pupils, an increase of 1,332. These schools were established in 1874 in response to the demand of many prominent citizens and patrons for English-German instruction. It was deemed inexpedient to introduce the study in the schools as now organized, and therefore separate schools were established in which instruction is given to the pupils in both languages. These schools have been eminently successful and have grown in public favor so rapidly that it has been impossible to furnish proper accommodation for the large number of children applying for admission.

High schools.— High school instruction is furnished for boys in the Baltimore City College and for girls in two high schools, the Eastern and Western. A majority of the 430 pupils attending the college last year were graduates of the grammar schools, but the number admitted from private schools is annually increasing. A preparatory department, forming an intermediate grade between the grammar schools and the college, was organized last year.—(Report, 1875-'76, of board of commissioners and city superintendent of instruction, Henry E. Shepherd.)

TRAINING OF TEACHERS.

PROPOSED NEW AGENCY FOR TRAINING TEACHERS.

The great want of the schools in Maryland, as well as elsewhere, says the State superintendent, is trained teachers. The agencies relied on to give this training are the normal school, the Educational Journal, the teachers' institute, and teachers' associations, but these are not sufficient. There are hundreds of new teachers appointed every year in this State who have never been brought under the influence of any of them and who cannot be thus brought except by some kind of compulsion. As, under present circumstances, every teacher cannot be a graduate of a normal school, Superintendent Newell suggests that the best school in each county be made a training school, which shall be brought up, in methods at least, to the level of modern pedagogical science; that in this school every new candidate for a place as teacher, not trained elsewhere, be required to spend six months as an observer and assistant, and that, before receiving his certificate, he be examined by the principal and certified to the county examiner.—(State report, 1875–'76.)

NORMAL SCHOOLS.

State Normal School, Baltimore.—This school, established by the school law of 1865 and reorganized under the law of 1868, has now taken possession of its new building, which is admirably adapted to its use. The beauty of the location and the attractive appearance of the building are noticed by all, but only those who have watched the struggles of the school during 10 years in cramped and ill-arranged quarters can appreciate the relief that is now felt.

During the year 1875–'76 there were enrolled 206 pupils, of whom 190 were women. At the commencement, in June, 1876, there were 21 students graduated, 18 of whom have since been employed as teachers. Since the organization of the school there has been an attendance of 1,199 students, 215 of whom were graduated. It is estimated that 124 of these are now teaching in the public schools of the State, and that the number of undergraduates teaching is about 215. The course of study lasts from 2 to 3 years. Tuition and books are free to 200 students, each county being entitled to send 2 for each of its representatives in the general assembly.—(Report of State superintendent and catalogue, 1875–'76, with return for 1876.)

The Baltimore Normal School for the Education of Colored Teachers reports an attendance in 1876 of 40 pupils (10 men and 30 women) and 4 graduates, of whom 2 were teaching. The course of instruction covers 4 years. Annual expense for tuition, $10 to $15. Amount of State appropriation for the year, $2,000.—(Return for 1876.)

Saturday Normal Class.— In Baltimore, a Saturday normal class, with a course of instruction in the theory and practice of teaching, is conducted by some of the most efficient teachers in the employ of the board.—(City report, 1875–'76.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The State superintendent's report for 1875–'76, as published in the Maryland School Journal, gives no account of the public high schools of the State, nor can anything be positively stated regarding them beyond the fact of their existence in certain towns, gained from the superintendent's report for 1874–'75. The Baltimore city report for 1875–'76 gives the attendance at the two high schools for girls in that city, the Eastern and Western, as 734, while at the Baltimore City College, the public high school for boys, there were 430 pupils, making a total of 1,164. The full course of 5 years in the college prepares pupils to enter the Johns Hopkins University. There is also a supplementary course of 1 year for business. The 2 high schools for girls offer a course of 4 years, comprising English and belles lettres, mathematics, natural sciences, moral, mental, and political sciences, vocal music, drawing, French, and German, the latter being optional.

ACADEMIES AND KINDRED SECONDARY SCHOOLS.

In all, 39 schools of this class present their statistics for the year 1876, showing 204 teachers and 2,673 scholars, 559 of whom were in classical studies and 1,292 in modern languages, 88 specifically preparing for a classical course in college and 24 for a scientific course, while 58 had entered college the preceding year. In 19 of these schools instruction was given in drawing; in 21 in vocal music; in 19 in instrumental music; 16 report means of illustration and experiment in chemistry; 22 in natural philosophy; and 19 report libraries of 150 to 2,000 volumes, the total number of volumes in the 19 being 27,175.—(Returns to Bureau of Education.)

PREPARATORY SCHOOLS AND DEPARTMENTS.

Two institutions of the former class report 14 instructors and 21 pupils, 19 preparing for a classical collegiate course and 2 for a scientific. They had sent 5 pupils to

college the preceding year and 12 to scientific schools. Only 1 reports chemical and philosophical apparatus, with a library of 2,500 volumes.

Four departments of colleges report 12 teachers, exclusive of the college faculties, with 196 pupils, 61 preparing for a classical course in college and 71 for a scientific course.—(Returns for 1876.)

BUSINESS COLLEGE.

One such, in Baltimore, reports 7 teachers and 341 students, without classification as to the studies pursued by these. It purports to teach common English branches and correspondence, penmanship, book-keeping, and commercial law.—(Return for 1876.)

SUPERIOR INSTRUCTION.

JOHNS HOPKINS UNIVERSITY.

This institution, founded at Baltimore in 1867 by the munificence of one of her distinguished citizens, Johns Hopkins, was organized and commenced work during the last year. It is entirely free from ecclesiastical and partisan control, and is otherwise established on a broad and liberal foundation, although, thus far, only men are admitted to its privileges. Mr. Hopkins has here established for Maryland, by his sole bounty, a true university of the highest order, providing for it such an endowment as the newer States have not equalled by their munificent land grants and direct appropriations. Its productive funds amount to $3,000,000, and yield an annual income of $180,000. Tuition is not free, except to those holding scholarships, but only $80 a year is charged. In accordance with the founder's request, 20 scholarships are given to students in Maryland, North Carolina, and Virginia, who are found "most deserving of choice because of their character and intellectual promise." The university scholarships differ from these in being honors won at examinations and open to competitors from any place. Two of these were bestowed, after examination, upon graduates of Maryland colleges. The trustees have also offered 20 fellowships or graduate scholarships to graduates of colleges in any State, to be bestowed for excellence in any of the following subjects: philology, literature, history, ethics and metaphysics, political science, mathematics, engineering, physics, chemistry, and natural history. These fellowships yield $500 annually and are renewable. Out of 152 applicants, 107 eligible candidates were selected, comprising graduates from 46 different colleges. Their applications were referred to specialists in each department, who examined carefully the claims of the candidates and reported to the trustees. The successful competitors in 1876 represent Amherst, Iowa, Yale, Lafayette, Harvard, Princeton, Columbia, Randolph Macon, and Concordia Colleges, the Universities of Virginia and California, and the Massachusetts Institute of Technology.

It was not expected, or indeed desired, that the number of students would be large during the earlier years of the university. Of the 89 registered in 1876, 54 had already received academic degrees; 12 matriculated for the bachelor's degree, and 23 were received as special students. No preparatory department has been organized and none is contemplated.

A useful and really valuable library, though only of a preliminary kind, has been opened to the students, and the work of building and furnishing the laboratories is going on with cautious speed. A number of afternoon lectures have been delivered, which combine to a certain extent the attractiveness of popular discourses with the precision of university teaching. The work of the first year, however, is meant to be purely tentative. The university does not commit itself, at present, to details.—(Catalogue and return for 1876, and report of State superintendent, 1875–'76.)

OTHER COLLEGES.

Frederick College, Frederick City, (non-sectarian,) chartered in 1763 and organized in 1797, has been in successful operation for 79 years. There are at present 3 departments, the classical, the mathematical and higher English, and the elementary English.—(Catalogue, 1875–'76.)

Loyola College, Baltimore, (Roman Catholic,) was organized as a college in 1853. Its course of studies occupies 7 years and embraces geography, history, book-keeping, the English, French, Latin, and Greek languages, literature, elocution, rhetoric, mathematics, physics, chemistry, logic, metaphysics, and ethics.—(Catalogue, 1875–'76, and return for 1876.)

Mt. St. Mary's College, near Emmitsburgh, (Roman Catholic,) was founded by Rev. John Dubois, afterwards bishop of New York, in 1803. The studies necessary for graduation, including a thorough course of English literature, occupy 3 years, those in the preparatory department from 2 to 3.—(Sadler's Catholic Directory, p. 21 of advertisements.)

Rock Hill College, Ellicott City, (Roman Catholic,) organized in 1857, comprises collegiate and preparatory departments, the former having 3 courses of studies, commercial, scientific, and classical.—(Catalogue, 1875–'76.)

St. Charles College, Ellicott City, (Roman Catholic,) is the classical department of St. Mary's Theological Seminary at Baltimore.

St. John's College, Annapolis, (non-sectarian,) established in 1784 and endowed by the State, receives from it an appropriation of $25,000 annually, of which $10,000 is for the board of 50 State students. The departments are preparatory and collegiate, the latter embracing 3 courses, a regular academic, a select, and a post graduate course. The degree of master of arts is conferred only on such graduates of the regular academic course as shall pursue this post graduate course for 2 years at the college or elsewhere. In the regular academic course there are the following departments: ancient languages, modern languages, mathematics, natural science, mental, moral, and social science, and history and the English language and literature.—(Catalogue, 1875–'76.)

Washington College, Chestertown, (non-sectarian,) organized in 1782, has preparatory and collegiate departments. The visitors of this college report an increasing public interest in it throughout the Eastern Shore. The 15 beneficiary students provided for under the acts of 1856 and 1874 were all in attendance in 1875–'76, and gave evidence of the benefits of the system.—(Report of State superintendent, 1875–'76, and return for 1876.)

Western Maryland College, Westminster, (Methodist Protestant,) unlike any of the colleges before mentioned, admits both sexes. The course of study, however, is not the same for both, the young women completing theirs in 3 years, while that for the young men extends over the usual collegiate 4 years. Both sexes have the same instructors, yet the two departments are kept entirely separate. There is a preparatory department and a theological course.—(Catalogue, 1875–'76, and return for 1876.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The *Maryland Agricultural College*, at College Station, Prince George's County, reports a year of good work, with improving prospects, its organization complete in every particular, and its condition very far superior to last year. The branches of study taught are grouped under the following departments: (1) civil engineering and astronomy; (2) English literature, moral philosophy, and history; (3) pure mathematics; (4) physics and applied mathematics; (5) agriculture, architecture, and drawing; (6) chemistry and natural history; and (7) ancient and modern languages. Agriculture, however, is to be made the leading feature of the course, which requires 4 years for completion. Tuition is free to students from the State; to others there is a charge of $50 annually.—(Report of State superintendent and college catalogue, 1875–'76, and return for 1876.)

The United States Naval Academy, at Annapolis, was founded in the year 1845, by Hon. George Bancroft, Secretary of the Navy, in the administration of James K. Polk. The

course of study, as at present organized, extends over 6 years, and embraces English composition and history, French, Spanish, drawing, applied mathematics, astronomy, electricity, ship building, naval and infantry tactics, public law, navigation, light and heat, steam engineering, ordnance and armor, seamanship, and naval architecture. The requirements for admission are a thorough acquaintance with the fundamental English branches. The number of cadet midshipmen allowed at the academy is 1 for every Member and Delegate of the House of Representatives, recommended by the Member or Delegate from actual residents of his district; 1 for the District of Columbia; and 10 appointed annually at large by the President of the United States.—(Catalogue, 1876–'77.)

THEOLOGY.

Centenary Biblical Institute, Baltimore, (Methodist Episcopal,) embraces theological normal, and preparatory departments, and receives both sexes. Normal students are required to pursue the same biblical studies with those in the theological department. Tuition is free to candidates for the ministry of the Methodist Episcopal Church. The institute is supported entirely by contributions from the church. The biblical course of instruction lasts three years.—(Circular and catalogue, 1875, and return for 1876.)

Mt. St. Clement's College, Ilchester, (Roman Catholic,) organized in 1868, reports a five years' course in theology, and Woodstock College, at Woodstock, (Roman Catholic,) a theological course of 7 years.—(Returns for 1876.)

LAW.

The Law School of the University of Maryland is now in successful operation and is making satisfactory progress. Its course lasts 2 years, and it graduated, in 1876, 29 students.—(Circular and return for 1876.)

MEDICINE.

The College of Physicians and Surgeons, Baltimore, announces through its faculty a continued and increasing success. Clinical illustration and didactic instruction are closely united. A special feature is the establishment of an obstetric clinic in connection with the college, claimed to be a much needed reform in the system of medical education in this country. The course lasts two years.—(Catalogue, 1874–'75, and return for 1876.)

The School of Medicine of the University of Maryland, Baltimore, also gives clinical teaching an important place in the plan of instruction. The university hospital, otherwise known as the Baltimore Infirmary, is the largest institution for the care of the sick in the city. It embraces a gynæcological department, and also one in which facilities are offered for giving instruction in obstetrics.

The medical department of Washington University, Baltimore, reports a two years' course of professional instruction. As a condition of an appropriation made by the legislature of Maryland, 1 student from each senatorial district is received free of charge for tuition. The hospital owned by the school has become virtually the casualty hospital of the city, and all cases of accident brought to it are, when practicable, treated in the presence of the class.—(Circular, catalogue, and return for 1876.)

DENTISTRY.

Baltimore College of Dental Surgery, which claims to be the oldest and for many years the only dental college in the world, has, during the past forty years, graduated nearly 800 students. It now occupies the new, elegant, and commodious building completed for its use in 1875. The plan of instruction is thoroughly practical, while careful attention is given to elementary and theoretical subjects.—(Catalogue, 1876.)

The Maryland Dental College, Baltimore, also claims to offer an eminently practical course of instruction. Lectures, both didactic and clinical, are delivered daily, while the infirmary, under the charge of the clinical professor and demonstrators, is open during the entire year. Diplomas are conferred upon examination when merited, but the candidate for graduation must be 21 years of age.—(Catalogue, 1876.)

SPECIAL INSTRUCTION.

EDUCATION OF THE BLIND.

The Maryland Institution for the Instruction of the Blind, at Baltimore, since its first opening, in 1854, has had under its charge about 171 pupils. All of these have received benefit, and many of them have been raised from a position of almost absolute dependence to one of comparative helpfulness and cheerfulness. One is a practising lawyer, another a successful farmer, another a student of divinity, another a piano tuner, others music teachers, broom makers, &c. The studies pursued are reading, spelling, writing, both with the pencil and in the point system; mental and written arithmetic, algebra, physical and descriptive geography, ancient and modern history, English grammar, rhetoric, composition, and declamation. The musical department occupies an important place in the course of study. Special attention has been paid to piano tuning and repairing, which must eventually become one of the most profitable occupations for the blind. Mattress making and chair caning are being taught the boys, and the girls are learning sewing, knitting, crocheting, bead work, and the use of sewing machines. There is a library of 125 volumes. The State appropriation for the year 1876 was $12,875. Number of pupils, 50.—(Catalogue, 1875–'76, and return, 1876.)

EDUCATION OF THE DEAF AND DUMB.

The Maryland Institution for the Education of the Deaf and Dumb, at Frederick, founded in 1867, is under the control of a board of directors appointed by the State for life. There are 91 pupils and 9 professors and instructors, one of whom is a semi-mute. Since the foundation of the institution 178 have been under instruction. The

branches taught are composition, grammar, history, geography, arithmetic, and, to a limited number, the higher English. There is a library of 2,000 volumes. The institution owns 10 acres of land, which, with buildings, &c., is valued at $250,000. The State appropriation for the past year was $27,000. A bequest was left the institution by the late Benjamin Reigle, of Hagerstown, which, when the estate is settled, will, it is believed, amount to $10,000 or $12,000.—(Return for 1876.)

EDUCATION OF COLORED BLIND AND DEAF MUTES.

An institution for the education of the colored blind and deaf mutes was founded at Baltimore in 1872, and is under the control of a joint committee of the directors of the two institutions for the blind and for the deaf and dumb whites. The work performed is similar to that of the parent institutions, and is directed with a view to the future welfare and support of the inmates. In addition to the ordinary education given in the school room, instruction is furnished in broom making and other employments, from which some revenue is derived for the institution. The State appropriation during 1876 was $8,500; number of pupils, 17; value of grounds, buildings, and apparatus, $18,000.—(Special return, 1876, and report of institution for the blind.)

OBITUARY RECORD.

THREE DECEASED EXAMINERS.

The State board says in its report, (p. 15:) "We have to deplore the loss by death during the past year of three faithful public servants: Mr. William H. Perveil, examiner in Anne Arundel County; Dr. Samuel Kepler, examiner in Baltimore County, and Mr. Benjamin Tippett, examiner in St. Mary's County. Varying in their gifts and opportunities, they all agreed in commanding the respect, esteem, and confidence of the board, and the gratitude of their fellow citizens for their labors in the cause of education. 'They rest from their labors, and their works do follow them.'"

LIST OF SCHOOL OFFICIALS IN MARYLAND.

[All terms from January 1, 1876, to January 1, 1878.]

Hon. M. A. NEWELL, *State superintendent of public instruction, Baltimore.*

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Sketch by Hon. Joseph White, in State report on education. 1873–'74; Barnard's New-England Journal of Education, vol. xxiv, 1873, pp. 264-278; statute laws of Massachusetts, from 1826; school laws, edition of 1875.

COLONIAL LEGISLATION.

Settled in 1622, this Puritan Commonwealth had, in twenty years, so far advanced as to enact in 1642 that the selectmen of every town should "have a vigilant eye over their brethren and neighbors, to see that they teach their children and apprentices, by themselves and others, so much learning as may enable them to read the English tongue and the capital laws, upon penalty of twenty shillings for every neglect therein."

To facilitate the performance of the duty thus imposed, it was further enacted, five years later, (1647,) that every townsbip of 50 householders within the colony should appoint one within the town to teach all children that should resort to him to write and read, provision being made for payment of his wages, either by the parents and guardians of the children taught or by the inhabitants in general. And in addition to this elementary instruction, every town of 100 householders was required to set up a grammar school, with teachers competent to prepare youths for the university, each town neglecting to set up such school to pay £5 per annum to "the next nearest school."

Provisions nearly resembling these were made five years later in the neighboring Plymouth Colony, then under a separate control, and these provisions seem to have held throughout the colonial times.

EARLY STATE LEGISLATION.

In 1789, the year after the ratification of the Federal Constitution, Massachusetts revised her school law, making it require both fuller instruction and more definite school terms. Thus it was provided that every town of 50 families should sustain schools wherein children might be taught to read and write and be instructed in the English language, arithmetic, orthography, and decent behavior; the terms of said schools for such towns to be equal to one school of 6 months. Towns of 100 families were to sustain these schools for terms equal to one of 12 months; towns of 150, for terms equal to one of 18 months; and towns of 200, for terms equal to one of 12 months; these last, however, sustaining also a school in which should be taught the Latin, Greek, and English languages for 12 months in each year.

It was in this revision of 1789 that, "in consequence of the dispersed situation of the inhabitants of several towns," making it difficult to collect the children in any one place for instruction, such towns were authorized to determine and define, in a town meeting called for that purpose, the limits of school districts. A supplementary law of the next year allowed the further privilege of district taxation for school houses. Both these concessions were merciful allowances to people in embarrassed circumstances, and the kind spirit of them is deserving of respect; but they proved to be the germ of a miserable district system, from which Massachusetts has only recently escaped, and which, too generally adopted elsewhere instead of the better township

system, has been the fruitful parent of ungraded, ill managed, and poorly instructed schools.

As far as possible these evils and others were here warded off by the requirement that only duly certified teachers should be engaged in all the schools provided for under the law; that the teachers in the grammar schools must be university graduates or have a certificate of qualification from a learned minister of the town, and that no child who had not at least learned to read should be admitted to the grammar schools. Visitation and inspection by the selectmen and minister were also provided for.

In 1800, with modifications in 1802 and 1815, districts were required to provide suitable houses for their schools; and, if they should neglect to do so, the town, on the application of four residents in a neglectful district, might take the thing in hand and see that it was attended to.

SUCCESSIVE IMPROVEMENTS.

Things worked on as thus arranged till March 4, 1826, when a law was passed to provide for a more systematic and business-like management of schools. This law required the election of a school committee of not less than 5 persons, at the annual town meeting in each town, the said committee to visit the town schools, examine their discipline, require evidence of qualification in the teachers, determine the class books to be used, and make returns to the secretary of the Commonwealth, according to a form to be furnished by him.

This great improvement was itself improved by a revised law of March 10, 1827, which provided for a school committee of 3, 5, or 7 persons in each town and of 1 in each school district, this last to be called the prudential committee. The duties of the town committee were as before mentioned, with the addition that, where children in the schools were not duly supplied with school books, they were to see that such books were provided and that payment for them was secured from parents with ability to pay. Those of the prudential committeeman were to keep the school house of his district in order, to select and contract with a school teacher, to provide fuel for the school, and to give the town committee such assistance and advice as might be necessary.

March 31, 1834, a new law made provision for a permanent State school fund, to be formed from the proceeds of lands owned by Massachusetts in the State of Maine and from the claim of the State on the United States for military services, to which other sources have since been added. This fund, originally limited to $1,000,000, has grown, through successive elevations of the lawful maximum, till, in 1876, the reported aggregate was $2,066,866.

In 1836 the care of the State for the schooling of her children was further shown by the passage of a law, April 16, (to take effect April 1, 1837,) forbidding the employment in factories of children under 15, on pain of $50 fine, unless such children should have attended school for 3 months in the year preceding the employment. In the same year returns of private schools and academies were required from the committees.

The next year, April 20, 1837, came an act which went far toward a completion of the State school system by securing for it a sort of headship at the capital, beyond the previous managing committees in the towns. This was the creation of a State board of education, consisting of the governor and lieutenant governor ex officiis and of 8 other persons, appointed by the governor, with advice and consent of council, one of the 8 to be changed each year; the board was to submit annually to the legislature an abstract of all returns made to it from the public schools, with such observations and suggestions as it might think necessary, and had the privilege of appointing its own secretary, whose duties were to be essentially those of a State superintendent of instruction.

The board thus constituted was favored by obtaining as its first secretary Hon. Horace Mann, already highly distinguished for his efforts in the cause of education, and from this time the central figure in the van of the school hosts. He gave himself, with all his well trained energies, to the work which now devolved on him, and immediately made his presence felt. One of his first aims was the establishment of libraries to aid the education going forward in the schools, and to this end the legislature was induced to authorize each school district to raise for the first year $30 for the establishment of a library and $10 in each subsequent year for the purchase of new books. March 2, 1842, a State appropriation of $15 to each school district that should raise an equal sum for a district library was also secured by Mr. Mann. He next devoted himself to the improvement of the qualifications of teachers, and found in this a ready helper in Mr. Edmund Dwight, of the State board. Mr. Dwight pledged for this purpose $10,000 from his private means if an equal sum could be secured for it from the State. The offer of Mr. Dwight was made March 10, 1838, and on the 13th Mr. Mann presented it to the legislature. It was accepted, and on the 19th of April $10,000 were appropriated by the State and put at the disposal of the board of education "to meet $10,000 more, contributed by private munificence," and "to aid in qualifying teachers for the common schools." This was the germ of the normal school system of the United States, first advocated by Thomas H. Gallaudet and James G. Carter, in 1824–'25, and ten years

afterward urged by Rev. Charles Brooks. Three schools for training teachers were established within the next two years, and two others, besides a normal art school, have since grown up within the State, while the number in the whole United States has come to be 151.*

March 18, 1839, came a further result of the deliberations of the board and the counsels of its energetic secretary in a clear defining of the duties of towns and their committees. Thus it was provided, in a law of that date, that in every town should be kept each year, at the town charge, by a teacher or teachers of competent ability and good morals, a school for the instruction of children in orthography, reading, writing, English grammar, geography, arithmetic, and good behavior, for the term of 6 months, or two or more schools for terms which together should equal 6 months. And in every school containing an average of 50 scholars a female assistant or assistants must be employed. Any two or more contiguous districts were authorized to unite for the purpose of forming and sustaining a union school.

The apportionment of the State school fund slightly varied at different times. March 18, 1839, it was made to be according to the number of persons in cities and towns between the ages of 4 and 16, as ascertained and certified by the school committee, no town to receive its share if it had failed to report its schools the year before or to raise by taxation for support of schools at least $1.25 for each child of school age. February 22, 1840, the basis was changed, and the distribution was directed to be according to the number of persons in cities and towns as ascertained by the State census of 1837. And again, in 1841, February 8, there was a return to the former rule of apportionment according to school population as certified by the school committee, with the same restriction to towns that had not raised by tax for support of schools $1.25, at least, for each person of school age.† Since 1858 one-half the apportionment goes to the public schools, while the other half is held for other educational purposes. This was the natural supplement of the establishment of the board of education, with its secretary, bringing the aid of the State to the people of the towns for the sustenance of schools, which it undertook in some degree to supervise.

FINAL PERFECTING OF DETAILS.

A State school system thus established and provision made for meeting taxation by the towns with assistance from the State, nothing remained but to get the machinery of the system into the best working order possible, and then to bring as many children as possible into the schools.

In the former line, one important step was the securing of superintendence of the schools of towns and cities, first by the voluntary action of the school committees of Springfield and other places from 1841 to 1854, and in the latter year by a legislative enactment allowing cities and towns to annually require the school committee to appoint a superintendent of public schools, to have the care and supervision of them, under direction of the committee. Since 1874 the committee may do this without city or town action. Another step was a succession of efforts from 1859 to 1873 to get rid of the district system in favor of the town system of public schools. A third was the authorization of a more liberal range of teaching: April 24, 1850, of physiology and hygiene; February 2, 1862, of agriculture also, where it should be deemed expedient; in 1865, of vocal music and drawing too, at the discretion of the school committee; and May 18, 1870, drawing, without such discretion, in any city or town having more than 10,000 inhabitants. A fourth was a law passed May 2, 1850, to furnish dictionaries for reference to each district and public school, above the primaries, that should provide a suitable desk or case for the reception of the same, with another law, March 24, 1873, allowing towns to loan text books for school use to any pupils in the public schools.

In the latter line, of bringing as many children as might be into the schools, came several enactments: in 1850, a truant law, which authorized the towns to make needful by laws concerning habitual truants and to appoint truant officers to see to the execution of the same, a power now delegated to the school committee; in 1846, a compulsory law, amended May 18, 1852, to require parents and guardians to send children of 8 to 14 years of age to school within their town or city for at least 12 weeks each year, 6 of these weeks to be consecutive; again amended May 12, 1873, to extend the time to 20 weeks; and once again, May 11, 1874, to make the 20 weeks two terms of 10 consecutive weeks each; in 1857, May 18, a law to authorize the establishment, in towns and cities, of evening schools for persons over 15 years of age, the school committee to control and superintend the studies; and in 1872, March 9, a further authorization of the establishment of industrial schools, attendance on these, however, not to take the place of the attendance on the public schools required by law.

In the way of special instruction, the education of the deaf and dumb had been provided for as early as 1819; that of the blind was looked after in 1829; that of adults

* Teachers' institutes, to further aid in training for school work, were conducted by Mr. Mann in 1845, at the expense of Hon. Edmund Dwight; the legislature in the following year appropriated $2,000 from the school fund to continue the work. Voluntary meetings of teachers for mutual improvement are now common.

† Changed in 1865 to $3 for each person between 5 and 15.

whose early training had not been attended to was committed to the care of towns and cities in 1847; that of juvenile delinquents to the same in the same year; and that of neglected children to their care, in 1866. The feeble-minded had a school established for their benefit in Boston in 1874.

A full system for the instruction of every minor in the State, and even for some who are not minors, has thus been rounded out, and, although still needing some slight improvements, stands as a noble monument of the wisdom of the people and of the men who have framed their laws.

ADMINISTRATION OF THE SYSTEM.

The main authority in almost all school matters has rested, from the beginning, with the people of the towns, and has been exercised by them through their school committees. Since 1837 the State board of education has had general oversight of the school system of the State, though with very little power of direction or control. It may hold property in trust for the Commonwealth for the benefit of schools, may prescribe the forms of registers and of school returns, and may elect its secretary. Beyond this it has no authority, except to make suggestions as to improvements to be sought, embodying these usually in its annual report to the legislature. Its secretary is the chief executive school officer. His duties are to make an abstract of the annual school returns, to inform himself as to the condition of the schools and the means of improving that condition, to suggest such improvements as are especially to be attempted, and to keep himself in communication with the people of the Commonwealth, with a view to the arousing and guiding public sentiment in relation to the practical interests of education. The first secretary, as before stated, was Hon. Horace Mann, from 1837 to 1848. His successors have been Dr. Barnas Sears, from 1848 to 1855; Hon. Geo. S. Boutwell, from 1855 to 1861; and Hon. Joseph White from that time till the close of 1876.

State agents, "to visit the several towns and cities, for the purpose of inquiring into the condition of the schools, conferring with the teachers and committees, and lecturing on subjects connected with education," have formed since 1850 a special feature of the school administration, performing much of the field duty of the secretary and aiding greatly in the oversight and improvement of the schools. Such men as Ex-Gov. N. P. Banks, Prof. S. S. Greene, Hon. B. G. Northrop, and Abner B. Phipps have served among these agents and have honored the position which they held.

ELEMENTARY INSTRUCTION.

The following account of the schools and the organization of the school system of the State is taken from a statement prepared in 1876 for the Centennial Exhibition.

GENERAL STATISTICS.

Area of the State, 7,800 square miles; population, 1,651,912; valuation of property, $1,840,732,706; number of cities, 19; of towns, 322; number of common schools, 5,350; of teachers, 8,269; of pupils, 289,950, and including those in public high schools, 305,776. The average length of public schools for the year was 8 months and 17 days. Number of evening schools, 114; of teachers, 364; of pupils, 9,337. Total expenditures for public schools, $6,201,614; for erecting and repairing school buildings, $1,533,143; for each child of school age, $21.* School fund, $2,065,238; income, $167,655; moiety to cities and towns, $83,827. Total value of school buildings in 1838, $550,000; in 1876, $20,856,077.

STATE BOARD OF EDUCATION.

The State board of education, established in 1837, consists of the governor, lieutenant governor, and 8 persons appointed by the governor for a term of 8 years, 1 retiring each year, in the order of appointment. It holds in trust any grant or devise of lands and any donation or bequest of personal property made to it for educational purposes; prescribes the form of school registers and of blanks for school returns; has charge of the State normal schools; appoints a secretary, agents, the art director, and the visitors and teachers of the normal schools, and makes an annual report to the legislature of its doings, with observations and suggestions, together with an abstract of the school returns. The incidental expenses of the board and official expenses of members are paid out of the income of the school fund.

SECRETARY OF THE BOARD OF EDUCATION.

The secretary is appointed by the board. His salary and travelling and office expenses are paid out of the income of the school fund. He receives, arranges, and makes abstracts of school reports and returns; collects information respecting the condition of educational interests, and diffuses it to promote those interests. He suggests improvements to the board, visits different parts of the State to awaken public interest in

* The secretary of the State board of education reports this item $22.

educational matters, and attends educational meetings. He conducts, by himself or agents, teachers' institutes, sends blanks, registers, and reports of board to towns and cities, and is a visitor of each of the State normal schools.

AGENTS OF THE BOARD OF EDUCATION.

The board is authorized by statute to appoint one or more agents. There were 5 of these agents in 1876. They are assigned to different sections of the State, where they visit towns and cities, observe schools, confer with teachers and committees, give advice and instruction in principles and methods of education by lectures and teaching exercises, and hold institutes.

STATE DIRECTOR OF ART EDUCATION.

This officer is appointed by the board of education as one of its agents. He is at the head of the State Normal Art School, superintends the instruction in drawing and examines the classes in the State Normal School and in the free industrial drawing schools of the cities and towns, and visits the cities and towns to confer with teachers and committees.

CITY AND TOWN SCHOOL COMMITTEES.

These are elected by the people for three years, one-third retiring annually, and have entire charge and superintendence of all public schools in towns. They report annually in print to the town, and make annual returns to the secretary of the State board of education, and receive a per diem allowance for services, the minimum of which is fixed by statute. Women are eligible.

CITY AND TOWN SUPERINTENDENTS.

School committees of cities or towns may appoint superintendents, if it be so ordered by annual vote. The compensation is fixed by the committee, and the superintendent works wholly under their direction and control, and reports to them. In cases where superintendents are appointed, school committees receive no compensation.

COMMON SCHOOLS.

Common schools are required in every town, and must be kept for 6 months in number sufficient for all children. They must instruct in orthography, reading, writing, English grammar, geography, arithmetic, the history of the United States, drawing, and good behavior; and may instruct in algebra, vocal music, physiology and hygiene, agriculture, and sewing. They are graded in the cities and villages and ungraded in the rural districts.

ATTENDANCE.

Attendance upon the common schools is compulsory for children between 8 and 14 years of age, to the extent of 20 weeks in two terms, each of 10 consecutive weeks. Towns and cities are required to make by laws concerning habitual truants and to designate a place of confinement and instruction for them. School committees are required to appoint and fix the compensation of two or more truant officers. Towns and cities are authorized to provide for neglected children under 16 years of age.

EVENING SCHOOLS.

Evening schools were first kept in 1836 and were organized by law in 1857. They may be kept in any town for persons over 12 years of age, but do not take the place of other schools. They are under the control of the school committee.

INDUSTRIAL DRAWING CLASSES.

These are required in cities and towns having 10,000 inhabitants, are free to all, and are under the control of the school committee. They are usually held in the evening.

KINDERGÄRTEN.

Statistics for 1876 have been received from 9 Kindergärten, 5 of them located in Boston, the others in Cambridge, Florence, and Yarmouthport. There were 172 children attending and, besides the conductors, 7 assistant teachers. In 3 of these schools the age of admission was from 3 to 6 years; in 3 others, from 3 to 7, and in the remaining 3 from 3 to 5, 3 to 7, and 3½ to 7. There is another school at Boston and one at Newton Centre from which no information has been received this year.

CITY SCHOOL SYSTEMS.

BOSTON.

Officers.— A board of education of 24 members, with a city superintendent of schools and 6 supervisors.

Statistics.— Population of the city in 1875, 341,919. Number of persons between 5 and 15, May 1, 1876, 58,636. Number of different pupils enrolled: boys, 29,554; girls, 25,833;

total, 55,417. Average number of pupils belonging to day schools, 46,098. Ratio of enrolment to school population, 94; ratio of average number belonging to the school population, 78. Average daily attendance of pupils in day schools, 42,797; average per cent. of attendance, 92.8. Average number belonging to evening schools, 2,913; average attendance at same, 1,598. Aggregate number belonging to day and evening schools, 49,423. Number of teachers in day schools: men, 150; women, 998; total, 1,148; in evening schools: men, 36; women, 106; total, 142; in evening drawing schools, 16, (all men;) total, 1,306, of whom 50 are special teachers. Number of day schools, 486; evening schools, 17; drawing schools, 6; total, 509. Cost of education per scholar, based on average number belonging to the day schools, $36.15. Total expenditures for school purposes, $2,015,380.84.

Remarks.—The system comprises four grades of day schools, the primary, grammar, high, and normal. Pupils are admitted to the primary schools at 5 years of age, and the course is designed for 3 years, with 6 half yearly steps. For pupils who are above the proper age of primary pupils, and yet are not qualified for the grammar grade, there are schools called intermediate, their twofold object being to relieve the primary classes from pupils of an unsuitable age and to shorten the preparation of these backward pupils for the grammar schools. The course in the grammar schools comprises 6 steps, each requiring about 1 year.

The high schools are of different types, mixed and unmixed, classical and scientific. The Latin school receives pupils at 9 years of age, with qualifications about equivalent to the requirements of the first year's grammar school course, its full course comprising 8 years. The 7 other high schools are to have a uniform course of 3 years. For the graduates, a post graduate course of 1 year is provided, for the girls, in the Girls' High School, and for the boys, in the English High School. The number of pupils belonging to these 8 schools during 1875–'76 was 2,173; average daily attendance, 2,062.

The normal school is now distinctly graded above the high schools, and the qualification for admission is the completion of the high school course or its equivalent. The course of study is entirely professional and lasts only one year. The number of pupils who belonged to this school in 1875–'76 was 69, of whom 61 received diplomas of graduation at the close of the year.

Besides the foregoing grades, the system comprises an evening high school and evening elementary schools, schools for licensed minors, (newsboys and bootblacks,) a school for deaf mutes, a Kindergarten, and evening industrial drawing schools. The evening high school, during the six months in which it was in operation, from October, 1875, to March, 1876, had a total enrolment of 1,999 pupils and an average attendance of 321, of whom 214 were young men and 107 women. During the same period there were in the 16 elementary evening schools an average of 2,038 pupils belonging and of 1,277 in daily attendance. In the 6 evening drawing schools, 412 pupils were taught by 16 teachers, the total expense, including instruction, materials, and incidentals, being $13,154.80. These schools are well organized and they are imparting excellent instruction in the different branches of industrial drawing.

The deaf mute school is well managed and well taught on the articulation plan as improved by the application of Professor Bell's system of "visible speech." During the year 65 pupils on the average were taught in this school by 8 teachers.

The 2 schools for newsboys and bootblacks have done much to improve their pupils. The morning and afternoon sessions are each 2 hours in length. The newsboys attend one and the bootblacks the other. Average number belonging, 67.

The only Kindergarten belonging to the system is taught by one teacher, and has an average of 25 pupils from 3 to 7 years of age. Ever since its establishment in 1870 it has been constantly improving, and is now believed to be a model institution. The superintendent thinks more of them ought to be established and that the expense attending them might be lessened by increasing the number of pupils to a teacher.—(Report for 1875–'76 of the city superintendent of schools, John D. Philbrick.)

CAMBRIDGE.

Officers.—A school committee of 15 members, of which the mayor of the city is chairman ex officio, and a city superintendent of schools.

Statistics.—Population of the city, 47,838; number of children between 5 and 15 years of age, 8,128. Number enrolled in day schools during the year, 9,411; average number belonging during the year, 7,167; average daily attendance, 6,527; average per cent. of attendance, 91. Average attendance in evening schools, 366; in evening drawing schools, 104. Number of pupils in private schools, 858. Number of teachers in public day schools, 184; in evening schools, including 2 in drawing schools, 51. Number of schools, day and evening, 36. Expenditures for all school purposes, $262,935.15.

Remarks.—The public schools are graded as primary, grammar, and high. The primary grade is divided into 3 classes, embracing as many years; the grammar into 6; and the high into 4 for the complete English course, into 3 for the shorter English course, and into 5 for the classical course. There is a training school for practical

instruction in methods of teaching, open to graduates of the high school and to others having equal qualifications. There are also 6 evening schools and 2 evening drawing schools, which are doing valuable work. Drawing, as a branch of instruction, has been steadily growing into favor, as its object and utility have been better understood. Vocal music is taught acceptably by teachers of the public schools, under the superintendence of a special teacher.—(Report for 1875–'76 of school committee and city school superintendent, Francis Cogswell.)

FITCHBURG.

Officers.—A board of education of 18 members, 3 from each ward, of whom one-third go out each year, with the president of the common council as ex officio member and the mayor of the city as ex officio chairman, and a superintendent of schools, who is also secretary of the board.

Statistics.—Number of pupils between 5 and 15 years of age in the city, 2,208; number of that age registered in the schools, 1,878; whole number of pupils registered, 2,319; average number belonging to the schools, 1,985; average daily attendance, 1,783. Number of schools in operation, 40. Number of teachers employed, 50.

Remarks.—The schools are graded as primary, secondary, intermediate, grammar, and high. There are also 7 ungraded schools. Two evening schools were kept, one 11, the other 8 weeks, having an aggregate attendance of 140 pupils. The evening drawing school is becoming more successful and popular year by year.—(Report of school committee, 1875–'76, Joseph G. Edgerly, superintendent.)

LOWELL.

Officers.—A school committee of 12 members, 2 for each ward, of whom the mayor and the president of the common council are members ex officiis. The officers of the committee are a chairman, vice chairman, and secretary, who is also city superintendent of public schools.

Statistics.—Number of children between 5 and 15 years of age, 7,400. Average number of pupils belonging to the schools, 5,732; increase for the year, 199. Average number of pupils to each teacher, 42.4; average attendance, 5,224; average per cent. of attendance, 91.1. Number of public schools, 71; number of teachers employed in them, 135. Expenditures for school purposes, $122,858.44.

Remarks.—The public schools consist of 1 high, 8 grammar, 3 intermediate, and 59 primary, with 5 evening schools. The percentage of attendance is a fraction greater than that of last year, owing, probably, to continued dull times; fewer children being able to work in the mills. The school-houses, without exception, are in good repair. The committee on music reports that this branch has been taught more successfully during the past year than at any previous time. Five evening schools have been sustained, in which there was an enrolment of 1,147 men and 591 women; total, 1,738; total average attendance, 587. An evening high school has also been opened and promises good results. There was at the day high school an average attendance of 289 pupils during the year; total enrolment, 299. In this school two courses of study are provided, classical and English, occupying 4 and 3 years, respectively; the former includes both Greek and Latin as required studies and French as an optional study.

The reform school, which is reported in excellent condition, has been for the last 15 years under the control of Mr. W. A. Lang, a gentleman of great tact and patience, as well as experience. Owing to his excellent management, the school will compare favorably with any public school in the city, composed of the same class of pupils, in respect to deportment and advancement in study.—(Report of school committee, 1875–'76, Charles Morrill, superintendent of city schools.)

LYNN.

Officers.—A school committee of 17 members, 1, apparently, for each ward, and 12 elected at large, 3 of the latter being women. The president and secretary are both members of the board.

Statistics.—Number of persons, 5 to 15 years of age, 5,924. Number of pupils in day schools between 5 and 15 years of age, 4,594; total number of pupils in the day schools, 4,941. Average number of pupils belonging to the day schools, 4,789; average daily attendance, 4,264; average number belonging to evening drawing school, 60. Number of schools, 63; of teachers, 113. Expenditures for public school purposes, $110,481.32.

Remarks.—Drawing is a prescribed study in the schools. There has been a general progress in it, and some marked exhibitions of talent. In the evening mechanical drawing school the interest is increasing. Music is one of the regular exercises in the schools, and the proficiency attained in it in some of the schools is very remarkable. One of the great scourges of the schools is truancy. The best efforts of the truant officers have been crippled by the want of an institution where truants can be confined as such, agreeably to the provisions of statutes recently passed.

The schools are graded as primary, grammar, and high, the latter having an average attendance of 157 pupils, of whom 44 graduated in 1876—25 girls and 19 boys.—(Report of school committee, 1875–'76, William P. Sargent, secretary.)

NEW BEDFORD.

Officers.—A school committee of 18 members and a city superintendent of schools.

Statistics, (for 1875.)—Number of children of school age, 4 002; number attending public schools, 3,599; average per cent. of attendance, 93; number of schools, 23; number of school buildings, 25; of school rooms, 91; of teachers, 100.

Remarks.—There is comparatively little unnecessary irregularity of attendance and instances of truancy are few. The percentage of attendance, too, is regarded as very good; especially when allowance is made for the fact that there are several large mill corporations in the town, that it is a seaport, that numbers of children attend private schools, and that the remainder can be accounted for to within a few individuals as either at school elsewhere, in employment, or else positively incapacitated for attendance at school. Music and drawing have been pursued with satisfactory results. Two evening schools have been in operation with an enrolment of 260 and an average attendance of 108 pupils.

A new high school building has been recently erected, an edifice carefully and intelligently planned, magnificent in its proportions, and furnished with the most approved facilities for instruction. The enrolment in the high school was 227; average attendance, 213.

The training school for teachers had an enrolment of 17, all girls.—(Report of school committee and Superintendent H. F. Harrington, for 1875.)

NEWBURYPORT.

Officers.—A school committee of 9 members, with a chairman, secretary, and agent.

Statistics.—Number of children in the city between 5 and 15 years of age, 2,505. Number of pupils registered during the year in public schools, 2,415; average attendance, 16,65. Expenditures for school purposes, $29,126.83.

Remarks.—The system embraces primary, grammar, and high schools, there being 2 of the latter, 1 for each sex. These had an attendance during the year of 221 different pupils and an average attendance of 151. There are also 2 evening schools, 1 for each sex, which have done a good work. The evening drawing school was well attended, but the plan of supporting instruction in this art seems not to be received with such favor in this city as elsewhere in the State. It languishes in the day schools and is not generally encouraged by the public.—(Report of school committee, 1875–'76.)

SALEM.

Officers.—A school committee of 18 members from 6 wards, with the president of the common council as member ex officio and the mayor as chairman ex officio, a superintendent of schools, and a secretary of the board.

Statistics.—Number of children of school age (5 to 15 years) in the city, 4,430; number attending public schools, 3,442, of whom 341 are over 15 years of age. Number attending private or denominational schools, 725. Whole number of pupils in all day schools, public and other, 4,167. Average cost per capita of pupils enrolled in public schools, $18.29; average cost of tuition per pupil in private schools, (in 1874–'75,) $27.11. Number of teachers employed in public schools, 87, of whom 45 are graduates of normal schools. Amount of salaries paid to teachers, $63,424.23; other expenses, $37,752.12.

Remarks.—The organization of the schools embraces primary, grammar, high, training, and evening schools. Their condition, as a body, is prosperous and improving, though not fully answering to the desire of the teachers and the superintendent. The primary schools, as a whole, seem to be in better condition than the grammar schools. Many of the latter, as well as some of the lower primary classes, are too full for the best teaching. The ungraded half time school in the vicinity of the Naumkeag Mills has, as usual, been doing excellent service. Careful attention is given to the teaching of drawing and of vocal music, with good results. Number of pupils enrolled in the high school, 251, of whom 25 boys and 5 girls are preparing for college.—(From report for 1875–'76 of school committee and Augustus D. Small, city superintendent.)

SPRINGFIELD.

Officers.—A board of education of 9 members and a city superintendent of schools.

Statistics.—Number of children 5 to 15 years of age, 5,408; number of pupils enrolled in the day schools, 5,890; average number of pupils belonging, 4,481; average daily attendance, 4,183. Number of pupils in evening schools, 377; in drawing school, 122. Total number of pupils, 6,389. Current expenditures for public schools, $106,949.

Remarks.—The general condition of the schools is good; the work of the various classes has been faithfully performed, and the attendance has slightly increased during the year. The high school has an increased enrolment, reaching now 345. This school has, within 3 years, increased in numbers 73 per cent. and in the average number belong-

ing 87 per cent., while the increase in the expense of sustaining it (one additional teacher only) has been but 9 per cent. In the drawing schools the number is not quite so large as last year, but in the evening schools the enrolment is somewhat greater and the attendance is more regular than formerly. These schools are all doing a very satisfactory work.—(Report for 1875–'76 of A. P. Stone, city superintendent of schools.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

There are now 5 of these schools besides the State Normal Art School. They are for the instruction and training only of persons intending to teach. One at Framingham, opened in 1839, is for women only; that at Westfield, opened in 1839, is for both sexes; Bridgewater school, opened in 1840, is also for both sexes; the Salem school, opened in 1854, is for women only; the school at Worcester, opened in 1874, is for both sexes. There is a regular course of 2 years, in 4 terms of 20 weeks each, and an advanced course of the same length or a single course of 4 years. Instruction is given in the regular course in all English branches taught in the public schools, and in Greek, Latin, French, German, and higher mathematics in the advanced course. All these subjects are studied with reference to teaching them, and special instruction is given in the principles and methods of school organization, government, and teaching. The normal schools are under the general control of the board of education, and each one is under the immediate supervision of a board of 3 visitors, consisting of 2 members of the board of education, with the secretary of the board. At Bridgewater, Westfield, and Framingham, boarding halls are connected with the schools, where students live at cost. The schools are supported wholly by the State and tuition is free. The Normal Art School, established in 1873, is to furnish trained instructors in industrial art to the towns and cities. It is under the control of the board of education, is supported by the State, and is open to both sexes.

The aggregate attendance upon the 5 normal schools in 1876 was 942, all but 76 being women. The number of graduates during the year in all, except the school at Worcester, is 203. This school has graduated 12 students since its beginning in 1874. Although open to both sexes, its privileges seem to be used almost exclusively by women, and it is stated that a change may, therefore, be made in the plan of the institution, reserving it exclusively for them. The experiment of securing practice in teaching, by distributing the pupils in their senior year as assistants or apprentices in the public schools, has been diligently followed here, and is believed to be of substantial value.

The Massachusetts Normal Art School, in this the fourth year of its existence, now has the 4 classes into which its work is divided in successful operation. The curriculum of study is designed to occupy 4 years, though many students who can give only a part of their time to study are unable to complete it in that period; such are teachers of drawing in public schools or classes. A large majority of the special teachers of drawing employed in the public schools of the State either have been or are now students in this school, and all teachers of drawing in the State normal schools have been trained here. The attendance in 1876 was 442: 271 women and 171 men. One-half of these were residents of Boston and the remainder, except 10, came from the State outside of that city.—(Centennial Statement, and report of board of education for 1876.)

TEACHERS' INSTITUTES.

Teachers' institutes are authorized by statute. They are held in various parts of the State by the secretary and agents of the board of education, and are supported by the income of the school fund.

NEW-ENGLAND JOURNAL OF EDUCATION.

For teachers already in the schools, no agency has been more valuable than that afforded by this ably edited and useful journal, conveying to them every week information as to methods of instruction, suggestions as to the discipline to be maintained, and discussions of almost every important topic connected with school management and school work.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

These schools, established in 1634, are allowed in every town and required in towns of 500 families or householders; they are for the benefit of all the inhabitants and must be kept 36 weeks. Besides the branches taught in common schools, instruction is given in general history, book keeping, geometry, natural philosophy, chemistry, botany, civil government of Massachusetts and the United States, and Latin. A higher grade is required in towns of 4,000 inhabitants. Besides branches previously mentioned,

schools of this grade furnish instruction in Greek, French, astronomy, geology, rhetoric, logic, intellectual and moral science, and political economy.

High schools were taught, during 1875–'76, in 148 cities and towns required by law to maintain them and in 42 that were not thus required, more than one high school, too, being taught in many of these towns, thus making a total of 211 in 190 cities and towns. The entire population of such cities and towns was 1,481,264, while that of the remaining cities and towns not providing high school instruction was only 170,388. From these figures it appears that facilities for public high school education are provided in cities and towns embracing more than seven-eighths of the entire population of the State. The total attendance upon these schools was 15,826. Number of teachers, 582.—(Centennial Statement, and High Schools of Massachusetts, by Abner J. Phipps, agent of the board.)

PRIVATE SECONDARY SCHOOLS.

In 5 schools for boys, 16 for girls, and 27 for both sexes, outside of the public school system, there have been reported to this Bureau 2,839 pupils under 222 teachers. Of these 649 are in classical studies, 713 in modern languages, 166 preparing for a classical course in college and 22 for a scientific course. Drawing is taught in 15 of these schools, vocal music in 25, and instrumental in 26. Chemical laboratories are reported by 27, philosophical apparatus by 26, and libraries numbering from 40 to 5,170 volumes by 34.

PREPARATORY SCHOOLS AND DEPARTMENTS.

Two preparatory departments of colleges and 22 independent schools of this class report, under the instruction of 157 teachers, 1,761 pupils, of whom 1,552 were in classical and 209 in scientific departments. Ten of these schools report the possession of chemical laboratories and of gymnasiums, 13 of philosophical apparatus, and 15 of libraries. In these the number of volumes ranges from 200 to 3,000 and aggregates 20,750.

BUSINESS COLLEGES.

Five of these, 4 in Boston, 1 in Pittsfield, report for 1876 a total of 22 teachers and 1,174 pupils, of whom 11 were studying French, the remainder being unclassified as to their studies. All the 5 teach common English branches and correspondence, with book keeping; 4 teach penmanship and banking; 3, commercial law; 2, life insurance; and 1, surveying.—(Returns to Bureau of Education.)

BROMFIELD ACADEMY.

By provision of the will of Mrs. Margaret Bromfield, of Harvard, recently deceased, Bromfield Academy, a school for boys and girls, has been endowed. It is to be erected on the site of the old Bromfield mansion. The endowment is a residuary one, and its amount is variously estimated at from $75,000 to $100,000. A condition of the gift made is that such pupils as, in the judgment of the selectmen of the town, are too poor to pay tuition shall be admitted free; another stipulation is that boys shall not be admitted in numbers to exceed more than one-third of all the pupils, and never to the exclusion of girls.—(J. S. Eaton, M. D., May 12, 1877.)

SUPERIOR INSTRUCTION.

AMHERST COLLEGE.

Amherst College, Amherst, (Congregational,) offers 3 courses of instruction, classical, scientific, and partial. The scientific course lasts only 3 years and is the same as the classical, except that it omits Greek entirely and Latin after the first term of freshman year, taking instead optional studies in science and modern languages. The partial course is for the benefit of persons who are unable to pursue the full one for the degree of B. A. Provision is made for graduate study when desired. Exercise in the gymnasium is required at an appointed hour each day. The college has a fund of $75,000, the income of which is appropriated to aid young men who are preparing for the ministry and need assistance.—(College catalogue, 1876–'77.)

BOSTON COLLEGE.

Boston College, Boston, (Roman Catholic,) opened in 1864, is conducted by the Fathers of the Society of Jesus, is for day scholars only, and in its seven years' course, includes preparatory, classical, and scientific studies.—(Catalogue, 1875–'76.)

BOSTON UNIVERSITY.

The Boston University, located in Boston and organized in 1873, is under the influence of the Methodist Episcopal Church. The departments are colleges of liberal arts, of music, and of agriculture, and schools of theology, law, medicine, and oratory. The attendance in all departments has increased during the year from 478 to 627, of whom 144 were young women. The increase in the number of young women over that of

last year was 42, a fraction over 41 per cent.; the increase in the number of young men was 107, a fraction over 28 per cent., showing that the tendency is toward a more nearly equal representation of the sexes in the university.

During the year reviewed by the report of 1875–'76 but 3 classes, the junior, sophomore, and freshman, were in attendance in the college of liberal arts. The admission of a fourth at the close of the year gave the institution, for the first time, its full complement of classes. Already, however, its numbers have nearly reached the limit of the accommodations afforded by the present college building. According to all appearances several years must pass before a new and larger one can be erected; meantime there is every probability that the numbers seeking admission will steadily and rapidly increase. It is therefore recommended by the president that the standard of requisites for admission be raised higher than that now maintained in any American colleges, so that only small classes of choice scholars will present themselves from year to year.

The school of all sciences, being a department for elective post graduate study only, presents no prescribed courses, but when fully organized it will embrace all branches of knowledge adapted to the ends of a universal post graduate school.

The school of oratory is designed to furnish every possible facility for training in reading and speaking, to qualify students to become professors of elocution and oratory in colleges and superintendents of this department in public schools. The full course of study occupies two years and includes voice culture, articulation, orthoëpy, expressive reading, declamation, gesture, oratorical action, and the dramatic art. Lectures are given on diseases and hygiene of the voice, laryngoscopy, acoustics, and æsthetics; also, practical instruction in Bell's system of visible speech for those who intend to become articulation teachers of deaf mutes.

The college of music is intended for students of the average proficiency of graduates of the best American conservatories of music, and is the only institution of its grade and kind in America.—(University Year-Book and catalogue for 1875–'76.)

COLLEGE OF THE HOLY CROSS.

This college, located at Boston, was founded in the year 1843 by Rt. Rev. Benedict Joseph Fenwick, bishop of Boston, and was by him given to the Fathers of the Society of Jesus. In 1865 it was incorporated and empowered to confer collegiate degrees. The course of studies embraces in its whole extent a period of 7 years, of which 3 are given to the preparatory and junior classes and the remainder to the senior. The last of these years is devoted exclusively to the study of rational philosophy and natural sciences.—(Catalogue, 1875–'76.)

HARVARD COLLEGE, CAMBRIDGE.

The number of students in college has trebled during the last 30 years, while that of the whole university has rather more than doubled in this time; the divinity school has been stationary; the law and medical schools have fluctuated in the number of students, and the scientific school has fallen off. The increase in the number of teachers has more than kept pace with the increase in the number of students; this increase, moreover, has been largely in the two highest grades, namely, in professorships and assistant professorships.

The amount of money annually dispensed by the university to young men of merit who need aid in getting their education has of late years been rapidly increasing, and reached in 1875–'76 the sum of $42,903.23.

During the 30 years intervening between 1836 and 1866 very slight changes were made in the requisites for admission, the only additions being an insignificant requisite in the rudiments of geometry and a small one in the outlines of Greek and Roman history. During the last ten years, however, very important changes and additions have been made. The examinations in Latin and Greek have been greatly improved in subject matter and in method; the mathematical requisites have been sensibly increased; English composition, with either French or German, has been added to the requisites, and natural science has got a foothold in the scheme. Furthermore, the few persons by whom mathematics are, for any reason, preferred to the classics, are permitted to offer certain advanced mathematics instead of portions of the Latin and Greek authors. The division of the admission examination between two years, which has been permitted since 1874, seems to be decidedly advantageous, on the whole, to the candidates, the schools, and the college. In the spring of 1876 the college faculty determined to hold the admission examinations of June in Cincinnati as well as in Cambridge, using the same papers in both places. The object was twofold: first, to give candidates from western schools the advantage of the division of the examination between two years and, secondly, to save for the candidates from the West the serious cost of the journey to and from Cambridge.

Since many of the elective courses of study in the college may be profitably pursued by persons of adult age, who have not received the common preliminary training in Latin, Greek, and mathematics which is required of all the candidates for the

degree of bachelor of arts, these courses were opened in the spring of 1876 to persons not less than 21 years of age who shall satisfy the faculty of their fitness to pursue the particular courses which they elect, although they have not passed the usual examination for admission. This class of students will be known as unmatriculated students; although the instruction of the college is open to them, they cannot be candidates for the bachelor's degree.

The most important event of the year 1875–'76, as regards the university's property and constitution, was the transfer to the president and fellows of the land, building, collections, and funds held by the trustees of the Museum of Comparative Zoölogy. Henceforth the great museum — a monument to the memory of Louis Agassiz, its founder — is identified, in its pecuniary interests, its government, and its scientific reputation, with the university of which it is a constituent part. The surrender of this property extinguishes another of the four distinct boards of trust which grew up about the university between 1857 and 1869. But two of these separate boards now remain, namely, the board of trustees of the Thayer scholarships and the board of trustees of the Peabody Museum.

TUFTS COLLEGE.

This college, located at College Hill and organized in 1856, is under the control of the Universalist denomination. Its courses of instruction are classical, philosophical, engineering, and theological. The engineering course extends through 3 years; the philosophical, like the classical, occupies 4. The philosophical includes all the studies of the classical course except Greek, requires additional French and German, and offers an opportunity of pursuing certain elective studies to a greater extent. There are 27 scholarships in the gift of the college, 15 of $60 and 12 of $100 each.—(Catalogue, 1876–'77.)

WILLIAMS COLLEGE, WILLIAMSTOWN.

This college, organized in 1793, is under the influence of the Congregational Church and is exclusively for young men. Each department is provided fully with those accessories which aid in making knowledge complete, vivid, and practical. In chemistry and astronomy there are abundant means of illustration; there is a large and growing cabinet of natural history, and there are extensive geological, botanical, and zoölogical collections. The college has command of about $6,000 annually, the income of funds given to aid students who need it. It is determined by the trustees that no young man of merit shall be obliged to intermit his studies here on account of inability to pay his college fees.—(Catalogue, 1876–'77.)

COLLEGES FOR WOMEN.

Ten colleges for women report their statistics for 1876, as follows: Number of professors and instructors, 164, including 4 belonging to preparatory departments. Number of students, 1,309, of whom 361 are in preparatory departments, 517 in regular collegiate and 119 in partial courses. The number of years in course ranges from 4 to 7. Aggregate number of volumes in libraries, 36,223.

Wellesley College, Wellesley, (unsectarian,) affords to young women opportunities for a higher education equivalent to those usually provided for young men. The course includes the Latin, Greek, French, and German languages; also, music, (vocal and instrumental,) drawing, and painting. A large and convenient art gallery has been provided, and courses of lectures on art are given. A special feature of the school is a domestic department. All students are expected to engage for an hour each day in some of the lighter domestic work of the family. The price for board and tuition is $250 each year.—(College circular for 1876.)

Smith College, Northampton, (unsectarian,) with requirements for admission and course of instruction equivalent to those of the best colleges for men, offers its advantages to rich and poor alike at a sum far below actual cost. The price of tuition, $100 a year, is remitted to those unable to pay; that of board, $250 a year, in cottages belonging to the institution, is reduced for the poorer students. It is the aim of the trustees so to use the funds of the institution that a truly collegiate education may be attained by every woman who is worthy of it.—(Statement, January 5, 1876.)

e Also 45 graduate students.
f Includes the university, library, and special funds.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The Massachusetts Agricultural College is beautifully located at Amherst, in the fertile valley of the Connecticut. It is provided with new and excellent buildings and a farm of nearly 400 acres. By an arrangement made with the Boston University, students on entering are allowed to matriculate in both institutions, and, on completing their course to the satisfaction of the authorities of both, may receive diplomas from either the college or the university or both.

The course of study embraces agriculture, botany, horticulture, chemistry, geology, veterinary science, zoölogy, mathematics, physics, civil engineering, military science and tactics, the English, French, and German languages, and mental and moral science. The instruction in the languages is intended to qualify graduates to write and speak English with correctness and effect and to translate German and French with facility. The scientific instruction is as thorough and practical as possible, and every science is taught with constant reference to its application to agriculture and the wants of the farmer. The regular course includes every branch of ordinary farming and gardening, and is both theoretical and practical. Each topic is thoroughly discussed in the lecture room, and again in the planthouse or field, where every student is obliged to labor. The amount of required work is limited to 6 hours each week. Additional work is paid for at the rate of 10 cents an hour, which is all the college can afford to pay. The amount earned in this way, however, is not sufficient to be of material assistance to students without other resources, and the cost of instruction here, it is stated, practically excludes a large proportion of the very class which the college was designed to instruct. It is recommended, therefore, by the trustees that a fund be set apart by the State for establishing scholarships, one for each State representative district, which would be something over 200 in all, and that these scholarships be awarded on a fair competitive examination. They would thus operate as a stimulus to exertion throughout all the public schools of the State, since they would become a reward for faithfulness and proficiency in study and secure a more direct connection of the college with the public school system.—(Reports of Boston University and of Massachusetts Agricultural College, 1876–77.)

Massachusetts Institute of Technology, Boston, provides a series of scientific and literary studies and practical exercises, embracing pure and applied mathematics, the physical and natural sciences, with their applications, drawing, the English language, mental and moral science, French and German. These studies and exercises are so arranged as to offer a liberal and practical education in preparation for active pursuits, as well as a thorough training for the various scientific professions. Ten regular courses, each extending through 4 years, have been established, as follows: Civil

and topographical engineering, mechanical engineering, geology and mining engineering, building and architecture, chemistry, metallurgy, natural history, physics, science and literature, and philosophy. These courses are identical during the first year, but for the 3 remaining years the studies in each course are arranged with reference to the end in view. A series of shops having been provided for teaching the students in the department of mechanical engineering the use of tools in wood and iron work, a two years' course in practical mechanism has also been established for those who wish to become master mechanics rather than engineers.—(Catalogue, 1876–'77.)

The Worcester Free Institute follows, in general, the plan of the polytechnic schools of Europe, with such obvious modifications as are rendered necessary by new conditions, but it gives special prominence to the element of practice in technical training. For the acquisition of practical familiarity with different branches of applied science the same facilities are offered as in the best schools of technology elsewhere; in mechanics, shop practice is added to the course. The institute, opened in 1868, has now graduated 6 classes, and the facility with which most of the young men have secured honorable and lucrative situations confirms the confidence of the trustees in the soundness of the general principles upon which the school is organized. The institution of the school is due to a conviction on the part of its founders that there is needed a system of training boys for the duties of an active life which shall be broader and brighter than the popular method of "learning a trade" and more simple and direct than the so-called liberal education. It is the firm conviction of the managers of the institute and of all who have watched its operation that the connection of academic culture and the practical application of science is advantageous to both in a school where these objects are started together and carried on with harmony and equal prominence.

The training of students preparing for mechanical engineers occupies 3½ years; that of all others, 3 years, of 42 weeks each. There are, therefore, 4 classes: apprentice, junior, middle, and senior. The curriculum embraces mechanical and civil engineering, drawing, physics, chemistry, and English, French, and German.—(Catalogue of institute, 1876–'77.)

In the *Lawrence Scientific School*, a department of Harvard, the course of instruction embraces the higher mathematics, mechanical and free hand drawing, surveying and engineering, physical geography and structural geology, physics, French, German, paleontology, anatomy and physiology, chemistry, and botany. Ten of the 37 students in the school graduated in 1875–'76, 4 receiving the degree of C. E., 3 that of S. B.; 2 graduated in chemistry and 1 in natural history.—(Report of Harvard College 1875–'76.)

Summer School of Botany and Zoölogy.—A summer school of botany and zoölogy was taught in the summer of 1875–'76 by the Peabody Academy of Science, Salem, for the benefit of teachers and others. In both branches the work was practical, including demonstrations and dissections, with constant use of the microscope; the aim was to give the methods of teaching and of making original research. The success of the school was beyond expectation, and it is designed to make it a permanent feature of the academy.—(Report of A. S. Packard, director of Academy of Sciences.)

THEOLOGY.

Andover Theological Seminary, Andover, (Congregational,) provides a regular course of study occupying 3 years, and a special course, which latter is open only to such students as are precluded from pursuing the regular course by age or some peculiar disability. The studies of the several years are conducted to a large extent in parallel courses, special prominence being given each year to particular branches. No expense is incurred for instruction and none by undergraduates for rooms in the college buildings, and, to those whose pecuniary necessities require it, $100 a year are given from the funds of the seminary.—(Catalogue, 1876–'77.)

Boston University School of Theology (Methodist Episcopal) provides a course occupying 3 years. Its degree implies, not only the successful completion of this course, but also the previous accomplishment of the four years' course in liberal arts. Students other than bachelors of arts are admitted, but not as candidates for the theological degree; even for admission they must show that they have mastered the studies customarily required for entrance upon the classical course in American colleges, and that by reason of age or other circumstances they cannot wisely attempt to qualify themselves for admission to the first division.—(Annual report of university for 1875–'76.)

Episcopal Theological School, Cambridge, (Protestant Episcopal,) has a course of 3 years, embracing the study of Hebrew, Greek, ecclesiastical history and polity, systematic divinity, apologetics, homiletics, and pastoral care. The study of elocution and oratory also receives proper attention, and, as soon as feasible, these will be made the subject of a special professorship.—(Catalogue, 1876–'77.)

Harvard Divinity School, Cambridge, (chiefly Unitarian,) comprises in its course of study the history of the Christian church, historical and other evidences of Christianity, anthropology, Christology, eschatology, history of ethical doctrine and Christian ethics, church polity, Hebrew language, literature and exegesis of the Old Testament,

science of thought, philosophy of religion, the ethnic religions, pastoral care, composition and delivery of sermons, history of the text of the New Testament, principles of textual criticism, and exegesis of the Gospel of Matthew.

The last academic year is marked in the history of the divinity school by an important change in one of its usages of long standing: the substitution for the annual visitation exercises of an oration by a member of the graduating class appointed to represent the school in the public exercises of commencement. Besides the 17 undergraduate students enrolled in the school during 1875–'76 there were 3 resident graduates.—(University report, 1875–'76.)

Newton Theological School, Newton Centre, (Baptist,) is designed especially for the instruction of college graduates and of any others whose attainments fit them to pursue with profit a full course of theological study. Applicants for admission to the regular course who are not graduates must be prepared for examination in the usual branches of an English education and in the Latin and Greek languages. The regular course occupies 3 years.—(Catalogue, 1876–'77.)

Tufts College Divinity School, College Hill, (Universalist,) provides a four years' course of instruction for the benefit of those who have not enjoyed a collegiate training. The full course is completed in 3 years by bachelors of arts. Tuition, room rent, and use of furniture are free, and students are also aided by a system of loans.—(College catalogue, 1876–'77.)

LAW.

The Law School of Harvard University reports for 1875–'76 a year of great prosperity. The number of students was increased from 147 to 173. The amount of instruction was largely increased by the accession of the Story professor, and the faculty was thus enabled to introduce an elective system, to some extent, for students of the second year. An admirable spirit of enthusiasm and industry pervaded the school. Large additions were made to the library, including 100 volumes of English reports, 42 of Connecticut, and 55 of New Hampshire. The chief event of the year, apart from the resignation of Professor Washburn and the appointment of Hon. Charles S. Bradley, of Providence, as his successor in the Bussey professorship, was the determination of the faculty to lengthen the period of study for the degree of bachelor of laws to 3 years from and after the beginning of the academic year 1877–'78.—(Report of president, 1875–'76.)

The School of Law of Boston University includes in its system of instruction regular oral text book exposition and recitation, free and written lectures, reviews, examinations, exercises in drafting contracts, conveyances, pleadings, indictments, and other legal papers, the criticism of briefs and arguments in moot courts, courses of reading, &c. The course of instruction was at the first organization of the school in 1872 fixed at 3 years, but up to the present time the third year has been made a post graduate one. The president of the university recommends that the original plan be now completed by putting graduation in its proper place at the end of the third year. The school is thriving vigorously. Notwithstanding an increase in the tuition fee, there were 12 more students matriculated in 1875–'76 than in any preceding year. More than one-half of the entire number, moreover, were college graduates.—(Annual report of the university, 1875–'76, and Year Book, 1877.)

MEDICINE.

The Medical School of Harvard graduated, in 1875–'76, 36 of its 231 students. Two additional instructors were appointed. Valuable donations were received of plates for the illustration of lectures, of books and microscopic preparations of the nervous system, and of wax models of diseases of the eye.

The classes in this school have for several years diminished in size to a striking degree between entrance and graduation. A careful inquiry into the causes of this fact shows that from one-half to three-fifths of these withdrawals have been for good and sufficient reasons, while the remainder have been, probably, because of inability or unwillingness to meet the requirements of the faculty. It is believed that the admission examination which is to be instituted on and after September, 1877, will diminish the number of withdrawals of the latter kind. The school has been husbanding its resources during the past two years in anticipation of a possible diminution in the amount of tuition fees in the two or three years succeeding that in which the examination for admission goes into force. The excess of receipts over expenditures in 1875–'76 was $6,053.96.—(Report of college, 1875–'76.)

The School of Medicine of Boston University is distinguished from all earlier ones by its scientific and practical catholicity. In one of its governing bodies one of the leading parties of the medical world predominates; in the other governing body, the other. All, however, cordially agree in this, that the university, like the state, must hold a perfectly impartial attitude toward all legally authorized branches of the American medical profession.

Of the 172 students attending in 1875–'76, 111 were men and 61 women. From the

first there has been no difficulty or embarrassment on account of coeducation. No lecture or operation has been restricted to either class, and the presence of the two sexes has been a wholesome restraint upon all. There are 66 graduates from the school, 52 men and 14 women; and, with the exception of a few who are in Europe pursuing their studies still further, nearly all are settled in active and many in extensive practice. The year 1875–'76 was thoroughly prosperous for the school. The number of students was much larger than ever before, the instruction more thorough and extensive, the means of illustration increased, the library enlarged, the building improved, a hospital opened on adjoining land, the grounds inclosed and ornamented, the funds augmented, the debts paid in part, and the remainder satisfactorily provided for by mortgage.

All candidates for admission who are not college graduates must pass a satisfactory examination in English branches and in the Latin language. The curriculum covers 3 years.—(Annual report, 1875–'76, and Year Book, 1877.)

DENTISTRY.

The Dental School of Harvard College closes, with the year 1875–'76, the attempt to educate men for the profession of dentistry under the old plan of a four-months' winter term. Hereafter there is to be a progressive course of two academic years, with examinations at the end of the first year which must be passed before the student can enter upon the second.—(Report of Harvard College, 1875–'76.)

The Boston Dental College provides a two years' course of instruction, embracing dental art and mechanism, anatomy and physiology, principles and practice of surgery, pathology, therapeutics, and chemistry and metallurgy. The aim is to make the course scientific as well as practical, extending into every branch of dental and collateral sciences as far as these can be made available to the dentist.—(Catalogue of college, 1876–'77.)

PHARMACY.

The Massachusetts College of Pharmacy embraces in its course of instruction the subjects of chemistry, materia medica, botany, and the theory and practice of pharmacy. These are taught both theoretically and practically, by means of lectures and recitations illustrated by experiments, specimens, models, diagrams, etc. The course covers 2 years. Hitherto no examination for admission has been prescribed, but it has been determined to require one after October, 1877.—(Catalogue, 1876–'77.)

SPECIAL INSTRUCTION.

EDUCATION OF THE BLIND.

Perkins Institution and Massachusetts Asylum for the Blind, in Boston, reports for 1876 an attendance of 149 pupils, the number admitted since its opening in 1829 being 909. It was established largely through the efforts of Dr. Samuel G. Howe, who remained its director until his death in 1876.

The course of training embraces instruction in the common English branches, as well as in some of the higher ones, and in foreign languages; lessons and practice in all branches of music and in tuning pianofortes; training in some simple trade and work at some domestic or mechanical occupation, and plenty of regular exercise under shelter and in the open air. The condition of the school is very satisfactory. The course of instruction pursued is the fruit of careful study and long observation and reflection. New methods of teaching certain branches have been introduced during the year and some of the old ones simplified and improved. Point-writing, after the system of Braille, has received considerable attention, although not to the neglect of the square hand. The advanced classes have constantly employed the point for keeping memoranda and notes of some of their studies.

Music has from the first received special attention in this institution. Its sagacious founder, eager always to increase the capacity of the blind for self support, never spared expense and pains in providing the necessary musical instruments and talented teachers. Thus the department has grown until it has become a complete conservatory in itself, where the piano, church and reed organ, flute, clarinet, and the various kinds of brass instruments, class and solo singing, harmony, and the history of music are thoroughly and scientifically taught. The number of pupils connected with this department during the past year was 92, and the time devoted by them to musical instruction and practice varies from 1 to 8 hours each day. The institution now owns 40 pianos, of which 7 are used in the tuning department. The attention given to this department has been even greater than ever, and the means for thorough instruction in it have been multiplied. The business of tuning outside the institution has been increased, and more than 50 names have been added to the list of patrons.

The work department constitutes a very important branch in the course of training. Most of the boys have been taught to seat cane bottomed chairs so well as to be constantly supplied with work from the factories, and a convenient number have been instructed in making brooms. Mattress and door mat making are taught; also upholstering, sewing, knitting, crochet and bead work, the running of sewing and knitting machines, and the various departments of domestic labor, as far as practicable.—(Catalogue, 1875–'76, and return, 1876.)

EDUCATION OF THE DEAF AND DUMB.

The Clarke Institution for Deaf Mutes, at Northampton, was founded in 1867, and munificently endowed by the late John Clarke, Esq., of Northampton, who, in 1867, gave $50,000, and a few years later $200,000. The State appropriates $250 a year for each State pupil, and has done so since 1869; this sum, however, does not pay more than three-fourths of the cost of each pupil.

Articulation is used as the means of instruction, but the institution is not pledged to any unchangeable system, but to that which experience shall prove to give the best results. An experience of more than 8 years has shown the superiority of the method used, though modifications in its application have been made from time to time. Professor Bell's symbols of visible speech are now used during the first years of instruction in training the pupils to a correct articulation. The mental development during this time is carried on by means of reading and writing, the pupils not being allowed to attempt speech until after a thorough and successful drill in the elementary sounds.

The branches taught are the common English, and algebra, geometry, botany, zoölogy, geology, physiology, natural philosophy, chemistry, physical geography, astronomy, ancient history, rhetoric, English literature, political economy, and psychology. The number of pupils in 1876 was 71—males, 41; females, 30.—(Report of institution and special return, 1876.)

The Boston Day School for Deaf Mutes, founded in 1869, is under the control of the Boston school board. The common English branches are taught to 79 pupils—males, 42; females, 37. Since the foundation of the institution 130 have received instruction. Articulation and lip reading are taught.—(Report of committee, 1874, and special return, 1876.)

The foregoing institutions are supported only in part by the State. A gross sum annually is appropriated to the Perkins Institution. To the Clarke Institution, the Boston School for Deaf Mutes, and the American Asylum at Hartford, Conn., the State pays a specified sum for tuition and board of each deaf-mute sent as a State pupil, and the institutions named are required to report annually to the board of education.—(Centennial Statement, 1876.)

EDUCATION OF THE FEEBLE-MINDED.

The private institution for the education of the feeble-minded youth, at Barre, established in 1848, is under the supervision of the Board of State Charities, and receives an annual appropriation from the State. It reports for 1876 an attendance of 84 pupils, 59 males and 25 females. The elementary branches are taught.—(Centennial Statement and special return for 1876.)

REFORM SCHOOLS.

There are 2 of these belonging to the State, 1 for boys at Westboro', and another for girls at Lancaster. Pupils are received during minority on sentence by a magistrate for a statutory offence. Each school is under the control of a board of trustees appointed by the governor.

LIBRARIES.

Each town and city is authorized by a law of 1857 to establish and maintain a free public library for the use of the inhabitants. It may appropriate for buildings and for founding the library not more than $1 for each ratable poll, and, to maintain it, not more than half that amount. Societies of 7 or more persons may be organized as corporations to maintain libraries, choose officers, hold a limited amount of property, and assess the shares to raise money.

THE LOWELL INSTITUTE, BOSTON.

Under the will of John Lowell, jr., esq., public lectures are annually delivered on such subjects as natural and revealed religion, physics and chemistry, with their application to the arts; also, on botany, zoölogy, geology and mineralogy, connected with their particular utility to man. The trustee may appoint lectures on the literature and eloquence of the English and other languages, and indeed on any subject that the wants and taste of the age may seem to demand. These popular lectures are all free. Provision is also made for courses of a strictly scientific character, for smaller classes of students, for which lectures a small admission fee may be exacted; but in no instance can a person be excluded through inability to pay.—(Circular from curator.)

OBITUARY RECORD.

JOHN H. CLIFFORD.

The death of Ex-Governor John H. Clifford, of Massachusetts, which occurred at his residence in New Bedford, January 2, 1876, removed from the board of Peabody fund trustees and from various other places of high influence one who had long

devoted valuable services to the advancement of literary culture and general education. Born at Providence in 1809, a graduate of Brown University in 1827, a lawyer from 1834 to 1858, and serving the State of his adoption successively as representative, senator, district attorney, attorney-general, and governor, he adorned and honored every station that he filled. For many years a member of the board of overseers of Harvard University and president of that body from 1868 to 1874, he took an active part in measures to advance liberal culture in that institution, and was an earnest and eloquent advocate of good learning in all its departments. A member too of the American Academy of Arts and Sciences, of the Massachusetts Historical Society, and of other kindred associations, he gave in them his hearty aid to the prosecution of scientific and historical inquiry; while, at the meetings of the Peabody fund trustees, he took, according to the testimony of their chairman, an active, earnest, intelligent, and efficient part in all their deliberations. His genial temperament, generous impulses, ready and felicitous words, kind and conciliatory manner, and wise judgment rendered him one of the most valuable members of that truly noble board.

Of course, around such a man honors came clustering. His alma mater conferred on him the degree LL. D. in 1849, and Harvard and Amherst offered the same degree in following years. He refused more candidacies than he ever accepted, and during the last year of his life had more than one offer of foreign appointment from the Government. But, with great capacities for public usefulness, he preferred the quiet and more independent walks of private life, and only abandoned his professional labors to preside during his later years over one of those great railroad corporations whose business demands both legal skill and practical tact and pays for these a handsome recompense. It was from the exhaustion of such engagements that in 1875 he sought recreation in foreign travel; returning from which apparently reinvigorated, and, as it was thought, with a new lease of life, he was suddenly prostrated by disease of the heart, and died, as was before stated, just as a new year was opening before him.—(New-England Journal of Education, January 8, 1876, p. 18, and address of Hon. R. C. Winthrop before the Peabody fund trustees, August 3, 1876.)

FRANCIS M. GARDNER.

Francis M. Gardner, head master of the Boston Latin School, and for 43 years an instructor in it, passed from this world January 10, 1876. Mr. Gardner was born in Walpole, N. H., March 15, 1812, his father, a distinguished lawyer, being at that time a member of Congress from New Hampshire, and subsequently a barrister in Boston. Francis was entered at the Boston Latin School in 1822, and had while there the advantage of the instructions of Head Master B. A. Gould, the editor of Adams' Latin Grammar, and of those of Mr. Leverett, known for his Latin Dictionary. After five years in the Latin School he entered Harvard, graduated with distinction in 1831, among such college mates as Wendell Phillips and J. Lothrop Motley, and engaged soon after in the study of law. The death of his father, however, having thrown upon him the care of a mother and sisters, he sacrificed for their sakes his personal aims, and, with a view to relieve them of the burden of sustaining him and contribute somewhat to their comfort, entered the Latin school as usher in the autumn of 1831. By 1836 he rose to be submaster and remained such till 1850, when the offer of a tutorship to a young man visiting Europe induced him to accept that opportunity for improvement by foreign travel. He returned at the expiration of a year to the Latin school as its head master, and continued in that position till his death.

A man of great physical strength, of immense power of application, and of intense strength of will, he seemed born to headship, and maintained it well. Somewhat stern in aspect and decided in his discipline, yet patient, impartial, manly, and devoted to his work, he gained generally the high respect of pupils and often their hearty admiration. He lived for them as much as teacher well could live; and even in his exercise, which was daily taken at the gymnasium till he was nearly 50 years of age, had a class of boys under gymnastic instruction, exercising with him, and bringing them forward in this, as in their other studies, with immense success. An instructor of the noblest character and of unusual power, he will be long remembered and long greatly missed.—(W. R. Dimmock, LL. D., in New-England Journal of Education, January 29, 1876.)

AUGUSTINE M. GAY.

Augustine M. Gay, who succeeded Mr. Gardner in the head mastership of the Boston Latin School, died in November, 1876, aged 48. Mr. Gay was born in Francestown, N. H., in 1827, and graduated at Amherst College, with the highest honors of his class, in 1850. In the autumn of that year he became submaster of the high school of Charlestown, Mass., and, on the decease of Mr. Bradley, the principal, in 1851, was elected to succeed him. He continued in this position, with much credit to himself, till 1860, when he resigned to assume the charge of a young ladies' school in Pemberton Square, Boston. Two years subsequently he went to Europe, and remained there during a considerable part of 1864-'65. In the fall of 1865 he entered the Boston Latin School

as usher, and established for himself such a character as teacher and disciplinarian that in 1867 he was made master. On the death of Head Master Francis Gardner, in the early part of 1876, he was selected to fill the place which Mr. Gardner had held for nearly 25 preceding years, and acquitted himself so well in his new position that scholars in greater numbers than ever previously flowed into the school, the enrolment at the time of his decease being nearly 400.—(New-England Journal of Education, November 11, 1876, p. 214.)

PROF. E. S. SNELL, LL. D.

Prof. Ebenezer Strong Snell, of the chair of mathematics and natural philosophy in Amherst College, died at his home in Amherst, September 8, 1876, after a connection with the college extending over a large portion of his life. Born in North Brookfield October 7, 1801, he entered Amherst as one of its first students September 18, 1821; became, after graduation, a tutor in the college, then professor, and has been since identified with its interests and aided much in the promotion of its work. A notice of him in the Amherst Student, Vol. X, No. 1, ascribes to him "perfect integrity, transparent purity and sincerity, matchless modesty, a rare and rich vein of pleasantry, gentleness tempered with firmness, kindly sympathy towards all men, with loyalty to God and faithfulness in every duty."

LIST OF SCHOOL OFFICIALS IN MASSACHUSETTS.

(Report of Hon. Daniel B. Briggs, State superintendent of public instruction, for 1874–'75, and return for 1875–'76, from Hon. Horace Tarbell, present superintendent.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Constitutions of 1837 and 1850; laws of Michigan from 1837; sketch by Hon. Daniel B. Briggs, State superintendent of public instruction; School Funds and School Laws of Michigan, by Hon. Ira Mayhew.

FOUNDATIONS.

The convention that framed in 1835 the constitution under which Michigan in 1837 was admitted into the elder sisterhood of States proposed to Congress and secured (1) that the sixteenth section in every township, or lands equivalent thereto, should be granted the State for the use of schools; (2) that the seventy-two sections set apart for the use and support of a university by act of Congress approved May 20, 1826, should, with such further quantities as might be agreed upon by Congress, be conveyed to the State and be appropriated solely to the use and support of such university. A basis was thus laid for the school system which now meets the eye, extending from the lowest common school instruction to the highest collegiate and embracing all between.

The constitution which went into effect on the admission of the State into the Union provided, in its article on education, for the appointment of a superintendent of public instruction for the State, to hold office for two years; for encouragement of "intellectual, scientific, and agricultural improvement;" for a system of common schools by which a school should be kept up in each school district at least three months in every year; for the establishment of libraries at least in every township, and for the careful husbanding of the land fund of the university with a view to the provision of full means for its support.

UPBUILDING.

Before the final settlement of the question of admission into the Union, the legislature passed an act, approved July 26, 1836, defining the duties of the superintendent of public instruction. These included, with supervision of the schools established under territorial laws of 1827 and 1833, a considerable amount of care for the preservation and sale of the school lands; a care which for some years was almost absorbing, no State land office being established until 1843.

March 20, 1837, the first primary school law under the State government was approved. By this the schools were made from the outset free, the provision for their support being an apportionment of the State school fund and taxes levied in the school districts. District officers, libraries, and township inspectors of schools were also provided for. From so good a law at so early a date the rapid rise of an excellent and prosperous school system might well have been expected. But unlooked for difficulties soon appeared and for a long time hindered progress. A large and easy sale of school lands, for example, awakened hopes of a swiftly growing school fund, especially as the lands sold for exceedingly high rates, of which one-fourth was immediately paid down. But ere long these hopes were dashed by the discovery that very often the lands were not worth even the portion of the purchase money paid; that further payments of either interest or principal could therefore not be had from them; that all over the settled portions of the State beggared and bankrupt holders were being compelled to forfeit what they had purchased, and that the more land any one had bought the worse appeared to be his condition in these circumstances. The difficulties hence ensuing threw heavy clouds over the bright early morning of the schools of Michigan, and it was years before the sunlight shone again.

March 1, 1839, an act was passed that has made the school reports of this State a better exposition of its educational condition than those of any other in the Union. This act required all educational institutions in the State to report annually to the department of public instruction.

The financial difficulties experienced in the effort to raise moneys for the schools through sales of school lands induced in 1843, March 8, a wise provision for an equal division of the burden of supporting them. This was the laying of a tax of half a mill upon the dollar for that year and one mill annually thereafter for the public schools. At the same date, township libraries were provided for by a requirement that $25 of the mill tax in each township should be expended annually for their support. An option was, however, given to the townships whether to accede or not to this arrangement, and in case any should not, district libraries were to exist under the provisions of the law of 1837.

In 1850 a new constitution was adopted, reiterating substantially the provisions of the former one with reference to common schools, assigning them also the products of the sales of all escheated lands, and requiring that within five years schools should be taught, free of charge for tuition, in every school district of the State for at least three

months in each year. This, of course, left it optional with districts to sustain them longer if they were disposed to do so, by rate bills and subscriptions, which, from the slenderness of the provided school funds, had been for some time resorted to. This constitution also directed the election in 1852 of a board of education for supervision of the State normal school, which had been established in 1849, and required the legislature to promote intellectual, scientific, and agricultural improvement, and, as soon as practicable, to provide for the establishment of a State agricultural school.

Following this constitution came, April 4, 1851, an act prescribing once again the duties of the State superintendent of instruction, an officer who was still continued. Then came in quick succession several acts relating to the schools: one, approved April 7, 1851, providing for a two mill tax instead of the one mill previously allowed; another, February 14, 1853, reverting to the former one mill tax; a third, February 10, 1855, establishing a *rate bill* in aid of the support of schools, an expedient that had previously been only tolerated; a fourth, of the same date, authorizing the holding of State teachers' institutes; and a fifth, February 12, 1857, providing for the incorporation of teachers' associations.

In 1859 four acts were passed. One, approved February 14, provided for graded and high schools in districts containing more than 200 children between 4 and 18 years of age, on a vote of two-thirds of the people of the district, any two contiguous districts being allowed to unite for such a purpose on the same conditions.* Of the three others, all approved February 15, one renewed the two mill tax of 1851, another authorized the division of township libraries among those of districts within the township, and the third made the tenure of office of district moderators, directors, and assessors three years, instead of one, a change of one member of the board to be made each year.

At this point legislation seems to have rested for a period of eight years. Then, March 13, 1867, came an act providing for county superintendents of schools to examine teachers, grant certificates according to qualification, visit and inspect the schools, look into the reports of township inspectors, and make duplicates of them for the State superintendent. This was the needed rounding out of the official staff of the school system, from district boards which had the care of keeping open district schools, through inspectors who looked into their condition in whole townships, with county ones to supervise even the work of these inspectors, till finally was reached one standing at the head of all, to inspect and animate, direct, and guide, the school forces and school work of the now prosperous and fast growing State.

SCHOOLS TRULY FREE.

As before said, the schools were meant to be, from 1837, free to all pupils living in the districts where they were maintained, reliance being based on a State apportionment and district tax for their support. The financial embarrassments of the earlier years of State existence prevented for a time the accomplishment of this design, and led first to a tolerance of rate bills for periods beyond the minimum school term, then to a legalization of them in 1855.

In 1869 the increase of population, of prosperity, and of intelligence induced the feeling that this bar to general education ought to be removed, and an act of April 3 in that year abolished the rate bill system, and required the districts to maintain free schools for 3, 5, or 9 months, according to their population, those having less than 30 children of school age holding a 3 months' school at least; those with from 30 to 800, a 5 months' school; and those with 800 and upward, a 9 months' school. To accomplish this, they were to raise annually a district tax, supplementary to the State school moneys, and sufficient to meet all expenses of the schools.

Having thus provided for the free schooling of all children, the State took a step meant to bring all within reach of the advantages she had provided. This was the passing, April 15, 1871, of a compulsory school law, requiring all persons having charge of children between 8 and 14 years of age to send them for at least twelve weeks each year to public school, unless excused by the school officers for ample cause, or unless taught at home or in a private school such branches as are usually taught in the primary public schools. This law, wise in itself and aiming at a most desirable result, has proved to be too far ahead of public sentiment to accomplish the intention of the legislators, and has remained almost a dead letter on the statute book from want of the enforcement of it by school officers.

In 1875, March 20, a great backward step was taken by the passage of an act abolishing the county superintendency and substituting for it a township superintendency of schools, as if quantity of supervision could atone for lack of quality; or as if colonels, majors, and captains ought to be dispensed with, and only lieutenants, sergeants, and corporals be relied on for due leadership and discipline of troops. Against this change there are already signs of a reaction, and as it is said to prove less economical than the

*This act was amended March 16, 1861, to allow such schools in districts containing 100 children between 5 and 20 years of age.

superseded plan, as well as less generally effective, it may be hoped that before very long the county superintendency will be restored, with whatever provisions may be needed for making it as good as possible.

SCHOOL ADMINISTRATION.

The gentlemen to whom Michigan has successively intrusted the headship of her school system have been, by appointment, as in column first; by election, as in column second:

John D. Pierce, 1836 to January 1, 1841.
Franklin Sawyer, January 1, 1841, to January 1, 1843.
Oliver C. Comstock, January 1, 1843, to January 1, 1845.
Ira Mayhew, January 1, 1845, to January 1, 1849.
Francis W. Sherman, January 1, 1849, to January 1, 1853.
Francis W. Sherman, January 1, 1853, to January 1, 1855.
Ira Mayhew, January 1, 1855, to January 1, 1859.
John M. Gregory, January 1, 1859, to January 1, 1865.
Oramel Hosford, January 1, 1865, to January 1, 1873.
Daniel B. Briggs, January 1, 1873, to January 1, 1877.

ELEMENTARY INSTRUCTION.

THE SCHOOLS IN 1874–'75.

The statistics for the school year 1874–'75 the superintendent regards as in the main satisfactory and encouraging. The increase in the number of districts reporting as compared with the previous year was 135, with a similar increase in the number of schools supported. There were organized 128 new districts. The increase in the number of school-houses was 86, furnishing additional sittings to the number of 6,988. The estimated value of school property, houses and sites, is $501,509 in excess of the former year. The additional number of teachers is 202, and the increase in the aggregate wages paid is $35,663. The last school census shows an increase in school population of 12,487, and the number of children reported as in attendance at the public schools gives an increase of 16,475, while the per cent. of attendance is 79, an advance of 4 per cent. on the previous year. But the reports on this point are not absolutely reliable, the apparent increase in the attendance upon the schools so far exceeding the proportional or natural increase as to awaken distrust. The number of sittings in the school-houses, not very correctly reported, appears to be 70,079 more than the number of children enrolled; yet it is probable that there are not sufficient accommodations for all who ought to be in the schools. Although most districts have school buildings with ample seating capacity, very many are sadly deficient, and this deficiency is most marked in the growing cities.

Comparing the total receipts and expenditures of the year 1874–'75 with those of the previous one, it appears that the usual advance is made in nearly every item, and this, in the midst of financial distress and general depression in business, affords striking evidence of the growing popularity of the schools.—(Report of superintendent, 1874–'75, p. iii.)

SCHOOL LIBRARIES.

There was no marked change in the condition of the libraries during the year 1874–'75. The number of districts reported was 1,171, or 94 less than the previous year, but the number of books added was 12,452, which was an increase of 2,137 over that of the preceding year. The whole number of volumes reported in district libraries was 132,348, an increase of 11,771.

The number of township libraries reported is 227, an increase of 20, and the number of volumes added, 4,133, or 388 less than were added the previous year, the total number of volumes in them being 55,603, an increase of 5,791. The whole number of volumes added during the year, in both district and township libraries, was 16,585, or 1,749 more than during the previous year; while the total number of volumes was 187,951, an increase of 17,502. The aggregate amount expended for library books was $20,898.58, or $1,947.17 in excess of that of the previous year. While these figures are not particularly encouraging, they show an increase in the libraries about in proportion to the increase in population.—(Superintendent's report, 1874–'75, p. xlviii.)

THE SCHOOLS IN 1876.

The message of the governor of the State to the legislature, delivered January 3, 1877, gives the following facts regarding the schools of 1876. The difference in the statistics submitted by the governor from those given in the summary can be accounted for on the supposition that the former relate only to the year 1876, while the latter embrace the school year 1875–'76.

The school census of 1876 reports 457,785 children of school age, of whom 343,947 were

enrolled, an increase in two years of 21,680 in the whole number, and of 17,805 in the number enrolled. There are 5,917 school-houses in the State, with 419,662 sittings, being 75,715 more than the enrolment. The value of school buildings and grounds is $9,382,270 and the expenditures for the year $4,128,707. The number of teachers was 12,900. There was a total expenditure by the people of the State of $5,000,000 for educational purposes, including schools for the unfortunate and criminal. The log school-house and the stately university have shared equally the people's solicitude and care. There are also special colleges for the farmer, schools in which to fit teachers, and schools for the professional student, and for one or two technical pursuits.

The people seem to recognize in all its fulness the truth of the old proverb, "The breath of the school children is the saving of the world." Yet, with all this, there are many thoughtful citizens who ask themselves the questions, "Are we doing educational work in the best way? Are our schools all they ought to be? Do they help our children as much as they should in the practical things of life, and fit them to be productive, self-helping citizens?" In times of financial depression like the present, when we fully realize that the only way up and out is through the productive industry of the people, these questions are pertinent ones. "We need," says the governor, "to give this subject our earnest attention; to care more for the depth and breadth of our education than we do for the height of our school-house tower; to pursue the substance and neglect the shadow; to make our schools the laboratory in which men are made. Our high and graded schools need to provide more technical instruction at once. If it is the province of legislation to direct or control in this matter, I ask your thoughtful attention to the subject. * * * Give to our special schools, to the university, to our common schools, every possible assistance in this work that can consistently be given with a due regard to economy."—(Message of Governor John J. Bagley to the legislature, January 3, 1877, pp. 8, 9.)

CITY SCHOOL SYSTEMS.

ANN ARBOR.

The Ann Arbor Courier supplies the following: "A few moments given to the public schools of the city show them to be in a flourishing condition. Professor Perry, who is eminently qualified for the position he holds, is ever on the watch for every improvement that will be beneficial to the schools. He has thoroughly systematized the entire plan of government as well as the method of teaching. The number of pupils in attendance is 1,613, an increase of 86 over that of the previous year. This increase, too, is principally in the high school, which numbers 358.—(Michigan Teacher, December, 1876, p. 446.)

DETROIT.

Officers.—A board of education of 22 members, one-half going out of office each year, and a city superintendent of schools.

Statistics, (for 1875.)—Number of youth of legal school age, 5 to 20 years, 34,593; total enrolment in public schools, 13,739; average daily attendance, 8,760; number of sittings, 11,131; number of teachers employed at the close of the year, 221.

Remarks.—Entering upon the year in a state of great efficiency, the public schools were maintained throughout in the best possible condition, under thorough, intelligent, and painstaking supervision. Action has been taken looking to simplifying the course of instruction in order to secure greater efficiency. The schools are divided into 12 grades, of which the 4 lowest include the primary schools; the next 4, the grammar; and the 4 highest, the high schools. The number belonging to the high school was 630; to the grammar schools, 2,748; and to the primary schools, 6,040. Two evening schools were maintained, having an enrolment in both of 278; average attendance, 175.—(Report of board of education, and of J. M. B. Sill, superintendent, for 1875.)

EAST SAGINAW.

Officers.—A board of education of 16 members, 8 of whom go out of office each year, and a city superintendent of schools.

Statistics.—Number of children between 5 and 20 years of age, 5,130; total enrolment, 3,159; average number belonging, 2,370; average daily attendance, 2,242; average number of pupils to each teacher, 47; receipts for school purposes, $45,505.84; expenditures, $45,505.84.

Remarks.—The schools are in a flourishing condition, making steady progress in their work. The attendance throughout all the classes in 1875–'76 showed a marked improvement. By the new system of grading, adopted in 1874, the course of study in the various grades was fixed at 12 years, the last 4 being given to the high school. The attendance at this school in 1875 was 132, and in 1876 113, a large increase over the number of former years. Penmanship, music, and drawing receive careful attention and are taught by special teachers.—(Report of the board of education, and of H. S. Tarbell, superintendent, for 1875–'76.)

GRAND RAPIDS.

Officers.—A board of education of 13 members, 2 for each ward, and a city superintendent of schools.

Statistics.—Number of children between 5 and 20 years of age, 8,900; total enrolment in public schools, 6,305; average number belonging, 3,404; average daily attendance, 3,167; number of pupils to each teacher, based on the average number belonging, 42; receipts for all school purposes, $92,679.21.

Remarks.—Progress has been made during the year in several respects. There has been in the enrolment an increase of 208 and in average daily attendance of 323 over the last year, rendering necessary the services of 7 additional teachers. The average time of attendance of enrolled pupils has also increased from 5¼ to 6 months. Only 92 cases of corporal punishment are reported, against 184 for the previous year. This decrease has been brought about by a united determination on the part of most of the teachers to resort to the use of the rod only when all other means fail to secure obedience. There has been a rapid growth of the high school during the last three years, so much so as to render the accommodations quite inadequate for the present attendance, which is 362. A business course has been arranged, embracing only such branches as are most essential to the average business man.

A training school was organized about four years ago, for the instruction of graduates from the high school who wish to teach.—(Report of board of education and Superintendent A. J. Daniels for 1875–'76.)

PONTIAC.

Officers.—A board of education of 6 members, and a city superintendent of schools, appointed by the board.

Statistics, (1874–'75.)—Number of children between 5 and 20 years of age, 1,122; total enrolment in the public schools, 1,024; average number belonging, 713; average daily attendance, 697; number of teachers, 18; total receipts for school purposes, $21,037.43.

Remarks.—The schools are graded as primary, grammar, and high, each grade embracing 4 years. Two courses are provided in the high school, a classical and a scientific. The influence of this school upon the grades below is of inestimable value. Drawing and music are not regularly in the course of instruction, but the necessity and the desire for them on the part of many of the patrons are pressing.—(Report of the board and of Superintendent J. C. Jones for 1875–'76.)

TRAINING OF TEACHERS

STATE NORMAL SCHOOL.

The growing demand for better qualified teachers is clearly indicated by the increase in the number of students seeking admission to this professional school. The number enrolled in the normal department in 1874–'75 was 409—there being 187 men and 222 women—an increase of 80 over the previous year. A much larger number of free students than ever before—180—were received this year, in accordance with a regulation by which each member of the house of representatives is entitled to appoint two students, residents of his district, who are entitled to instruction free of charge. Of the 60 students who graduated in 1875, all but 8 entered soon after upon the work of teaching, most of them securing prominent positions in the graded and high schools of the State. The demands made by this class of schools for teachers of advanced acquirements and professional training are now being met, in a fair measure, by this school, with the aid of the university.

The attendance for 1875–'76 numbered 722 and there were 79 graduates in 1876. The State board of education, in view of the crowded condition of the school, ask an appropriation of $50,000 for an additional building. Over 6,000 students have attended the school since its opening in 1853.—(Report of State superintendent, 1874–'75, pp. lxxxix, xc, and message of governor, 1877, pp. 8, 9.)

SECONDARY INSTRUCTION.

HIGH SCHOOLS.

Of the 286 graded and high schools in the State, reports were received by the State superintendent in 1875 from only 164. Distinct high school departments were reported in 85 of these and 56 prepared their students to enter college. The number of students belonging to the high school departments during the year 1874–'75 was 16,722; number of graduates, 445. Most of the schools were in session for ten months, many of them with a well devised system of instruction and a regular systematic course of study. From the most approved, pupils are received into the university on a certificate of graduation from the school, without further examination. Fifty were thus received from the Ann Arbor high school alone in the year covered by the report.

In a table of the schools of 19 of the chief towns and cities of the State, prepared for the Centennial Exhibition by Superintendent Jones, of Pontiac, there appear the following statistics of the high schools in 18 of these: absolute enrolment, 2,346; average number belonging, 1,677; average daily attendance, 1,576; men teachers, 24; women teachers, 39; average of pupils to a teacher, based on average number belonging, 26.6. The course of study in the better class of these schools is often divided into classical, embracing both Latin and Greek; Latin-scientific, including French instead of Greek; scientific, which takes in French in the last two years of the course; and English, in which no other language is studied. In some cases there is an option between German and French or a liberty of studying both in the last two years.

PRIVATE SECONDARY SCHOOLS.

In 1 school for boys, 1 for girls, and 2 for both sexes, outside of the public school system, there have been reported to this Bureau 465 pupils, under 29 teachers. Of these pupils, 17 are in classical studies, 298 in modern languages, and 1 preparing for a classical course in college. Drawing and instrumental music are taught in 3 of these schools and vocal music in all. Chemical laboratories are reported by 1; philosophical apparatus by 2; and libraries of 50 to 520 volumes by 3, the aggregate number of volumes being 870.

PREPARATORY SCHOOLS AND PREPARATORY DEPARTMENTS.

Eight preparatory departments of colleges report 17 instructors and 1,239 pupils, of whom 189 were preparing for classical and 262 for scientific courses.

BUSINESS COLLEGES.

Nine business colleges report 26 teachers and 1,316 students, of whom 25 were studying telegraphy. Eight of these schools teach the common English branches and correspondence and commercial law; all teach penmanship and book-keeping; 6, banking; 3, political economy; 5, life insurance; 2, phonography; and 4, telegraphy. One reports a library of 500 volumes.

SUPERIOR INSTRUCTION.

UNIVERSITY OF MICHIGAN.

This university is a part of the public educational system of the State. The governing body, the board of regents, is, by provision of the State constitution, elected for terms of 8 years, by popular vote. The university aims to complete and crown the work which is begun in the public schools, by furnishing ample facilities for liberal education in literature, science, and the arts, and for thorough professional study of medicine, law, and dentistry. Through the aid which has been received from the United States and from the State, it is enabled to offer its privileges, without charge for tuition, to all persons of either sex who are qualified for admission. Students from other States are asked to pay a larger admission fee than those from Michigan, but they receive their instruction and access to all the advantages of life at the university without incurring any charge for tuition.

The departments are those of literature, science, and the arts, medicine and surgery, law, pharmacy, the homœopathic medical college, and the dental college. Each of these departments and colleges has its faculty of instruction, charged with its special management, while the university senate, composed of all the faculties, considers questions of common interest. The department of literature, science, and the arts has 7 regular and full courses of 4 years each, viz, classical, scientific, Latin and scientific, Greek and scientific, civil engineering, mining engineering, and architecture and design. Post graduate courses are provided for the graduates of this or any college who may desire to pursue advanced study, whether for a second degree or not.

The work of 1875–'76 is said by President Angell to have been eminently satisfactory. Three new schools were established, those of homœopathy, dentistry, and mines, and the library and art museum were increased. Just one-half the number of students in attendance were residents of Michigan. Of these 101 were women, of whom 60 were engaged in literary studies, 37 in medical, 2 in legal, and 2 in homœopathic. The experience of the year confirms the opinion that women who come to the college in good health are able to complete the collegiate and professional courses without detriment to it.—(University report, 1876–'77 and 1875–'76.)

The governor says in his message, (1877:) "The legislation of 1875, establishing in the State University a school of mines, a chair of architecture and design, and of dental surgery, has already accomplished more than its most earnest advocates anticipated. The dental school has so many students that an additional professor is needed. An impetus has been given to technical education that must, in time, be of great practical value to the State."—(Governor's message, page 10.)

OTHER COLLEGES.

Adrian College, Adrian, (Methodist,) provides collegiate, preparatory, theological, and music departments, the former comprising 6 distinct departments of instruction, viz, classics, mathematics, natural science, philosophy, political and social science, and modern languages. In the school of music the instruction is divided into 2 courses, the classical and the amateur, the former being designed especially for those who desire to become thoroughly accomplished musicians and teachers. Thorough instruction is given in the theory and practice of music, vocal as well as instrumental. The college is open to both sexes.—(Catalogue, 1876–'77.)

Albion College, Albion, (Methodist Episcopal,) comprises collegiate and preparatory departments, the former having 4 courses of study: the classical, scientific, Greek and scientific, and Latin and scientific. Both sexes are admitted. A conservatory of music has been opened in connection with the college, the course consisting of 7 grades and requiring for completion 4 years.—(College catalogue, 1875–'76.)

Battle Creek College, Battle Creek, (Seventh-Day Adventists,) has practically 3 departments: collegiate, normal, and Bible. Phonography, vocal music, and book keeping are also taught. Both sexes are admitted.—(Catalogue, 1875–'76.)

Hillsdale College, Hillsdale, (Free Will Baptist,) comprises collegiate, preparatory, theological, commercial and telegraphic, music and art departments. The collegiate department includes classical, scientific, and English and normal courses. The college occupies 5 separate buildings, all of brick, 3 stories high—4 of them new, having been erected since the burning of the former edifice in 1874. Both sexes are admitted.—(Catalogue, 1876–'77.)

Hope College, Holland, Ottawa County, (Reformed Dutch,) disclaims being a denominational college in any but the Protestant sense. Persons of all religious connections are admitted on equal terms, even to the theological department. The departments are preparatory, academic, and theological. Girls are admitted to the primary department. Arrangements are not yet completed for opening the more advanced departments to them.—(Circular of college, 1875–'76.)

Kalamazoo College, Kalamazoo, (Baptist,) has in its collegiate department 3 courses of instruction, the classical, Latin-scientific, and the scientific. Each course covers 4 years. Both sexes are admitted. The studies of the preparatory department embrace 3 years.—(Catalogue for 1876.)

Olivet College, Olivet, (Presbyterian and Congregational,) has 5 departments, viz, preparatory, collegiate, normal, music, and art. The collegiate department embraces a special course for ladies also, with classical, scientific, normal, and music courses. The ladies' course leads to diplomas usual in ladies' seminaries, but the regular collegiate course is open to both sexes.—(Catalogue, 1876–'77.)

COLLEGES FOR WOMEN.

Two colleges for women report 19 teachers and 168 students, of whom 48 are in preparatory departments, 114 in regular collegiate classes, and 6 in partial courses. The course of study requires 4 years for completion. The libraries aggregate 970 volumes.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

STATE AGRICULTURAL COLLEGE.

The grant made by Congress gave Michigan 240,000 acres of land, which was devoted to the establishment and support of a State agricultural college. A tract of 676 acres of land, well varied in character, was purchased and the foundation of the present prosperous institution laid. Aided now and then by provisional State grants, the agricultural college has, by the industry and enterprise of its managers, become one of the most valued helps to popular education in the State. By its régime, no student is exempted from three hours' daily labor, and encouragement is given for more continued industry, while habits of frugality and prudence are inculcated as part of the college discipline.

The course of study embraces all the advantages of a liberal English education, while the technical instruction is claimed to be, in its admirable practicability, in advance of other similar institutions of sister States. The buildings, consisting of a college hall, boarding hall, dormitory, laboratory, greenhouse, 7 residences for president and professors, dwelling of herdsman, farm house, 4 barns, with shops and sheds, are situated on undulating ground, about 3 miles distant from the capital. The greenhouse and a handsomely laid out park of over 80 acres are among the most noticeable features of the late improvements. Tuition is free; board furnished at cost.—(Report, 1874–'75, pp. lxxxviii.)

The governor says in his message, 1877: "I am satisfied that the college is in better condition and doing better work than ever before. It is not only educating the students under its roof, but the president and faculty, through a system of farmers' institutes held throughout the State, are enlisting the good will and sympathy of the people."

The number of students in 1875–'76 was 166; graduates, 33. Inventory of property, $252,268, an increase in two years of $20,860.—(Report of State superintendent, 1874–'75, p. lxxxviii, and governor's message, 1877, p. 10.)

The polytechnic school of Michigan University gives advanced instruction in the mathematical, physical, and natural sciences, and thorough courses in the practical application of these sciences to the arts. It comprises the course in civil engineering, the school of mines, the course in architecture and design, advanced courses in science, and the school of pharmacy. The work is arranged with reference to the wants of two classes of students, namely: first, those pursuing the study of civil or mining engineering, or architecture and design, or pharmacy, which includes an extended course in analytical chemistry, with the view of graduating; and, secondly, graduates of colleges and other persons qualified for advanced or special study of mineralogy, geology, zoölogy, botany, civil or mining engineering, architecture and design, physics, analytical and applied chemistry, pharmacy, or metallurgy.—(University Calendar, 1876–'77.)

THEOLOGY.

The school of theology at Adrian College embraces in its course of study systematic pastoral and natural theology, mental and moral science, inspiration of the scriptures, exegesis of the New Testament, Hebrew ecclesiastical history, and church government.—(Catalogue, 1876–'77.)

The theological department of Hillsdale College offers a regular course of 3 years, an English course, and a special course. Tuition is free to members in good standing of evangelical churches.—(Catalogue, 1876–'77.)

Hope College Theological School provides a three years' course of instruction and requires for admission a collegiate preparation.

LAW.

The department of law of Michigan University embraces in its course of instruction the several branches of constitutional, international, maritime, commercial, and criminal law, medical jurisprudence and the jurisprudence of the United States, including such instruction in common law and equity, pleading, evidence, and practice as will lay a substantial foundation for practice in all departments of law.—(University Calendar, 1876–'77.)

MEDICINE.

The department of medicine and surgery of Michigan University imposes upon applicants for admission, unless they be college graduates or matriculants of the university, an examination which, though not so exacting in its demands as it is hoped soon to make it, is intended to test the student's acquaintance with the English fundamental branches, his general intelligence and capacity to appreciate and profit by professional instruction. The course is 2 years. To graduate, the student must have pursued the study of medicine and surgery for the term of 3 years with some respectable practitioner, must have attended two full terms of didactic instruction, and must have

been engaged in the study of practical anatomy and chemistry. Women are admitted to this, as to all departments of the university, on the same conditions that are required of men. The instruction given them, though equal in all respects to that provided for men, is given separately, the two classes not being brought together, except in the department of general chemistry.

The Homœopathic Medical College of the university demands a similar examination for admission and similar acquirements for graduation, and admits women as well as men to its classes, giving the instruction separately. To encourage a higher grade of preliminary acquirements, an allowance of 6 months from the term of study is made in favor of college graduates and 1 year in favor of graduates of the department of pharmacy in this university.

Detroit Medical College, at Detroit, provides a three years' course of study, that for each year lasting nearly 10 months. In the plan of instruction clinical, didactic, and laboratory teaching are blended. The college has under its control, for educational purposes, 3 hospitals, 1 of them being so connected with the college building that surgical cases are brought into the amphitheatre for operation.—(Announcement and catalogue, 1876–'77.)

The Dental College of the University of Michigan was recently established by the legislature, in response to a request from the Dental Association and many citizens of the State. The qualifications for admission are the same that are demanded of candidates for the study of medicine, and students in dentistry attend lectures and receive instruction jointly, the medical class enjoying in all respects equal facilities with them. The course of study covers 2 years, but graduates of the medical school may enter the senior class.—(Annual announcement, 1875.)

SPECIAL INSTRUCTION.

STATE REFORM SCHOOL.

The boys in this institution are engaged, in addition to their school studies, in various occupations, as tailoring, shoemaking, farming, &c.; but on account of their tender age the question of necessary and productive employment for a large proportion of them is one that has been found difficult of solution.

The condition of the school has much improved during the last two years. It has

ceased to be a prison, and is now really a reform school. The bars and iron doors have disappeared; the high fence has been made into kindling wood; and the results are no corporal punishment, no escapes since its opening, less destruction of State property, a general tone of comfort and cheerfulness in all its surroundings, and a brighter, better look in the faces of the boys. The table and furnishing, the clothing, &c., are better than heretofore, and all tend toward lifting the institution out of the prison mire to the higher plane of a school. The attendance in 1875 was 220; in 1876 it was 230. Average age of boys on admission, 13½ years. The boys attend school about 5 hours each day. The studies pursued are reading, writing, geography, arithmetic, and grammar. The effort made in every department to control without corporal punishment has given new energy and cheer to the school, and the boys, animated by a greater spirit of freedom and learning to regard study as a source of pleasure as well as of improvement, are rapidly acquiring a knowledge of the branches taught.—(Report of State superintendent, 1874–'75, pp. 222–235, and message of the governor to the legislature, 1877, pp. 13, 14.)

STATE PUBLIC SCHOOL, COLDWATER.

The object of this school is to support, clothe, and educate destitute children at the expense of the State, and finally, when they are prepared for it, secure their location in good homes, either by apprenticeship or adoption. This last is considered, perhaps, the most important work of the institution, and is one which is daily demanding more attention from the officers. An important aid was rendered by the legislature of 1875, through a provision for appointing, in many of the counties, agents for the supervision of charitable, penal, pauper, and reformatory institutions. These agents are appointed by the governor, and are carefully selected with a view to their fitness for the work of finding and selecting suitable homes for the children of this institution, and of retaining oversight of them after they are placed there. In this school the little dependent waifs are gathered from all parts of the State, to be washed, clothed, fed, warmed, and for a time placed under wholesome discipline and the best mental and moral training, whence they pass into homes where the same good influences continue. Under the law the child received here becomes the ward of the State, and the trust continues until he is 21 years of age; his whole career is watched over as by an anxious parent from the day the State becomes his guardian, the control of his natural parents entirely ceasing from that time. In some cases, however, children have been indentured to their parents rather than to others, the condition of the parents having, meantime, so improved as to warrant their taking care of their own child. In such cases parents are required to give the usual indenture to support and educate the child, the State retaining guardianship during minority as in other cases.

The cost per capita for the year ending September 30, 1875, was, on the average attendance, $159.80, this including salaries of teachers, food, clothing, school books, and all the current expenses of the school. It should be remembered, in this connection, that while the average attendance was only about 160, there have actually passed through it 221 children, most of whom were clothed before leaving. This reduces the actual cost per capita considerably. The cost per capita for the year 1875–'76 was $126.66; number in the school September 30, 1876, 255; average age of the children, 9 years.

The school is supplied with a superior corps of teachers, admirably adapted to their work, and the progress of the children is quite as rapid as the average of those in the other public schools of the State. The conduct of the children is, upon the whole, remarkably good. Fighting and quarrelling are seldom seen, and profane words are scarcely ever heard from those who have been in the school a few months. Discipline is secured as far as possible by moral means.

An appropriation of $500 was made for a library, of which something over $300 has been expended in the purchase of a choice collection of juvenile books, numbering 460 volumes.—(Report of superintendent, 1874–'75, pp. 236–249; and message of the governor, 1877, p. 12.)

EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The institution at Flint for the education of the deaf and dumb and the blind gave instruction in 1876 to 212 pupils. The legislation of 1873 and the active efforts of the officers of the institution have secured the attendance of nearly all the children of the State who need public care, yet there are some remaining in families and in poor-houses. The system of instruction here is constantly improving. The new method of "articulation" has recently been introduced with marked success. The boys are taught trades and the girls are instructed in housework and sewing.—(Message of the governor to the legislature, 1877, pp. 16, 17.)

EDUCATIONAL ASSOCIATIONS.

STATE TEACHERS' ASSOCIATION.

The twenty-fifth annual session of the State Teachers' Association was held at Grand Rapids in December, 1875.

After the address of welcome by Henry Fralick, esq., of the Grand Rapids board of

education, and response by President Tarbell, the address of the evening was delivered by Prof. C. A. Kent, of the law department of Michigan University, on the origin and extent of the duty of the State to educate. The president's address, presented on the following day, urged the need of greater unity of thought and coöperation among educators and suggested means by which the usefulness of the association might be increased. The address was referred for consideration and report to two committees of three members each. The question of the representation of education at the Centennial was then presented by Hon. John J. Bagley, governor of the State, and afterward by others. Papers were also presented and addresses delivered by Mr. H. A. Ford, of Kalamazoo, on the relation of social science and education; by Miss S. J. Pyne, of Grand Rapids, on preparation for teaching; by Prof. F. H. Pease, of the State normal school, on teaching music to children; by Mr. Charles R. Backus, giving an outside view of the public schools; by Professor Olney, of the State university, on the high schools of the State; by Miss Julia M. Stancliff, on the development of the perceptive faculties; by Professor Putnam, on the Kindergarten; by Prof. W. L. Smith, teacher of music in the public schools of East Saginaw, making a plea for music in public schools; by Superintendent D. Bemiss, of Coldwater, on outside and inside dangers to the schools; by Miss Minnie L. Coe, of Grand Rapids, on physiology in schools; by Rev. W. D. Love, of East Saginaw, on religious education in the schools; and by Miss A. J. Field, superintendent of public schools at South Haven, on hearth and home education.—(Michigan Teacher, February, 1876, pp. 41–134.)

ASSOCIATION OF CITY SCHOOL SUPERINTENDENTS.

The Michigan Association of City Superintendents of Schools held several meetings during the week of the State superintendents' meeting, at which President Angell of the State university and other members of the faculty were present. A vote taken by them showed a preference of German to French as one of the requirements for admission to the scientific course of the university. The principal business was the revision of the course of study for graded schools. A constitution was adopted and officers elected for the ensuing year. There were present and enrolled as members 19 superintendents.—(Michigan Teacher, February, pp. 134–136.)

ASSOCIATION OF MUSIC TEACHERS.

The association of special music teachers in the public schools of Michigan had its second meeting at the same time, all but two of such teachers in the State being present. The chief topics of discussion were: (1) How can public opinion best be secured in support of music as a study in public schools? (2) The general arrangement and management of a musical department; and (3) Systems, methods of instruction, and course of study.—(Michigan Teacher, February, p. 136.)

OBITUARY RECORD.

The educational necrology of the past month in the State is unusually large, including the death, on the 9th ultimo, of Mr. W. L. M. Breg, for the last 20 years a teacher in the deaf, dumb, and blind asylum at Flint; of H. C. Baggerly, superintendent of Corunna for the past 5 years, on the 14th ultimo; and of Miss Jennie Carmichael, May 20, for nearly 10 years a teacher in the Detroit public schools.—(Michigan Teacher, June, p. 292.)

LIST OF SCHOOL OFFICIALS IN MICHIGAN.

Hon. HORACE S. TARBELL, *State superintendent of public instruction, Lansing.*

(Report for 1875–'76 of Hon. D. Burt, State superintendent of public instruction, and special returns for 1875 and 1876.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITY.

This sketch has been prepared for the Bureau of Education by the courtesy of Hon. D. Burt, State superintendent of public instruction, and rests upon the authority of the investigations made by him into the legislation of the State respecting public schools.

TERRITORIAL ACTION.

Minnesota was organized as a Territory in 1849 and admitted as a State in 1858. Among the first acts of its territorial condition was one to establish and maintain common schools, passed November 1, 1849.

The provisions of the act were that the county commissioners should lay an annual tax of one-fourth of 1 per cent. (2½ mills) on the taxable property of the county for the support of schools. Fifteen per cent. of all money accruing from liquor licenses and fines for criminal offenses were added to the school fund of the county. Every township containing not less than five families was made a school district, but county commissioners were empowered to divide townships that contained at least ten families into two or more districts. This power was used so that Minnesota has never had the township system of districts, a fact to be regretted. Three trustees were to be annually elected for each district, with power to hire teachers and to have general charge of the schools. It was made their duty to examine teachers and to visit schools. Any school district could vote a special tax, not to exceed $600 in one year.

On the 4th of March, 1854, a further act was passed requiring three months of school in any district within the year as a condition of an apportionment from the county treasury. If, however, the number of scholars returned did not exceed 12 six weeks in a year, or three months in two preceding years, the district was not entitled to an apportionment. New districts organized in any year received apportionments for that year, even without having a school.

In 1856 an act for the relief of school districts was passed, providing that the trustees of any district, after reserving a sufficient amount of money to pay teachers' wages for the length of time which the district decided at its annual meeting to have school taught during the year, might use the remainder of its funds for repairing school-houses and meeting similar incidental expenses.

EARLY STATE ACTION.

The territorial law, thus twice amended, appears to have been accepted by the State, on its entrance into the Union, as sufficient for that time. But in its constitution the new State embodied the principle that "the stability of a republican form of government depends mainly on the intelligence of the people," and drew from it the practical corollary that the legislature should establish a general and uniform system of public schools. It also provided for the formation of a perpetual school fund from the proceeds of the lands granted by the United States for the support of schools; for such arrangement, by taxation or otherwise, as, with the income arising from the school fund, would secure a thorough and efficient school system, and for the establishment and endowment of a university.

RISE OF NORMAL SCHOOLS.

The normal school at Winona was opened under act of 1858 in 1860, on an appropriation for the year of $1.500. In 1862, after being open about a year and a half, it was closed until 1864, when it was reopened and reorganized. The sum of $3,000 was appropriated to it for 1864, $4,000 for 1865, and there has been since that time an annual appropriation of $5,000. In 1871 the school received a supplementary appropriation of $3,000; in 1872, of $5,000; in 1873, of $7,000; and the same for 1874 and 1875, in addition to the regular appropriation of $5,000.

The legislature of 1860 passed an act suspending for five years a clause in the act of 1858 giving permission to open two schools in addition to that at Winona, which was not affected by the act of suspension. From this and other causes the normal school at Mankato was not organized till October, 1868, nor that at St. Cloud till September, 1869.

MODIFICATIONS OF THE FIRST SCHOOL LAW.

In 1862 it was enacted that all fines for the breach of any penal law, not otherwise appropriated by law, should go into the school fund of the county.

In the same year the 2½ mill tax of 1849 was reduced to 2 mills, but still distributed upon the basis of the number of persons between 5 and 21 years of age. In 1875 this tax was reduced to 1 mill, and returned to each district in proportion to property paying the tax, a plan which friends of education hope soon to change.

LOCAL SUPERVISION OF SCHOOLS.

The territorial law of 1849 made the trustees of each district the examiners of teachers and the visitors of schools. In 1860 it was provided that there should be chosen at the annual town meeting of the several towns in the State a town superintendent to hold office one year. The power to divide the town into districts and to regulate and alter districts was placed in his hands. But districts to be affected by his action could require that the chairman of the town board of supervisors and the town clerk be associated with him, and that a majority of the board so constituted be necessary to any change in the boundaries of districts. The town superintendent examined teachers and was required to visit the schools twice in each term. There could be an appeal to the State superintendent from the action of any district meeting or of a town superintendent respecting alterations in school districts, and the decision of the State superintendent was final. This plan did not give satisfaction. The town superintendent was paid a per diem fee, not to exceed that of other town officers. Town supervision, as thus adopted, was too advanced for a new State with few schools in some counties, and the legislation of 1860 on this subject was superseded in 1862 by a plan by which the commissioners of each county appointed an examiner of teachers in each commissioner district. Twice in a year these officers held meetings for the examination of candidates, and they could also give private examinations. They were not required to visit the schools and were not responsible for the success or failure of teachers. There was no definite standard of examination. Many of these examiners were incompetent, and almost anybody could teach school in those days.

In 1864 a law was passed that any county electing to do so might appoint through its commissioners "a fitting person of high moral character and literary and scientific attainments county superintendent of schools." It was made the duty of the county superintendent to examine teachers, visit schools, receive reports from clerks, and report to the State department. The older and more populous counties adopted this system from time to time, until, in 1869, a law was passed making the system obligatory upon nearly all the counties of the State. Those excepted were newly organized counties, and most of them have since been included.

There has been a tendency to make this office elective, but bills aiming at this have always been defeated until, in 1876, a special act was carried excepting several counties and rendering the office elective in them. It appears that the constitution of the State does not admit of the affixing of any moral or literary qualification to office held under election by the people. This fact will probably prevent any further change in this direction.

STATE SUPERVISION.

In 1860 a law was passed making the chancellor of the university ex officio superintendent of public instruction. This office was first filled by Rev. E. D. Neill, and he made the first educational report to the legislature, holding the office until April, 1861, when he was succeeded by Rev. B. F. Crary, who served until 1862. In March of this year a law was passed making the secretary of state ex officio superintendent of public instruction, and Hon. D. Blakely, as such, held the office until 1866. He was succeeded by Hon. H. C. Rogers, who continued in office until 1867. In this year a law was passed requiring the governor to make the appointment, subject to confirmation by the senate. Hon. M. H. Dunnell was the first appointee. He held the office until August 1, 1870, when he resigned, and was elected to Congress. Hon. H. B. Willson was appointed to fill the unexpired part of Mr. Dunnell's term. After its expiration he was twice reappointed, and retired from the office in 1875. He was succeeded by Hon. D. Burt, the present incumbent of the office, whose term, under the existing law, reaches to April, 1877.

ELEMENTARY INSTRUCTION.

SCHOOL-HOUSES, SCHOOLS, ENROLMENT, ETC.

Buildings.—There were 144 more school-houses built than during the year 1874–'75. Of these, 5 were log houses, although several of this class disappeared. There are 5 new brick houses, most of them being elegant structures, one in Minneapolis costing $16,000 and one in Winona about $35,000. Of the 3,119 school-houses in the State, 684 have home made seats, only about 1 in 10 of them being comfortable. The desks are clumsy, the pitch of the backs wrong, and the height of the seats such that the feet of small children do not touch the floor. The old style of long planks placed against three sides of the room for desks, and of long benches before them with no backs, may be found in numbers of these houses. Only 123 school-houses (mainly in cities) report having proper ventilators; most of the country teachers report their rooms ventilated by a hole in the ceiling; that is, a hole overhead, letting the hot air up against the roof, is considered a ventilator. The fact that foul air should be taken from the bottom of the room is not recognized. In the estimation of three-fourths of the trustees, a school-house is well ventilated if the windows can be opened when the

room becomes uncomfortably hot; yet several hundred of them do not even admit of this, the windows being secured by nails to keep out the boys in summer and the cold in winter. Nearly a thousand school-houses report their outhouses in bad condition, while 840 have none belonging to them. Several county superintendents, however, report that many new buildings of this kind have resulted from the asking of the question in the blanks of the previous year; and the hope of increasing this result has led to the presentation of the figures as to this point.

Schools.—In some counties the average annual length of schools was not given, and it is believed that the estimated figures (4.6 months) is too low. The 31 graded schools which report their statistics remained in session an average of 9.5 months.

Enrolment.—The increase in the enrolment of the present year over that of the past and other years has been very considerable, a result due to the change in the plan of apportionment.

Teachers.—It is suspected that the number of teachers reported is somewhat too large, yet many teach in summer and not in winter. The graded schools have their teachers engaged for the year, while most rural districts employ new ones every term.—(Report of Superintendent Burt, 1875-'76, pp. 76, 77, 82, 253-255.)

GRADED SCHOOLS.

The number of these schools is gradually increasing. Some ten of the largest cities have established regular courses of study and definite departments, with classes or grades in each. The economy of the plan is obvious and its convenience and efficiency are securing popular favor. In villages where the number of teachers ranges from 2 to 4 or 5 the grading is often well defined and thorough work is done; yet it requires from 8 to 10 months of school in a year to preserve any plan of gradation and to make it possible to carry pupils through a definite course of instruction. These schools in a few of the largest cities define their work from the lowest class in the primary department to the graduating class of the high school, indicating the time for passing through each grade and making the length of an entire course about 12 years. The common branches are made prominent in primary and secondary departments. In the grammar schools the higher English branches are studied, as physiology, physical geography, advanced grammar, and composition.—(Report of superintendent, 1875-'76, p. 74.)

CHANGE IN BASIS OF APPORTIONMENT.

A law was enacted in 1875 making enrolment in public schools rather than the number of census children the basis of apportionment of the public school funds.

There were many objections to the oldplan. It gave an unfair advantage to districts in which there happened to be parochial schools, maintained at private expense. It did not help districts according to the number and size of their schools and the educational work actually done; it offered no inducement to gather neglected children into the schools, nor to open schools in new counties. But the main reason for the change is that the fund in question proceeds from lands donated by Congress for the use of "schools;" that in pursuance of this object the constitution of the State provided for the appropriation of the fund to the use of "scholars;" therefore, the old law apportioning it to districts according to the number of those who were merely of proper age to become scholars was unconstitutional. But the new plan, it is thought, is not yet perfect, and it is anticipated that another step forward may be found advisable. Some districts, in order to secure a larger share of the fund, may, it is feared, enroll persons in the schools who are brought forward merely for the purpose and who will attend but a few days. In that case, it is stated, it will be necessary to make the apportionment on the average attendance, which will, moreover, have the additional result of holding children in school more regularly than at present.—(Report of superintendent, pp. 9-16.)

RESPECTS IN WHICH THE SYSTEM IS WEAK.

The State superintendent enumerates certain points in which the public school system is weak, as follows:

(1) It permits indefinite divisions of counties into petty school districts. The older counties have from 6 to 8 districts in each township, necessitating small and weak schools.

(2) It creates too many trustees invested with power to hire teachers. The present number of these officers is 9,909; teachers, 3,303. In any county with 100 districts 300 persons select the teachers, and they have a great many daughters and nieces, and sisters and cousins, and friends; and, human nature being what it is, favoritism is the result. Under this system county superintendents often cannot raise the standard of scholarship in teachers. Public sentiment in many communities will not sustain them in rejecting incompetent candidates.

(3) It is left possible for districts to vote that their children shall not be educated. The remedy consists in abolishing the petty districts, and thus taking from them the power to cripple and even kill their own schools. The condition should be imposed

that the current school fund shall be supplemented on territories much larger than that of the present districts by a uniform rate of taxation that will yield such territories funds sufficient to secure efficient schools of equal length. There were, it is estimated, not less than 350 districts that last year raised no special school tax, and there were more than 800 schools kept for only three months. The superintendent recommends the passage of a law fixing a certain amount of special taxation below which districts cannot fall in any year.—(Report of State superintendent, 1875–'76, pp. 19–25.)

KINDERGÄRTEN.

Information has been received from 2 Kindergärten, one in St. Paul, established in 1876 and having an attendance of 20 pupils, the other in Minneapolis, established in 1875, with 6 to 9 pupils. Hard times and much sickness among the children have kept down the numbers in the school last named. Hours of daily session in the Minneapolis school, 3; in the St. Paul school, 4½. Age of admission in the former, 3 to 6 years; in the latter, 4 to 7.

CITY SCHOOL SYSTEMS.

ST. PAUL.

Officers.—A board of education of 18 members, of whom one-third are changed each year, and a city superintendent of public schools, appointed by the board.

Statistics.—Enrolment during the year, 4,491; average attendance, 2,608; number of schools, 69; number of teachers, 82.

Remarks.—Corporal punishment has been banished from the schools of this city with results in the highest degree gratifying. The discipline of the schools has steadily improved, and the pupils have acquired a self control which is very marked, even to strangers. Cases of insubordination are extremely rare. Truancy has largely diminished. There have been but two cases of expulsion during the year, while the cases of temporary suspension in all the schools have been less than the cases of corporal punishment in a single school in former years.

The high school was organized in 1870, and has graduated 66 students, of whom 20 have taught and 21 have entered colleges. Teachers for the public schools are largely supplied from the high school. The enrolment of pupils in it increases rapidly every year, and leading citizens are coming to take advantage of it in preference to sending their children to private schools away from home.—(Report of State superintendent, pp. 141, 142.)

MINNEAPOLIS.

Organization.—The organization here is a peculiar one, there being two boards of education and two superintendents of schools, one for the original city of Minneapolis, now called the west division, the other for what was the city of St. Anthony, which in 1872 was united with Minneapolis and forms now the east division.

Statistics.—These for the west division are as follows: Population, (estimated,) 26,000; children of school age, (5–21,) 6,843; enrolled in public schools, 3,388; school-houses, 7; rented rooms, 2; whole number of school rooms, 54; seating capacity of these, allowing 56 pupils to a room, 3,024; admissions to high school, 83.

For the east division they are given thus: School-houses, 4; rooms for school, 19; seating capacity of school rooms, 1,152; teachers employed, 19; amount paid for salaries of teachers, $9,910; enrolled pupils, 1,249; average daily attendance, 724; average attendance to a teacher, 38.1; number of pupils in high school, 48.

Notes.—In the west division there are 8 grades before reaching the high school, and, while these grades express intervals of one year each, every grade is subdivided into 3 divisions, each representative of three months. The advantages claimed for this arrangement are two: (1) pupils failing to pass any examination do not have to drop far and are left rather hopeful in the near prospect of another trial. (2) No pupil is required to remain in any class any given length of time, but on obtaining a prescribed average for two successive months is rewarded for his industry and credited for his ability by prompt promotion.

In the east division there are 9 years of preparatory work and 2 years in the high school course. Ladies here act as school directors, and 2 such appear in the list of 6 members of the board for 1875–'76. As early as 1861 a special teacher of music was employed in this division, but was retained only one term. No special teacher of drawing has ever been employed, nor has there been till the close of the school year 1875–'76 a superintendent; the secretary of the school board performing some of the duties of one and the teacher of the highest room in each building being constituted principal of all the schools therein and required to report their condition monthly to the board of education.—(Reports of the two divisions, in State report for 1875–'76, pp. 143–153.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

The normal school at Winona reports in its normal department 302 pupils, of whom 88 were men and 214 women; average attendance, 196; graduates, 36. The school at Mankato in its normal department, 250; men, 85; women, 165; average attendance, 114. The school at St. Cloud, in its normal department, 213, 63 men and 150 women, and an average attendance of 131. Total enrolment, 765; average attendance, 441.

The class of 85 new pupils entering the school at Winona was of much higher grade than that of any class received previously. It possessed more of the settled teacher element. A large number had been members of institutes in which normal school teachers were instructors. Others were from schools or institutes taught by graduates, and all showed plainly that the thorough work done in the normal schools and the State institutes is producing grand results in the schools of the State. During the year 60 undergraduates went out as teachers.

At Mankato there has been a marked increase not only in the entire enrolment but in the average attendance, showing that more pupils remain during the entire term than ever before. The higher classes, also, are well represented, indicating an advance in grade as well as in numbers.

The school at St. Cloud, in respect to efficiency, discipline, completeness of course, and elevation of professional spirit, has made marked advancement during the year. A special effort was made to give the school a more decided professional character. Students evidently incapable of making teachers were not advanced, and the names of those unworthy of promotion, after a review of a term's studies, were removed from the roll. Every student, before graduation, is required to give instruction in the practice room one hour a day for 9 weeks, under the supervision of a critic teacher. A home for the students after the family coöperative plan has been opened, the expense of which, including room rent and good wholesome food, is expected to average not more than $2.50 weekly.—(Report of State superintendent, 1875–'76, pp. 99–119.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The State superintendent does not give the number of public high schools or departments existing in the State. He says, however, that in the larger cities generally there exist either distinctly named high schools or else highest departments in the graded schools, in which are taught some of the branches usual to high schools proper. In the best of the high schools are found algebra, geometry, and sometimes trigonometry and surveying. Latin is taught in perhaps a dozen high schools. Greek is found in the printed courses of 4 or 5 schools, while actual classes exist in a less number. German is more common than Latin and French is studied in several schools.—(Report of Superintendent Burt, 1875–'76, pp. 74, 75.)

In a number of reports from towns and cities, made to the superintendent, respecting their graded systems, and appended to his report, there is a frequent reference to a high school as existent, sometimes a schedule of the course of study in it, but almost no statistics as to the number of pupils in attendance and graduating from these schools.

PRIVATE SECONDARY SCHOOLS.

In 2 schools for boys, 5 for girls, and 7 for both sexes outside of the public school system, there have been reported to this Bureau, under 68 instructors, 1,172 students, of whom 173 were engaged in classical courses and 185 in modern languages; 62 were preparing for classical and 21 for scientific courses in college. Drawing is taught in 9 of these schools, free hand in 5 and mechanical in 4; vocal music is taught in 10 and instrumental in 11. Chemical laboratories are reported by 3 and philosophical apparatus by 5. One school for boys, 1 for girls, and 6 for both report libraries ranging in size from 125 volumes to 1,500, and aggregating 3,527.

BUSINESS COLLEGES.

Two business colleges, located at Minneapolis and St. Paul, report 8 teachers and 338 pupils, of whom 18 were studying telegraphy. The common English branches and correspondence, penmanship and book keeping, and commercial law are taught in all, and surveying, political economy, life insurance, phonography, and telegraphy in 1. One reports a library of 147 volumes.

SUPERIOR INSTRUCTION.

UNIVERSITY OF MINNESOTA.

The course of study is arranged under 4 departments: (1) Science, literature, and the arts; (2) mechanic arts; (3) agriculture; (4) collegiate department, all numbering 267 students in 1875–'76. Of these 225 belonged to the collegiate department, 66 of the number being women. Five of the 34 students in the department of science, literature, and the arts were also women, making 71 in attendance. There were registered

as residents of Minnesota 241 students; from other States, 26. In addition to the college work, 114 students are engaged in some remunerative employment and 69 are believed to have earned their own living. Fifty-seven had at some time been teachers.

The board of regents, after a careful consideration of a proposition to discontinue the preparatory department of the university, came to a resolution that the institution must for some time longer continue to offer preparatory instruction; but certain conditions were decided upon. In order to encourage preparatory work in the high schools and academies of the State and coöperation by them with the university, no applicant is to be admitted to the collegiate department to pursue the studies of any regular class or course who is entitled to receive and can actually receive substantially the same instruction in the public schools of the school district in which he resides. This action, it is believed, has generally met with a favorable reception. Its effect is most marked in the university city, from which many young persons had been accustomed to resort to the university without having passed through the course of instruction offered in the public schools. The State superintendent advises the organization of proper preparatory courses of study to be carried on in connection with the ordinary high school curriculum, and formed, more especially, to suit those young persons who do not expect to go to college.

The year 1875–'76 was a marked one for the university. The occupation of the new buildings has permitted considerable enlargement of the work. The library, moved into more commodious apartments, on the first floor of the main building, can at length fulfil its proper function in the institution. The new chemical laboratory in the agricultural college was occupied throughout the year by large and interested classes. The general museum was opened to the public during the spring term. There were 12 graduates in 1876: A. B., 4; Sc. B., 5; B. C., 3.—(Report of State superintendent, 1875–76, pp. 127–136.)

OTHER COLLEGES.

Carleton College, Northfield, was founded by the State conference of congregational churches, but it is not under ecclesiastical control nor is it meant to be sectarian in its methods or influences. It is open to all alike, without regard to race, sex, or nationality. The departments are preparatory and collegiate, the latter embracing classical, literary, scientific, and English courses, all extending over 4 years.—(Catalogue, 1875–'76.)

St. John's College, St. Joseph, (Roman Catholic,) is conducted by the Benedictine Fathers, and comprises ecclesiastical, classical, commercial, and scientific courses, besides an elementary school for beginners. The college buildings are large and commodious, built of granite and brick, and afford accommodation for over 300 students. The number of students and the prosperity of the school are increasing.—(Catalogue, 1875–'76.)

COLLEGES FOR WOMEN.

Two colleges for women report 15 teachers and 178 pupils, of whom 10 were engaged in preparatory studies and 62 in regular courses. The courses of study are from 4 to 8 years. The libraries of these 2 colleges aggregate 525 volumes.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The College of Agriculture, a department of the State university, organized in 1870, comprises 2 courses, an advanced and an elementary. In the college of the mechanic arts there are courses in civil engineering, in architecture, and special courses. The elementary agricultural course lasts 4 years; the higher, 2.—(Report of State superintendent, 1875–'76, and return to Bureau of Education.)

THEOLOGY.

Of the schools of theology embraced in the following table, the first is Lutheran, the second Roman Catholic, the third Protestant Episcopal. Of the 8 years set down for the course at St. John's, 5 are believed to be preparatory and collegiate and 3 theological, this latter number having been given in preceding returns for the theological course.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The institution at Faribault has, during the year past, yielded more than the usual returns. As one of the results, 15 pupils, 13 deaf and dumb and 2 blind, graduated with fair prospects for the future, and others left the school thinking their education already quite sufficient for all practical purposes. During the year 121 pupils were in attendance, of whom 98 were deaf-mutes and 23 blind. The number entering at the fall term was diminished somewhat by the hard times and the failure of the crops in certain counties. Out of 75 uneducated deaf-mutes known to be within the limits of the State, only 5 entered school during the fall of 1875, while 6 others, of whom nothing had been previously known, presented themselves. No special effort has been made to bring the large number of uneducated deaf and dumb children to school, for the reason that they could not be accommodated if they should come, there being neither sufficient room nor funds.

The deaf-mute pupils are divided into 6 classes, taught by 3 men and 3 women. The classes are graded every term, and oftener when deemed necessary, and the pupils are carried through a course of study calculated to give them a good common school education. School duties engage their attention 4½ hours daily besides one hour of study in the evening, 5 days in the week. For industrial purposes they are divided into 5 classes, including one of printers, which has not yet been fully organized and cannot be until means are obtained to open an office and employ a practical printer. These classes labor 3½ hours daily for 6 days in the week, making 9 hours a day in school and shop. This plan has been practised nearly 3 years with very satisfactory results, the deportment and health of the pupils not having suffered.

It is found that from 10 to 15 in a hundred are capable of learning to speak. One

entire class composed of semi-mutes is taught by articulation. The introduction and practice of drawing during the past year have been followed by gratifying results.

Improvements for the convenience and comfort of the blind pupils have been made during the past year to such an extent that the institution is now fully prepared to do excellent work in educating them, except in respect to teaching them trades. This subject has been considered by the board of directors and will be provided for as soon as circumstances will permit.—(Report of State superintendent, 1875–'76, pp. 120–123.)

EDUCATIONAL CONVENTIONS.

MINNESOTA EDUCATIONAL ASSOCIATION.

This association met at Red Wing, August 22 and 23, 1876. No information in respect to its proceedings is given in the report except a notice of a resolution passed in testimony of regard for the memory of V. J. Walker, who was present at the first meeting of the association, aided in the preparation of its constitution, and contributed largely to its success.—(State report, 1875–'76, p. 95.)

OBITUARY RECORD.

PROF. VERSAL J. WALKER.

On the morning of Thursday, May 17, 1876, President Folwell, of the University of Minnesota, announced to a called meeting of the faculty of that institution the sad intelligence of the death of Prof. Versal J. Walker, which had occurred a few hours before. Professor Walker, as stated in a memorial pamphlet published by the university, was born at Brookline, Vt., in 1824, and received an academic education at the Townsend Academy, in the same State. He entered Waterville College, (now Colby University,) in the State of Maine, in 1845, and graduated there with the honors of his class in 1849, having taken high rank in languages, and especially distinguished himself for his proficiency in mathematics and the sciences. Soon after his graduation he became principal of the academy at New London, New Hampshire; he passed, a few years later, to the charge of a kindred school at China, Maine, and, having taught there and elsewhere in New England till 1855, went to California, where he remained four years. On his return eastward, in 1859, he married, settled as a teacher of public schools in Winona, Minn.; distinguished himself as a successful organizer and instructor; established the first high school there, and was its principal for several years; was subsequently elected to the joint office of principal of high school and superintendent of the city schools, and filled this position with much acceptableness until chosen professor of the Latin language and literature in the State university, in which last office he continued until his death, performing the duties with marked ability and success.

For several years Professor Walker was secretary of the State Teachers' Association of Minnesota, and was at one time its president. On his removal to Minneapolis, his reputation as an organizer secured him an election to the board of education of the eastern division of the city, in which position he served for three years, fulfilling the duties of secretary of the board and superintendent of the schools, which, under his management, are said to have decidedly improved.

The governing principle of his life appears to have been to do well whatever he undertook, and, undertaking nothing but what he had the ability to do successfully, he left behind him, when his work was finished, the reputation of a faithful laborer and of a truly useful man; one that had helped many to become men and women, noble, just, and pure.—(Memorial pamphlet published by the university.)

LIST OF SCHOOL OFFICIALS IN MINNESOTA.

Hon. D. BURT, *State superintendent of public instruction, St. Paul.*

COUNTY SUPERINTENDENTS.

[*Term.*—The office of county superintendent having been made elective, the term of present incumbents will expire in the autumn of 1877, they giving place to new officers to be elected by the people November 6.]

County.	Superintendent.	Post-office.
Aitkin	C. W. Knox	Aitkin.

(Report for 1875–'76 of Hon. Joseph Bardwell, State superintendent of public education, pp. 93–95.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

United States Statutes, 1802, 1803, 1817; Laws of Mississippi, 1818, (first session of first general assembly;) Poindexter's Revised Code, 1824, pp. 402–409; Howard and Hutchinson's Statutes of Mississippi, 1840, pp. 120–142; Revised Code of 1857, p. 369; Revised Code of 1871, sections 1992–2060; later school laws and reports and census returns.

FOUNDATIONS LAID.

By act of Congress, April 24, 1802, Mississippi, then comprehending most of the territory south of Tennessee and west of Georgia to the Mississippi River, was made a portion of the territory of the Union, with a view to the formation from it of a State as soon as its population should amount to 60,000 free inhabitants. March 1, 1817, another act authorized the people of the western portion of this territory to form a

constitution and State government, and enter the Union on the same footing with the other States. Both these acts carried with them (the former one explicitly) the provisions of the ordinance of July 13, 1787, for the government of the Northwestern Territory, that section 16 in every township should be reserved for the use of schools, and that an entire township should be reserved for a seminary of learning. By subsequent acts these grants were made distinct.

BUILDING UPON THESE FOUNDATIONS.

The first general assembly of the State, at its first session, passed, February 5, 1818, an act to provide for the care of the 16th section lands, giving the charge of them to the judges of the county courts, with authority to lease the lands, to protect them from waste and damage, and to apply the funds arising from them to the purposes prescribed by act of Congress. They were also authorized to provide for the erection of one or more schools within their counties, as they should deem right and useful.

November 26, 1821, a fuller and more explicit act was passed, providing for the formation of a literary fund from the proceeds of escheats, confiscations, fines, forfeitures, &c.; for the management of this fund by a board composed of the governor and chief officers of State, with 3 persons chosen by the general assembly; for the appointment by this board of an attorney or agent in each county to see to the collection of the fines and moneys appropriated to the fund; for the distribution of the proceeds of the fund, through 5 to 10 commissioners for every county, to a school or schools in every county, its benefits to be enjoyed, however, only by the poor children of the county, who, with the assent of their parents, should be selected by the commissioners, to be taught reading, writing, and arithmetic. The president and directors of the literary fund were authorized by this act to lease for any term of years which they might deem advisable the lands reserved by the United States for the use of schools in every township, and to apply the proceeds of these leases to the building of school-houses and to the education of the children of the poor. The county school commissioners appointed by them were also authorized to appoint each year a committee of their body to visit all seminaries of learning, academies, and common schools within their respective counties; to examine into the qualifications of the teachers or schoolmasters to educate their pupils in the branches to be taught, and also into their character for morality, sobriety, and capacity to maintain due discipline; to observe the number of the scholars, and how far they were advanced in education; and to report all these things to the president and directors of the literary fund. It was further provided that no schoolmaster should be permitted to take charge of any seminary of learning in the State who should not produce to the president and directors of the literary fund testimonials that he was a citizen of the United States, and qualified to teach the Greek and Latin languages, and that he was of good moral character; provided, that the teacher of a common school should not be required to have the qualification to teach Greek and Latin.

The above law repealed that of February 5, 1818, with another slightly amendatory of the same, and was itself amended in 1824 by a provision in a revised school law for the election annually of 5 trustees of schools and school lands for every township, who were to cause a school-house or school-houses to be built on the sections reserved for the use of schools; to pay the expenses, in whole or in part, out of any money in their treasurer's hands; to employ and pay suitable teachers for the schools, and to lease the school lands and look after the preservation of them.

In March, 1833, an act was passed to provide for the distribution among the counties of the capital of the literary fund, which now had reached the sum of $50,000, this capital to remain invested in productive stock, and its dividends only to be used, as before directed, for the education of poor children in the schools.

THE SYSTEM AS THUS ESTABLISHED.

With slight amendments in 1836 and 1839 and the Revised Code of 1857, the system thus outlined seems to have prevailed until the approach of the civil war, when almost everything in relation to schools and school funds was arrested.

The township trustees appear to have been the chief managers, and academies, as well as common schools, were aided by them in their work, most likely for instructing pupils who had gone on into secondary studies. In the census of 1850 $5,743 from public funds and $50 from taxation are set down as paid to them, and in 1860 $680 from taxation and $44,211 from public funds.

The common schools in 1840 were 382, with 8,263 pupils; the academies 71, with 2,553. In 1850 the common schools, were 762; the teachers, 826; the pupils, 18,746; school income, $254,159, of which $66,118 were from taxes and public funds. The academies were 171, with 297 teachers, 6,628 pupils, and an income of $73,717, of which about one-twelfth was from taxation and public funds. In 1860 the common schools numbered 1,116, with 1,215 teachers, 30,970 pupils, and an income of $385,679, about three-fifths coming from tuition fees. The academies had gone down to 169, but had more teachers, more pupils, and a considerably larger income, the teachers being 430, the pu-

pils 7,974, the income $313,522, about one-seventh from taxation and public funds, the remainder from endowments and tuition fees.

The University of Mississippi was established in 1844; an institution for the blind, at Jackson, in 1852.

SYSTEM AFTER THE CIVIL WAR.

Under the constitution of 1869 — which provided for a State board of education, for State and county superintendents of education, for the maintenance of a public school or schools in each school district at least 4 months in the year, for the establishment of a school fund, and for a poll tax of not more than $2 for school purposes—a new school law became necessary. One was passed July 4, 1870, embodying the above provisions; constituting each county and each incorporated city of over 5,000 inhabitants a school district; giving to the State board control of the school lands and school funds, with power of appointing county superintendents; and making the State superintendent the general supervisor of the public schools, with power to make rules and regulations for them, and with the duty of visiting annually the schools of each congressional district, of holding, at such visit, a teachers' institute, of deciding controversies pertaining to school management, and of making annual report to the legislature. To each county superintendent was given the supervision of the schools of the county, with the duty of visiting each once a term; of examining and licensing teachers for them, and of making to the State superintendent annual report respecting them; to the State auditor an enumeration of the educable children of the county; and to the State board a description of the condition of the school lands and school funds within the county committed to his charge. The schools were thrown open to every youth between the ages of 5 and 21 residing in the districts where they were taught, and all were to have equal advantages, without distinction. The Bible was not to be excluded from the schools, and no person was to be permitted to disturb or molest them.

The revision of the laws in 1871 embodied essentially the same provisions, with the additions of making the State superintendent president of the board of education; of requiring him to have the school law printed and distributed; of giving him an office clerk to aid him, and of providing for the government and guidance of a State normal school, which had been established the year before at Holly Springs.

The system was a good one, and under more favorable circumstances might have wrought out most beneficent results. But, imposed under the stress of a political necessity on a largely unwilling and reluctant population, opening its full privileges to poor whites and colored youth equally with the ones by whom these had been despised, and having often among its administrators officers and teachers from the North, it met at first, in many instances, with violent and bitter opposition. Schools sometimes were burned, northern teachers not seldom driven off, and obstructions thrown, in various ingenious methods, in the way of instruction of the colored population. These difficulties have been greatly overcome as time advanced, and the benefit of an educated rather than an ignorant laboring class is realized. But later legislation has crippled very much the efficiency of the school system, and though the attendance on the schools has gone on increasing, the number of teachers in them, the expenditure upon them, and the average length of the school term have all, as may be seen from the statistics, very much decreased.

STATE SUPERINTENDENTS.

These, as given by the existing holder of the office, have been: H. R. Pease, from 1870 to 1873, inclusive; T. W. Cardozo, from 1874 to 22d March, 1876, inclusive; T. S. Gathright, from April 4, 1876, to August 31, 1876, resigned; Joseph Bardwell, from September 1, 1876, to December 31, 1877. The two latter are appointments to fill an unexpired term.

ELEMENTARY INSTRUCTION.

THE PUBLIC SCHOOL SYSTEM IN MISSISSIPPI.

The report of Superintendent Bardwell for 1875–'76 is occupied chiefly with a discussion of the question of the right of the State to sustain free schools by taxation, in which he quotes largely from an address delivered by Hon. H. H. Chalmers, associate justice of the supreme court of the State of Mississippi, before the literary societies of the University of Mississippi at its last annual commencement. In this address the rightfulness of taxation for education is affirmed and sustained on various grounds, but chiefly on grounds of public interest.

The State superintendent concedes that the present system has faults which should be corrected; that in some features it was at one time pressed so far beyond the requirements and the ability of the people as to become a burden rather than a blessing. As a natural result, at the last meeting of the legislature, the principle of reaction set in, and it would be contrary to ordinary analogy if, in some respects, the pendulum had not swung to the opposite extreme. Such, he suggests, has been characteristic of recent legislation on the subject of the county superintendency. At the last session of

the legislature the salaries of county superintendents were reduced, and they were relieved from the duty of a personal inspection of the schools in their respective districts. The necessity of an amendment to this law restoring the former provisions is strongly urged upon the legislature.—(Report of State superintendent, 1875–'76, pp. 3–15.)

CITY SCHOOL SYSTEM.

VICKSBURG.

Organization.— In Mississippi, each city of 3,000 or more inhabitants, unless the subject of special legislation, forms a school district, governed in educational matters by a board of 6 school directors, chosen by the resident voters.

Statistics.— The number of children of legal school age, between 5 and 18 years, is 3,400; enrolment in public schools, 1,545; average daily attendance, 950. The estimated enrolment in parochial schools is 300; number of teachers in public schools, 24; number of school rooms, both for study and recitation, under one teacher, 23, and 4 of these are for high school pupils. The salary of the assistant teachers in primary schools is $585. In grammar schools it is $731; that of principals in grammar schools being $975. Both sexes are paid an equal salary. The amount expended for school purposes during the year was $19,642.14. Average expenses per capita on average daily attendance, $20.56.—(Special return from city superintendent, Charles E. Bent.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

The State normal school at Holly Springs and the normal department of Tougaloo University, both for colored students, seem to be the only schools in operation for the training of teachers. The school at Holly Springs had an attendance of 88 students, 29 men and 59 women. The school is sustained by the State, making tuition and text books free. Vocal and instrumental music and drawing are taught. In the normal department of Tougaloo University there was an attendance of 61 students. The elementary course covers 2 years, the advanced course, 1. Music, vocal and instrumental, is taught. Tougaloo University has been the means of raising a large number of the freedmen from the lowest depths of ignorance and degradation and making them intelligent, refined students and teachers. A farm of 500 acres furnishes employment for such of the young men as wish to pay a part of their expenses in labor, while the boarding hall gives employment to that class of the young women.—(Catalogues of State Normal School and of Tougaloo University, 1875–'76.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Beyond the preceding account of 4 rooms in Vicksburg being used for high school exercises, no distinct information respecting high schools in this State has reached the Bureau, though the existence of such in the cities and larger towns is to be supposed.

PRIVATE SECONDARY SCHOOLS.

In 3 schools for boys, 3 for girls, and 3 for both sexes, outside of the public school system, there have been reported to this Bureau 492 pupils under 30 teachers. Of these, 98 are in classical studies, 27 in modern languages, 62 preparing for a classical course in college, and 43 for a scientific course. Drawing is taught in 4 of these schools, vocal music in 3, and instrumental music in 3. A chemical laboratory is reported by 1, and libraries in 3, aggregating 21,121 volumes.

PREPARATORY DEPARTMENTS.

Four preparatory departments report 6 teachers and 290 pupils, 36 of whom were preparing for classical and 69 for scientific courses.

BUSINESS COLLEGE.

One business college reports 10 teachers and 100 students; of the latter, 5 study phonography, 20 telegraphy, and 75 French. The common English branches and correspondence, penmanship, book-keeping, higher mathematics, surveying, and commercial law are taught. There is a library of 100 volumes.

SUPERIOR INSTRUCTION.

UNIVERSITY OF MISSISSIPPI.

The plan of instruction here embraces three general departments, viz, preparatory education; science, literature, and the arts, and professional training. In the department of science, literature, and the arts are included five distinct courses of study, three of which are undergraduate parallel courses, and two post graduate courses. The three undergraduate courses lead to the degrees of bachelor of arts, bachelor of science, and bachelor of philosophy, the latter covering only 3 years, the others 4. The de-

partment of professional education embraces in its plan a school of law, one of medicine, and one of agriculture and the mechanic arts. The school of medicine is not yet organized.

OTHER COLLEGES.

Alcorn University, at Rodney, is open to both races and sexes, but is practically for the colored race. A recent letter from Prof. Vashon, of this university, states that there are now prospects of a more promising future for it. Nearly all the students are yet in the preparatory department; but three have passed beyond into the freshman class.—(Special return.)

Mississippi College, Clinton, (Baptist,) was chartered as an academy in 1826; as a Presbyterian college in 1830, and in 1850 came under its present management. Its departments are preparatory and collegiate, the latter being divided into several distinct schools.—(Return for 1876.)

Shaw University, Holly Springs, (Methodist,) was organized and chartered in 1870. Its departments are preparatory and collegiate, the latter having classical and scientific departments. Both sexes are admitted.—(Return for 1876.)

Tougaloo University, Tougaloo, established by the American Missionary Association in 1871, for the benefit of the colored race, has as yet no collegiate department, and it has therefore been left out of the college table.

COLLEGES FOR WOMEN.

Six colleges for women report 43 professors and instructors and 3,630 pupils. Of the latter 214 were in the preparatory departments, 406 in regular and 13 in partial courses. The course of instruction covers from 4 to 5 years. The volumes in libraries aggregate 5,400.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The school of agriculture and the mechanic arts of the University of Mississippi, to the support of which two-fifths of the congressional donation for the benefit of agriculture and the mechanic arts have been devoted, is now opened for the reception of students. Agriculture here is to be taught as a profession, requiring varied knowledge and a liberal education, and fully equal in dignity to other professions. Agricultural experiments will be carried on in connection with the farm and garden to such an extent as may be compatible with the requirements of instruction and the means at command. The present endowment is insufficient to accomplish more than a first step toward providing for the requirements of practical instruction, and it is hoped that before long other legislative or congressional aid may be extended to it.—(University catalogue, 1876.)

The agricultural and mechanical department of Alcorn University is sustained by the remainder of the funds received from the congressional land grant. The full course of study is to cover 4 years, but as yet only the preparatory department is in operation.

THEOLOGY.

The warden of the Bishop Green Associate Mission and Training School, (Protestant Episcopal,) reports an attendance during the year 1875–'76 of 14 students for the minis-

try, including three orphans of the clergy, only one of whom is absolutely a candidate for holy orders. One of the 14 has left to pursue a more extended course elsewhere, one has been called away by the dangerous illness of his mother, and one has been admitted to deacon's orders, leaving the present number eleven.—(Report of warden, May, 1876.)

LAW.

The law school of the University of Mississippi comprises in its course a study of the law of real estate, of personal property, torts, general practice, rights of persons, criminal law, and procedure in equity, jurisprudence, and constitutional and international law. Text books are the chief means of instruction. In 1872 the trustees dispensed with the necessity of an attendance of 2 years, and permitted the graduation of students after one year's study, provided a satisfactory examination be passed.—(University catalogue, 1876.)

SPECIAL INSTRUCTION.

EDUCATION OF THE BLIND.

The Mississippi Asylum for the Blind, at Jackson, reports an attendance in 1875–'76 of 26 pupils. The institution is sustained by the State. The amount appropriated for its use during the year was $10,000. In addition to the literary branches, chair seating, mattress making, and broom making are taught. There is a library of 255 volumes.—(Special return for 1875–'76.)

EDUCATION OF THE DEAF AND DUMB.

The Mississippi Institution for the Education of the Deaf and Dumb, also located at Jackson, reports an attendance of 36 pupils, 20 male and 16 female. The branches taught are reading, writing, grammar, geography, general history, physical geography, arithmetic, and the Bible. The plan of instruction followed here is the sign method. The appropriation received from the State last year amounted to $10,000. There are only 12 volumes in the library.—(Special return for 1875–'76.)

LIST OF SCHOOL OFFICIALS IN MISSISSIPPI.

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Laws of Missouri, 1820 and 1822; Revised Statutes, 1835, pp. 563–570; Laws of 1838–'39, pp. 112–148; Revised Statutes of 1855, pp. 1413–1460; Laws of 1858–'59, pp. 69, 70; of 1864–'65, p. 127; General Statutes, 1865, pp. 249–277; Laws of 1870, pp. 127–159; Constitution and School Law of 1875.

FIRST STEPS.

Admitted into the Union in 1821, Missouri received from the General Government the then customary gift of the sixteenth section in every township, for the support of schools within the same, and 72 sections, or two entire townships, "for the use of a seminary of learning," generally understood to be a university for the State. Under acts of December 6, 1820, and December 17, 1822, commissioners for the care and lease of the school lands were appointed by the county courts, the commissioners under the first act numbering 5 for every county, under the second, 2 for every township. These latter were empowered to build a school-house for their several townships whenever the funds derived from rent or lease of the school lands should justify such action.

Except in St. Louis, where, under the voluntary action of the inhabitants, with the sanction of a territorial law, a board of trustees for schools had been appointed January 30, 1817, these seem to have been the only steps toward a school system till the year 1824. In that year an act was passed to constitute each township a school district, with a board of 5 trustees, who were to build or procure school-houses, to appoint teachers and visitors of schools,* to make rules for the government of such as should be established, and, on the demand of two-thirds of the voters in the township, to levy a tax for keeping the schools open as long as might be wished by a majority of those who sent their children to them.

ADVANCEMENT.

Beyond the laws above referred to no important action seems to have been taken till March 19, 1835, when there was a revision of the statutes relating to schools, with a view to "a system of common primary school education as nearly uniform as possible throughout the State." The main changes made in this revision were, (1) the substitution of a board of 3 trustees for townships, in place of the board of 5 provided for in 1824; (2) the delegation to these 3 of some powers of supervision previously directed to be exercised by the visitors, who, however, were still to be appointed by them; (3) the provision for an annual election of them by the people to whom they were responsible; (4) the requisition of biennial reports from them to the county courts as to the condition of the schools, with a like biennial report from the courts to the secretary of state; and (5) the constitution of a State board of education, to be composed of the governor, the State auditor, the State treasurer, and the attorney general, styled "commissioners for literary purposes."

These were decided advances toward a system, with links of connection between all its parts; the main lack being that there was no vitalizing agency intermediate between the State board fixed in its own centre and the township boards distributed throughout the State. This want, at the suggestion of the friends of education, the legislature undertook to supply by the appointment, in 1839, (under a revised school law of February 9, in that year,) of a State superintendent of common schools, to hold office for two years, with commissioners and inspectors for townships. The times, however, were not yet quite ripe enough for progress such as this, nor was the popular feeling in favor of free schools sufficiently strong; for, as the census of 1840 shows, there were in all the State only 642 primary schools at this time (including those of the city of St. Louis) and 47 academies and grammar schools; and of the 18,714 scholars in the whole only 526 are set down as at public charge. The inference is almost inevitable that the greater portion of the schools were private enterprises; and that what few public schools there were must have taken most of their scholars as pay pupils, with only a sprinkling of the poorer class as free through public funds. It does not, therefore, surprise one to find that, at the expiration of a two years' term, the services of a State superintendent of common schools were thought unnecessary, that the office as a separate one was abolished, and that the secretary of state was made again the receiver of the school reports.

Still, things went forward. Population flowed into the State. The newcomers often became renters of school lands. Increasing quantities of these became available as a source of revenue for schools, and increasing numbers of the people wanted schools to send their children to. Hence, in the census of 1850, we find 1,570 public schools reported, with 1,620 teachers and 51,754 pupils; the schools receiving $3,024 from local taxes and $74,807 from public funds, with $7,178 from endowments and $75,761 from other sources, supposed to be tuition fees. This improvement led to a new call for a State superintendency of public schools, at once to maintain the ground thus gained and to make advances greater and fuller still. And as by this time the advantages of such a superintendency had been amply demonstrated in the neighboring States of Iowa and Kentucky, the office was reëstablished in 1853, the term being made two years, and with a single interval (during the confusion of the civil war, 1861–'65) has been continued ever since, with only a change of title from superintendency of com-

*These visitors, 9 in number for each township district, were to visit the schools once in 3 months, to examine teachers, to issue certificates of qualification to such as were approved, and to exercise a general supervisory power over the discipline and course of instruction in the schools.

mon schools to superintendency of public instruction. Of its efficacy as a quickener of educational activity, we have the evidence of the census of 1860, which tells of 4,120 public schools, with 4,769 teachers, 175,855 scholars, and an income of $802,856, of which $116,318 were from taxation and $447,146 from public funds; the schools nearly three times as many as ten years before; the funds from the people and the State toward the support of them more than seven times as great. "*Toward* the support of them" is said, for they were not yet free schools in the full sense, a considerable portion of the annual income being still from "other sources" than endowments, taxes, and public funds.

A REVISED SYSTEM.

The change of circumstances resulting from emancipation of the slaves during the war and from the raising of these to the rank of citizens, required the formation of a new constitution for the State in 1865. This constitution recognized the right of all the children of school age to free instruction in the public schools; and while allowing separate schools for children of African descent, required that "funds provided for the support of public schools" should be "appropriated in proportion to the number of children, without regard to color." It called for the formation, from the United States land grants and other sources, of a public school fund, to be securely invested and sacredly preserved; the annual income of which fund, with so much of the ordinary revenue of the State as should be necessary, was to be faithfully appropriated for the establishment and maintenance of the free schools and university provided for. No township or school district, however, was to receive any portion of the public school fund, unless it should have maintained a school for at least three months in the preceding year. And in case the fund should prove insufficient to sustain a free school four months in every year, the general assembly was authorized to provide by law for remedying such deficiency by the levying of local taxes for school purposes.

The personnel of the State board of education was also changed by this constitution, the governor, State auditor, and State treasurer being dropped from it, and the members of it made to consist of the secretary of state and attorney general, with the State superintendent, whose term was lengthened to 4 years, and who was to be ex officio president.

In accordance with this constitution a new school law was prepared and included in the general statutes of 1866, providing for the organization and support of the university, and for the reorganization, support, and maintenance of common schools. By this law every congressional township was to constitute a school district, with subdistricts, governed by a board of school directors composed of three persons, elected for terms of 3 years, one to be changed each year, a township board being composed of the clerks of these subdistrict boards. The former were to control the local school affairs of their subdistricts; the latter to have general custody of the school property, with control of the central and high schools of their township. Separate schools for colored children were to be provided where the number of such in a district should exceed 20. Where it was less than 20 the amount of school money to which any smaller number was entitled might be used as should best secure the education of them, the terms and advantages of schools for all this class of children to be equal in all respects to those of the same grade for any other class. Besides the State superintendent, who was allowed an assistant at $2,000 salary, county superintendents were to be elected under this law, in place of former county commissioners, to hold office for two years, and to have, under the direction of the State superintendent, the immediate supervision of all matters pertaining to public education in their counties, such as the instruction of subordinate school officers as to their duties, the supplying of them with the needful forms, the examination and licensing of teachers, the visitation and examination of the schools, the holding of semi-annual teachers' institutes, and the assisting of the State superintendent in securing uniformity of text books. Returns from teachers to the township clerk, from him to the county clerk, and from the latter to the State superintendent, as the basis of an annual report from him, were also provided for.

Incorporated cities, towns, and villages were allowed to organize for school purposes, with special privileges, under boards of education composed of 6 directors elected for terms of 3 years each, one-third to be changed each year. The usual powers of city boards were given these, especially that of organizing and maintaining, besides primary schools for rudimental studies, schools of higher grade, as they might be called for; all schools, however, to be free to the children of all actual residents within the district.

FURTHER REVISION.

By act of March 1, 1870, the portion of the above law which related to incorporated cities, towns, and villages was, with other acts on the same subject, slightly modified. An act to aid in the establishment of two State normal schools was approved on the 19th of the same month, one school to be located south of the Missouri River, another north of it; while on the 14th of the month the Lincoln Institute at Jefferson City was constituted a State normal school for the training of colored teachers.

At the same date with the normal school law (March 19, 1870) an act to provide for the reorganization and support of public schools was passed without important change as to State, county, or local school officers, except that township boards had their discretionary power of establishing central or high schools restricted by the requirement that they first submit to a called meeting of the voters an estimate of the cost of such a school and get the sanction of the meeting. The number of school children necessary for a separate colored school was brought down from 20 to 15; and if the local officers should neglect to establish such schools, the State superintendent was authorized to establish them. A school day was declared to consist of 6 hours occupied in school; a school month, of 4 weeks of 5 such days each; while the school year was to be understood as commencing with the third Saturday of April in each year.

In 1875 a new constitution was adopted containing substantially the provisions of the former one, with some slight change, such as that the governor was again made a member of the board of education; that the having of separate schools for colored children was made imperative, and that instead of so much of the public revenue as should be sufficient, not less than 25 per cent. of it was directed to be set apart, exclusive of the interest of the school fund and sinking fund, for the support of public schools, while all appropriations to sectarian schools and institutions were forbidden.

In a new school law, made necessary by this constitution, the only important change of school officership, beyond that noted in the board of education, was the restoration of the old county school commissioners in place of county superintendents of schools. The duties to be performed were not materially changed, but unfortunately the office was stripped of its efficiency by a clause which left it to the people of the counties to determine whether they would have the exclusive and entire services of the commissioner; and as times were hard and funds were low, only one county in the State has seen fit to avail itself of these full services. The system is thus greatly crippled from want of efficient supervision of the schools and instruction of the teachers through county institutes. But this hindrance to progress the present active State superintendent is endeavoring to have removed.

SUPERINTENDENTS.

The State superintendents have been: Peter G. Glover, 1839–'41; John W. Henry, by special appointment, 1853–'54; E. C. Davis, 1854–'57; William B. Starke, 1857 to December, 1861, when commenced an interregnum of 4 years, during which the secretary of state did the office duty of State superintendent; James Robinson, by special appointment, 1865–'67; Ira Divoll, 1871, removed by death soon after entering on his office; John Monteith, appointed for the unexpired portion of Mr. Divoll's term, 1871–'75; R. D. Shannon, present incumbent, 1875–79.

ELEMENTARY INSTRUCTION.

POOR SCHOOLS.

Many districts are cursed with poor schools, conducted by so-called teachers who are so incompetent as to be unable to calculate the average daily attendance of pupils. The children come out of these schools with lazy habits, with characters fashioned in very indifferent moulds, satisfied with a superficial and shallow view of any and all truths presented to their attention through life, and with a smattering and imperfect knowledge of a few disjointed facts, which serve as a hindrance rather than an aid to further progress. It is true the law requires persons to possess certain qualifications before they shall be permitted to teach; but this provision, like the requirement that a man shall be competent to teach in the public schools before he can hold the office of county commissioner, is a mere statute, without any means of enforcement. These schools are governed by boards of directors who are ignorant of the law, and are unable to understand it without explanation. The district clerks, in such cases, are ignorant of their duties, and of course cannot perform them.—(Report of Superintendent Shannon, 1875–'76, p. 5.)

SHORT SCHOOL TERMS.

The legal school term, (four months in a year,) is too short. What the child learns in four months cannot be wholly retained through the succeeding eight months of vacation. Much is forgotten, and when school is reopened much of the same ground must be gone over again. In some districts, moreover, no schools have been maintained for a year or two at a time. The superintendent thinks that better schools might be maintained for a longer term, without increase of local taxation, if the school funds were properly managed; and it is recommended that a law be passed requiring each district to maintain a school for not less than six months every year.—(Report, 1875–'76, p. 7.)

LOSSES OF SCHOOL MONEY.

The superintendent says that there is abundant evidence of the mismanagement of school funds. Vast sums of money are annually drawn from the pockets of the people, ostensibly for public school purposes, from which the children derive no benefit. Hundreds of thousands of dollars are squandered and find their way into the pockets of individuals who have no right to them. In St. Louis County alone the schools have recently lost nearly $150,000. County officials fail to fully collect and properly apply the proceeds of fines, forfeitures, penalties, and sales of estrays, which the law directs to be placed in the permanent school fund. They violate law and disregard justice by putting school funds into county warrants and county and township bonds, and by appropriating them to almost all conceivable purposes not contemplated or permitted by the law. They are frequently very careless or negligent in lending school moneys in respect to obtaining ample security. The law is disregarded in not making school fund liens the first upon real property, and responsible personal security is not obtained. From these causes the aggregate annual loss to the permanent school fund must be immense, but there are no means of accurately computing the amount. There is scarcely a county in the State that sends reports from all its school districts, and in some instances there are as many as 20 delinquents.—(Report of State superintendent 1875–'76, p. 4.)

NEED FOR COUNTY SUPERVISION.

These and other evils affecting the efficiency of the school system, which the superintendent mentions, arise almost wholly, as he remarks, from the fact that there are no persons in the counties whose special province it is to do the work necessary to prevent such evils. Whoever undertakes to supervise and guard the various school interests of a county and to protect the people of it from injustice and imposition, must devote his best energies and ability to the work, and give to it his closest and most constant attention. To do this he must be compensated for his time and labor. The superintendent, then, asks that a law be passed at once providing for an agent in each county, who shall have in charge the welfare of the schools, and whose duty it shall be to examine teachers, visit every school district in the county, counsel and instruct the teachers, explain the school law to district clerks and directors, point out their duties under it, and require them to make the reports which the law requires. It should be his duty to examine the county records at stated intervals, to inform himself as to the proper disposition under the law of the township, county, and swamp land funds, and of fines, forfeitures, penalties, &c.; to examine into the nature and sufficiency of the securities held for school moneys loaned, and to institute legal proceedings when necessary, to protect the funds or make their management conform to law. He should be under the control of the State superintendent, have a fair salary, and be required to take oath and give ample bond for the faithful performance of his duty.—(State superintendent's report, pp. 6, 7.)

COLORED SCHOOLS.

The report as to colored schools is not as favorable as was that for the previous year. The State superintendent was compelled to enforce the law as to their establishment by calling in the aid of the grand juries many more times in 1876 than in 1875. In many cases the difficulties arose solely from the ignorance of district officers as to the requirements of the law, and in all such instances an explanation of the law proved sufficient. But in some instances there was an evident evasion of it and a violation of the constitution. The people of the State, as a rule, however, have, says the superintendent, performed their duty under the law promptly and fully.—(State superintendent's report, 1875–'76, p. 17.)

CITY SCHOOL SYSTEMS.

KANSAS CITY.

Officers.—A board of education of 3 members and a city superintendent of schools appointed by the board.

Statistics.—Number of persons in the city between the ages of 6 and 20 years: white, 6,289; colored, 837; total, 7,126. Enrolment of pupils, 4,267; average daily attendance, 2,550; per cent. of attendance on average number belonging, 92.09. Number of teachers, 60, of whom 11 are men and 49 women.

Remarks.—The schools are graded as primary, intermediate, grammar, and high, the course of instruction in the latter, however, having been recently abridged to two years. It is hoped that at no distant day it may be reëstablished with a complete course which will connect the common schools with the university.

The work of the year has been satisfactory. Decided improvement was made in teaching some of the branches, while the instruction in others was more thorough, systematic, and rational than ever before. Reading was better taught, and there appeared to be much greater interest taken in the subject than formerly.—(Report, 1875–'76, of J. M. Greenwood, superintendent public schools.)

ST. JOSEPH.

Organization.—Not stated in the report from which this is taken. By law cities, towns, and villages not under special laws, are, in educational matters, under a board of 6 directors chosen for terms of 3 years each, one-third being changed each year.

Statistics.—The number of school population, 6 to 20 years of age, was 6,415, of whom 5,775 were white, and 640 colored. Number of white children attending public schools, 3,113; colored, 397; total, 3,510. Average daily attendance, 2,145; number of days schools were taught, 200. Number of teachers, men, 11; women, 42; total, 53. Monthly salaries of teachers, men, $87.45; women, $57.58. Average daily cost of each pupil for tuition, .054. Number of children that may be seated in the school rooms, 3,000. Value of property owned by the district, $118,095. Expenditures for school purposes during the year, $63,945.32.—(Report of E. B. Neely, secretary of school board, in State report, 1875–'76, p. 69.)

ST. LOUIS.

Organization.—The schools are under the control of a board of president and directors of 26 members, 2 from each ward of the city, who are elected by qualified voters of the city for the term of 3 years, one-third going out each year. There is a city superintendent, who, with his two assistants, exercises a general supervision over the public schools of the city.

Statistics.—Estimated population of the city, 475,000. Number of children between 5 and 21 years, (legal school age,) 161,496. Total enrolment in day and evening schools, 43,663; of these, 1,503 were colored. Number of teachers in day and evening schools, 785. Number of schools: district, 44; evening, 24; colored, 5; normal, 1; high and branch high, 6; total, 80. The receipts for school purposes from all sources were $955,385.73. Of this sum $761,527.74 were from city school taxes and $96,743.60 from the State school fund. Total expenditures, $772,996.34, of which $553,241.52 were for salaries of teachers and superintendents. The cost of education per capita, including tuition and incidentals, based on the enrolment in all day schools, 38,300, was $15.30. This embraces children in all the schools, high, normal, district, and Kindergarten.

Remarks.— Owing to the fact that the city grows more rapidly in population than in the amount of wealth per capita, the expenses of the schools have increased faster than the sources of income. Provision has been required for the accommodation of an average of nearly 2,500 new pupils each year. To supply this need the plan has been adopted of making additions on lots adjoining large schools already established, saving half the expense required in building independent schools, as well as much of the current expense of running them after they are opened. By means of such economical measures it is expected that the schools will be kept up to their present standard. The increase of the number of pupils in the day schools during the year was 2,449, while there was a decrease in the attendance upon evening schools of 478. The ratio of children enrolled under 10 years of age continues to increase, but if allowance be made for the 1,041 children enrolled in Kindergärten it will be found that the average age of pupils in the other schools has slightly increased.

The "half time system" has been used more extensively the past year, and, in some cases, to the positive advantage of the pupils. This practice has been allowed only in the lowest grade, or first year of schooling. The efforts of teachers to secure punctual habits are gradually working a reform in the ways of the community. The number of cases of tardiness has reached the ratio of 52 to the 100 pupils enrolled during the year. There were 964 more pupils studying German in 1875–'76 than during the previous year. Of this increase 565 are German-Americans, and 399 Anglo-Americans.

Kindergärten.—The Kindergarten experiment has prospered the past year beyond all expectation. The number of schools has increased to 12. In these there were 12 paid teachers, styled "directors," and 38 unpaid teachers, who volunteered their services for the sake of learning the theory and art of Fröbel. Of the 1,041 children enrolled, 533 were boys, and 508 girls. The age prescribed by the board was the sixth year. After all applying at this age were enrolled, others were admitted who had not completed their fifth year, and some who were in their seventh. The president of the board of education is in favor of admitting children to these schools at least as early as the completion of the fourth year, that the training may be begun when the muscles are not yet hardened by use and the faculties have not yet received a permanent bias in other directions. He regards the training of the hand and eye given here as of the greatest importance in the development of skill, even beyond that obtained in the industrial drawing classes.

The Normal School now graduates more than enough to furnish teachers for the public schools. Much has been done to raise the standard of graduates by increasing the length of the time for the course, making it now two years and a half, and also by requiring higher qualifications in scholarship of those who enter, candidates for admission from the high schools being required to have completed, in a satisfactory manner, at

least one year's work of those schools. The enrolment during the year was 291, all girls; graduates, 82.

The High Schools report an unprecedented increase in numbers enrolled, reaching 437, 153 boys and 284 girls; and the graduation of a senior class of 100 pupils.—(Report for 1875–'76 of the board, and of the superintendent, Hon. William T. Harris.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

At the first session of the State Teachers' Association, held in St. Louis in 1856, the friends of education began to make organized efforts to secure State normal schools. The St. Louis Normal School for the education of teachers for the city schools was established in 1857, and has ever since been in successful operation. The North Missouri school, at Kirksville, was established in 1867, and was for more than 3 years conducted as a private enterprise. In 1872 it was accepted as one of the State normal schools, for which the legislature made provision in 1870. The other one was located at Warrensburg, and another has since been established in the southeastern portion of the State. All these schools are reported to be in a prosperous condition, the number of students steadily increasing from year to year. That of the first district, at Kirksville, had an attendance in its normal department of 627, of whom 208 were men and 419 women. In the second district normal school, at Warrensburg, there was an attendance of 414, 241 men and 173 women. In that of the third district there were 281 students, 153 men and 128 women. Number of graduates, 110.—(Report of State superintendent, 1875–'76, pp. 74–87.)

Lincoln Institute, at Jefferson City, is doing a good work in the training of colored teachers. The advancement of its students is rapid, and calls are frequently made on it to supply teachers to counties in different sections of the State. The number of students was 118, less by 8 than the preceding year. This decrease was the result of the demand for colored teachers, which has drawn away from the institute many of its more advanced students. There were, however, 11 graduates from the two years' course, against 9 the preceding year, and 2 who completed a full 4 years' course. Instrumental music and needlework are taught as extras.—(State report, 1875–'76, pp. 88, 89.)

NORMAL DEPARTMENTS.

The normal department of the State University has, since its opening in 1868, graduated 8 classes, numbering, in the aggregate, 56 pupils. The curriculum embraces a full academic or collegiate course, which prepares teachers for the position of tutors in colleges or principals of academies or high schools, and also a 2 years' course intended as a preparation for teaching in the common schools. Normal departments also exist in Central College, La Grange College, and Thayer College.

EDUCATIONAL JOURNALS.

The Western, a well conducted monthly magazine, published at St. Louis, has given in its later pages in each number considerable local school information, while the American Journal of Education, published in the same city, has in its monthly issues aimed to give also information on school matters respecting all the Southwestern States. Both have been useful.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The State superintendent makes no report as to the public high schools for 1875–'76. The high school in Kansas City had an attendance of 249 pupils, under 6 teachers. The high school at St. Louis reports an enrolment of 437, and the branch high schools of 897, making 1,583 pupils in the State known to be studying the high school branches. The junior or lowest class in St. Louis is divided among the several branch high schools, while the second, third, and senior classes find accommodation in the central high school building.

PRIVATE SECONDARY SCHOOLS.

In 3 schools for boys, 4 for girls, and 8 for both sexes, outside of the public school system, there have been reported to this Bureau 1,342 pupils, under 89 teachers. Of these, 107 were in classical studies, 263 in modern languages, 57 preparing for a classical course in college, and 20 for a scientific course. Drawing is taught in 7 of these schools, vocal music in 7, and instrumental music in 8. Chemical laboratories are reported by 5, philosophical apparatus by 5, and libraries of 100 to 2,000 volumes by 9.

PREPARATORY SCHOOLS AND DEPARTMENTS.

There is an attendance of 1,239 students reported by 15 preparatory departments of colleges, taught by 30 instructors. Of the students, 431 were preparing for classical courses in college, and 189 for scientific.

BUSINESS COLLEGES.

Six business colleges report an attendance of 1,363 students, under 39 teachers. Ten of the students were studying telegraphy, 88 German, and 14 French. In 5 of these schools the common English branches and correspondence are taught; in 5, penmanship; in 4, book-keeping; in 3, the higher mathematics, surveying, banking, political economy, and phonography; in 1, life insurance; in 4, common law; and in 2, telegraphy. Three report libraries with from 210 to 350 volumes, aggregating 860.

SUPERIOR INSTRUCTION.

STATE UNIVERSITY, COLUMBIA.

The departments at present embraced are (1) the college proper; (2) the normal; (3) the agricultural and mechanical; (4) the school of mines and metallurgy at Rolla; (5) the college of law; (6) the medical college; and (7) the department of analytical and applied chemistry. The collegiate department proper is said to be now organized with as full and complete a course in the classical and modern languages, in mathematics, in literature, and in the natural sciences as is known in American colleges. The studies are adjusted in four courses, viz, those of arts, science, letters, and philosophy. Young women are admitted to all departments of the university upon the same terms as are young men. The Hudson mansion, a large and elegant building, has been fitted up as a special college home for the young women. A matron has been employed as superintendent and manager, and the price of board put at actual cost. Graduates of all colleges in the State authorized to confer degrees and of the State normal schools are admitted to the post graduate course of the university free of charge for tuition.

OTHER COLLEGES.

Central College, Fayette, (M. E. Church South,) embraces preparatory and collegiate departments, the latter comprising schools of mathematics, moral philosophy, English literature, Latin language and literature, Greek language and literature, modern languages, natural philosophy, and physical science.—(Catalogue, 1874–'75.)

Central Wesleyan College, Warrenton, provides a course of study embracing preparatory, classical, scientific, theological, normal, and commercial departments. While both American and German students receive thorough instruction in all the different branches in the English language, all have here an opportunity to become masters of German.—(Circular of college, 1876–'77.)

Drury College, Springfield, (Congregational,) is for both sexes, and embraces preparatory, collegiate, normal, music, art, and ladies' departments. The recent completion of the Walter Fairbanks Hall enables the trustees to place at the disposal of young women an elegant and commodious building. The collegiate department includes classical, scientific, Latin scientific, and Greek scientific courses. Superior advantages are afforded for the study of music in the conservatory of this college, the methods being similar to those pursued in the best conservatories of this country and Europe. There is a normal class for those who intend to become teachers of music.—(Catalogue, 1875–'76.)

La Grange College, La Grange, is open to both sexes, and provides preparatory, scientific, normal, and music departments, and a department of modern languages.—(Catalogue, 1874–'75.)

Lewis College, Glasgow, (Methodist Episcopal,) has preparatory, collegiate, theological, and music departments. A non-resident course, leading to the degree of Ph. B., has been established for the benefit of those whose duties will not permit them to reside at the college. The collegiate department embraces classical and scientific courses, the latter covering only 3 years. Both sexes are admitted.—(Catalogue, 1876–'77.)

Pritchett Institute, Glasgow, (non-sectarian,) is for both sexes, and offers preparatory, collegiate, and post graduate courses; the subjects of study being the Bible, the Latin, Greek, and modern languages, philosophy, history, chemistry, and physics, natural history and geology, English language and literature, mathematics, astronomy, and art.—(Catalogue, 1876–'77.)

Thayer College, Kidder, (Congregational,) is for both sexes, and provides preparatory, collegiate, and normal departments, and a ladies' course for such young women as do not wish to pursue the full college curriculum.—(Catalogue, 1874–'75.)

St. Vincent's College, Cape Girardeau, (Roman Catholic,) is conducted by the priests of the congregation of the mission, and was chartered with university privileges in 1843. The collegiate department covers a period of 5 years, and embraces a complete course of English and classical literature, mathematics and physics, Latin, Greek, and modern languages. There is a theological department, comprising a course of study similar to the studies usually pursued in the ecclesiastical seminaries of this church.—(Catalogue, 1875–'76.)

St. Louis University, St. Louis, (Roman Catholic,) has preparatory, classical, and commercial courses of study; the classical is completed in 6 years, the commercial in 4. The study of French and German is optional in either course.—(Catalogue, 1875–'76.)

Washington University, St. Louis, (non-sectarian,) comprises 5 departments: the academy, Mary Institute, the college, the polytechnic school, and the law school. It is

intended to embrace the whole range of university studies, except theology, and to afford opportunity of complete preparation for every sphere of practical and scientific life. The academy is a preparatory school; Mary Institute is a seminary for young women. In the collegiate department the studies of the freshman year are required; those of the remaining three years are elective. The effort is to make good scholars rather than many graduates.—(Catalogue, 1876–'77.)

William Jewell College, Liberty, (Baptist,) is organized in eight schools, over each of which presides a professor, who fixes the mode of instruction, the standard of graduation, and the method of determining it. Each student is required to select so many of these schools as shall occupy three recitations daily. These schools are (1) Latin, (2) Greek, (3) mathematics, (4) natural science, (5) modern languages, (6) English and history, (7) moral philosophy, and (8) theology. To obtain the degree of bachelor of arts, the student must be graduated from the schools of English and history, Latin, moral philosophy, German, (or French,) and must have passed a successful examination in natural science, the intermediate classes of Greek and mathematics, and have graduated in Greek and mathematics.—(College catalogue, 1875–'76.)

COLLEGES FOR WOMEN.

Ten institutions for the superior instruction of women report an attendance of 922 pupils, under 80 professors and teachers. Of these students there were 240 engaged in preparatory studies, 390 in regular collegiate classes, 10 in partial, and 16 in post graduate courses. All but three of these colleges are authorized to confer collegiate degrees, and their courses of study cover from 4 to 8 years. Four report libraries ranging from 300 to 2,000 volumes, and aggregating 3,000. Vocal music is taught in all these schools, and instrumental in all but 1; French, German, and drawing in 8; Italian in 2, and painting in 7. Four report the possession of chemical and philosophical apparatus; 2, natural history museums; 1, an art gallery; and 3, gymnasiums.

INTERCOLLEGIATE CONTEST.

The Missouri intercollegiate contest took place at Liberty, December 23, 1876. The prize oration was delivered by W. D. Christian, of Westminster College, Fulton.—(Ohio Educational Monthly, March, 1877, p. 102.)

a Includes society libraries.

b Also 18 graduate students.

c Buildings sold under deed of trust, and college to be transferred to another location.

d Total income from all sources.

e Also 5 graduate students.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The Agricultural and Mechanical College, a department of the State University, receives three-fourths of the income of the congressional land grant for its support. It is located at Columbia, Boone County, on a farm of 140 acres, given by the county. Since the opening of the college in 1871, the attendance has been steadily increasing, and the wide spread prejudice against a collegiate education for farmers is rapidly disappearing before the manifestly beneficial results already developed.

The regular course of instruction embraces the subjects usually studied in such schools, and covers 4 years. There is a resident graduate course, and one in horticulture, for young women.—(Report of university, 1875–'76.)

The School of Mines and Metallurgy, Rolla, receives the remaining fourth of the income from the fund derived from the congressional grant. Analytical chemistry, mineralogy, geology, metallurgy, mathematics, (pure and applied,) drawing, (artistic and mechanical,) civil and mining engineering, and military tactics, form the main branches of study at this institution. The apparatus is of the most approved kind; the laboratory in good working order; and the library, consisting mainly of technical works, contains a large number of rare volumes.—(University report, 1875–'76.)

LAW.

The Law College of Missouri University, opened in 1872, provides a course of instruction covering 2 years, and embracing the various branches of the common law and of equity, commercial, international, and American and English constitutional law, and criminal and federal jurisprudence. The mode of instruction is by daily examinations in text books, daily lectures upon special titles, and moot courts. A well selected law library, as well as the general library of the university, is open to the students.—(University catalogue, 1875–'76.)

The Law School of Washington University is designed to prepare young men for the practice of the profession to a degree far above the ordinary standard of admission to the bar. The course of study embraces instruction in international, constitutional, and admiralty law, the jurisdiction and practice of United States courts, real property law, equity jurisprudence, evidence, pleading and practice, mercantile law and contracts, corporations, insurance, domestic relations, torts, and some elements of criminal jurisprudence. Instruction is given by daily examinations upon assigned portions of standard treatises as well as by lectures upon practical topics, and by moot courts held weekly. The law library numbers upward of 3,000 volumes. The full course includes two annual terms, each of six months.—(University catalogue, 1876–'77.)

MEDICINE.

The medical college of the State university, organized in 1873, claims to provide a course of instruction as full and complete as that of any school in the country. The students are examined each day upon the lectures and recitations of the previous day, and great care is taken to avoid cramming. In order to be graduated students must have a standing of 85 per cent. in anatomy and physiology, of 60 per cent. in botany, chemistry, toxicology, and pharmacy, and 75 per cent. in all other studies.—(University catalogue, 1875–'76.)

St. Louis Medical College, St. Louis, has a regular course of instruction of 2 years, but students are advised to spend an additional year in preparation, and to those who are willing to follow it a graded course of 3 years is offered without additional charge for the third year.—(Announcement, 1876–'77.)

Missouri Medical College and Hospital, St. Louis, embraces in its 2 years' course of lectures all the branches usually pursued in such schools.—(Announcement for 1876.)

The Homœopathic Medical College, St. Louis, prescribes a 2 years' course of study, and also provides a 3 years' graded course, which students are recommended to take. This is divided into junior, scientific, and senior classes.—(Catalogue, 1876–'77.)

The Missouri School of Midwifery and Diseases of Women and Children, St. Louis, has been established more especially for the purpose of training women to be skilful attendants upon their own sex.—(Announcement, 1875.)

The Missouri Dental College, St. Louis, recognizing the fact that two years are too short a period in which to gain a thorough scientific knowledge of the science of dentistry in its present advanced position, has established a 3 years' progressive course of instruction, which students are encouraged to pursue, instead of the 2 years' course required for graduation.—(Catalogue, 1876–'77.)

THEOLOGY.

The Jeremiah Vardeman School of Theology, at William Jewell College, provides a regular course of 2 years for those who are prepared to proceed with the study of the Scriptures in Greek and Hebrew. For others a course is so arranged as to be pursued in connection with literary studies.

The German Lutheran Theological School, at St. Louis, Missouri, has a theoretical course of 3 years followed by a practical one of 2, embracing all the branches usually taught in schools of theology.—(Catalogue, 1875–'76.)

St. Vincent's College, (Roman Catholic,) has a theological department comprising precisely the same course of study as is usually pursued in ecclesiastical seminaries.—(Catalogue, 1875–'76.)

The theological course at Lewis College has been established in response to a demand in the Methodist Church for a shorter course in theology. Young men preparing for the ministry can here pursue many of the studies required by the discipline of the Methodist Church under the guidance of competent instructors.—(Catalogue, 1876–'77.)

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

The Missouri Institution for the Education of the Deaf and Dumb, at Jefferson City, reports for 1875–'76 an attendance of 224 pupils. The number is increasing rapidly from year to year. While in 1873–'74 the increase was 9 per cent., it rose in 1875 to 10, and in 1876 to 19. As the dormitory capacity of the institution is now almost fully occupied, it will, at the present rate of increase, be overcrowded in 1877 unless additions to the buildings be erected. The institution has now in successful operation a

shoeshop and cabinet maker's shop, both of which have skilled workmen at their head. During a part of each day 18 pupils are engaged in making boots and shoes, 12 in the manufacture of furniture, and 9 in learning the art of printing, being allowed to spend a part of each day for this purpose at the printing office of one of the city papers. Great interest is manifested by all in their employments, and they give promise of acquiring such skill as will afford them a certain support.

As regards the effort to teach articulation, it is stated that after a full and fair trial, extending over two years, the conclusion has been reached that in the great majority of congenital cases it cannot be successfully taught, while in many cases of semi deafness it has proved very successful.—(Report for 1875 and 1876.)

EDUCATION OF THE BLIND.

The Missouri Institution for the Education of the Blind, St. Louis, teaches in its literary department, besides the common English branches, natural philosophy and civil government. Reading is taught in the French or vertical point system, as well as the combined print and the Howe lower-case letter. The boys spend one or more hours each day in the workshop, where they learn broom making. In the girls' industrial department hand and machine sewing, knitting, tatting, and fancy beadwork are taught. A number of the girls make all their own clothing in a most creditable manner. In the music department the use of 9 different instruments is taught, and there are also classes in music printing and musical composition. The progress of the pupils in this department is very good.—(Report, 1874.)

EDUCATIONAL CONVENTIONS.

During the last week of December, three important conventions met at Mexico, Mo., resulting in a great impetus to popular education in Missouri.

STATE TEACHERS' ASSOCIATION.

The fourteenth annual meeting is said to have been characterized by ability, enthusiasm, and practical work. The attendance was large and the interest intense. The addresses and papers were unusually able and pointed. Governor Hardin spoke in eloquent terms of the determination of the State to furnish all the best possible facilities for education. Professor Tice discussed the weather, and Hon. W. S. Switzler expounded the educational bearings of the new constitution. Some of the more important measures of the convention are its pledges to coöperate with and sustain the State superintendent and to encourage public libraries. Resolutions were also passed recognizing the necessity of county supervision, and authorizing the State superintendent to hold normal institutes during July and August in each congressional district.—(American Journal of Education, February, 1876, page 10.)

CONVENTION OF COUNTY COMMISSIONERS.

This convention, it is hoped, is the beginning of a complete revolution in the educational work of the State. A few of the measures agreed upon as necessary are the gradual perfection of the present school law and opposition to frequent changes; the increase of the duties and compensation of county commissioners; the reëstablishment of county and normal institutes; a strictly public quarterly examination of teachers, and an annual meeting of the commissioners as a section of the State association.—(American Journal of Education, February, 1876, page 10.)

NORMAL CONVENTION.

The faculties of the several normal schools, with the State superintendent as chairman, met in convention and adopted a uniform plan of work to be submitted to the respective boards of regents. The features embraced in it are a uniform course of study, the same standard for admission and graduation, and the diploma for the advanced course to include a State certificate.—(American Journal of Education, February, 1876, page 10.)

(Special report to United States Bureau of Education for 1874–'75 and 1875–'76, by Hon. J. M. McKenzie, then State superintendent of public instruction.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

A sketch kindly prepared for this report by Hon. J. M. McKenzie, late State superintendent of instruction, has only needed slight additions from the more recent State reports.

EARLY EFFORTS AND DIFFICULTIES.

Nebraska began its separate existence as a Territory under the Kansas-Nebraska act of 1854. The first census taken in the fall of that year showed a population of 4,494 "squatters," as no title to the land could yet be acquired. The first territorial legislature convened at Omaha January 15, 1855. During this session, March 16, 1855, a school law was enacted, the main features of which were separate districts, district school tax and rate bill, a county school tax of three mills, and a territorial and county superintendency. The territorial librarian was superintendent of public instruction ex officio. James S. Izard was the first, H. C. Anderson the next, and John H. Kellom the third.

At the first session of the legislature three educational institutions were incorporated: Simpson University, at Omaha City; Nebraska University, at Fontenelle; and Nebraska City Collegiate and Preparatory Institute. Only one of these, however, even attempted a real existence, Nebraska University. It lingered until 1872, when it was merged in Doane College, at Crete.

The honor of teaching the first school on Nebraska soil is somewhat disputed. Undoubtedly several claimants may aspire to the honor. Probably as strong a title as any may rest in Major J. D. White, who taught a subscription school in a loghouse in Nebraska City during the fall and winter of 1854.

Nothing was done in the interest of public schools to any extent for the two or three years succeeding the organization of the Territory. Claims, town sites, and corner lots occupied the attention of the people; speculation ran high, but school matters were below par.

Hon. J. H. Kellom, in a report to the legislature, December 12, 1857, says: "Judging from the meagre materials handed over to me by my predecessor, (H. C. Anderson,) and from the reports of the few county superintendents, I am painfully convinced that the interests of education and the value of good common schools have not secured that attention which their importance demands. Reports from four counties have been received. Nemaha has 9 districts, $400 school money, and 355 scholars. In Otoe a tax of 3 mills on a dollar has been assessed, and 3 districts with $78 school money reported. Richardson County has 2 schools in operation, and no fund. Douglas reports 3 school districts and 4 schools now in operation."

This is the first report on record made to the legislature, and shows poorly for a Territory containing from fifteen to twenty thousand inhabitants.

At the session of the legislature held September, 1858, a new school law was enacted, which was substantially the Ohio law, modified to suit (as it was thought) the condition of the Territory. The separate district plan was abolished and a township plan adopted. County superintendency was abolished and a territorial school commissioner provided for. The duties of county superintendent were assigned to a committee of three. This was a very cumbersome law, and education made but little progress while it remained in force. Under it Hon. William E. Harvey was chosen school commissioner, and he, during the first year of his administration, made a great effort to organize schools.

In his first report to the legislature, January 4, 1860, he says: "Much difficulty has been experienced in the organization of our common school system from the indefiniteness of the word 'township' in the law; and as there are no civil or municipal townships in the Territory, and no law for their organization, but little could be done outside of the incorporated cities and towns. Consequently a full enumeration of scholars has not been taken in the rural districts."

The taxes due the territorial school fund from the several counties that were not paid over at this time amounted to $15,216.60.

The summary of the several county reports on education was as follows: Number of counties reported, 17; number of districts, 46; number of scholars, males 2,399, females 2,368, total 4,767; number attending school, 1,310, or nearly 28 per cent.; number of teachers, males 20, females 22, total 42; number of school-houses, 15; number of schools, 29; value of school-houses, $1,900. During the year 1860 selections of indemnity school lands, amounting to 8,553 acres, were made.

At the next session of the legislature Mr. Harvey made a very full report of the work of his department for the year ending January 1, 1861. The legislature ordered 3,000 copies of this report, embodying the school law, to be printed and distributed to the several school districts.

This was the only report on education published while Nebraska was a Territory; the next published report being that of Hon. S. D. Beals in 1870.

The report of 1861 showed a great increase in all respects on the preceding year, as shown by the following summary:

Number of organized counties, 19; of school subdistricts, 139; of children of school age, (males 3,763, females 3,278,) 7,041; of public schools, 108; of select schools, 23; of pupils attending primary schools, (males 1,377, females 1,177,) 2,554; of pupils in high schools, 376; per cent. of attendance, 41; number of teachers in public schools, (males 38, females 76,) 104; total paid for teachers' wages, $4,772; value of school-houses, $9,188.22; number of school-houses, 34; amount of territorial school tax, $6,352.33.

At the legislative session of 1861 the office of school commissioner was abolished, and the duties devolved upon the territorial auditor, which position Mr. Harvey filled till January, 1866. But, as his auditorial duties necessarily confined him largely to his office, and hindered attention to educational affairs, no great interest was taken in school matters from 1861 to 1866, and the educational advantages possessed during these days were exceedingly limited. Select schools had the ascendency, and several such schools found a liberal patronage in Omaha, Nebraska City, and elsewhere.

In the fall of 1862 the citizens of Pawnee City established a school of seminary grade, called the Nemaha Valley Seminary and Normal Institute. This school was successful far beyond the expectations of any of its friends. Students came from a great distance, and the school continued until the State normal school offered the principal teachers a better opportunity and a wider field of labor.

During the winter of 1866 the citizens of Peru, a small town on the Missouri River, sixteen miles below Nebraska City, commenced the enterprise which eventually gave them the State normal school. They raised by subscription about $8,000, and erected a school building 80 feet long by 40 feet wide, and three stories high. In the fall of 1867 this building, with 60 acres of land, was deeded to the State, to be used as a State normal school.

In the summer of 1866 the people of Brownville and also those of Nebraska City commenced the erection each of a large high school building. The building at Brownville cost the city about $16,000, that at Nebraska City about $30,000. These were the first school buildings of any considerable size or value in the State. At this time Omaha had no adequate provision for the education of her children. Although a wealthy and rapidly growing city, the school-houses were all small frame buildings, poorly furnished, and greatly crowded. The school buildings generally throughout the Territory were miserable hovels and their furniture was of the plainest kind.

A NEW DEPARTURE.

In the fall of 1866 a company of those interested in the cause of education met at the high school building in Nebraska City to discuss the important features of a law to be presented to the next legislature. After considering many points, it was agreed to call a State educational convention, to meet at Omaha about the time the legislature convened.

This convention met pursuant to call January 7, 1867, and, after several days spent in discussion, adopted resolutions asking the restoration of the school commissioner and county superintendents, the establishment of a State normal school and a State university, and recommending a number of wise provisions that have since been adopted.

At the session of the first State legislature, held in June, 1867, the State normal school was established, and a grant of 12,800 acres of saline lands was made for its future support. The school was commenced October 24 of the same year. J. M. McKenzie was principal until January, 1871, when he assumed the duties of State superintendent of public instruction.

During this first session of the legislature a school law was passed embodying the main features of the present law, but by some oversight it did not go into force until the spring of 1869. The law provided for a State superintendent of public instruction, with power to recommend a list of text books for the use of public schools, to direct in the examination of teachers, to apportion the State school fund to the several counties, &c. It also provided for county superintendents, and returned to the independent district plan; it provided that the State school fund should be apportioned by the State superintendent to the several counties pro rata, according to the number of school children last returned, and that it should be apportioned by the county superintendents to the several school districts in two parts, one-fourth to be divided among the several school districts maintaining schools at least three months during the year; the remaining three-fourths pro rata according to the number of children between the ages of 5 and 21 years in each district. It provided that no school lands should be sold for less than $7 an acre, and that the proceeds of the sales should be invested in United States, State, or county bonds, or loaned to individuals, the loan to be secured by bond and mortgage on real estate.

The removal of the State capital to Lincoln about this time caused considerable excitement in financial circles. Town lots in the new capital (then bare, raw prairie) sold at almost fabulous prices, and many were lured by the golden promises of future

gain to make large investments. The new city arose as if by magic, and what had been almost an uninhabited waste in less than two years became a busy city.

The State university, insane asylum, and penitentiary buildings were located in or near the city. The contracts for the erection of these buildings were let by three of the State officers as a board of commissioners; and as the university building and insane asylum were very poor structures for the vast amount of money expended in their erection, much blame was thrown on the commissioners, many accusing them of conniving with the builders for a share of the profits.

STATE SUPERINTENDENCY.

In the spring of 1869 Hon. S. D. Beals, of Omaha, was appointed State superintendent of public instruction. One of his first official acts was to issue a list of printed questions for the examination of teachers throughout the State, requiring all the examination papers to be sent to his office. This had the effect to almost immediately raise the standard of qualifications of teachers. This system of questions has since been continued. Another important act of Mr. Beals was the recommendation of a list of text books for the schools of the State.

After a careful examination of a great number of series of books, he adopted Worcester's Dictionary and Speller, Hilliard's Readers, French's Arithmetics, Harvey's Grammars, Guyot's Geographies, &c. As a large number of publishers had been anxious to supply their particular series, a war was immediately waged against the recommended list, and Mr. Beals was accused of having been influenced by mercenary motives in making his recommendations; but such accusations were basely false, and the series still stands as he left it, with a very few additions, as the State list.

Unfortunately during the years 1869 and 1870 a large amount of the school fund was invested in individual loans on bond and mortgage. Much of the money thus invested has been entirely lost on account of the depreciation of property. The new constitution now confines the investment of the school fund to United States, State, and registered county bonds.

From 1869 the educational interests of the State became an absorbing topic amongst the people. In the fall of 1867 the State Teachers' Association was organized. The first meeting was held at Brownville. Since that year it has gradually increased in importance, until at the present date it exerts a serious influence on all the educational interests of the State.

During the year 1869 Mr. Beals held a series of teachers' institutes in different parts of the State that did much to awaken a lively interest in the cause of education among the people. These teachers' gatherings have increased in efficiency from year to year, until at present they are an indispensable aid to the cause of education.

In 1869 Omaha awakened to a lively sense of her duty in the cause of education, and commenced the erection of her high school building, and also of several ward school buildings.

Other places, stimulated by her example, erected splendid buildings, and soon schoolhouse building became a mania throughout the State, until to-day Nebraska can boast of as many fine school buildings for the number of her inhabitants as any State in the Union; but, alas! she has entailed upon herself a load of debt that at present is very grievous to be borne.

In the fall of 1870 J. M. McKenzie was elected State superintendent of public instruction, and continued to act as such, through reëlection in 1874, till January, 1877, when, under a new constitution, the office was cut short, and S. R. Thompson entered upon duty as superintendent for a term reaching to 1879.

The earlier years of Mr. McKenzie's administration were marked by steady and continual advance in all matters connected with education. The last two years of it were less apparently successful from the wide spread desolation of agricultural interests by the ravages of the migratory grasshoppers, which diminished exceedingly the resources of the State, and limited, in consequence, the appropriations and taxes for school purposes.

The new constitution made renewed provision for a State school fund, for free instruction in the common schools, and for the distribution of the income of the school fund among all school districts that should have maintained school for at least 3 months of the year for which the distribution should be made. It gave to the counties for common school purposes all fines, penalties, and license moneys levied in them under State laws, and to cities, villages, and other subdivisions of a county, all such arising under their especial laws and ordinances. It forbade the sale of university, agricultural college, common school, or other lands held or to be acquired for educational purposes, for less than $7 an acre, or less than their appraised value, providing thus against the waste of school resources which has too often taken place in such sales and insuring to the State, eventually, a noble fund for education. It also forbade the introduction of sectarian teaching into any school supported in any measure by State funds, or the acceptance by the State of any property or money to be used for sectarian purposes.

With such provisions a fair future may be looked for when the difficulties incident to the growth of a new border State are overcome, and probably in time so large a school fund will be realized as to obviate the necessity of any taxation for school purposes.

SUPERINTENDENTS.

As before indicated, the territorial librarians who were superintendents of public instruction ex officio were James S. Izard, H. C. Anderson, and John H. Kellom. Territorial school commissioner, William E. Harvey, 1859–'66, part of the time as territorial auditor and commissioner ex officio. The Hon. John Gillespie filled the office of commissioner from the date of Mr. Harvey's leaving till the appointment of a State superintendent.

The State superintendents have been, to this time, S. D. Beals, 1869–'71; J. M. McKenzie, 1871–'77; S. R. Thompson, elected for a term extending from January, 1877, to January, 1879.

In the Bureau report for 1875 it was stated that under the provisions of the school law the superintendent was elected for a term of 4 years, which is true; but it should also have been stated that under the new constitution the term of superintendency is limited to 2 years.

ELEMENTARY INSTRUCTION.

WANT OF REPORT.

No report of school operations for 1875–'76 having been published, our only information respecting elementary instruction in the State is that which is derived from the summary of educational statistics given at the beginning of this abstract. The impoverishment resulting from the devastations of the grasshoppers, and the consequent large draft upon the State resources for aid to special sufferers, have constrained this economy in educational expenditure. But it is hoped that henceforth this necessity may not continue, and that for 1876–'77 there may again be full reports.

TRAINING OF TEACHERS.

NORMAL SCHOOL.

The State normal school, at Peru, provides 3 courses of study, an elementary normal of 2 years, an advanced English normal of 3, and an advanced classical normal of 3. Students completing either the advanced English or the advanced classical course receive a diploma with the degree of normal graduate, and a State certificate entitling the holder to teach in any public school in the State. Tuition is free.—(Catalogue, 1874–'75.)

EDUCATIONAL JOURNAL.

The Nebraska Teacher, an organ of the State Teachers' Association and of the State superintendent, continued to be published at Beatrice during 1876, aiding, as a well conducted school journal always will aid, in disseminating educational information among teachers, and discussing for their benefit important questions of school management. But at the close of that year, in common with most of the school journals of the Northwest, it was absorbed into the Educational Weekly, a new journal, to have its seat in Chicago, with a chief editor at the centre and local editors in the several States represented by it.

CITY SCHOOL SYSTEM.

OMAHA.

The course of study here is divided into 8 grades. Strict classification of the pupils is made at the commencement of every school year, and this classification is revised at the beginning of the two following terms. Changes to a lower grade are avoided if possible. The general policy is to keep the same teacher in charge of a class throughout the year, and to require her to give special attention, outside of the regular hours, to those who, from any cause, may need it. On the other hand, the promotion of all who are able to do more work is encouraged, and opportunity for this is given to all at every monthly examination. Any pupil who stands at or above 90 per cent. in those studies on which his future success mainly depends, has the privilege of trying the examination of the next class in advance, and if it appears that he will not be a hindrance he is promoted at once. Over 300 students were engaged in the study of German under charge of a special teacher.—(The High School, Omaha, April and May, 1877.)

SECONDARY INSTRUCTION.

HIGH SCHOOLS.

From the absence of a State report for 1875–'76, no distinct information can be given respecting this class of schools for that year. They exist at Ashland, Beatrice, Brown-

ville, Lincoln, Omaha, and Pawnee City, perhaps elsewhere. No uniform course of study appears to have been yet arranged for them by which they may act uniformly as feeders of the university; one is, however, under consideration.—(See report of State Teachers' Association under Educational Conventions at the close of this abstract.)

PRIVATE SECONDARY SCHOOLS.

A school for girls at Omaha (Brownell Hall) reports an attendance of 85 students under 8 teachers. All the students are pursuing an English course, and 7 a classical, while 15 study modern languages. Drawing and music, vocal and instrumental, are taught. The school has chemical and philosophical apparatus and a library of 2,000 volumes.—(Return to Bureau of Education.)

PREPARATORY DEPARTMENTS.

Two preparatory departments report 250 pupils, of whom 106 are preparing for a classical course and 82 for a scientific.—(Return for 1876.)

BUSINESS COLLEGE.

A business college at Omaha reports an attendance of 130 students under 5 teachers. Twelve students were studying phonography, 21 telegraphy, and 5 German. In addition to these branches, commercial English and correspondence, penmanship, bookkeeping, higher mathematics, banking, and commercial law are taught.—(Return for 1876.)

SUPERIOR INSTRUCTION.

STATE UNIVERSITY.

The University of Nebraska, at Lincoln, is constituted by law a part of the educational system of the State. It is controlled by a board of regents elected by the people, and is open to all qualified citizens of the State free of charge for tuition, without regard to sex or race. Provision is made in the plan for the establishment of 6 departments or colleges. Two of these have been organized, that of literature, science, and art, and that of agriculture. The former embraces classical, scientific, Latin-scientific, and Greek courses. The library is composed of books chosen with care, almost every department of literature being represented in the selections. An annual appropriation is required to be made for its increase.—(Catalogue, 1875–'76.)

DOANE COLLEGE, CRETE.

The year 1875–'76 of this college has been its best, the attendance has been larger and the work better done than ever before. Three courses of study are laid down and carefully followed, English, classical, and scientific. The young ladies' course is essentially the same as the scientific.—(Minutes of Congregational Association of Nebraska, October 26–29, 1876.)

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The Industrial (or Agricultural) College, a department of the State university, provides two courses of study, a 4 years' course which runs nearly parallel to the scientific course of the academic department, and a shorter one which may be completed in from

3 to 6 terms, according to the student's proficiency when he enters. There are 3 terms of study each year, but only two of them correspond to the terms in the academical department, the third being taught in the summer, for the reason that then the means of instruction are most available, and more remunerative employment can be furnished than in winter. Under this arrangement students who are qualified can engage in teaching district schools during the winter. The farm contains 320 acres of good land, all under improvement. A portion of it is set apart for experimental purposes. Students are required to work at least 2 hours each day for 5 days in the week, unless excused for good reasons. This labor is paid for at the rate of from 10 to 15 cents an hour, according to the individual's skill and fidelity. In this way a student may earn fully half his necessary expenses.—(University catalogue, 1875–'76, and special return.)

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

The Nebraska Institution for the Deaf and Dumb, at Omaha, reports an attendance of 48 pupils in 1876, of whom 25 are males and 23 females. The sign language is the method of instruction generally used here. A few semi-mutes have been taught articulation. The only workshop at present is the printing office. Ten boys are under instruction in type setting, 5 in the morning before school, and 5 in the evening after school. With their help the Mute Journal of Nebraska, a large paper of 6 columns, is published once a month without outside assistance. The printing office has recently been furnished with new type. A new building was erected in 1876, for which the legislature had previously appropriated $15,000. The institution is reported to be in a prosperous condition, and the children advancing in their studies in a satisfactory manner.—(Biennial report of board of directors for 1875 and 1876, and special return for 1876.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

The State Teachers' Association met at Nebraska City March 28, 1876. After the address of welcome by Rev. J. D. Kerr, president of the Nebraska city board of education, was responded to by the president, Prof. C. B. Palmer, an address was delivered by Superintendent McKenzie upon the present condition of education in the State. Papers were read and addresses delivered during the sessions by President Palmer upon "Education in America 100 years ago;" by Miss Evelyn Darling, of Brownville, on "The educational value of art;" by Prof. S. R. Thompson, of the State normal school, on "The best method of selecting county superintendents;" by Prof. J. B. Bruner on "The danger of too many studies in school;" by Mrs. Ebright, of Brownville, on "The model woman;" by Prof. S. D. Beals, of Omaha, on "Language;" by Chancellor A. R. Benton, on the question "Ought the State to provide a system of schools which might afford to all the children of the State a preparation for the university?" by Professor Church, on "Moral instruction;" by Superintendent Lamb, on "The moulding power of the teacher;" by Prof. D. B. Perry, of Doane College, on "The English language in relation to other languages spoken in the State;" and by Prof. Jones, of Lincoln, on "What constitutes efficient supervision?"

After the paper of Chancellor Benton the following resolution was adopted by the association :

Resolved, That a committee of three be appointed by the chair, whose duty it shall be to prepare and present to the association at its next meeting a report on a system of high schools for the State, including a course of study and the means for supporting the same.

It was decided to hold the next session at Fremont.—(Nebraska Teacher, July, 1876.)

MEETING OF COUNTY SUPERINTENDENTS.

From the Nebraska Teacher of September, 1876, it appears that a meeting of county superintendents was held at Hastings during the session of the normal institute. No full account of the proceedings is given, but reports of eight county superintendents as to the condition of education in their counties are given as some of the reports received on that occasion.

LIST OF SCHOOL OFFICIALS IN NEBRASKA.

Hon. S. R. THOMPSON, *State superintendent of public instruction, Lincoln.*

[Term, January, 1877, to January, 1879.]

COUNTY SUPERINTENDENTS.

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Laws of Nevada, 1861, pp. 273-278; Compiled Laws of Nevada, 1873, sections 3321–3386.

PROMPT TERRITORIAL ACTION.

The act of Congress to organize the Territory of Nevada was approved March 2, 1861. The first regular session of the territorial legislature began on the 1st day of October

in that year. Its first act was not passed and approved till the 30th of the month. And yet, with all the multifarious legislation necessary to set the official machinery in motion, the assembly, before the close of the next month, (November 29, 1861,) had enacted a school law embracing all essential provisions, such as the arrangements for creating a school fund, for levying a tax to pay salaries of school teachers, for the setting apart of all fines for offences as a further aid to the support of common schools, and for the securing of a necessary number of school officers.

The principal of all moneys accruing to the Territory from sales of land granted by the General Government for schools was to constitute the permanent school fund, the interest of which was to be annually distributed in proportion to the number of the children of school age for the support of common schools, and for no other use whatever. The annual school money for the pay of teachers was to be 10 per cent. of all paid into the county treasuries for taxes; to which, as before said, was to be added the amount received from fines.

At the first special election, in January, 1862, a territorial superintendent of public instruction was to be elected, with the usual powers and duties of such an officer. To aid him with their counsel there was to be a territorial board of education, composed of the territorial auditor and territorial treasurer, with himself as president; while in each county, at the general elections, was to be chosen a county superintendent of common schools, to hold office for two years, with power to divide his county into school districts, to notify the inhabitants of each of its establishment and boundaries, to receive and file the reports made from the districts, to apportion among them the school moneys, to visit them for inspection of the schools each year, and to promote, throughout his county, the use of a uniform system of school text books. He was also to look to the collection of the fines which were to aid the annual school moneys. In the districts three school trustees were to be elected, to hold office in each case for a year, to look after the school rooms, to furnish fuel for the same, to levy special taxes for this purpose, to engage teachers, and to visit and inspect the schools. They were also to appoint a census marshal for each year, who was to make accurate enumeration of all children of school age.

STATE ACTION.

By the constitution of 1864, under which the Territory was admitted as a State, provision was made for the promotion of intellectual, literary, and scientific improvement; for the election of a State superintendent of instruction; for the creation of a school fund, of a university, and of normal schools; for a special tax of half a mill upon the dollar for the maintenance of the university and common schools;* and for the constitution of a board of regents for the management of the affairs of the university and of its funds.

Under this constitution the first State school law was enacted March 20, 1865, providing for a school fund from the school lands and various other sources; for a State board of education; for a State superintendent of public instruction, to hold office for 4 years; for county superintendents, with 2 years' terms, and increased duties and responsibilities; for school trustees in each school district, with larger powers and duties more defined; and for county boards of examination for teachers, composed of the county superintendent and of two persons appointed by him.

Essentially the same features have been retained in the subsequent school laws of 1873 and 1877, the changes being mainly in matters of detail.

Under these laws the State board of education is composed of the governor, the superintendent of public instruction, and the surveyor-general, the governor being president and the superintendent secretary. It has power to prescribe and cause to be adopted a uniform series of text books in the principal studies pursued in the public schools.

Under the same laws the State tax for schools, instead of being diminished as permitted by the constitution, has been continued at half a mill on the dollar, a wise liberality for a young State. To this is added a county tax of not less than 15 nor more than 50 cents on each hundred dollars, with a view of maintaining schools for 6 months in each year entirely free. But after such 6 months of free schools, the trustees of any district are given power to assess rate bills for the further continuance of the schools; and persons refusing or neglecting to pay such rate bills are excluded from the benefits of the prolonged term.

No school district may receive, except when newly organized, any portion of the public school moneys if it has failed to keep open a public school at least 3 months of the year ending the last day of August previous; nor may any school receive any moneys, benefits, or immunities under the law, unless such school shall have been taught by a teacher or teachers duly examined, approved, and employed by legal authority.

Sectarian books, tracts, papers, and doctrines are forbidden to be used or disseminated in the public schools.

* Provided that in ten years such tax might be reduced to a quarter of a mill.

The school month is made to consist of 4 weeks of 5 days each. The school year for accounts and reports commences on the 1st day of September and ends with the last day of August.

A compulsory school act was passed February 25, 1873, requiring all children between 8 and 14 years of age to be sent to a public school for at least 16 weeks in each school year, unless excused by the trustees of the school district in which the parents or guardians reside on the ground of bodily or mental disability or of instruction in some other form.

SUPERINTENDENTS.

The territorial and State superintendents, as given by the present incumbent of the latter office, have been to this time: Territorial, A. F. White, January, 1863, to November, 1864; State, the same, from November, 1864, to December 31, 1866; A. N. Fisher, January 1, 1867, to December 31, 1874; Samuel P. Kelly, January 1, 1875, for a term to expire December 31, 1878.

ELEMENTARY INSTRUCTION.

PROGRESS OF THE SCHOOLS.

A marked improvement in all departments of education is reported. The general interest of the people in public education was never more manifest than it is at present, and this interest is born of the practical working of the free schools. Their importance and benefit are being acknowledged by persons who never before gave the subject a thought. Money is liberally contributed for school purposes where it could not be raised for any other public object. In only one instance was a school tax voted down, and that was in the interest of a corporation against the wishes of the people most concerned. This sympathy of the people produces a healthy feeling, which reacts upon the schools, inciting the teachers to activity and the children to industry.—(Report for 1875 and 1876, p. 20.)

TEACHERS.

The teachers are not all competent, comprising some of the worst as well as some of the very best. The State superintendent has been obliged to advise removals on account of incompetency in some instances where the trustees failed to take the necessary action. Owing to the urgent solicitation of friends, the influences of relationship, and at times culpable carelessness, unsuitable teachers are placed and kept in charge of schools while at the same time there are applications from persons well qualified. The plan adopted by some of the examining boards of the State of competitive examinations was a step in the right direction, the superintendent remarks; and he further suggests that it will be well for the legislature to consider whether the establishment of a State board of examination would not remedy the evil complained of.—(Report of State superintendent, 1875 and 1876, p. 20.)

RELIGIOUS INSTRUCTION.

The question of religious instruction in the public schools has brought out some sensible thought, but much more meaningless talk. That the morals of the children should be watched over and cared for, all agree. The statutes prohibit sectarianism, but they do not decide as to reading the Bible; in some schools it is read, in others it is not. In the opinion of the superintendent, the question of public morals as well as that of public education is clearly secular; and if there be in the Bible that which will improve public morals without interfering with the principles of those dependent on the schools for educational privileges, that help is desirable. He thinks that the singing or repeating in concert of the Lord's Prayer and the reading of the beatitudes and psalms responsively by teacher and scholars (upon which Jews and Gentiles agree, and to which non-religionists do not object) would be a fair compromise.—(Report of superintendent, 1875 and 1876, p. 22.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

There are three public high schools in the State (at Elko, Virginia City, and Gold Hill) where instruction is given, in addition to the common English branches, in natural philosophy, university algebra, chemistry, English literature, and civil government, particular attention being paid to instructing pupils in the duties pertaining to citizenship.

PRIVATE SECONDARY SCHOOL.

A school for young women was opened by Bishop Whittaker, at Reno, November 12, 1876, with almost as many boarders as the spacious building could accommodate, besides a number of day pupils. The building, which is supplied with all the modern con-

veniences and every arrangement necessary to the comfort and health of the pupils, stands on an eminence commanding a beautiful view of Reno, the green valley around, and the snow capped Sierras on every side. Ten thousand dollars of the funds used in its erection were contributed by Miss Wolfe, of New York, and $10,000 more were raised by the indefatigable bishop.—(Southern Churchman, December, 1876.)

The above mentioned school and the preparatory department of the State university are, aside from the public high schools, the only institutions affording secondary instruction of which information has been received.

SUPERIOR INSTRUCTION.

THE STATE UNIVERSITY.

The university was opened in 1874, with 7 pupils; in 1875, there were 16 in attendance, and 23 in 1876, all in preparatory studies. It is the aim at present to make this a State school, superior to the higher grade of public schools, and to gradually advance the standard to that of like institutions in other States. The advancement of the pupils in their studies has been very gratifying. Mathematics is taught with great thoroughness; Latin, German, and French are a part of the course, also English literature and other branches.—(State report, 1875 and 1876, pp. 22, 23.)

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB AND THE BLIND.

The State superintendent reports having had under his charge since the beginning of his official term 5 pupils of the above classes, whom he placed in the institution at Oakland, California. The average number attending was 3. They displayed a remarkable proficiency in their studies and occupations.—(State report for 1875 and 1876, pp. 23, 24.)

LIST OF SCHOOL OFFICIALS IN NEVADA.

Hon. S. P. KELLY, *State superintendent of public instruction, Carson City.*

[Term, January 1, 1875, to December 31, 1878.]

STATE BOARD OF EDUCATION.

[Term, 1875–'79.]

Name.	Post-office.
His excellency L. R. Bradley, governor	Carson City.
Hon. John Day, surveyor-general	Carson City.
Hon. Samuel P. Kelly, State superintendent of public instruction	Carson City.

COUNTY SUPERINTENDENTS.

[Term, January 1, 1877, to January 1, 1879.]

County.	Superintendent.	Post-office.
Churchill	W. H. A. Pike	Educational Institute.
Douglas	John E. Johns	Genoa.
Elko	E. S. Yeates	Elko.
Esmeralda	D. H. Fletcher	Aurora.
Eureka	A. W. Kaye	Eureka.
Humboldt	C. Chenowith	Winnemucca.
Lander	J. R. Williamson	Austin.
Lincoln	G. R. Alexander	Pioche.
Lyon	C. McDuffie	Silver City.
Nye	F. C. Granger	Belmont.
Ormsby	L. S. Greenlaw	Carson City.
Storey	J. N. Flint	Gold Hill.
Washoe	Orvis Ring	Reno.
White Pine	H. S. Herrick	Hamilton.

NEW HAMPSHIRE.

(Report for 1875–'76 of Hon. J. W. Simonds, State superintendent public instruction, pp. 562, 563.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

School Legislation and Statistics, by Moses B. Goodwin, in State report for 1872, pp. 135–169; Legislative History of Education, in State report for 1875, pp. 295–301; Constitution of 1783; State reports from 1848; Bancroft's History of the United States, vol. 1, p. 418; Prof. H. E. Parker, in Sanborn's History of New Hampshire, pp. 346–352; Revised Laws of 1792, 1815, 1830, 1843, 1853.

BORROWINGS FROM MASSACHUSETTS.

From 1641 to 1680 New Hampshire and Massachusetts were united with a common representation in one legislature.

One fruit of this union was that the famous school law of June 14, 1642, for the compulsory education of all children in at least the English tongue and capital laws, affected New Hampshire as well as her sister State; and so did the other of November 11, 1647, for an elementary school in every town of 50 householders, and a grammar school, with a teacher capable of fitting youth for the university, in every one of 100 householders. These laws continued to be school laws of the State, not only during the existence of the early Union, but, by allowance or adoption, for a century or more beyond; the first by a sort of general consent, the second by express transfer to the statute books. This transfer took place in 1719, with only one important change, the increase of the penalty for not establishing a school from 5*s.* to £20, an increase which showed earnestness.

Another fruit of the union was the possession, with comparatively few exceptions, of a school lot in every township; for, as Massachusetts, in dividing up her townships, gave ordinarily one of the 63 equal parts of each for a school, the custom, through their union in one legislature, was followed generally in New Hampshire. Hence the occasional township funds, which, through a thrifty investment of the proceeds of an early lease or sale, have in some cases continued until now to afford aid in the maintenance of schools. A careful husbanding of these funds in every case might have made schools early and fully free.

INDEPENDENT COLONIAL ACTION.

The first instance of this, with respect to education, was a clause in a law of 1693* requiring the selectmen of a town to assess a tax to build a school-house, and the people to provide a schoolmaster. As before said, this in 1719 was followed by a reënactment of the school law of 1647, and this by an enactment in 1721 that derelict selectmen should be liable, in their own estates, for the penalty of not establishing a school. These things seem to have rested for just half a century, when, in 1771, an act was passed providing that this wholesome penalty should, both as to towns and to selectmen, be reduced from £20 to £10; the reason assigned being that since the passage of the law, the nominal value of the provincial currency had doubled.

The difficulty with respect to all these laws was, that no officer appears to have been charged with the duty of seeing to the execution of them; and as private information and complaint against offending towns was an invidious thing, compliance with the law might be easily evaded. And that it was so evaded is pretty evident from the concurrent statements of the historians of different towns.

*This is Professor Parker's date.

EARLY STATE ACTION.

The consciousness of deficiency in educational affairs, and a desire for improvement in this respect, found vent, after the creation of the State, first, in a clause of the constitution of 1783, (copied mainly from § 2, chap. 5, of the Massachusetts constitution of 1780,) that "knowledge and learning, generally diffused through a community, being essential to the preservation of a free government, and spreading the opportunities and advantages of education * * * being highly conducive to promote this end, it is the duty of the legislators and magistrates, in all future periods of this government, to cherish the interest of literature and the sciences and all seminaries and public schools." It found expression afterward in a legislative act of June 18, 1789, to repeal all former acts respecting education, because they "had been found not to answer the important end for which they were made," and to provide a better system. One change made by this act was, that the amount of money for school purposes, left previously to the discretion of the towns, was fixed for every town at the rate of £5 for each £1 of public taxes. Another was, that in ordinary towns it was directed there should be "English grammar schools" for teaching reading, writing, and arithmetic; and that in shire and half-shire towns, grammar schools should be established for teaching Latin and Greek, in addition to the branches required in the English grammar schools.* A third change was, that it was now required that, to secure engagements, teachers should be examined by such competent authorities as schoolmasters, learned ministers, preceptors of academies or presidents of colleges, and furnish certificates of qualification from them. Certificates of character were subsequently required.

CHANGE FROM TOWN TO DISTRICT SYSTEM.

Down to the present century, the town was the school unit; towns built the schoolhouses, employed the teachers, received and disbursed the school funds, and did whatever was thought necessary for the schools. But in 1805, (December 28,) again following the lead of Massachusetts, an act was passed to empower the towns to divide into school districts. In subsequent acts there was a renewal of this permission, till, July 6, 1839, the empowering clause was replaced by a provision peremptorily ordering the subdivision.† And so, for the sake of having schools within easy reach of pupils, a system has come in which has hindered proper grading, has divided schools almost to nothingness, has made it impossible to secure for half of them good teachers, and has given over the supervision of them in a great degree to such persons as could be had rather than to such as would be most desirable.

SCHOOL COMMITTEES.

A law passed December 22, 1808, directed that each town should, at its annual meeting, appoint 3 or more suitable persons,‡ whose duty it should be to visit and inspect annually the schools in their respective towns and parishes at such times as should be most convenient for those concerned, and in such manner as they should judge most conducive to the interests of literature, morality, and religion. And in case any town should neglect to appoint such persons, the duty of inspecting schools should devolve upon the selectmen. A district committee, consisting of one person for each school district, to be chosen at the annual meeting of the town, was also provided for, July 6, 1827.

This, July 4, 1829, was added to and amended by a provision that there should be chosen annually, in the month of March, by each school district in the several towns, (except Portsmouth,) a committee consisting of one or more persons, not exceeding 3, who should be resident in the districts for which they should be chosen, and be called the prudential committee thereof. The duties of this committee were to be to select and contract with teachers for their districts, to provide them board, to furnish fuel for the school, to give information of its opening, and to aid the superintending committee in any manner necessary.

In these laws was laid the foundation of the system of town supervision and district care of schools, which, with comparatively little alteration, still continues.

Portsmouth, excepted in the latter act, had been specially empowered, July 7, 1826, to choose a school committee of its own, with the powers and duties of both the others, and some besides. On several subsequent occasions there was special legislation for its benefit.

---

*The rate of taxation for school purposes fixed in this law of 1789 was changed in 1791 to £7½ for £1; in 1705, to $35 for every $1; in 1804, to $45 for $1; in 1806, to $75 for $1; in 1808, to $70 for $1; in 1818, to $90 for $1; in 1840, to $100 for $1; in 1852, to $135 for $1; in 1853, to $150 for $1; in 1855, to $260 for $1; in 1868, to $250 for $1; in 1870, to $350 for $1.

The provision for classical schools in shire and half-shire towns was abolished in 1807, and the matter left to regulate itself.

†To further reënforce this act a penalty of $100 was, in the revised laws of 1843, imposed on selectmen who should neglect to make such a division for six months after an application for it by ten legal voters.

‡Made July 6, 1827, not less than 3 nor more than 5 persons, with the additional duty of examining schoolmasters and mistresses proposing to teach within the town, of dismissing the incompetent, even though licensed, and of directing and determining the class books to be used.

An excellent school law, passed July 6, 1827, made it the duty of the superintending school committees to visit and inspect the schools of their respective towns at least twice in each year, to inquire into the management of them and the proficiency of the scholars in them, and to use their best endeavors to have the youth in the several districts attend the schools. The results of their observations and inquiries were to be embodied in a written report to the town at its annual meeting, this report to state the number of months public schools had been kept in each district in said towns; what portion thereof had been kept by male and what by female teachers; the whole number of scholars that had attended each school; the number of children between 4 and 14 that had not attended school; and the number, if any, between 14 and 21 who could not read and write. This was the first beginning of anything like effective regulations for thorough supervision and returns, and if there had been added to it the requirement that the reports should be forwarded to some central officer and published for the information of the State, it would have been almost all that could be wished. As it was, it was a great improvement on the law of 1808.

FURTHER IMPROVEMENTS.

In the same law the selectmen of the towns, on notification from a school teacher that any parents had not supplied their children with the prescribed text books, were authorized to supply books for such children and add the cost of them to the next annual tax of the parents or guardians. In 1833 destitute children were directed to be furnished with text books free.

Another law of July 6, 1827, made very special and complete arrangements for the erection of suitable school-houses for the districts, and for making these as comfortable and convenient as possible.

In 1828–'29 a literary fund which had been formed in 1821 (June 29) by a tax upon the banks, with a view to the endowment or support of a college, was ordered to be distributed among the towns, according to their apportionment of the public taxes, "to be applied to the support and maintenance of common free schools, or to other purposes of education." This fund — at first amounting to $10,000 annually, and now to about $27,000 — has, since 1847, been distributed on the basis of the number of children 4 years old and upward attending a public school, as shown by the annual returns of the school committees.

July 3, 1846, permission was given towns to contribute to the support of county teachers' institutes, which from this time forth were encouraged till 1861, when they were abolished as inefficient; but they were revived in 1868, were made imperative, and funds for their support provided by the State.

July 10, 1846, a still greater improvement was made by the legislature giving the State schools a head devoted to their interests. This head was a State school commissioner, to be appointed by the governor and council, to spend 20 weeks of each year among the counties for the purpose of encouraging and counselling school officers, to receive returns from school committees, and to make an annual report to the general court each June. Prof. Charles B. Haddock, of Dartmouth College, the enlightened originator of the bill, was the first commissioner appointed under this act, and his exertions to improve and unify the State school system are said to have been productive of excellent effects; as were, though in a somewhat less degree, those of his successor, the Rev. Richard S. Rust, of Northfield Institute. The latter, in his second report, says that in the discharge of his official duties for 1848–'49 he had travelled above 2,000 miles, delivered more than 50 public addresses, visited 300 schools, and aided in conducting several county institutes.

MODIFICATIONS OF THE SYSTEM REACHED.

Too frequent change is the great evil in republics. The State commissionership had barely had time to indicate its efficiency before the sense of the need of something coming closer to the people began to be experienced; and instead of supplying this need by an agency intermediate between the commissioner and the committees, the legislature, in 1850, abolished the State commissionership and established a county commissionership in its place. One of these commissioners was to serve for each county, and all together were to constitute a State board of education. Each commissioner was to spend not less than one day in each town of his county every year, for the purpose of promoting, by addresses, inquiries, and other means, the cause of common school education, and was to report his doings annually to the secretary of the board, who prepared the report of the board for publication. This system, incomplete without the directive and vitalizing influence of a State head, had yet enough of popularity about it to endure for 17 years; when, in 1867, there was a return to the plan of a central superintendent, with the addition of a board of education, to consist of the governor and council with himself, but without county officers between him and the committees. This State headship, thus reëstablished, has continued to the present time, though the board of education linked with it was abolished July 7, 1874. The superintendent holds office for two years and is appointed by the governor and council.

The teachers' institutes which had been revived in 1868 were abolished with the board of education, from a renewed impression that they had ceased to be efficient; but an agitation for their revival is again on foot.

In the line of compulsory training a law of 1846 made imperative at least 3 months' schooling of children employed in factories. One in 1848 established stringent provisions for preventing truancy; and one of July 14, 1871, required all persons having charge of children between 8 and 14 years of age to have them instructed in a public or a private school, or otherwise, for at least 12 weeks of each year, 6 of these weeks to be consecutive.

A State teachers' association was established in 1854; a State agricultural college received a charter in 1866; a State normal school was set on foot in 1870. All these have been since continued. Since 1848 graded schools have been provided for.

STATE SCHOOL OFFICERS.

These have been — exclusive of the secretaries of the boards of education composed of county school commissioners* — as State school commissioners: Charles B. Haddock, 1846-'47; Richard S. Rust, 1847-'50; as State superintendents: Amos Hadley, 1867-'69; Anthony C. Hardy, 1869-'71; John W. Simonds, 1871-'73; Daniel S. Beede, from August, 1873, to February, 1874, when John W. Simonds was reappointed for the remainder of his term, and in 1876 was succeeded by Charles A. Downs, a former secretary of the board of education. His term reaches to 1878.

ELEMENTARY INSTRUCTION.

CONDITION OF THE SCHOOL SYSTEM.

The space given to the school history compels the omission, very reluctantly made, of much interesting matter in the last State report relating to the present condition of the schools in such points as their buildings, teachers, efficiency of supervision, absenteeism, and the efficacy of the compulsory law.

IMPROVEMENTS.

Since 1871 the interests of public education have improved in the following respects: (1) In popular sentiment for supporting and advancing schools; in educational meetings held in towns and districts; in the general demand for a more frugal expenditure of the school moneys, and in the growing tendency to discard the district system and adopt the town plan. (2) In the work of school supervision, in examining teachers and schools, in organizing and conducting schools, in the written work of scholars, and in the school reports. (3) In a general desire to secure better qualified teachers and more thorough instruction. (4) In the introduction into many schools of singing, free-hand drawing, elements of the sciences, and oral lessons. (5) In the establishment and management of the State normal school, with improved facilities for preparing teachers. (6) In the erection of new school buildings, adapted to the comfort of scholars, and supplied with necessary appurtenances.—(State report, 1875–'76, p. 472.)

KINDERGÄRTEN.

Reports for 1876 have been received from 2 Kindergärten, one of them located in Nashua, the other in Manchester. The latter was organized in 1876 by a pupil of the conductor of the school in Nashua. There was an aggregate attendance of 30 pupils under 4 teachers; hours of study each day, 3; age of admittance, 3–7 years. For further particulars, see Table V.

CITY SCHOOL SYSTEM.

NASHUA.

Officers.—The school committee is composed of as many members from each ward as the ward is entitled to aldermen in the city council. The mayor of the city is ex officio chairman, and a city superintendent is appointed by the committee.

Statistics.—Population of Nashua, about 12,000; number of children 4 to 21 years of age, 3,252; enrolment in schools, 2,313; average number belonging, 1,643; average daily attendance, 1,512; average per cent. of attendance, 92; number of teachers, 53. Expenditures for public schools, $32,555.53.

Remarks.—The schools are graded as primary, middle, grammar, and high, the latter comprising classical, English, and business courses. The number of pupils in attend-

*The secretaries of the board, as given in the last State report, were: John S. Woodman, 1850-'51; Hall Roberts, 1851-'54; King S. Hall, 1854-'55; Jonathan Tenney, 1855-'57; James W. Patterson 1857-'61; Wm. D. Knapp, 1861-'62; John Wingate, 1862-'63; Roger M Sargent, 1863-'64; Charles A. Downs, 1864-'65; George W. Cate, 1865-'66; Roger M. Sargent, again, 1866-'67.

ance is larger now than at any previous time, comprising about 9 per cent. of the whole number in the schools. There were 17 graduates in 1876, of whom 10 were young women, 7 young men. Four evening schools were sustained, with an attendance of 136 pupils.—(Nashua school report, 1876, Superintendent Hon. John H. Goodale, and report of the Commissioner of Education for 1875.)

No printed reports from other cities have been received.

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL, PLYMOUTH.

This school was established by act of the legislature in 1870, "for the better training of teachers for the common schools of the State," and in 1871 the introductory term of school opened. It has proved a triumphant success. Already it has exerted an untold influence for good upon the schools of New Hampshire, and it occupies an honorable position among the best normal schools in the nation. With its 170 graduates in the educational field, and as many more undergraduates who are sharing their labors, and with its increased facilities for the training of teachers, the school ranks among the most important institutions under the patronage of the State. The graduates for 1875–'76 numbered 35, of whom 6 belonged to the second course and 29 to the first.—(Report of the State superintendent, pp. 324–326.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

The State superintendent, in his summary of public school statistics, reports the existence of 39 high schools, 18 of them being town and 21 district schools. The number of pupils in attendance, branches pursued, &c., are not given in the summary, but such information is furnished in respect to 30 public high schools, which are included in a list of 87 secondary schools to which the superintendent had sent circulars of inquiry. There are 32 public high schools given in the list, but two of them make no report as to attendance, &c.; one of them has but just been established; 27 report the value of their school property, which ranges from $1,000 to $80,000 each school, (only that part of school property used for high school purposes being counted,) and 8 report libraries ranging from 20 to 800 volumes, and aggregating 2,570. The 30 schools were taught by 77 instructors, 32 men and 45 women; and had an attendance of 2,674 pupils, 1,168 boys and 1,506 girls; of whom 998 were studying the ancient, and 361 the modern languages.—(Report of the State superintendent, 1875–'76, pp. 549–555.)

ACADEMIES AND SEMINARIES.

Of the 55 academies and seminaries replying to the circular of the superintendent, 9 made no report of attendance or of the branches studied, 18 failed to give the value of their school property, and 54 did not report the number of volumes in their libraries. The attendance, so far as given, is, boys, 2,298; girls, 1,739. There were 157 teachers employed, of whom 87 were men and 70 women. The ancient languages were studied by 970 pupils, and the modern by 460. The libraries numbered about 22,000 volumes.

The aggregates of this table, including public and other high schools, represent, as the superintendent remarks, a grand educational power. There are 5,731 young men and women taught by 234 well educated instructors. The larger number of these students are pursuing the higher branches; 1,968 study the ancient, and 821 the modern languages. They have free access to libraries containing nearly 25,000 volumes. The cash value of buildings, furniture, lots, and apparatus of 86 of these schools, is estimated at $1,100,000.—(Report of the State superintendent, 1875–'76, pp. 549–555.)

Special reports were received by the United States Bureau of Education from 35 of the above class of schools, 1 for girls and 34 for both sexes, having 3,465 pupils under 115 teachers. Of these, 642 are in classical studies, 217 in modern languages, 169 preparing for a classical course in college, and 36 for a scientific course. Drawing is taught in 16 of these schools, vocal music in 16, and instrumental music in 18. Chemical laboratories are reported by 13, apparatus for the illustration of natural philosophy by 22, and libraries of 50 to 4,000 volumes by 20.

PREPARATORY SCHOOLS.

Five preparatory schools report 41 teachers and 418 students. There were 378 preparing for a classical and 40 for a scientific course. Two report chemical laboratories, 3 philosophical apparatus and gymnasiums, and all report libraries having from 100 to 3,000 volumes, and aggregating 6,600.

BUSINESS COLLEGE.

A business college in Manchester, with 3 teachers, reports 133 pupils, studying the common English branches, commercial correspondence, penmanship, book-keeping, banking, and commercial law.

SUPERIOR INSTRUCTION.

DARTMOUTH COLLEGE.

The 5 departments of this college, namely, academical, scientific, agricultural, engineering, and medical, are so constituted and connected as to secure for each, as far as may be, all the advantages of the institution, and to insure, with diversity and distinctness, a desirable unity. While the college adheres in general to the idea of a settled and well balanced curriculum, it admits, to a certain extent, the elective principle. There is a choice, on entering, between the 3 undergraduate departments, academical, scientific, and agricultural; and in each of these departments a partial course may be taken, embracing two, at least, of the prescribed studies, and securing an appropriate testimonial. In the scientific department there is a choice in the last year, and in the agricultural department in the last two years, between different courses. There are, also, a number of options between particular studies.

The equipment of the observatory, through the liberality of the friends of the institution and of science, has recently been greatly improved. Considerable additions have also been made to the museum of geology and natural history. The gymnasium has the most approved apparatus and furniture. The students attend regular exercise under an instructor, and at other times the building is open for voluntary practice. Large additions have been made of late to the means of assisting indigent and worthy students. Aid is mainly given in the form of scholarships, usually of $70 annually, though in some cases the amount is increased to $100.—(College catalogue, 1876–'77.)

NEW ENGLAND UNIVERSITY OF ARTS AND SCIENCES.

Of this institution, "chartered by the State of New Hampshire," in respect to which a plan was presented in the Report for 1875, nothing further has been heard.

COLLEGES FOR WOMEN.

Three colleges for women, all authorized to confer degrees, report 24 teachers and 270 students, of whom 143 were pursuing preparatory studies; 92 were in regular, 20 in partial, and 15 in post graduate courses. All have libraries, the aggregate number of volumes in them being 2,350. Music, vocal and instrumental, and drawing and painting are taught in all; French and German in 2, and Italian in 1. Chemical apparatus and that for the illustration of natural philosophy are reported by all; 1 has a natural history museum, and 2, galleries of art.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The New Hampshire College of Agriculture and the Mechanic Arts was established in 1866 as a department of Dartmouth College. The course of instruction, as at present arranged, embraces three years, and leads to the degree of Sc. B. During the first year all pursue the same studies, but at the beginning of the second, students are required to select either the special course of agriculture or that of the mechanic arts. The requirements for admission embrace, at present, only the studies pursued in the common schools. There are 12 free scholarships, one for each senatorial district, cover-

ing the charge for tuition. Scholarships have also been established by Hon. John Conant, numbering one for each town in Cheshire County. There are also other scholarships available to students from any part of the State. A valuable tract of 165 acres of land has been secured for an experimental farm by the munificence of John Conant, of Jaffrey. The college has also recently purchased 200 acres of woodland adjoining the farm.—(Dartmouth College catalogue, 1876–'77.)

Thayer School for Civil Engineering.—This department of Dartmouth College was established through the generosity of General Sylvanus Thayer, who gave $70,000 for the purpose. The course is essentially a post graduate one. The design is to give thorough and systematic instruction in fundamental principles and operations pertaining to the principal branches of the science, without aiming to give in detail a technical knowledge of each.—(College catalogue, 1876–'77.)

MEDICINE.

The medical department of Dartmouth College provides a 3 years' course of study. Applicants for admission, unless already matriculants of Dartmouth, or graduates of some reputable college, academy, or high school, are examined as to their fitness to appreciate the study of medicine. The building belonging to this department has been put in thorough repair throughout. New museums of anatomy and materia medica have been furnished; also microscopes, and an extensive collection of microscopical preparations, rendering the appliances for illustration ample.—(College catalogue, 1876–'77.)

EDUCATIONAL CONVENTION.

STATE TEACHERS' ASSOCIATION.

This association was organized in 1854 by about 100 of the teachers of the State assembled at Concord. For the first years of its existence the association held two meetings annually in different sections of the State. Later only one meeting has been held annually, each continuing for two or three days. At these meetings literary essays are read, and various practical educational subjects discussed. They have exerted a great and favorable influence upon educational progress in the State. At these meetings was first agitated the progressive legislation of the State relating to schools, such as the establishment of the office of State superintendent, of State teachers' institutes, and the State normal school.—(Report of the State superintendent, 1875–'76, pp. 307, 308.)

OBITUARY RECORD.

PROFESSOR E. W. DIMOND.

Prof. Ezekiel Webster Dimond, born in Warren, New Hampshire, August 7, 1836, died from disease of the brain at Dartmouth College, Hanover, N. H., July 6, 1876. Left at an early age an orphan, with but slender means, Mr. Dimond laboriously prepared himself for college, and, teaching during both his preparatory and collegiate course, graduated at Middlebury College, Vt., in 1865. The autumn of that year was spent in giving instruction at the Methodist Seminary, Springfield, Vt.; the next year, in studying natural science under Prof. Agassiz, at Cambridge, Mass., till the summer; after which he engaged in lecturing on chemistry at different seminaries for young ladies, in Worcester and elsewhere. In 1867 he published a work evincive of considerable scientific ability on "The chemistry of combustion" as applied to the economy of fuel, with special reference to the construction of fire chambers for steam boilers. The reputation as a scientist and teacher which by this time he had acquired, obtained for him, in 1868, the senior professorship in the New Hampshire State Agricultural College, at Hanover, with the professorship of chemistry in Dartmouth College. Spending some months abroad in preparation for the duties of these posts, he entered with zeal upon those duties, and continued the industrious prosecution of them to the close. A man of excellent natural abilities, of untiring energy, of genial and generous spirit, and of unflagging devotion to his work, his labors both as an instructor and a manager, especially in the agricultural department, are said to have been very valuable. President Smith, in a memorial notice of him, at the opening of the session subsequent to his death, gave him the high praise of being one of the most self-sacrificing men he had ever known, and one, too, of the kindest.—(The Dartmouth, September 7, 1876, pp. 7–9.)

CHIEF STATE SCHOOL OFFICER.

Hon. Charles A. Downs, *State superintendent of public instruction, Concord.*

[Term, 1876 to 1878.]

NEW JERSEY.

(Report of State Superintendent E. A. Apgar for 1875–'76, pp. 8, 9, and return to Bureau of Education.)

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Sketch by Hon. Ellis A. Apgar, prepared for Kiddle and Schem's Educational Encyclopedia; Nixon's edition of Elmer's Digest of the Laws of New Jersey; Statute Laws, from 1824 to 1874.

FIRST LAYING OF FOUNDATIONS.

The Dutch and Swedes and Finns, who were the earliest colonists of what is now New Jersey, left little trace behind them of efforts for the education of their children. The Presbyterians, Independents, and English Friends, by whom these first settlers were succeeded, did much in this direction, under the authority of their several religious organizations. The school-house was the general attendant of the place of worship, and the schoolmaster was quite frequently the appointee of the church session or of the meetings of the Friends. The latter appear to have been the first to lay the basis of a settled fund for education by dedicating to this purpose in 1683 the proceeds of the sale or lease of a valuable island in the Delaware. And while the whole State was under them as its "proprietors," the first New Jersey law for the establishment of schools was passed by their general assembly at Perth Amboy, October 12, 1693. This enacted that the inhabitants of any town within the province, under warrant of a justice of the peace of the county, might meet when they should think fit, and make choice of three men of the town "to make a rate for the salary and maintenance of a schoolmaster;" and the consent and agreement of the major part of the inhabitants to such a rate should bind the remaining part to pay their proportion of it, under pain of distress upon their goods for failure. By this law, with only an amendment looking to an annual election of the school committee and to a central and convenient location of the school-house, schools were established in all portions of the province where the inhabitants desired them and the population warranted them, throughout the colonial times.

BUILDING ON THESE FOUNDATIONS.

When the province became, after the revolutionary war, an independent State, a number of these schools still existed, under the law and custom of provincial times, though private schools, sustained by voluntary payment of tuition fees, had generally come to be the rule. The free schools, where they did exist, lived only by permissive action of the State, and for a long while had no aid from her. On the 9th of February, 1816, came the first promise of an improvement in this condition of affairs. At that date an act was passed directing the State treasurer to invest in the 6 per cent. bonds of the United States the sum of $15,000, to form the basis of a State school fund, and to be increased at the end of every year by reinvestment of the interest received. The next year there was an augmentation of the fund by act of the legislature; and, interest in the matter growing as time advanced, in 1818 the chief officers of the State government were made "trustees for the control and management of the fund for the support of free schools." The due control of it being thus assured, the amount of it was increased to $113,238.78.

In 1820, following this provision of a State fund for free schools, came another not less important: the authorizing of the inhabitants of any township to raise by taxation means for the education of pauper children and of those of parents too poor to pay for schooling. The designation of such only as the objects for assistance was,

of course, unwise, tending to degrade the schools in which they should be taught, and cause these to be looked upon as "pauper schools;" but this was an error shared for the time with the greater portion of the States, while the idea of aiding the poor to acquire an education was certainly commendable.

In 1824, December 28, provision was made for steady increase of the State school fund by the addition to it of one-tenth of the State taxes for each year, and in 1828 the town meetings had the privilege of raising money for the erection or repair of school-houses added to that of raising it for the education of poor children.

An extensive investigation made in this same year having shown that one-third of the children of the State were growing up without any education, the legislature was awakened to some conception of its duty, and passed in 1829 the first comprehensive State school law. Its provisions were that there should be in each township an election of a school committee, whose duties should be to divide the township into convenient school districts; to examine and license teachers for the schools; to visit these, at least every six months, with a view to inspection of their working and condition; to make report of that condition to the annual town meeting; and to have this report sent to the governor, to be laid before the legislature. On the division of the township into districts they were to call annual district meetings, at which should be chosen three trustees, who were to provide for their respective districts suitable school-houses, determine how many months the school should be kept open, and make a list of the children in the district between 4 and 16 years of age, which list should be the basis for the apportionment of the public school money. This school money, $20,000 annually for the whole State, was to be divided among the counties in proportion to the amount of taxes paid by each, and among the school districts in proportion to their school population.

A SET-BACK.

In 1831, February 16, through the influence of the friends of private and church schools, this newly established school system was abolished, and a law enacted for the limitation of the State appropriation to the education of poor children alone, and the distribution of it to private and parochial as well as public schools. By the same law district boundary lines were swept away, and teachers were no more required to be examined.

RENEWED ADVANCE.

All this was so much opposed to the advancing educational sentiment in favor of free unsectarian schools that it could not be long endured, and on the 16th of January, 1838, a called convention of the friends of such schools met at Trenton, and, after due debate of the whole subject, appointed a committee to issue an address to the people of the State. This drew forth such a demonstration in favor of public schools free from all denominational control that the legislature, March 1, 1838, repealed the act of 1831, and restored the main features of that of 1829, with some improvements. The division of the State into school districts was renewed, and so was the distribution of the public money to the districts for the benefit of the public schools alone. The examination and licensing of teachers, as a necessary preliminary to their engagement in all schools aided by the State, was restored; and while making these restorations the opportunity was seized to engraft upon the school system some better features than it had before possessed. Thus the State appropriation was raised from $20,000 to $30,000 annually; the minimum school age from 4 to 5 years; the examination of teachers, from the occasional work of a township school committee to the regular one of a county board of examination; townships were called on to meet the State appropriation for the schools with a tax levy of double the amount of State money received; and the odious mention of pauper children as the only ones entitled to State aid was abandoned.

In 1845 came another mark of progress. A supplementary school law was passed, March 1, authorizing the appointment of a State superintendent of public schools for the counties of Essex and Passaic, with liberty for other counties to avail themselves of this supervision, by resolution of the boards of freeholders. The next year, April 17, came a more comprehensive law, repealing all preceding school bills, but embracing the best provisions of each one, with the addition of a general superintendency for the whole State and a local one for every township, the township superintendents to visit the schools of their townships every quarter and make report to the State superintendent every year.

In 1851 the legislature increased the State appropriation for the schools to $40,000, this to be annually apportioned among the counties in proportion to their population, and among the townships in proportion to the number of children of school age, (now 5 to 18,) the local tax for school purposes in townships being limited to $3 annually for every child of such age.

A COMPLETED SYSTEM.

As a means of improving the teaching force and giving it a special training for its work, teachers' institutes, with $100 appropriation to each, were authorized March 3,

1854, and a State normal school February 9, 1855; while, as a further encouragement to public education, the annual State allowance for the schools was raised in 1858 from $40,000 to $80,000.

Here matters rested till the conclusion of the civil war, which tasked the resources of the States in general too heavily for much improvement. That ended, a new era in educational affairs began. A State board of education, consisting of the governor and chief officers of state, with the trustees and treasurer of the normal school, was in 1866 put in charge of the school system, the State superintendent thenceforth being its secretary. To correspond with this great change and meet the advanced requirements of the time, a revised school law was passed March 21, 1867, the powers of the State board and State superintendent being defined, county superintendents coming in place of township ones; and State, county, and city boards of examination were provided for, without a certificate from one of which no teacher in a public school should be entitled to any salary. The district trustees of a township were also constituted a township board of trustees, subject to be called together by the county superintendent for consultation and advice with reference to school management. The State allowance for public schools was made $100,000 instead of $80,000, and the limitation of the district tax to $3 per child was taken off.

The law has, as to these things, remained substantially the same till now; but in 1871, April 6, there was an amendment making the public schools entirely free, and providing for a State tax of two mills on the dollar to enable them to be held as such for 9 months in the year, with an allowance of an additional township tax for this purpose if it should be necessary. In 1874, too, a law was passed requiring all persons having charge of children between 8 and 13 years of age to have them instructed in some way for at least 12 weeks in each year, 6 of which weeks must be consecutive. The next year this was improved in several particulars, tending to give it greater efficiency than has generally been secured by such laws in the United States.

ADMINISTRATION.

As may be seen, the administration at the outset was entirely local; State aid began to be provided for in 1816, State government and supervision in 1845, the full union of the two in 1846; and this was improved and brought to something like its present measure of perfection in 1867, when county superintendence was brought in.

The State superintendents under the laws of 1845 and 1846 were Theodore F. King, 1845–'52; John H. Phillips, 1852–'60; Frederick W. Ricord, 1860–'64; and Caleb M. Harrison, 1864. Under the laws of 1866 and 1867, by which the secretary of the State board of education is ex officio State superintendent, the present incumbent, Hon. Ellis A. Apgar, has held the office by successive elections for terms of three years to the present time.

ELEMENTARY INSTRUCTION.

DIMINISHED RESOURCES.

Referring to the fact that the amount set apart for all school purposes in 1875–'76 was much less than in 1874–'75, Superintendent Apgar says that the districts not entitled to a definite sum must, in consequence, receive much less per child than formerly. The per capita apportionment must be $4.24 instead of $4.49. "This reduction is due to two causes: first, a decrease of $6,558,190 in the taxable property of the State, making a difference of $13,116.38 in the amount derived from the two-mill tax; and, secondly, a large increase (14,694) in the school census upon which the apportionment is based. The aggregate reduction per child to large districts and to those having less than forty-five children amounts to from 50 to 60 cents. This is greatly to be regretted, and it is feared that it will have a serious effect upon the schools. Local taxation to supplement the deficiency must be resorted to, or the terms during which the schools are ordinarily kept open must be shortened. It is hoped that the people will raise by district tax the amount needed to keep the schools up to their previous standing both in length of terms and general efficiency."—(State report for 1875–'76, p. 10.)

LARGE ATTENDANCE ON THE SCHOOLS.

The total enrolment for 1875–'76 increased 8 per cent. over that for 1874–'75, and the attendance upon public and private schools amounted to 79 per cent. of the whole school population. Nearly all the children between 7 and 16 are believed to have attended school during some part of the year.

The increase in enrolment and average attendance is looked on by the superintendent as highly gratifying. Though the number of school age increased but 2,132, the enrolment in the public schools increased 4,521, and the average attendance 5,431. The number attending no school diminished 2,435.—(State report, pp. 13, 14.)

GOOD SCHOOLS THROUGH GOOD TEACHERS.

The qualifications of teachers affect so greatly the character of schools that it is always pleasant to find evidence of effort to have the teachers such as they should be.

In New Jersey this effort is apparent. The examinations for teachers' certificates are mainly conducted by county boards, composed of the county superintendent and of first grade teachers chosen by him; and as the county superintendent is selected by the State board on the ground of capacity and not of politics, and has to stand the test of acceptance or rejection by the county freeholders, the examinations are generally real trials of qualification, not being mere formalties. As a consequence of this, only 70 men and 42 women received first grade county certificates during the past year; 134 men and 119 women second grade ones; far the greater part of the examined candidates, 596 men and 1,161 women, having to content themselves with third grade ones, while 713 applicants failed to pass at all. This augurs well for the future of the schools, for incapable teachers only spoil their pupils.—(Report, p. 11.)

WHAT THE CENTENNIAL SHOWED.

It is pretty fair evidence of the good discipline of the New Jersey schools, that besides 2 colleges and 33 private schools, 1,184 ungraded public schools in the State, with 230 graded schools and 8 high schools, contributed to the educational exhibit at the Centennial; only 120 of the public schools failing to represent themselves, and only 5 per cent. of the teachers abstaining from participation. The number of pupils who furnished work was about 14,000; the number of specimens of all kinds and from all sources placed in the school exhibit of the State, 17,662.

The character and extent of the studies pursued were shown from the fact that the exhibit made consisted of drawings, maps, mathematical operations, penmanship, grammatical analysis, composition, and primary work, besides herbaria, mineralogical and zoölogical specimens, chemical products, crayon portraits, water color sketches of New Jersey birds, and various mechanical contrivances, all from the pupils of the schools.

The general thoroughness of the instruction given was evinced in the great completeness of the work presented and its high excellence in most respects. In map drawing and penmanship a rank beyond that of many States and up to that of the very best was confessedly attained. In mathematics, composition, and grammar, the superintendent holds that "the exhibit was equal to that from other States, excepting a limited amount furnished by the high schools in a few of the larger cities of the country." In artistic drawing it is admitted that Massachusetts made the best display, but Mr. Apgar thinks that with the other States New Jersey fairly held her own; while as to the general completeness of her educational collection he cites testimony from the American Bookseller, Pennsylvania School Journal, and New York Tribune, to show that in this respect she stood among the first if not herself the very first. County and city superintendents, teachers, and pupils, all seem to have labored with great unanimity to secure the results obtained

The exhibit, as a whole, will be preserved in a room at the State-house, and will form the basis of a growing museum of school work, all meritorious work being receivable at any time, that there may be a constant stimulus to excellence.—(State report, pp. 21–28.)

KINDERGÄRTEN.

Of these happy combinations of domestic freedom and school training and instruction, 10 make report of themselves for the year past, all speaking in high terms of the effect of the training in securing habits of attention, order, quick perception, and ready submission to mild discipline. Of the 10 reporting schools, one seems to embrace two departments, a German and an English, under the same teachers. Another in the same city, Newark, is not heard from. One existing last year at Hackensack does not report itself, and another at Plainfield; a preparatory department of still another school has been given up. For further particulars see Table V, in appendix.—(Returns to Bureau of Education for 1875–'76.)

CITY SCHOOL SYSTEMS.

CAMDEN.

Officers.—A board of education and city superintendent of public schools.

Statistics.—Estimated population, 40,000; children of school age, 10,842; enrolled in public schools, 5,270; in private and parochial, 1,200; average attendance in public schools, 4,039; that in others not given. Teachers in public schools, 103; wages of these, $350 to $1,600 for primary and grammar schools. No high school existent. Salary of superintendent, $1,084. Receipts for public schools, $86,751; expenditures, $86,363; average expense per capita, based on average daily attendance, $17.23.

It appears that evening schools have been maintained, but there are no statistics of them except the wages paid teachers, $30 to $40 a month.—(Return to Bureau of Education from Superintendent H. L. Bonsall, for 1875–'76.)

ELIZABETH.

Officers.—A board of education and city superintendent of schools.

Statistics for 1875–'76.—Population, 25,000; children of school age, 6,517; enrolled in

public schools, 4,547; in private and parochial, 1,800. Average attendance in public schools, 2,293; in private and parochial, 1,779. Teachers employed in public schools, 59; in private and parochial, 62. Salaries of teachers in public schools, $350 to $1,600, the latter for principal of high school; salary of superintendent, $500. Receipts for public schools, $43,624; expenditures, $41,986. Average expense per capita, based on average daily attendance, $18.07.

Notes.—Two evening schools have been maintained, enrolling 561 male pupils, and 38 females, under 3 male and 7 female teachers. Total average attendance, 215.

The superintendent says that, notwithstanding a decrease of 328 in the number of children of school age, the enrolment in the city schools was 646 greater than in 1874–'75. The average daily attendance has not increased in the same proportion, the advance in this having been 11 per cent. against 20 per cent. advance in enrolment.—(Report of State superintendent, pp. 3 and 4 of appendix, and return from Superintendent E. D. Smith.)

JERSEY CITY.

Officers.—A board of education and city superintendent of public schools.

Statistics.—Estimated population, 120,000; children of school age, 38,068; enrolled in public schools, 19,463; in private and parochial, 8,000; average attendance in public schools, 10,058. Teachers in public schools, 273; wages of these, $360 to $3,000. Salary of superintendent, $3,500. Receipts for city schools, $223,514; expenditures, $225,932. Average expense per capita, based on average daily attendance, $21.27.

Notes.—The grades are primary, grammar, and high. No city evening schools are mentioned; but there appears to be a city normal school, as salaries of teachers in such are given, though no other statistics of it appear.—(Return for 1875–'76 from Superintendent Dickinson to Bureau of Education.)

NEWARK.

Officers.—A board of education of 30 members, 2 for each ward, and a city superintendent of schools.

Statistics for 1875–'76.—Population about 120,000; children of school age, 37,206; enrolled in public schools, 17,356; in private and parochial, 7,378; average daily attendance in the public schools, 10,933; number of teachers in these, 282. Wages of teachers, in primary schools, $300 to $1,200; in grammar schools, $425 to $2,000; in high school, $800 to $2,400. Salary of the superintendent, $2,500. Receipts for public schools, $217,038; expenditures, $208,033. Expense per capita based on average daily attendance, $20.23. A city normal school, with 4 teachers and 135 pupils, has been conducted during the year; and evening schools, with 36 teachers and 1,479 enrolled scholars, also appear. The city high school had 5 male and 7 female teachers, with 176 male and 278 female pupils on its rolls; average attendance, 342.

Notes.—Music appears to have been taught by a special teacher or teachers at a salary of $1,500; but there is no mention of special instruction in drawing or penmanship. The superintendent says that the school accommodations do not keep pace with the increase of the school population. Much as they have been needed there have been no new school-houses built during the year. A large number of children, probably in some measure from this cause, attend no school; but from those reported as non-attendants, 12,742, about 3,000 must be deducted for the number between 5 and 6 years old, who are not admitted to the public schools, and perhaps 6,000 more for those over 15, who are irregular in their attendance.

As evidence of improvement in the instruction given, it may be noted that there was a larger proportionate number of successful applicants for admission to the high school, and also a decided improvement in the general appearance of the papers presented.—(Return to Bureau of Education, and report of Superintendent Sears, in State report, pp. 10–13.)

NEW BRUNSWICK.

Officers.—A board of education, and city superintendent of schools.

Statistics.—Population, about 18,000; children of school age, 4,956; enrolled in public schools, 2,455; in private and parochial, 1,183; average attendance, including that on evening schools, 1,638. Teachers employed in public schools, 42; salaries paid these, $300 to $1,400. Salary of city superintendent, who is principal of all the public schools, $2,500. Receipts for public schools, $85,610; expenditures, $85,610. Average expense per capita, based on average daily attendance, $17.37.

Notes.—An evening school has been maintained, with 3 male teachers and 1 female, an enrolment of 130 males, and an average attendance of 95.

The schools are graded as primary, grammar, and high, with a course of four years for each, and a steadily increasing proportion of the pupils is said to be passing up to the higher departments.

The attendance, notwithstanding a great prevalence of sickness, is reported to have been exceptionally good, the percentage in the high school and grammar departments having been 95.5 on the average enrolment, and that for all the schools, 93.6. No less

than 274 pupils were present every day during the year; and of this number, one young lady, Mary Bessonett, had completed 8 years without the loss of a day.

A great advance in school accommodation has been made by the erection of a new high school building in a healthy location on the finest avenue of the city. In its construction great care was taken to secure large isolated rooms, properly lighted, heated, and ventilated; and, so far as a three months' occupancy can test a building, the superintendent thinks that the ends aimed at have been reached. The building cost $50,000, and when completely furnished will accommodate 750 pupils.—(Appendix to State report, pp. 13, 14, and return from Superintendent Pierce for 1875–'76.)

PATERSON.

Officers.—A board of education of 16 members, two from each ward, one-half apparently going out each year, and a city superintendent of public schools.

Statistics.—Estimated present population, 39,000; children of school age, 11,982; enrolled in public schools, 8,459; in private and parochial, 1,500; average attendance, 4,143. Teachers in public schools, 102; wages paid these, $355 to $1,425; salary of superintendent, $2,000. Receipts for public schools, $93,073; expenditures, $92,621. Average expense per capita, based on average daily attendance, $17.97.

Notes.—Music was taught by two special teachers during a portion of the year, and drawing from January, 1876. A city normal school has been kept up, with 4 teachers and 122 pupils; and from October 11 to the midwinter, 5 evening schools, with 21 teachers and 605 enrolled scholars, the teachers in both cases being of the regular corps of city teachers. There has also been a normal class connected with the high school, the course in which occupies a year, and is meant to insure a thorough mastery of the subjects taught in the primary and grammar grades, with skill in discipline, and improved methods of imparting instruction. This class is held to be a valuable auxiliary to the school system, and an important step toward securing teachers more thoroughly trained for their work than the majority of applicants for positions.—(Report of the board of education, and return to Bureau of Education from Superintendent W. J. Rogers for 1875–'76.)

TRAINING OF TEACHERS.

STATE NORMAL SCHOOL, TRENTON.

The State normal school, established at Trenton in 1855, is the chief agency for the supply of well trained teachers for the public schools. It has two courses of instruction, one extending through 2 years, the other through 3 years; the former termed the elementary, the latter the advanced course. Both include vocal music and drawing. Graduates from the advanced course receive State certificates of the second grade, valid for 7 years; those from the elementary course certificates of the third grade; each entitles the holder to teach, without further examination, in the public schools of the State for the period covered by the certificate.

The pupils have, during their course, the advantage of observation and practice in an excellent model school, close beside the normal school, the course in which runs up from elementary English studies to a fair range of high school ones. They are boarded at very moderate rates, in well arranged and comfortable buildings provided by the State, quite near the school.

The number enrolled in the year 1875–'76 was 256; the average number in attendance, 205. The graduates numbered 39, of whom 28 were from the advanced course, and 11 from the elementary.—(Report of trustees and principal for 1875–'76.)

FARNUM PREPARATORY SCHOOL, BEVERLY.

This school occupies an excellent building in a pleasant village on the Delaware, 10 miles below Trenton. Erected in 1855–'56 by a wealthy citizen of Beverly, from whom it takes its name, it was offered to the State for its normal school. But that school having just been located at Trenton, this was accepted only as a preparatory school. It receives some aid from the State and has a normal department, but its graduates receive no diplomas, and are not authorized to teach in the public schools without examination.

CITY NORMAL SCHOOLS.

Normal classes — sometimes composed of those who are already teachers, sometimes of those who aim to be such — are maintained in at least 4 cities of the State, Jersey City, Hoboken, Newark, and Paterson. The first does not report the number of its normal pupils, but, from the salary paid its principal instructor, probably includes in its normal class a considerable number of its teachers. The class in Hoboken is said, in the State report, (p. 7 of appendix,) to have graduated 5 in 1876. Newark reports 135 pupils, under 4 teachers, and Paterson 122, under the same number.—(Returns to Bureau of Education for 1875–'76.)

OTHER MEANS OF TRAINING TEACHERS.

County superintendents are required by the rules of the State board of education to encourage the formation and assist in the management of county institutes, in which

the teachers of the several counties receive instruction as to methods of teaching and discipline and all matters connected with school work. From the published reports of the superintendents such institutes seem to have been held in at least the greater portion of the counties, and with much advantage. To them, in some cases, have been added county and township teachers' associations, one of these meeting every three months, and several, in Burlington County, once a month. In Cumberland County the superintendent has endeavored to reach all the teachers by publishing, in the county papers, a series of letters, pointing out practicable means of improvement in the qualifications for their work; this series to be supplemented, in 1876–'77, by another on the best methods of performing that work.

Educational journals, of course, aid much in this direction, and a new one for the State, the New Jersey School Journal, has been set on foot for 1877. It is hoped that the Journal may prove a success.

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

High schools in connection with the public school system have been established in Elizabeth, Hoboken, Jersey City, Newark, New Brunswick, Orange, Passaic, Paterson, Phillipsburg, and Rahway, while in the model school connected with the State normal school at Trenton, high school studies are pursued by the 2 senior classes. In these different schools, excepting Hoboken, from which no report has been received, there appear to have been 1,607 students under 47 teachers, in courses varying from 2 to 4 years.—(Returns to Bureau of Education for 1875–'76.)

PRIVATE SECONDARY SCHOOLS.

In 7 schools for boys, 9 schools for girls, and 20 for both sexes, outside of the public school system, there have been reported to this Bureau 2,416 pupils under 163 teachers. Of these 510 are in classical studies, 341 in modern languages, 237 preparing for a classical course in college, and 72 for a scientific course. Drawing is taught in 16 of these schools, vocal music in 24, and instrumental music in 24. Chemical laboratories are reported by 10, philosophical apparatus by 16, and libraries of 75 to 2,200 volumes by 16.

PREPARATORY SCHOOLS AND PREPARATORY DEPARTMENTS.

Five preparatory schools report 183 pupils, under 31 teachers, and 1 preparatory department reports 18 pupils. In the 6 schools there were 166 pupils preparing for the classical course and 35 for the scientific. Three report chemical laboratories, apparatus for the illustration of natural philosophy and gymnasiums, and 2, libraries of 50 and 2,000 volumes.

BUSINESS COLLEGES.

Three business colleges report 19 teachers and 398 students. Two pupils were studying Spanish, 7 French, 26 German, 3 telegraphy, and 12 phonography. All these schools teach the common English branches and correspondence, penmanship, bookkeeping, and commercial law, 2 banking and phonography, and 1 telegraphy. One reports a library numbering 575 volumes.

SUPERIOR INSTRUCTION.

COLLEGES FOR YOUNG MEN.

The College of New Jersey, at Princeton, more commonly known as Princeton College, leads all the others in the State, with respect alike to age, accommodations, extent, and influence. Founded as far back as 1746–'47, by the Presbyterians, who largely settled that portion of the State, it has remained since under their control, but it is open, like others, to students of all churches or of none. Its course is full, its faculty most respectable, its buildings excellent, and its apparatus for instruction and illustration large.

Fellowships, worth $600 in some cases, and $250 in others, reward the exertions of specially industrious and meritorious students, and enable them to pursue, for a year after graduation, studies supplementary to those of the college course. These studies may be prosecuted either at the college or elsewhere, but reports of them must from time to time be presented to the faculty. Fellows are now pursuing the highest studies in Princeton, Oxford, (England,) Leipzig, and Berlin.

Its library of 33,000 volumes and 2,000 pamphlets, increased last year by the addition of about 2,000 books and 150 pamphlets. It has two museums with four able curators. Its graduates in the year were 117, its bachelors of arts numbering 109, its bachelors of science, 8. In the intercollegiate contest, January, 1877, a graduate of Princeton stood first in mental science.

Two new professorships have been established, one of architecture and applied

arts, the other an adjunct professorship of mathematics and civil engineering.—(Paper of State superintendent, catalogue for 1876–'77, and letter of Dr. McCosh, January 23, 1877.)

Rutgers College, New Brunswick, (Reformed,) stands next to Princeton in age, influence, and reputation. It has good buildings in a pleasant portion of a pleasant city, near the great centres of population for the State, a faculty with a fair mingling of conservative and progressive elements, and an official recognition from both the General and State governments in the adoption of its scientific department as the State college of agriculture and mechanic arts.

There is no preparatory department. In the classical collegiate course all the studies up to the close of the sophomore year are obligatory. During the junior and senior years some subjects are required of all students; but several others are now made elective, with only the requirement that at least one of these must be pursued. Thoroughness rather than quantity appears to be the rule, though a considerable range of study is provided for, and the plan sketched for going over this is a judicious one. Graduates in 1876: bachelors of art, 27; of science, 2.

The post graduate course, of which mention was made last year, is fully outlined in the catalogue for this year, and embraces moral philosophy and evidences of Christianity, metaphysics, geology and chemistry, higher mathematics, Greek language and literature, modern languages, political and social science.—(Catalogue for 1876–'77, and return to Bureau of Education.)

Seton Hall College, South Orange, (Roman Catholic,) occupies buildings specially erected for its use in 1859–'60, and, beautiful itself for situation, overlooks one of the most charming portions of the State. Under the charge of the Roman Catholic bishop of Newark, it is conducted largely by secular priests, with the aid of some lay instructors. Sisters of charity look after its domestic arrangements and care for such students as need nursing. The course, as in most of our Roman Catholic colleges, is largely patterned on the South European plan, paying special attention to classical studies, as a preparation for professional life, though training for scientific and commercial pursuits is not neglected. Health, manners, and morals are said to be carefully attended to.

St. Benedict's College, Newark, (Roman Catholic,) is a day college, conducted by the Benedictine Fathers, and is designed to give young men a classical or commercial education, combined with thorough instruction in Christian doctrine, and strictly Catholic discipline. The time spent at the college is entirely devoted to recitation and instruction, and lessons have to be studied at home. French, German, and drawing are elective studies. For the benefit of those not prepared for the college classes there is a preparatory department.—(Catalogue for 1875–'76.)

Burlington College, Burlington, (Protestant Episcopal,) having failed to reach a real collegiate rank after many years of effort, has been relegated to the list of preparatory schools. (See Table VII.)

COLLEGES FOR WOMEN.

Four institutions for the superior instruction of young women report for 1876 a total of 49 instructors and 381 students. One of the instructors and 20 of the students are in a preparatory department. The remaining 361 students are: 78 regular collegiate, 6 special, and 5 post graduate. Three of these institutions are authorized to confer degrees. The courses are from 4 to 7 years. All teach vocal and instrumental music, French, German, drawing, and painting. Three report chemical laboratories and apparatus for the illustration of natural philosophy, and 2 a museum of natural history. Three have libraries numbering 1,000, 1,200, and 2,000 volumes respectively.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENTIFIC.

The John C. Green School of Science, a department of Princeton College, provides two courses in general science, one of 4 years, to be pursued by candidates for the degree of B. S.; the other, less determinate, extending into several special departments, to be pursued by students who have graduated as B. A. or B. S., and are candidates for the degree of Sc. M. There are also 4 elective courses from the beginning of the junior year, and a department of civil engineering, the course in which is 4 years. Arrangements have been made for a department of architecture connected with the school of science, to commence with the session of 1877–'78.—(Catalogue of the College of New Jersey, 1876–'77.)

The Rutgers Scientific School, at New Brunswick, is the State college for the benefit of agriculture and the mechanic arts, and presents 3 courses of study: one in civil engineering and mechanics, one in chemistry and agriculture, and one in chemistry alone. During the first and second years the studies of the two former courses are the same, and are meant to form a complete course for land surveyors. During the last two years the subjects of higher mathematics, mechanics, and engineering in the engineering course are replaced in the agricultural by analytical chemistry, practice in the laboratory, and agriculture.—(Report for 1876.)

The Stevens Institute of Technology, Hoboken, established for special scientific training, devotes itself particularly to mechanical engineering, in which it graduated 16 students in 1876. Its course is 4 years. The high school of Hoboken acts as a preparatory department to it. Six students appear in partial courses; 2 in post graduate.—(Return for 1876.)

PROFESSIONAL.

The Theological Seminary, at Princeton, (Presbyterian,) presents a course of 3 years in the usual subjects of theological study, with provision for graduate study beyond this. It is open to persons of every denomination of Christians. Prof. Charles Hodge, long and honorably known for his connection with this seminary, retired at the close of 1876 to a merited repose, and has been succeeded by his son, A. A. Hodge, D. D. This seminary has a noble library, students having access also to the college library.—(Catalogues for 1875–'76 and 1876–'77.)

The Theological Seminary of the Reformed Church in America, at New Brunswick, is also open to all denominations, has a course of 3 years, and a library of more than 20,000 volumes.—(Catalogue for 1875–'76.)

The Drew Theological Seminary, at Madison, (Methodist Episcopal,) has a regular course of study, requiring 3 years for its completion, which is arranged with special reference to the attainments of college graduates. Others are received, but they must pass an examination satisfactory to the faculty in classical and general literature and science. For those not so prepared there is a special course.—(Catalogue for 1875–'76.)

In *The German Theological School of Newark*, at Bloomfield, (Presbyterian,) the course is divided into two departments, the theological and the academic, the latter preparatory to the former. The full course comprises 6 years, 3 in the preparatory and 3 in the theological department.

SPECIAL INSTRUCTION.

STATE REFORM SCHOOL FOR BOYS, JAMESBURGH.

The number of inmates for 1876 was 214, of whom 17 were colored and 32 foreign born. Only 71 could read when committed. When the boys are considered fit for removal, which must be not less than a year after their admission, good homes are sought for them, but a guardianship still exercised. The mild but firm discipline maintained has been found in most cases to be productive of good order and fair promise of reform.—(Report for 1875 and return for 1876.)

STATE INDUSTRIAL SCHOOL FOR GIRLS.

The number here in 1876 was 30, of whom 5 were colored and 1 foreign born. Only 4 could read when committed. Reading, writing, arithmetic, spelling, geography, and physiology are taught in the school, and through a due admixture of firm discipline and mild moral suasion, five-sevenths of those admitted are ordinarily made orderly and useful members of society.—(Report for 1875 and return for 1876.)

LIST OF SCHOOL OFFICIALS IN NEW JERSEY.

Hon. ELLIS A. APGAR, *State superintendent of public instruction, Trenton.*

[Term, 3 years from date of appointment.]

STATE BOARD OF EDUCATION.

Members.	Post-office.	Term expires.
Joseph D. Bedle, governor	Jersey City	January, 1878.
John P. Stockton, attorney-general	Trenton	
Robert F. Stockton, comptroller	Trenton	April, 1880.
Henry C. Kelsey, secretary of state	Trenton	April, 1881.
Leon Abbett, president of senate	Jersey City	January, 1878.
Rudolph F. Rabe, speaker of assembly	Hoboken	January, 1878.

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Randall's History of the Common School System in the State of New York; Sketch by Hon. Victor M. Rice, State superintendent, in special report, 1867; Sketch by Hon. Neil Gilmour, State superintendent, in 22d annual report, and list of superintendents from the same.

BEGINNINGS.

As early as 1633 the original Dutch settlers made arrangements for instruction, and their schools were continued till some time after the occupation of the country by the English, provision being made for one in every parish. The earliest English schools appeared in the beginning of the 18th century, one of the first being what is now Trinity School, New York, opened in 1710. King's College, now Columbia College, chartered in 1754, afforded opportunity for superior instruction, and academies and private schools for secondary and ordinary training; but beyond the setting apart in 1789 of two lots in each township to be afterward surveyed "for gospel and school purposes," no provision looking toward common or free schools seems to have been made till 1795. In that year, April 9, an act was approved which appropriated $50,000 annually for five years to encourage schools in the cities and towns of the State, in which the children of the inhabitants should "be instructed in the English language, or be taught English grammar, arithmetic, mathematics, and such other branches of knowledge as are most necessary to complete a good English education." Arrangements, quite good for that time, were made for the distribution of this State school fund among the counties, towns, and school districts; for the raising by tax in each county of a sum for schools equal to one-half of that apportioned by the State; for the supervision of the schools and apportionment of the school moneys by three to seven commissioners in each town; and for the care and management of them in the districts by boards of two or more trustees. In fact, a very fair school system was arranged, and under it, in 1798, there were 1,352 schools in operation, with 59,660 children taught in them.

This act of 1795 expired by its own limitation in 1800, and although successive governors urged on the legislature a new provision for the support of common schools, nothing was done for them by the State and for the State except the authorizing in 1801 of a series of "literature lotteries," meant to raise $100,000, and the appropriation, April 2, 1805, of the net proceeds of 500,000 acres of State lands to the formation of a school fund. This act laid the foundation of the present fund for common schools, which by its terms was to be invested and accumulate till the interest should amount to $50,000, when an annual distribution of that amount was to be made among the school districts of the State. Only a week later an act was passed to organize a free school society for the city of New York, but this was local as well as limited in aim, and only touched a border point of the whole State.

THE FIRST CONTINUOUS SCHOOL SYSTEM.

The hopes and efforts of the friends of common schools found their accomplishment when on February 17, 1812, a committee appointed in the preceding year reported to the legislature a bill which passed that body and secured the approval of the governor. The bill embodied features not differing greatly from those of the law of 1795. Its outlines were as follows: that the several towns of the State be divided into school districts by three commissioners, elected by the citizens qualified to vote for town officers; that three trustees be elected in each district, to have the care and superintendence of the schools to be established in it; that the interest of the school fund be divided among the different counties and towns according to their respective populations, as ascertained by the United States census; that the proportion received by the respective towns be subdivided among the school districts according to the number of children in each between the ages of 5 and 15 years, inclusive; that each town raise by tax, annually, as much money as it receives from the school fund; that the gross amount of moneys received from the State and raised by towns be appropriated exclusively to the payment of the wages of teachers; and that the whole system be placed under the superintendence of an officer to be appointed by the council of appointment. The amount to be distributed by the State under this system was about the same as had been disbursed by the preceding law, but that to be raised by the people to meet this was double what it had been before. Essentially the same officers, with essentially the same duties, were retained. A head was given to the system, which it had not before. Inspectors for examination of teachers and for visitation of the schools were associated with the township commissioners, and authority was given the school districts to raise by special tax a sum sufficient to purchase a lot for the school, to build the school-house, and to keep it in repair.

The generally wise provisions of this system, and the appointment of an intelligent and cultivated lawyer of Albany, Mr. Gideon Hawley, to the headship of it, insured

its success, and, with some amendments suggested by experience, it continued to be the system of the State till 1841.

The amendments to it were substantially: in 1814, that the levying of a town tax equal to the State appropriation to the town should not be optional, but compulsory; that the levying of a like sum, in addition, might be optional; but that failure to make the first levy and to keep a school open for three months should work a forfeiture of the State school money; and in 1822, that the superintendent should have appellate jurisdiction in all controversies arising under the school laws, and that his decision in such cases should be final.

Another alteration, not an amendment, but rendered necessary by peculiar circumstances, was the abolition of the superintendency as a separate office and the making it an appendage to the office of secretary of state.

Augmentations of the State funds for common schools were made at different times, bringing the annual amount in 1827 to $100,000, and in 1838 to $275,000, one-fifth of which last sum was to go for books for district libraries, authorized to be created in 1835; the remainder to the payment of salaries of teachers, a like sum to be raised by local tax among the people.

The literature fund, for aiding academies, looked to for a supply of teachers for the schools, also received in 1827 an increase, bringing its capital up from $35,000 to $245,000, the income from which was directed to be distributed, not, as before, in proportion to the number of students instructed in the classics, but in the ratio of those instructed in classical or higher English studies, or in both.

IMPORTANT CHANGES.

The system of supervision by township officers, absorbed quite generally in other occupations and with little leisure and too often little capacity for school work, proved unsatisfactory. On two occasions, in 1827 and 1840, the State superintendents recommended, in consequence, that it should be dispensed with, and that in lieu of it should be instituted a supervision in counties or other larger districts, by persons competent to investigate the methods of instruction, the qualifications of teachers, and all the operations of the school system. In 1841 these views prevailed, and on the 26th of May in that year the legislature passed a law providing for the appointment, every two years, by the board of supervisors of each county, of a county superintendent, for the general inspection and supervision of the common schools within his jurisdiction. By the same act the number of town inspectors was reduced, provision was made for the establishment of schools for colored children, a deputy State superintendent was allowed, and various other amendments in the existing system made.

In 1843 the offices of town commissioner and inspector were abolished, and a single officer, called town superintendent, substituted. Teachers' institutes, subsequently made a regular part of the State system, took their rise in this same year.

In 1844 the specific instruction of teachers by a course of normal school training was added to the previous one of teachers' classes in academies, by an act passed May 3d to establish a normal school at Albany. The results of this instruction to both the teachers and the schools proved so highly beneficial that seven other normal schools, at Brockport, Buffalo, Cortland, Fredonia, Geneseo, Oswego, and Potsdam, have been since either established or accepted by the State as a part of its regular school system; the city of New York sustaining also, in its City College and Girls' Normal School, substantially two others of its own.

In 1847, at a special session of the legislature in November, the opponents of county superintendency succeeded in securing the abolition of the office and the passage of a requirement that all appeals from the decisions of local school officers be carried up to the State superintendent. This destruction of the intermediate agency between the town and State superintendency is said to have been followed by a long and sad deterioration in the efficiency of the State system—an efficiency only restored after many years by a reorganization of the system in 1854–1856.

In 1854 the first great step in such a reorganization was effected by separating the office of State superintendent from that of the secretary of state, and giving it, April 8th, to the Hon. Victor M. Rice as head of the department of public instruction; and in 1856 a further advance in it was made by the abolition of the comparatively inefficient office of town superintendent, and the restoration, under a modified form, of county superintendents, now called school commissioners. These acts brought the school forces of the State under the control of an officer devoted wholly to their management, with subordinates whose experience, ability, and full absorption in the work secured a bringing of these forces into higher discipline and efficiency than had previously been possible.

FREE SCHOOLS AT LAST.

Up to 1849 the system of supplying any deficiency in the school moneys by rate bills on persons sending pupils to the schools had continued to prevail, the rate being according to the number of days' attendance of such children. But the trouble which

this involved — by delaying payment of the teachers, inducing litigation with parents as to their rates, and putting a sort of premium on truancy and short attendance — led to the passage of an act on the 26th of March, in the year 1849, establishing free schools throughout the State, and providing for raising, by district taxation, all the supplementary funds for their support. But taxpayers had not yet been educated up to this point, and so the law, though sustained at the annual election by a majority of 157,921 among the voters of the State, met with violent and extensive opposition. This opposition succeeded in carrying through the legislature in 1850 a bill for the repeal of the free law; but the repeal, being submitted to the people, was defeated. The next year, after long and free debate upon the subject, a compromise was effected by which the absolutely free system was discontinued and the levying of rate bills was again allowed, but a much larger sum than previously was to be raised by a State tax and distributed with the other school funds among the districts. So things went on, with comparatively little variation till 1867, when, the public mind being more fully ripe for it, an act was passed abolishing the rate bill system, declaring the common schools absolutely free to all children of the requisite school age, and making provision for supplying by taxation the deficiency arising from abolition of the rates, which rates, in the preceding year, had amounted to $709,025.36. Under this law all obstructions to universal education are removed, and to every child of proper age the school of his district is as wholly free as the air which he inhales or the sunlight in which he basks.

ADMINISTRATION OF THE SYSTEM.

The following gentlemen have been intrusted by the State with the honor of heading the school system and administering its affairs:

As sole State superintendents of common schools: Gideon Hawley, 1813–'21; Welcome Esleek, for a part of 1821.

As State superintendents in conjunction with the office of secretary of state: John Van Ness Yates, 1821–'26; Azariah C. Flagg, 1826–'33; John A. Dix, 1833–39; John C. Spencer, 1839–'42; Samuel Young, 1842–'45; Nathaniel S. Benton, 1845–'48; Christopher Morgan, 1848–'52; Henry S. Randall, 1852–'54; Elias W. Leavenworth, from January 1 to April 8, 1854.

As superintendents of public instruction: Victor M. Rice, 1854–'57; Henry H. Van Dyck, 1857–'62; Victor M. Rice, again, 1862–'68; Abram B. Weaver, 1868–'74; Neil Gilmour, present incumbent, elected first for 1874–'77, and again for 1877–'80.

To Gideon Hawley, first superintendent, is ascribed by Randall the efficient organization of the school system; to Gen. Dix, the introduction of district libraries; to John C. Spencer, the establishment of the principle of thorough supervision; to Col. Young, the ingrafting of normal schools and teachers' institutes on the previous idea of getting good teachers through academies; while to Nathaniel S. Benton, Christopher Morgan, and Victor M. Rice belongs the honor of especially laboring to establish the rule that the State schools should be entirely free.

The deputy State superintendents, introduced under the administration of Hon. John C. Spencer and having very responsible relations to the school work while the secretaries of state were superintendents, have been, Samuel S. Randall, 1841–'46; Alexander G. Johnson, 1846–'49; Samuel S. Randall, again, 1849–'52; Henry W. Johnson, 1852–'54; Samuel S. Randall, a third time, April to June, 1854; Joseph J. Chambers, June 14, 1854, to December 26, 1854; E. Peshine Smith, December 26, 1854, to August 1, 1857; Emerson W. Keyes, August 1, 1857, to August 19, 1865; Samuel D. Barr, August 19, 1865, to November 30, 1868;* James C. Brown, November 30, 1868, to January 9, 1869; Edward Danforth, January 9, 1869, to August 1, 1874; Jonathan Tenny, August 1, 1874, to December 16, 1875; Addison A. Keyes, from December 16, 1875, to the present time.

SCHOOL FUNDS.

The common school fund was established by an act of the legislature, passed April 2, 1805, which provided "that the net proceeds of five hundred thousand acres of the vacant and unappropriated lands of the people of this State, which shall be first sold by the surveyor-general after the passing of this act, shall be, and hereby are, appropriated as a permanent fund for the support of common schools." Subsequently it was enacted that "the proceeds of all lands which belonged to the State on the first day of January, in the year 1823, (except such parts thereof as may have been or may be reserved or appropriated to public use, or ceded to the United States,) together with the fund denominated the common school fund, are to be and remain a perpetual fund, the interest of which is to be inviolably appropriated and applied to the support of common schools throughout the State." In 1838 it was provided that the unappropriated income of the United States deposit fund, which it was estimated would be about

* Randall's History makes Mr. Barr deputy from 1862 to 1868. The matter being referred to State Superintendent Gilmour, he kindly made the needed corrections and additions in the list of deputies from the time of Mr. Randall's incumbency in 1854 to date, and wrote "This list is compiled from official records, and may be relied on as correct."

$50,000 annually, should be added to the capital of the common school fund; and the constitution of 1846 declared that the capital of the fund should be preserved inviolate, its revenues applied to the support of common schools, and the sum of $25,000 annually added to the capital of the fund from the revenue of the United States deposit fund. This is the only constitutional provision for the support of common schools; and the support thus guaranteed is in itself entirely inadequate to the maintenance of a system of public education as extensive as that which, by slow processes, has been built up in this State.

The capital of the fund amounted, on the 30th of September last, to $3,080,107.68, while the revenue, which alone is applicable to the support of common schools, was in 1875 no more than $179,773.15. Of this amount, $170,000 have been appropriated for dividends to common schools, and $5,000 for the support of Indian schools. From these statements it will be seen that the revenue guaranteed by the constitution for the support of common schools in the State would not, upon the present basis of expenditure, support them for a single week in each year. The lands now owned by the State the proceeds of which, if sold, would go to increase the capital of the common school fund, are of comparatively little value; so that hereafter, under existing laws, the capital of the fund is not likely to be increased very materially, except by the amount annually added to it from the revenue of the United States deposit fund. It may not be of any decided advantage to the school system to have a large fund held in trust for its maintenance; certainly it would not be if the constitution were so amended as to require the legislature to make ample provision for the support of a system of free education.

The receipts of the free school fund for the year 1875–'76 were, including State tax, $3,132,725; payments, the same.

Under the amendments to the school law passed last winter, the State treasurer makes to the educational department a monthly statement of the condition of the free school fund, and the bank in which deposits are made and upon which all drafts are drawn furnishes the department a duplicate passbook, showing the amount deposited and withdrawn from time to time. Thus the fund is safely guarded from loss through errors or defalcations.—(State reports for 1875 and 1876.)

ELEMENTARY INSTRUCTION.

PROGRESS OF THE SCHOOLS.

The common schools of the State, notwithstanding the depression in business, received, during the school year 1875–'76, a generous support, were largely attended, and performed their functions as successfully as in any preceding year. The Centennial Exhibition has done much to incite not only educators, but the public generally, to renewed efforts to lay broad and deep the foundations of education, that the youth of to-day may become useful citizens.

That the people of the State are keenly alive to the interests of the common schools is evidenced by the fact that of all taxes assessed and collected no taxes are paid more cheerfully than those for the education of youth. There are some who complain that the schools cost too much, but their number is small. Not only are the people willing to pay the tax necessary for the general expenses of the schools, but, whenever new buildings are to be erected, or repairs are to be made, an increased tax is willingly paid for such purpose, if thereby the greater comfort or pleasure of the children can be subserved. The increasing demand for money for educational purposes has kept and must keep pace with the improvement and development of the State; and it is believed that such was the controlling idea when the change was made by the legislature from a fixed tax levy for the support of schools to a rate per cent. on the valuation of property.—(State report, 1875–'76, pp. 5, 37.)

COMPULSORY EDUCATION.

Special reports made to the State superintendent by city superintendents in respect to the subject of compulsory education show that, except in the city of New York, almost no practical steps have been taken to enforce the law. It is conceded, however, that the moral effect of the law has been good. The superintendent believes that attendance at school has been somewhat increased in consequence of its existence. The effort to obtain statistics showing the workings of the act in the rural districts was much more successful than that of the previous year. The reports of trustees are not, however, especially encouraging, and but little has been done under the law in the rural districts. In most of such districts, in the villages and in the smaller cities, a very large proportion of children between 8 and 14 attend school the prescribed length of time and did so attend before the compulsory education act was passed.

TOWNSHIP SYSTEM.

Since the passage by the legislature of 1867 of the free school act, whereby the old system of rate bills was abolished, the question has been agitated whether the school

districts as they now exist should not undergo a change. In times past, when the bal ance of teachers' wages remaining due after the application of public money thereto was raised by rate bills, it seemed well that the districts as defined should exist; but now, since any balance remaining unpaid is raised by a tax on the district property, the superintendent believes that the necessity for the present system has ceased, and that the schools would be materially benefited, the quality of the instruction improved, the attendance increased, and supervision made more thorough by adopting the township system.

The district boundaries are in many cases very indefinite, and much of the time of school commissioners is occupied in adjusting differences and difficulties in regard to them, and in setting off property, first to one district and afterward to another. Frequently, too, these changes are the cause of bitter quarrels. In short, the superintendent believes that the existence of the present district system is detrimental to the interests of education, and recommends that it be abolished, and the township system established in its place.—(State report, 1875–'76, p. 34.)

INDUSTRIAL DRAWING.

The State superintendent issued, in November, 1876, a circular inquiring of boards of education in cities and union schools organized under special acts what action had been taken to carry out the provisions of the law relating to free instruction in drawing. The reports received generally show satisfactory results. Nearly all indicate that efforts have been made to comply with the law. In most of these schools drawing has been taught by the regular teachers, though special teachers have been employed in several. In some of the cities, and also in several of the union schools referred to, drawing has formed a part of the course of instruction for many years. The study has also been introduced into other schools not required by law to make it a part of the regular course of instruction. While the reports generally show a desire to comply with the provisions of the law, and also indicate satisfactory results, it is still thought that a great impetus would be given to the study if special teachers could be detailed to visit the schools where drawing is required to be taught to organize classes and give instruction to the regular teachers.—(State report, 1875–'76, p. 31.)

SCHOOLS FOR INDIAN CHILDREN.

The number of persons between the ages of 5 and 21 years residing on the several reservations is 1,674, a little more than one-half of whom reside on the Allegany and Cattaraugus reservations. There are 28 school-houses, and 29 teachers are employed for terms that will average 34 weeks in each year. The registered attendance of pupils at the several Indian schools during the year 1875–'76 was 1,117, and the average daily attendance 588. These figures do not vary greatly from those presented in the last report, and there is nothing in them calling for special comment. Nearly all the schools were visited during the year either by the State superintendent personally or by persons connected with the department of education, and all were found to be doing well.—(State report, 1875–'76, p. 26.)

KINDERGÄRTEN.

Special reports embracing statistics for 1876 have been received from 15 schools of this class, of which 7 are located in New York City, 3 in Brooklyn, and the remaining 5 in Albany, College Point, Dansville, Irvington, and Rochester. Besides the 15 principals, these schools report the employment of 24 assistants and an attendance of 517 children, who are under instruction in a majority of the schools three and four hours of the day, 3 only retaining them as many as 5 hours. The ages of admittance range all the way from 3 to 10 years, but in a majority of the schools they are from 3 and 4 to 7.

CITY SCHOOL SYSTEMS.

ALBANY.

Officers.—A board of education of 15 members, a city superintendent, who is ex officio secretary of the board, and a superintendent of buildings and repairs.

Statistics.—Pupils enrolled in public schools, 13,941; average enrolment per quarter, 10,224; average daily attendance, 7,998; percentage of daily attendance on number enrolled, 57.

Notes.—The number of sittings has been enlarged during the year to 10,072, an increase of 759; but, as the attendance increases much more rapidly when greater facilities are offered, the provision is still inadequate. There has been an increase of 1,168 in the registered number, and of 658 in the average attendance of pupils, as compared with last year. During the last 10 years the number of registered pupils has more than doubled, and the average attendance has increased 3,658—not quite double, but a most remarkable and satisfactory increase.

A new and commodious building has been erected for the use of the high school,

which numbered in May, 1876, 441 pupils. At the commencement in June, 1875, there were 49 graduates. The number enrolled during the year 1875–'76 was 574. Six evening schools were in operation during the year, with an attendance of 1,230 pupils.—(Report of board of public instruction, 1876, J. O. Cole, superintendent of schools.)

AUBURN.

Officers.—A board of education of 9 members, serving for 3 years, one-third of them going out of office each year. The city superintendent is secretary of the board.

Statistics.—Youth from 6 to 21 years of age, 4,821; total enrolment, 2,543; average number belonging, 1,806; average attendance, 1,696; percentage of attendance, 94.09. Number of public school teachers, 47; all but two of them women. Expenditures for school purposes, $32,985.24. Estimated enrolment in private and parochial schools, 1,200.

Notes.—The attendance has steadily become more regular as tardiness has diminished; the percentage of attendance being better than ever before in the history of the schools. The course of study, embracing primary, grammar, and high grades, occupies 12 years, 4 for each grade. From the fact that but a very small number of those who commence the course remain long enough to secure any considerable part of the advantages offered, it is suggested that the care of the inferior grades of the schools is the most important trust confided to school authorities. From the reports for the closing month of the year it appears that the average number of children belonging in the first three grades was 963; for the second 3 years it was 545; for the two grades completing the grammar school course it was 200; while for the remaining four years of the high school course the number was reduced to 115.—(Auburn report, 1875–'76, B. B. Snow, superintendent.)

COHOES.

Officers.—A board of education of 10 members and a city superintendent of schools.

Statistics.—Children in the city between 5 and 21 years of age, 9,607; attending public schools, day and evening, 2,443; average attendance on day schools, 1,399; schools, 24; teachers, 33.

Notes.—The schools are graded as primary, intermediate, grammar, and high. There were also 8 evening schools sustained, with a total average attendance of about 500 pupils.—(Report of board of education, 1875–'76, Oliver P. Steves, superintendent.)

ITHACA.

Officers.—A board of education of 12 members, holding office for 3 years, one-third going out each year. The secretary of the board is superintendent of schools.

Statistics.—Children of school age, 2,407; registered in the schools, 1,769; average number belonging, 1,245; average daily attendance, 1,158; percentage of attendance on number belonging, 93; cost per pupil on average number belonging, $17.15; teachers, 31.

Notes.—The system embraces primary, intermediate, grammar, and high departments, each of which includes 3 years, the high school having, in addition to the regular studies, a preparatory course of 1 year. The several courses of study in the high school are arranged with reference to the requirements of the neighboring university, and quite a number attend with the view of qualifying themselves for it. More than one-third of the 200 pupils attending during the year were non-residents, who paid in tuition the sum of $1,109.50.—(Report of board of education, 1875–'76, L. C. Foster, superintendent of schools.)

KINGSTON.

Officers.—A board of education of 10 members holding office 3 years.

Statistics.—Persons of school age, 2,770; enrolled in schools, 1,814; average number enrolled, 1,125; average daily attendance, 1,062; sittings in the schools, 1,427; volumes in the district library, 1,981.

Notes.—The schools below the high school course are graded as primary, junior, and senior, each of these occupying three years. The three years' course in the high school is supplemented by a post graduate course of one year. Latin, Greek, French, and German are taught. Book-keeping, surveying, natural history, German, and other tusdies are optional.—(Report of board of education, 1875–'76.)

NEW YORK CITY.

Organization.—A board of education composed of 21 commissioners of common schools, of whom one-third are changed each year, with 5 school trustees for each ward, of whom 1 is changed yearly. The board appoints the executive staff, consisting of a city superintendent and 7 assistant superintendents of schools, a superintendent of school buildings, and an engineer, with such special teachers as are to be employed, while the trustees, with a general oversight of the schools of their wards, have the nomination of principals and vice-principals for these, subject to confirmation by the board.

Statistics.—Number of children of legal school age, (estimated,) 375,000. Enrolment

during the year, 252,155; average daily attendance, 122,518; number of teachers, 3,247, of whom 335 are men, and 2,912 women, 132 of the former being employed in the evening schools. Number of schools, 308. The salaries of teachers range from $500 paid assistants in primary schools to $3,000 paid principals of grammar schools, and $5,500 to principals of normal schools. The salary of city superintendent is $5,500, and that of the assistant superintendents is $4,500. Total expenditures for public school purposes, $3,948,100.31.

The enrolment in the evening schools, exclusive of the high, was 20,676; average attendance, 9,038; number under 12 years of age, 18; number between 12 and 15 years, 11,375; number 16 to 18 years, 4,297; number 18 to 21 years, 2,265; number over 21 years, 2,694. Of 260 classes examined in these schools, the instruction in 152 was found excellent; in 97 it was good; and in 1 fair.

Notes.—The system comprises primary, grammar, corporate, and evening schools, the nautical school, the normal college and training school connected with it, and the Saturday normal school for teachers. Four of the 108 grammar schools and 3 of the 115 primaries are for colored children. One of the 35 evening schools is a high school.

There was during the year a decrease of 2,567 in enrolment, and an increase in the average daily attendance of 1,560. The average enrolment during the year was about 72 per cent. of the total enrolment, and the average attendance was nearly 90 per cent. of the average enrolment, showing a little more than 10 per cent. as the average rate of absenteeism, an increase of about 1 per cent. over last year; there having been a retrogradation of 4 per cent. in the colored schools, but an improvement of 1 per cent. in the grammar schools. The average attendance, as compared with enrolment, shows an increase of 9 per cent.

The number of pupils the schools will accommodate is 2,000 more this year than last, and yet there were 9,142 pupils refused admission during the year for want of accommodations. A decided improvement is reported in the character of instruction and in the discipline. There were 130 pupils suspended for misconduct, of whom 22 were readmitted. The question as to what means of discipline should be used upon those who prove incorrigible still claims serious consideration. The system of expulsion neutralizes, to a considerable extent, the operation of the compulsory attendance department, as the very boys who are placed in the schools at considerable expense are often in a few days expelled as incorrigible. Many parents, moreover, finding the public school teachers unable to govern their unruly children, send them to parochial or industrial schools. The average attendance of pupils in such schools increased during the year more than 5 per cent., and enrolment in them has increased during the last 10 years nearly 90 per cent. against an increase of about 13 per cent. in the public schools. This disparity in the growth of the public schools as compared with the others is not accounted for entirely on the ground mentioned, and yet it is believed that the number of children excluded from the schools by the indirect operation of the system is large.

The new course of study, making drawing a regular and graded study in the grammar and primary schools, has introduced a reform which was very much needed, as previously the work was not uniform and the grading was left to either special teachers, principals, or class teachers. The new plan has not been in operation long enough to admit of a report of results. The graded system of teaching music has made some progress during the year, though hitherto the results of teaching this branch have been unsatisfactory. German has been made an optional instead of a general study, and has been restricted to the three higher grades of the grammar schools. Excellent progress has been made in this study, and its popularity is shown by the fact that since it has become optional the number of pupils taking it has decreased but very little. French is now taught in the three highest instead of as before in the two highest grades, and results are hoped for equaling those in German, notwithstanding that thus far this branch has not received the same fostering care that has been given to German.

*The nautical school** has held daily exercises on board the ship St. Mary's, with an average attendance of 109 pupils, 12 more than that of last year. The character of the instruction imparted and of the discipline was excellent. The school studies pursued were reading, spelling, arithmetic, geography, English grammar, penmanship, and map drawing. The success of the pupils in the technical examinations to which they have been subjected, as well as the large number who have graduated as accomplished seamen, attest the high degree of success which has attended this experiment of nautical instruction.

The 46 *corporate schools* are taught by 197 teachers, of whom only 91 are licensed by State or city authority, and had an average attendance of 121,353 pupils. These schools, which are connected with various benevolent and religious institutions, are under the immediate control of their respective boards of trustees, by whom the teachers are appointed, but they are subject to the general supervision of the board of education

* Discontinued since this report.

and its officers. All have been visited and examined during the year, and their modes of instruction and discipline carefully inquired into. Of 154 classes examined the instruction in 37 was found excellent; in 101, good; and in 16, fair. The schools of the Childrens' Aid Society, which are more numerous than those of any other corporate school authority, are very well conducted and carefully supervised.

The compulsory education law meets many obstacles to its full enforcement, among which are the difficulty of ascertaining accurately what children liable to its provisions are engaged in various occupations, and of retaining unruly and truant children after they have been placed there. The want of special provision for vicious children and the want of adequate accommodations for the school population necessitate the refusal of many applications for admission.—(Report of Hon. Henry Kiddle, city superintendent of schools, 1875-'76.)

OSWEGO.

Officers.— A board of education, of 16 members, 2 from each ward, elected for terms of 2 years, one-half going out of office each year, and a secretary appointed by them, who has the general supervision of the schools.

Statistics.— Children in the city between 5 and 21 years of age, 8,845; different pupils registered, 3,917; average daily attendance, 2,770; permanent teachers, 69; children reported as attending parochial and private schools, 1,595. Expenditures for school purposes during the year, $78,633.47.

Notes.—The schools are divided into primary, junior, senior, high, and unclassified. The high school had an average number belonging of 87 during the year 1875-'76, and an average attendance of 75.—(Report of board of education, 1875-'76.)

SCHENECTADY.

Officers.— A board of education of 10 members, 2 from each ward, and a superintendent of schools who is also secretary of the board.

Statistics.— Population of the city, 12,807; children of school age, 4,431; pupils registered during the year, 2,183; average number belonging, 1,597; average daily attendance, 1,493. School rooms, 27. Regular teachers, 33; of music and drawing, 3. Cost of education per capita on average number belonging, $13.79.

Notes.— The grades are primary, intermediate, grammar, and high. An evening school for boys was opened as an experiment, and kept open 23 evenings. It was attended by an average number of 39 pupils, and was considered a success. The high school or classical institute was attended by 126 pupils, of whom 73 studied Latin and 17 Greek. Industrial drawing has been taught, according to law, in all departments of the schools, but without the aid of a special teacher.—(Report of board of education 1875-'76, S. B. Howe, superintendent.)

SYRACUSE.

Officers.—A board of education of 8 members, 1 from each ward, whose term of office is 1 year, and a superintendent of schools, who is clerk of the board.

Statistics.—Persons between 5 and 21 years of age, 16,552; pupils registered, 8,820; average number belonging, 6,624; average daily attendance, 6,228; regular teachers, 206; special, 1. Cost of education per pupil on average number belonging, $19.44; on average daily attendance, $20.68. Expenditures for the schools, exclusive of buildings and permanent repairs, $128,803.43.

Notes.—The grades are primary, junior, senior, and high, each comprising 4 years, and the whole course occupying 12. There are also ungraded and evening schools, which, for a number of years past, have been an important part of the work. The attendance during the year was not so good as usual, owing to an epidemic which prevailed to an alarming extent. The discipline and general order of the schools is reported as superior to anything heretofore attained. Corporal punishment was banished from the schools more than 8 years ago, and each year since that time the schools have improved in respect to the deportment of pupils.

Music is taught in all the grades with remarkable success. The children in the primary schools are able to sing properly, at sight, simple music by number, letter, and notes, in the key of C; the classes in the higher grades are correspondingly advanced in the study. The attendance in the high school is greater than ever before; average number belonging, 275. Latin, French, German, and Greek are taught.—(Report of board of education, 1875-'76, Edward Smith, superintendent.)

TROY.

Officers.— A board of 12 school commissioners whose term of office is for three years, one-third going out each year, and a city superintendent of schools.

Statistics.— Children in the city 5-21 years of age, 17,720; attending public schools, 8,475; average daily attendance, 4,616; estimated number attending private schools, 2,013. Public free schools, 19; private schools, 14. Teachers in public schools, 139; number who taught 28 weeks or more, 133. Expenditures for public schools, $141,029.

Notes.— The school work has been profitable, and in the main, thorough. The citizens never showed more interest in their school system than they have during the past year. It is becoming more and more fixed in the hearts of the people.

The high school building will accommodate 152 pupils. The average number belonging is 92.

Evening schools were held in three wards, there being 596 names registered and an average attendance of 222 pupils.—(Report of board and of Superintendent David Beattie, 1876.)

TRAINING OF TEACHERS.

NORMAL SCHOOLS.

New York affords to young men and women who intend to become teachers free instruction in 8 State normal schools. During 1875–'76 there were 6,352 pupils instructed in these schools, 2,848 of whom were in the normal departments. The number of normal graduates for the year was 282, and the whole number since the establishment of the normal school system in the State has been 3,463.

Besides these State schools there is the girls' Normal College of New York,* with a 3 years' course of study, in which were, for 1876, a total of 1,409 students, of whom 233 graduated. Including these with the others, we have a sum of 4,257 normal students in that year, with 514 graduates.

In 1875 these schools graduated 256 of their 2,955 normal students, at a cost of $163,892. The average expense of each graduate was, therefore, $640.20. As the State superintendent remarks, however, it is not just to measure the usefulness of these schools by the number of their graduates, for the reason that many pupils attend for one or two terms and then engage in teaching without having completed the course, but having, undoubtedly, received much benefit and become far better teachers than they would have been without any special training.

While fully recognizing the importance of normal schools in the preparation of teachers, the State superintendent is not of the opinion that they must necessarily monopolize the work. He sees no reason why the high schools and the academies and academical departments of union schools should not graduate competent teachers, and he urges upon all such schools to pay great attention, especially during the last scholastic year, to the training of such pupils as propose to become teachers.

In some of the normal schools of the State the primary and academic departments have been permitted, to a certain extent, to overshadow the normal. This, says the superintendent, ought not to be permitted; yet it is difficult to see how any change can be brought about, except by legislative enactment. He considers it unfortunate that the State should, when it so materially enlarged the normal school system 10 years ago, have entered into a sort of partnership with the localities in which the new schools were established, whereby, in consideration of the erection and donation of buildings and grounds, those localities were led to believe that their children and youth would have special educational advantages at the expense of the State, and whereby the normal schools have had attached to their academic departments unnecessarily large primary departments, and wholly unnecessary intermediate departments. He is of the opinion that it would be much better to have the normal schools what they profess to be, institutions simply and solely for the training of teachers for the common schools of the State; that they should be mainly schools where those in attendance should be taught *how* to teach, having previously learned *what* to teach, and that they should not be weighted down with high school and collegiate departments.—(State reports 1874–'75 and 1875–'76.)

TEACHERS' INSTITUTES.

Teachers' institutes were held in 58 counties during the year 1875–'76, giving all the teachers of the State an opportunity to attend, with the exception of those in New York County, to which the law in regard to institutes does not apply. Besides these, an institute was held at Versailles, for one week, for the benefit of the teachers on the Allegany and Cattaraugus Indian reservations. The sessions of the county institutes lasted, in 22 counties, 2 weeks, and in 36 counties 1 week. The aggregate attendance of teachers was 10,991, of whom 3,470 were men and 7,521 women. The whole expense to the State for the organization and maintenance of these institutes for the calendar year 1876 was $13,119.78. Gradually the sessions of institutes have been changing from 2 weeks to 1, and this change, in the opinion of the superintendent, has been for the better. He believes it would be of great advantage to have institutes held in each county twice a year, one for the teachers of the winter and another for those of the summer schools, and recommends that the law be in this respect amended. It is also recommended that the law be so amended that districts which have paid teachers their wages while attending institutes be reimbursed therefor from the public money. With these

*The College of the City of New York, which doubtless sends many of its graduates into the schools as teachers, is not included among the normal schools.

amendments secured, and with means taken to secure a permanent corps of able instructors, teachers' institutes, which, even now, with their imperfections, are productive of much good, will be greatly improved.—(State report, 1875–'76, pp. 23, 24.)

TEACHERS' CLASSES IN ACADEMIES.

Under the law, the regents of the university are authorized to pay for instruction in the science of common school teaching in academies and in the academical departments of union schools selected by them for that purpose. During the calendar year, 1876, 87 of these institutions maintained such classes. During the academic year, 1875–'76, the attendance thereat was 1,726, of whom 590 were young men and 1,136 young women.—(State report, 1875–'76, p. 30.)

EDUCATIONAL JOURNALS.

The teachers of a State are greatly influenced by the school journals which circulate among them. A well conducted paper of this class spreads much important information as to methods of government which have proved effective, or methods of teaching which promise to benefit the schools. It discusses questions which solitary teachers have no other means to secure debate upon. It suggests, by its editorials or communications, new modes of meeting and managing old difficulties. And by its weekly or its monthly issues it brings teachers all over the State into communion like that which is secured at institutes where they are seated together in one hall and listen to instruction from one lecturer.

Somewhat this service has been done for New York by the sprightly School Bulletin, full of all matter relating to the State; the dignified New York School Journal, full equally of matter relating to the city; the National Teachers' Monthly, always ready to discuss whatever question may arise; and Schermerhorn's Monthly, an excellent journal for parents and teachers, which came to an untimely end at the close of 1876 through the much regretted failure of the respectable and useful house by which it had been published. The Journal of Education, another useful paper, published first in Brooklyn and then in New York City, also died within the year.

STATE CERTIFICATES TO TEACHERS.

Eight examinations for State certificates were held during 1875–'76 at different places in the State. Some of the most prominent educators of the State served on the examining committees. Of the 47 candidates who presented themselves several were found to be ineligible from lack of experience in teaching, at least 3 years' experience in teaching being required of candidates for this certificate. Twenty-one of the number examined were recommended as suitable persons to receive State certificates on account of their moral character, learning, and ability to teach. The act passed by the legislature of 1875, whereby the granting of State certificates on recommendation was changed so that they could be issued only upon examination, is regarded as a wise measure. This system of examinations has attracted the attention of many of the leading educators of the State, and is highly commended. That its tendency is to elevate the profession of teaching cannot be doubted.—(State report, 1875–'76, p. 35.)

SECONDARY INSTRUCTION.

ACADEMIES AND UNION SCHOOLS.

The place occupied in most other States by public high schools is in this filled by academies and union schools. Pupils are received into the academies from public grammar schools on condition of receiving a certain State allowance for their tuition. The union schools are public graded schools with academic departments. The number of pupils instructed in the several academies of the State in 1875–'76 was 30,175. The number of pupils attending the higher departments of union graded schools is not given separately, but is doubtless included in the above 30,175, as the report of the regents of the university for the preceding year, 1874–'75, (the latest,) gives 30,154 as the aggregate attendance for that year in academies and academic departments of union schools. The number of students claimed as classical in both, 1874–'75, was 8,354; the number allowed by the regents, 7,577.—(Regents' report, p. viii.)

PRIVATE SECONDARY SCHOOLS.

In 52 schools for boys, 53 schools for girls, and 103 for both sexes, outside of the public school system, there have been reported to this Bureau 19,759 pupils, under 1,216 teachers. Of these, 3,041 are in classical studies, 3,480 in modern languages, 1,321 preparing for a classical course in college, and 673 for a scientific course. Drawing is taught in 142 of these schools, vocal music in 122, and instrumental music in 136. Chemical laboratories are reported by 90, philosophical apparatus by 125, and libraries of 50 to 3,000 volumes by 139, aggregating 106,042 volumes.

PREPARATORY SCHOOLS AND DEPARTMENTS.

Reports for 1876 have been received from 18 preparatory schools and 16 preparatory departments, having a total attendance of 3,835 pupils, under 233 teachers. There

were 1,717 pupils preparing for a classical course, and 684 for a scientific. From the 18 preparatory schools 167 pupils entered college at the close of the last academic year, besides 73 who entered scientific schools. Nine report chemical laboratories; 13, apparatus for the illustration of natural philosophy; 8, gymnasiums; and 12, libraries of 271 to 3,000 volumes, the aggregate number being 13,702.

BUSINESS COLLEGES.

Statistics for 1876 are reported from 23 business colleges in this State, having 112 teachers and 4,344 students. Of the latter, 126 were studying phonography, 121 telegraphy, 288 German, 158 French, and 22 Spanish. The common English branches and correspondence are taught in 22 of these schools; penmanship and book-keeping, in all; the higher mathematics, in 2; surveying, in 1; banking, in 9; commercial law, in 13; political economy, in 4; life insurance, in 1; phonography, in 8; and telegraphy, in 10. Four have libraries of 50 to 500 volumes, aggregating 850 volumes.

SUPERIOR INSTRUCTION.

CORNELL UNIVERSITY.

This institution of learning, founded by the joint bounty of the United States Government, of the State of New York, and of Ezra Cornell, is, in some respects, the State university as far as there can be said to be one apart from the aggregate of colleges. Free tuition is given to all students in the agricultural department, and, besides these, to one student every year from each assembly district of the State, each scholarship being continued 4 years, making the total number of State scholarships 512. These are given to students selected from the various public schools and academies maintained by the people of New York, after yearly competitive examinations, open to both sexes. The university is open to all, irrespective of sex, color, or nationality. There is no separate course or department for women students; the entrance examinations are the same for them as for the young men, and depend upon the course they intend to pursue. The institution maintains no preparatory school. The instruction given is distributed into several departments, some of which are subdivided into schools, and out of these schools and departments there are made up 4 general and 6 technical or special courses, leading to the first degree in arts, literature, science, agriculture, architecture, civil engineering, and mechanical engineering. No regular post graduate courses have been marked out, but such studies are arranged to suit individual wants. Post graduate study is encouraged by the offer of free tuition to all who engage in it, whether they are graduates of this or of other colleges.

Among the special features of this university are liberty in the choice of studies, the prominence given to those which are practically useful, and the absence of a marking system to determine the relative rank of students. Young men having some special trade, as that of carpenter, mason, or machinist, may, in some cases mainly, and in a very few cases entirely, support themselves while carrying on their studies. The University Press, which is amply equipped for doing both job and book work, furnishes a means of partial self support to experienced printers, as well as of education for those students who design to make journalism their business in life.—(University register and catalogue, 1876–'77.)

OTHER COLLEGES.

Brooklyn Collegiate and Polytechnic Institute, (non-sectarian,) embraces collegiate and academic departments, each requiring four years for the completion of the studies. In the collegiate department there are four distinct schemes of study from which students may choose, namely, classical, scientific, liberal, and commercial.—(Catalogue, 1876.)

Canisius College, Buffalo, conducted by the fathers of the Society of Jesus, was opened in 1870. The course of studies embraces preparatory, classical, and commercial branches. —(Catalogue, 1875–'76.)

College of St. Francis Xavier, New York City, is conducted by the fathers of the Society of Jesus. It is a day college, with 5 distinct departments, the post graduate, undergraduate, grammar, commercial, and preparatory.—(Catalogue, 1875–'76.)

College of the City of New York, (non-sectarian,) provides classical and scientific courses, also a post graduate course in civil engineering, and a short commercial course. —(Report of the trustees of the college, 1876.)

Columbia College, New York, (Protestant Episcopal,) embraces in its course of instruction 9 departments, namely, (1) Greek language and literature; (2) German language and literature; (3) chemistry; (4) mathematics and astronomy; (5) mathematics; (6) philosophy, history, political economy, and belles lettres; (7) physics; (8) the Latin language and literature; and (9) botany. Free tuition is given students of good character unable to pay; various associations are entitled to free scholarships; every religious denomination in the city of New York is entitled to have at the college all the time one free student who may intend to enter the ministry; and every school from which there shall be admitted in any one year into the college four students who pay their matriculation fee, has the privilege of sending one scholar to the college to be educated free.—(College catalogue, 1874–'75.)

Hamilton College, Clinton, (Presbyterian,) embraces collegiate and law departments. The interest of beneficiary funds, amounting to about $3,000 a year, is annually distributed to needy students. The college has recently received a gift of $4,000 from Samuel H. Jarden, of Philadelphia, as a permanent investment, to be known as the Jarden fund for the aid of worthy and loyal students.—(Catalogue, 1876-'77.)

Hobart College, Geneva, (Protestant Episcopal,) embraces a classical course of 4 years, a scientific course of 2, and a course of science and modern languages of 3 years. The last is for the benefit of those who wish without taking the entire classical course to secure full advantage of the English, scientific, and philosophical studies pursued in it.—(Catalogue, 1875-'76, and circular.)

Ingham University, Le Roy, (Presbyterian,) for young ladies, has 5 courses of study, namely, academic or preparatory, classical, literary, music, and fine arts. The literary course covers only 3 years, and is intended to meet the wants of such young women as do not wish to study the higher classics or mathematics.—(Catalogue, 1875-'76.)

Madison University, Hamilton, (Baptist,) provides, besides the usual college course of 4 years, scientific and partial courses. The departments of instruction in the collegiate course are: (1) metaphysics; (2) logic; (3) Christian ethics; (4) Greek language and literature; (5) Latin language and literature; (6) modern languages; (7) pure mathematics; (8) applied mathematics; (9) natural history; and (10) civil history, English literature, and oratory.—(Catalogue, 1876-'77.)

St. Bonaventure's College and Seminary, Allegany, (Roman Catholic,) provides classical, scientific, commercial, and ecclesiastical courses of study.—(Catalogue, 1875-'76.)

St. John's College, Brooklyn, (Roman Catholic,) provides a full classical, English, and commercial course. German and French are taught without extra charge.—(Catalogue, 1875-'76.)

St. John's College, Fordham, (Roman Catholic,) furnishes classical and commercial courses of instruction. The commercial course embraces all the branches of a good English education, and is completed in 4 years. The classical course comprises 3 grammar classes, 4 undergraduate classes, and a post graduate department.—(Catalogue, 1875-'76.)

St. Lawrence University, Canton, (Universalist,) embraces collegiate and theological departments, the former including scientific and classical courses. Both sexes are admitted.—(Catalogue, 1876-'77.)

St. Stephen's College, Annandale, (Protestant Episcopal,) is designed especially for the training of such young men as are looking forward to the ministry. The courses are preparatory and classical. There is also a course lasting from 2 to 3 years, which those may take who do not intend to study for a degree, but wish to become candidates for orders.—(Catalogue, 1876-'77.)

Syracuse University, organized in 1871, has established 3 departments, viz, college of the liberal arts, college of physicians and surgeons, and college of the fine arts. In the last is embraced a four years' course in architecture and in painting.—(Circular.)

Union College, Schenectady, (non-sectarian,) provides classical, scientific, and eclectic courses of study, and a course in the Oriental languages. There is also connected with the college a special school of civil engineering, the students of which are admitted to the various departments of the college without extra charge.—(Catalogue, 1876-'77.)

University of the City of New York, New York, (non-sectarian,) embraces departments of arts, of science, of medicine, and of law. In the departments of arts and of science tuition is free. The course covers 4 years. In connection with the department of science there is a school of art, embracing instruction in elementary drawing in lead pencil and crayon, painting in oil and water colors, general principles of composition, ornament, and the arts of design.—(Catalogue of university, 1875-'76.) From a circular issued by the society called Sorosis, it appears that, in response to a petition presented by that society, the university has decided to order examinations for women similar to those established by Harvard and other colleges, and that it further proposes to arrange classes and courses of study for women as soon as the means can be found to supply professors and other requirements of the work.

University of Rochester, Rochester, (Baptist,) affords three courses of study: a classical course extending through 4 years, a scientific course of equal length, and an eclectic course for students who may desire instruction in particular departments without becoming candidates for degrees. The scientific course requires no Greek, and only so much of Latin as is essential to the successful prosecution of the modern languages and the mastery of scientific terminology. In the place of Greek and Latin a more extended course of study is prescribed in physical science, mathematics, history, and the modern languages.—(Catalogue, 1876-'77.)

Vassar College, Poughkeepsie, (non-sectarian,) is exclusively for young women, and embraces preparatory and collegiate departments. In the collegiate course the studies are prescribed as far as the middle of the sophomore year, excepting that there is a choice allowed between the Greek, German, and French languages, only one of which is required. In each following semester every student elects three full studies, or what is equivalent to them, subject to the approval of the faculty. The languages embraced

in the course are Latin, Greek, German, and French. All are required to take Latin, and to elect one of the remaining three as a second language. Students are usually able to take one art study in addition to their regular college work, and are advised to do so when they can, as a valuable element of culture. The arts taught are vocal and instrumental music, drawing, painting, and modelling in clay or wax. The elements of vocal music and drawing are taught in classes without extra charge, while the more thorough courses of personal training are given in individual lessons at fixed fees, outside of the college course.—(College catalogue, 1875–'76.)

COLLEGES FOR WOMEN.

Besides Ingham, Elmira, Wells, Rutgers, and Vassar, there are 13 institutions reporting as colleges for women, all but 3 of which have authority to confer collegiate degrees. Length of course, 4 to 10 years. The number of students reported is 2,660; teachers, 216. Of the students, 649 were pursuing preparatory studies, and 253 regular collegiate; 28 were in partial and 22 in post graduate studies. Vocal and instrumental music, drawing, painting, and French, are taught in all these schools; German in 11; Italian in 6; Spanish in 3, and Portuguese in 1. Nine report chemical laboratories, 10 apparatus for the illustration of natural philosophy, 7 natural history museums, 2 astronomical observatories, 5 gymnasiums, and 2 art galleries. All but 1 report libraries of from 225 to 4,000 volumes, aggregating 16,568.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The agricultural department of Cornell University offers a full course of 4 years, leading to the degree of bachelor of agriculture, and an abridged course of 3 years. The university farm consists of about 100 acres, exclusive of the experimental farm, the campus, and timber land. A large proportion of the farm is devoted to the raising of food for the domestic animals. Forty acres are used in conducting experiments in the rotation of crops, the various modes of cultivation, the value and application of domestic and imported fertilizers, the hardiness, productiveness, and value of the various grains and grasses, and in originating and testing new varieties. The instruction is given by lectures and recitations, and illustrated with the aid of Auzoux models of plants, domestic animals and parts of animals, and various other collections. Besides the class room exercises, the student devotes as much time as can be profitably spared to actual practice in the botanical, chemical, and veterinary laboratories, as well as in the fields and barns.—(University register and catalogue, 1876–'77.)

The department of mechanic arts of Cornell University reports itself now in a condition to do its work in the most satisfactory manner. Closely connected with the lecture room, in which the theoretical side of the mechanic arts is presented, are rooms for the designing and modelling of machinery, and workshops fitted with power and machinery for working in wood and metals. This shop is conducted wholly as a means of instruction; each student in the department is required to devote at least two hours each day to work in it; and the candidate for the degree of bachelor of mechanical engineering has an opportunity to design and construct machines and apparatus, or conduct experiments approved by the department.

Other scientific courses in Cornell University.—There are 5 courses leading to the degree of bachelor of science, namely: (1) science; (2) scienceand letters; (3) chemistry and physics; (4) mathematics; and (5) natural history. Each of these covers 4 years. The course in civil engineering, which also occupies 4 years, embraces hydraulic engineering, railroad engineering, bridge architecture and construction, topographical engineering, industrial engineering, and mining engineering.—(Catalogue, 1876–'77.)

The school of mines of Columbia College provides 5 parallel courses of study, viz, civil engineering, mining engineering, metallurgy, geology and natural history, and analytical and applied chemistry. The plan of instruction includes lectures and recitations, practice in the laboratories, projects, estimates, and drawings, field geology, and reports on mines and industrial establishments.—(Catalogue of college, 1874–'75.)

The department of science of the University of the City of New York embraces 2 courses, one leading to the degree of bachelor of science, the other to that of civil engineer.—(Catalogue of university, 1875–'76.)

The school of civil engineering, Union College, provides a full course of 4 years, leading to the degree of civil engineer, and a special course for such as desire to study surveying, road engineering, or any other special branch of the course. The instruction is given by constant exercise in mechanical drafting, instrumental field work, and numerical calculation, combined with lectures and the study of text books.—(College catalogue, 1876–'77.)

THEOLOGY.

Auburn Theological Seminary, Auburn, (Presbyterian,) is open to students of every evangelical denomination. The regular course of study occupies 3 full years. A collegiate education, or its equivalent, is required of candidates for admission.—(Catalogue of seminary, 1876–'77.)

General Theological Seminary of the Protestant Episcopal Church, at New York, provides a course of 3 years, embracing departments of biblical learning and interpretation of scripture and of Oriental and Greek literature, systematic divinity, evidences of revealed religion, pastoral theology, and ecclesiastical polity and law. Candidates for admission are examined in English composition, Hebrew and Greek grammars, and the Gospels and the Acts of the Apostles in the original.—(Catalogue of seminary, 1875–'76.)

Hamilton Theological Seminary, Hamilton, (Baptist,) has a course of instruction which has been extended to 3 years. It embraces departments of Hebrew and Old Testament exegesis, of New Testament exegesis, of ecclesiastical history, of Christian theology, of pastoral theology, and of homiletics. Candidates for admission to the regular course must have a collegiate or other preparation for its studies. Students of all Christian denominations are admitted. No charge is made for tuition.—(Catalogue, 1876–'77.)

Hartwick Seminary, near Cooperstown, (Lutheran,) embraces both theological and academical departments. The course of instruction in the theological department extends over 3 years.—(Catalogue, 1874–'75.)

Rochester Theological Seminary, Rochester, (Baptist,) is open to students of all denominations of Christians. The regular course of instruction, which is designed for

graduates of colleges, is completed in 3 years. A shorter course is provided for those who require it.—(Catalogue, 1874–'75.)

Union Theological Seminary, New York, (Presbyterian,) also admits students who are prepared for its course of study, from every denomination of Christians. Candidates must have had a regular collegiate training, or pass an examination on branches usually pursued in college. The regular course occupies 3 full years, and a pledge is required of students to complete a full course, here or elsewhere, unless unavoidably prevented.—(Catalogue, 1875–'76.)

The Tabernacle Lay College, Brooklyn, is a training institution in theology for laymen and women, without regard to denomination. The training is general and special—general, preparing for the discharge of common Christian duties, and special, for certain forms of Christian work. There are preparatory, junior, senior, and theological classes, the latter embracing systematic theology, exercises in exposition, outlines of discourses, and a review of all the studies with reference to the Christian life and work. The full course is 2 years. The college is open five evenings of the week. Most of the students are employed during the day, and support themselves. The instruction is free.—(Circular, 1876.)

The Martin Luther College, Buffalo, is a German-Lutheran school of theology, having in connection with it an elementary parochial school, in which both the German and English languages are taught. The institution is in a good condition. Three students of theology graduated in 1876.—(Letter from the director of the college.)

LAW.

Albany Law School, a department of Union University, provides a course of 1 year, and requires no examination or particular course of previous study for admission; but in order to receive the degree of B. L. the student must have devoted to the study one year exclusive of that comprised in the course of this school. The method of instruction is by lecture, examination, and discussion in moot court.—(Catalogue of college, 1876–'77, and of law school, 1875–'76.)

The Law School of the University of the City of New York provides a course of instruction covering 2 years. Graduates of any college or university who, in their course, have studied the theory and general principles of jurisprudence, and the historical development of the United States and Great Britain, are allowed an advanced standing of 1 year. The scheme of studies embraces the history of the law, jurisprudence, the Roman law, international law, and municipal law.—(Circular of law school, 1876–'77.)

The Law Department of Hamilton College provides a course of instruction of 1 year for college graduates, and of one year and one-third for those who are not graduates. The instruction is given by text books and familiar oral lectures.—(Catalogue of college, 1876–'77.)

MEDICINE.

Albany Medical College has been since 1873 a department of Union University. The method of instruction is to combine, with didactic lectures, clinical lectures, recitations, and practical work in the dissecting room, the examination and diagnosis by students of cases assigned them, with reports and criticisms of the same by the class and the professors. Applicants for admission who are not graduates of colleges are examined as to their fitness for the course.—(Catalogue of college, 1876–'77.)

Bellevue Hospital Medical College, New York, comprises in its course of instruction 7 departments, viz, practice of medicine, surgery, obstetrics, materia medica, physiology, anatomy, and chemistry. The distinctive feature of the college is the union of clinical and didactic teaching, this principle being followed in the case of students attending their first term, as well as of those who are further advanced. The school for nurses in this hospital, described in the Reports of the Bureau of Education for 1873 and 1874, is still continued, and is flourishing.—(Circular, 1876–'77.)

College of Physicians and Surgeons, New York, is the medical department of Columbia College. No preliminary examination is required for admission. Candidates for the degree of M. D. must have attended two full courses of lectures, the latter in this college, and must have studied medicine 3 years under the direction of a regular physician or surgeon. The plan of instruction is by didactic lectures with demonstrations, clinical teaching, recitations, and personal instruction in subjects involving physical manipulation.—(Catalogue of college, 1875–'76.)

The College of Medicine of Syracuse University offers students the advantages of a graded course of instruction, covering a period of 3 years. Applicants for admission, if not graduates of some literary school, are examined in the branches of a common English education.—(Annual announcement of college, 1876–'77.)

Long Island College Hospital, Brooklyn, unites a hospital and medical school for the purpose of securing more thorough demonstrative teaching. The hospital is under the immediate control of the regents and council of the college, and the courses of instruction are given within its buildings, thus making clinical teaching a reality to the student, by cultivating his faculties of observation at the bedside.—(Announcement and circular, 1875–'76.)

The New York Free Medical College for Women, New York, which claimed a system of instruction as broad and liberal as can be obtained in any other institution in the world, and had, in addition to the regular medical course, a department of instruction for nurses, has been closed.—(Catalogue, 1875–'76, and letter to Commissioner of Education.)

The Medical Department of the University of Buffalo gives an important and prominent position to clinical teaching, all the practical subjects presented in the didactic course being fully illustrated at the bedside. Applicants for admission who are not graduates of colleges or other specified schools are subjected to an examination. In order to graduate, students must have studied medicine for 3 years, must have dissected, and must have attended two full courses of lectures, the last at this institution.—(Announcement of medical department, 1876–'77.)

Medical Department of the University of the City of New York.— Clinical instruction constitutes a prominent feature in the plan of education, and the almost unlimited resources of New York offer ample facilities for obtaining familiarity with diseases at the bedside. The student, in order to graduate, must attend two courses of medical lectures, the last at this school, and must also have studied medicine for 3 years, including the lectures, under the direction of a respectable practitioner.—(University catalogue, 1875–'76.)

Woman's Medical College of the New York Infirmary.—The plan of instruction here is arranged to secure a gradation of studies through the 3 years of the student's course. Students before being graduated are examined by a board of examiners, composed of professors from the several medical colleges of the city and from the profession at large.—(Catalogue, 1876.)

The Eclectic Medical College of the City of New York admits both men and women to its classes, and requires for graduation 3 years' study of medicine under the supervision of a reputable physician, and attendance upon two full terms of instruction in an incorporated medical institution, the last of which shall have been this college.—(Catalogue, 1876–'77.)

The New York Homœopathic Medical College provides, in addition to its old course of 2 years, a 3 years' graded course, and, as an inducement, offers a large reduction in the price of tuition to those students who pursue the graded course. The examinations for graduation are very strict, and are conducted first by the faculty, and afterward by a board of censors composed of physicians who are not connected with the college.—(Annual announcement, 1876–'77.)

The Medical College and Hospital for Women, New York, has adopted a 3 years' graded course of study, and demands for admission a good English education. The college is thoroughly equipped with every material and apparatus requisite for medical instruction.—(Announcement, 1874–'75.)

The New York College of Dentistry offers a course of 2 years, embracing operative and mechanical dentistry, chemistry, metallurgy, histology, anatomy, physiology, general pathology, oral surgery, therapeutics, and materia medica. The college has established, as a public charity, an infirmary where the worthy poor and the inmates of the charitable institutions of the metropolis are treated by the students of the college under the supervision of the attending dental surgeons, thus affording the student practice in every conceivable operation in dentistry.—(Announcement, 1876.)

The College of Pharmacy of the City of New York affords instruction in chemistry, botany, materia medica, toxicology, and pharmacy. The instruction is given by lectures delivered during 7 months, three evenings in each week; and attendance at 2 such annual sessions is the prescribed course of study requisite for graduation.—(Prospectus of college, 1875.)

Statistics of scientific and professional schools, 1876.

Schools for professional instruction.	Corps of instruction.	Endowed professorships.	Number of students.	Number of years in course.	Property, income, &c.				Number of volumes in library.

SPECIAL INSTRUCTION.

EDUCATION OF THE DEAF AND DUMB.

The State has for many years pursued a broad and liberal policy respecting the care and education of deaf mutes, and during the year 1876 no less than 893 children were instructed in the 5 institutions authorized by law to receive State pupils. They were distributed among the several institutions, as follows: New York Institution for the Instruction of the Deaf and Dumb, 556; New York Institution for the Improved Instruction of Deaf Mutes, 110; Le Couteulx St. Mary's Institution for the Improved Instruction of Deaf Mutes, at Buffalo, 100; Central New York Institution for Deaf Mutes, at Rome, 85; Western New York Institution for Deaf Mutes, at Rochester, 42.

The institution at Rochester has been authorized to receive State and county pupils on the same terms and conditions as the others. The school was opened on the 4th of October, 1876, and is in a flourishing condition. All the institutions for the instruction of deaf mutes have prospered during the year. They were all visited by the State superintendent, and he bears testimony that they have been prudently and judiciously managed, and that the moral, mental, and physical necessities of the pupils have been carefully attended to. The crowded condition of the New York Institution for the Instruction of the Deaf and Dumb has been considerably relieved by the younger schools, and it can now successfully care for all the pupils in attendance.—(State report, 1875–'76, p. 27.)

In Le Couteulx St. Mary's, besides the literary branches, instruction is given in cane seating of chairs, tailoring, dress making, sewing by hand and machine, fancy work and housework. There are in the literary department 8 teachers, including the principal and the teacher of articulation. Instruction in linear drawing was introduced in 1875–'76. The plan of instruction includes the sign language, writing, and speaking.—(Report of institution, 1875.)

The New York Institution for the Deaf and Dumb has adopted a plan by which a much smaller number of teachers than formerly is sufficient for the instruction of its large attendance of pupils. The pupils are separated into two divisions, one of which is employed in manual labor and the other in literary studies for half the day, the order being changed each week, so that those who had been working in the shop in the morning should go into the school room at that time and their places be taken by the other division. The plan has been found to work well. Nine of the 14 teachers are gentlemen; 4 of them are liberally educated hearing teachers, and 5 graduates of the institution who have shown extraordinary talent for imparting instruction. There are, besides these, a teacher of articulation, who devotes his whole time to developing artificial speech and lip reading in promising cases of the congenital deaf, and to preserving and developing the speech of the semi-mute, and a lady who, every week, gives to each class above the grade of the first year 2 consecutive hours of instruction in drawing.—(Report of institution, 1875.)

The Institution for the Improved Instruction of Deaf Mutes, New York City, makes it a special aim to teach articulation. The children are in school till 3 in the afternoon and have a study hour besides, in the evening, while the larger ones have to study lessons and write exercises for which more time than the usual study hour is required. They are further encouraged to read books and newspapers, and they must have certain hours for recreation. There is therefore no time left for working in shops. It is considered, also, that pupils who have been taught articulation can as readily obtain employment in shops as can hearing children, thus rendering instruction in trades in the institution unnecessary.—(Report of institution, 1875–'76.)

St. Joseph's Improved Institute, Fordham, founded in 1869, teaches the common English branches to deaf and dumb children. This institution reports having received from the State in 1876 an appropriation of $7,325.50, its receipts from tuition being $563.—(Special report, 1876.)

Cayuga Lake Academy, Aurora, reports a class of 4 deaf-mutes. A class in articulation was founded in 1871. The branches taught are "the same as in day schools for hearing children."—(Special report, 1876.)

EDUCATION OF THE BLIND.

The number of pupils in the New York Institution for the Blind on the 1st of January, 1876, was 183, and during the year ending December 31, 1876, there were 220 present and receiving instruction. The results of the work of instruction were satisfactory, and will compare favorably, it is believed, with what is accomplished in the best schools of like grade for the seeing. The employments taught are cane seating, mattress making, piano tuning, sewing by hand and by machine, knitting, and fancy work.—(Report of institution, 1875–'76.)

The New York State Institution for the Blind, at Batavia, reports 178 pupils under instruction in 1876. Since its opening in 1868 there have been 339 admitted. The boys are taught broom making; the girls, sewing on the machine and by hand, knitting, crocheting, and bead work. There are 450 volumes in the library.—(Return, 1876.)

INSTRUCTION OF IDIOTS.

There are 2 asylums for the feeble-minded in this State, one located at Syracuse, the other at Randall's Island. The asylum at Syracuse reports an attendance in 1876 of 224 inmates, 139 males and 85 females. The branches taught are "the simplest elementary school branches and 2 or 3 trades." Since the institution was established in 1851, there have been 350 inmates dismissed improved. In the school at Randall's Island there were 182 inmates, 94 males and 88 famales, all native born but 22. Seven could read and write when admitted, and 30 have learned since. The branches taught are reading, writing, and arithmetic.—(Special reports, 1876.)

VALLEY HOME.

The Susquehanna Valley Home, located in the town of Binghamton, is a home for children depending upon charity for support. December 31, 1875, there were 66 children in the institution, about one-half belonging to Broome County, the others to the six neighboring counties. Here the children are provided with a comfortable home, and instructed in a school connected with the institution in charge of a qualified teacher, and possessing, in some respects, advantages over our common schools. Irregular attendance and tardiness are unheard of. During the year 1875 the school was taught 238 days, with an average attendance of 54 pupils.—(State report for 1875, p. 350.)

EDUCATIONAL CONVENTIONS.

STATE TEACHERS' ASSOCIATION.

This association held its thirty-first anniversary at Watkins, July 25, 26, and 27, 1876. The distinctive features of the meeting are reported by the School Bulletin (September) as having been "fair attendance, strong local attractions, but a deplorable lack of one building large enough for the general meeting, the sections, and the book agents; an efficient local committee; a crowded programme, with some strong and some very weak features; an admirable presiding officer, and a general and successful purpose of the many to rescue the association from the few who have usurped control of it."

UNIVERSITY CONVOCATION.

The thirteenth anniversary or fourteenth meeting of the University Convocation of the State of New York was held in Albany, commencing July 12, 1876. The meeting was marked by a smaller attendance than usual, more vigorous discussion, and a greater inequality in the value of the papers. Among the subjects presented were, "The voluntary system in university education," by President Martin B. Anderson, LL. D., Rochester University; "Physical culture in colleges," by Capt. Thomas Ward, U. S. A., Union University; "Interacademic competitive examinations," by Principal George R. Cutting, A. M., Waterville Union School; "Land surveying as practised in the State of New York," by Principal Aaron White, A. M., Canastota Union School; "Prizes in schools as usually distributed," by Principal Michael P. Cavert, A. M., Rhinebeck Union School; "School supervision and State aid," by Instructor William W. Dawley, A. M., Amsterdam Academy; "A plea for the study of Latin," by Rev. J. A. Wells, D. D., Griffith Institute; "Endowment of higher institutions for the education of women," by Prof. Henry J. Van Lennep, D. D., Ingham University; "Military drill in academies," by Col. Charles J. Wright, A. M., Peekskill Academy; "History in its relations to practical life," by Prof. Selah Howell, Christian Biblical Institute, Stanfordville; "Instruction in vocal music," by Principal Isaac O. Best, Clinton Grammar School; "The health of our scholars," by Principal Samuel H. Goodyear, A. B., Dansville Seminary; "New Netherland and the Fatherland," by Prof. Ransom B. Welch, D. D., LL. D., Union University; "Relations of private schools and seminaries to our system of public instruction," by Principal Eber M. Rollo, A. M., Delaware Literary Institute, Franklin; "Duties of the teacher to himself," by Principal Ezra B. Fancher, Seneca Falls Academy; and "The teacher as a citizen," by Jonathan Tenney, A. M., Albany, late deputy superintendent of public instruction.

Among the most interesting discussions was that upon military drill in academies. Nearly all agreed that the body should be trained by exercises of some kind, but a wide difference of opinion appeared as to what kind is best. Principal Cavert's paper, opposing the custom as at present followed of offering prizes in schools, was based upon the replies received to a circular of inquiry sent by him some time ago to 65 universities and colleges in 28 States. The discussion was very animated. In the debate on President Van Lennep's paper, Vice-President Russell, of Cornell, urged that it is wiser to strengthen the colleges we have which admit women than to found more for them. President Raymond thought training schools for women should be arranged with special reference to their needs as to regimen, &c. He said the want of Vassar College is free scholarships, free not alone to daughters of clergymen and teachers, as had been suggested, but to worthy young women, whoever and wherever they were.—(School Bulletin, July and September, 1876.)

OBITUARY RECORD.

PROF. CHARLES DAVIES, LL. D.*

This highly distinguished mathematical author and instructor, born 1797 in Washington, Conn., ended his useful and honorable life at Fishkill-on-the-Hudson, September 18, 1876. A large portion of his early days were spent amidst the rugged scenes of the frontier in St. Lawrence County, New York, whither his father had removed while Charles was yet a child; and here, in the effort to break up and cultivate what was then almost a wilderness, were developed the industry and energy, the quickness and decisiveness which made him the excellent teacher and useful author that he subsequently became. When he was only about 15 the war of 1812 commenced, and martial ardor being naturally awakened by his nearness to the hostile line, he entered West Point as a cadet in December of the next year. The quick promotions of a state of war secured him a second lieutenancy in the artillery after only two years at the academy, and for another year he was in active service. Then the mathematical ability he had displayed during his student life induced the authorities to appoint him assistant professor of mathematics in the Military Academy at which that life was spent, and he entered upon duty as such December, 1816. In 1821 he was made assistant professor of natural and experimental philosophy, and in May, 1823, professor of mathematics. His experience in this position made him painfully aware that there were no sufficiently good text books in our language for the instruction of young men in the sciences he had to teach. He therefore set about translating from the French the needful works, and from 1833 to 1836 published such versions of Legendre's Geometry and Bourdon's Algebra as threw preceding text books of their class quite into the shade. They were not translations merely, but improvements, uniting the practical methods of the English with the scientific generalizations of the French. They were at once received with such a hearty welcome, and met with such general acceptance and success, that in 1837 he resigned his chair to devote himself at Hartford, in his native State, to the preparation of a thorough series of such works. Blessed with good health, a clear head, and a firm will, he held to this purpose till he had produced 28 most valuable books, reaching from first lessons in arithmetic into the higher mathematics, and covering the needs alike of the primary school, the academy, and college, with some addressed to students beyond these. They were an inestimable gift to those for whose use they were prepared, alike from their clear statement of first principles and from their illustration and enforcement of these in practical applications and results. They made him widely known and largely famous, brought him in handsome recompenses, and secured him many friends. Honors accumulated on him, and to the A. M. bestowed in 1824 by the College of New Jersey, and renewed in 1825 by Williams College, Massachusetts, was added the degree of LL. D. from Geneva College, New York, in 1840. Trinity College, Hartford, was glad to be able to engage him as professor of mathematics from 1839 to 1841. The United States Government made him paymaster at West Point from 1841 to 1846; and when he settled subsequently at Fishkill-on-the-Hudson, within easy travelling distance of New York, the university of that city secured him as professor of mathematics and philosophy in 1848; after 9 years' service in this chair he transferred his instructions to the professorship of higher mathematics in Columbia College in 1857, continuing in this till 1865, when he retired, remaining emeritus professor till his death.

A genial man, a Christian gentleman, an instructor whom all honored, an author whom very many blessed, Professor Davies lived a life as useful and has left behind him a memory as fair as any one could reasonably wish to live and leave. In schools and colleges, from Maine to California, he will be remembered gratefully as the one who, more than any other, has changed arithmetical and mathematical pursuits from a drudgery almost into a delight; has taught principles of general application instead of merely narrow and hard rules; and has shown not merely a result of figuring, but how to reach it and why it needs must come out right.

HON. HENRY S. RANDALL.

Hon. Henry Stephen Randall, born in Brookfield, May 3, 1811, died at Cortland, August 14, 1876. He was a graduate of Union College, 1830; was admitted to the bar in 1834; became editor of the democratic paper of his county, and achieved distinction as a politician; but preferring to devote himself to education, became a county superintendent of schools, and was more than once offered a State superintendency. Becoming secretary of state for New York, he, under the then existing law, acted as State superintendent in conjunction with his office as secretary, from 1852 to 1854, and after the organization of the Cortland Normal School was president of its board of trustees.—(School Bulletin, September, 1876, p. 4.)

* The authority for facts and dates here is mainly a brief biography by Prof. E. D. Mansfield, a near connection of Professor Davies.

REV. GEORGE WHIPPLE, D. D.

A great bereavement overtook the American Missionary Association in the death of this gentleman, its senior secretary, October 6, 1876. For 20 years he had been identified with all its operations, and had done probably more than any other single man to give them vigor and efficiency. Born at Albany, New York, he pursued his academic studies for some time at the Oneida Institute, in the same State, and then went to the Lane Seminary to study theology under Dr. Lyman Beecher. When the right of perfectly free speech on the exciting questions of that time and place was denied by the board of trustees, he, with others of his class, went thence to Oberlin, where his theological studies were continued under Professors Finney and Morgan. On his graduation, in 1836, he was ordained, but never entered on a pastoral connection. Seeing his way to a perhaps higher usefulness and greater freedom as an educator, he became a tutor at Oberlin, and secured such favor by his teaching that the professorship of mathematics was soon put into his hands, and was elevated, under his administration of it, to a point of high efficiency. At the close of 1846, Professor Whipple was offered the position of corresponding secretary of the American Missionary Association, then recently formed, and meant to extend, with other blessings of the Gospel, the advantages of Christian education to the subjects of its work. He took the place, and by his energy and industry, sound judgment and practical ability, did much to raise the association to the high place it has since occupied. When the emancipation of the slaves throughout the South opened them to the combined influences of the Gospel and the school, he, with his fellow workers in the society, entered delightedly into the wide field thus presented, and besides aiding the Indians of our plains and the Chinese of California to acquire an education, dotted the whole South with Christian schools and colleges. In the midst of his labors in this line he was overtaken with sunstroke in the summer of 1876, and, gradually failing from that time, went peacefully to his repose from lengthened labor as the autumn was withering and scattering its leaves.—(American Missionary, November, 1876.)

LIST OF SCHOOL OFFICIALS IN NEW YORK.

Hon. NEIL GILMOUR, *State superintendent of public instruction, Albany.*
ADDISON A. KEYES, *deputy superintendent, Albany.*

[Term, under reëlection, 1877–1881.]

(Report of Hon. Alex. McIver for 1873–'74, and return to Bureau of Education from Hon. John C. Scarborough, State superintendent, for 1875–'76.)

NOTES ON SUMMARY.

The comparison here attempted is between the years 1873–'74 and 1875–'76, because no return for the intermediate year was received. The means of comparison, however, are very limited, partly from the fact that the returns made to the office of the State superintendent during the incumbency of the last superintendent have been quite imperfect, and partly from the further fact that they do not always cover the same items. This last has been so much the case with matters of income and expenditure that only the sum of these is given for the two years. The number of children enrolled for 1875–'76 is given as an approximation to the precise number, rather than an absolute report, the superintendent stating that the enrolment of whites was about half the enumeration of 257,521 and that of the blacks a little more than half of 136,968.

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

Common Schools and Public Instruction, 1873, by Henry Barnard, LL. D.; Sketch by Superintendent McIver in State Report for 1874, pp. 10–42; Returns of United States Census, and State Reports to 1874, with State Constitutions and School Laws.

FIRST LOOKINGS TOWARD A SYSTEM.

No Southern State began with fairer promise in respect to public education than did this. In its initial constitution, 1776, section 41, it ordained that "a school or schools shall be established by the legislature for the convenient instruction of youth, with such salaries to the masters, paid by the public, as may enable them to instruct at low prices, and all useful learning shall be encouraged in one or more universities."

But, fair as these words were, and honestly as no doubt they were meant by those who penned them, they failed for forty years to find even the beginning of their accomplishment from legislative action, as far as schools were concerned. The University of North Carolina, evidently meant to come after and be prepared for by the schools, was chartered in 1789 and organized in 1795, but the schools had their first public notice from the State authorities in 1816. In that year Governor Miller called attention to the need of them in his message to the general assembly, and a committee of the legislature, with the Hon. Archibald D. Murphy as chairman, was appointed to consider and report upon the subject of "affording means of education to every one, however indigent." This committee, December 19, 1816, presented a report decidedly in favor of "a judicious system of public education." The report said, in words wonderfully wise for that day, "This general system must include a gradation of schools, regularly supporting each other, from the one in which the first rudiments of education are taught to that in which the highest branches of the sciences are cultivated. It is to the first schools in this gradation that your committee beg leave to draw the attention of the legislature at this time, because in them will be taught the learning indispensable to all, reading, writing, and arithmetic. These schools must be scattered over every section of the State, for in them education must be commenced, and in them it will terminate as to more than one-half of the community. They will be the most difficult of organization and the most expensive to the State; but they will be the most useful, inasmuch as all the citizens will be taught in them, and many of the children are destined never to pass on to any other."

The report went on to suggest that from the youth educated in these schools at State expense teachers should be selected for schools in which they might be qualified to teach, and that discreet persons should be appointed in each county to superintend and manage the concerns of the sectional schools which should be established, to designate the children who should be educated in part or in whole at the public expense, and to apply the funds which should be consecrated to the purposes of these schools. It closed with a recommendation that the two houses should appoint three persons to digest a system of public instruction founded upon the general principles which had been stated, and to submit the same to the next general assembly.

The house concurring with the senate on this motion, a committee was appointed, with the same gentleman as chairman, and made an elaborate report at the session of 1817. This new report recommended the formation of a fund for public instruction, and the constitution of a board to manage the fund and carry into execution the plan of public instruction contemplated. This plan was one which was meant "to make the progress of education natural and easy," beginning with primary schools in which the first rudiments of learning were to be taught, and proceeding to academies in which the youth were to be instructed in languages, ancient and modern history, mathematics, and other branches of science, preparatory to entering the university, in which instruction should be given in all the higher branches of the sciences and the principles of the useful arts. An institution for the deaf and dumb was also included in the plan.

For the elementary instruction to be given it was proposed to divide each county in the State into two or more townships, and to have one or more primary schools established in each township which should provide a lot of ground of not less than 4 acres, and erect thereon a sufficient house, and vest it in the board of public instruction. For secondary training this board was to divide the State into 10 academic districts, and have one academy erected in each district; the State to meet one-third of the expense of the erection and the site, and furnish one-third of the sum required for salaries of teachers, on condition of their instructing a certain number of poor children free of charge. As to the superior instruction which was meant to crown the whole, the legislature was urged to to provide the needed funds for sustaining and carrying forward the then struggling university. For knitting the whole together came the board of public instruction to be constituted, which was to consist of the governor of the State as president, and 6 directors, to be appointed by the general assembly. This board was to have power to locate the several academies to be established; to determine the number

and titles of the professorships therein; to examine, appoint, and regulate the compensation of the professors and the teachers; to appoint, in the first instance, the trustees; to prescribe the course of instruction and discipline, according to general rules which should be first fixed by law; and to provide some just mode of advancing from the primary schools to the academies, and from the academies to the university, as many of the most meritorious children educated at the public expense as the proceeds of the funds for public instruction should suffice to maintain and educate.

No better, more compact, or more connected scheme for the formation of a State system of instruction could well have been devised at that quite early day. The main fault in it was that it undertook too much, viz, to "maintain" as well as "educate" the children of the poor, an undertaking quite beyond the means of a State yet sparsely settled, and with the burdens of a recent war still weighing on the people. It was the expense which this portion of the plan involved that seems to have killed the project, for though the bill met with favor from the legislature, was ordered to be printed, and put into a form for passage, the consideration of the large sums it would annually require to carry out its liberal provisions induced a pause after the first reading of the bill, and that pause was fatal to it. Instead of eliminating from it the one specially impracticable feature and trying to work out the practicable ones, its advocates desired and urged its passage as a whole, and so friends fell from it and it failed.

RAISING A SCHOOL FUND.

There was a pause of eight years further then before any scheme for meeting the expense of public schools was broached. At that date, 1825, the legislature laid the foundation of "a fund for the establishment of common schools," to consist of dividends arising from stocks held by the State or afterwards to be acquired in certain banks and works of internal improvement; of a tax on licenses to auctioneers and retailers of spirituous drinks; of the unexpended balance of a State agricultural fund; of moneys paid the State for entries of vacant lands, and of such sums as the legislature might find it convenient to appropriate from time to time.

To manage this fund, the governor of the State, the chief justice of the supreme court, the speaker of the senate, the speaker of the house, and the State treasurer, with their successors in office, were constituted a body corporate and politic under the title of "The president and directors of the literary fund," with power to hold property and to dispose of and improve the same for the promotion of learning and the instruction of youth.

Under an act of 1836, the constitution of the board was changed, and it was made to consist of the governor and three other members to be appointed by him biennially; and all the State swamp lands not previously granted to individuals, with all shares of stock owned by the State in the Bank of North Carolina and in the Bank of Cape Fear, as well as the dividends arising from these, were vested in the corporation as a public fund for education and the establishment of common schools. And, as in 1837, the State received from the United States, as its share of the surplus deposit fund, $1,433,757, and turned this over, less $300,000, to the literary fund in addition to about $1,000,000 of previously held assets, it is not to be wondered at that the legislature, in that year, called on the president and directors of the literary fund to digest a plan for common schools suited to the condition and resources of the State, and to report the same at the next session of the general assembly.

A SYSTEM REACHED AT LAST.

In accordance with the resolution of 1837, the president and directors of the literary fund made to the legislature, December 4, 1838, an elaborate report based on an examination of the systems of all the States. It proposed to have the State divided into 1,250 school districts, each to have a school-house erected in it, as pleasantly situated and as neat and commodious as possible; to have a normal department organized in the State university for the training of teachers for the schools; to have the income of the literary fund, amounting then to about $100,000 annually, distributed among the districts at the rate of about $240 for each, to aid in the maintenance of schools, and to be supplemented by a local tax of twice that amount, levied by the county court; and, finally, to have 5 superintendents of schools for each county, and 3 committeemen for each school district. The scheme provided only for common schools, and left academies to succeed these at no long interval, and colleges and universities in due time to crown the whole.

The adoption or rejection of this system it was proposed to submit to a vote of the people, and on the 8th of January, 1839, a little more than a month after the submission of the report, the legislature, under the lead of Mr. W. W. Cherry, chairman of the committee on education, passed an act to divide the State into school districts, 6 miles square, and to refer to the people the question of the establishment and maintenance of schools in these. The establishment of a school for teachers was passed by. In counties where the vote should be in favor of common schools the county court was to select 5 superintendents for the county, whose first duty was to divide the county into

school districts, for each of which 3 committee men were to be chosen "to assist the superintendents in all matters pertaining to the establishment of schools" within their district. The court was also to see to the levying of a tax sufficient to build a school-house for 50 scholars in each district, and the further tax above referred to for meeting the State allowance to each school; which tax, however, most mistakenly, was cut down in 1844 to one-fourth of what had been recommended.

Nearly every county in the State voted for the schools and the school tax proposed, and at the next session of the legislature in 1840, a law embodying the main features of the report was passed, and the new school system was at once set in operation. It was modified somewhat in 1844, especially by an allowance of an increase of the school districts, diminishing, in proportion to that increase, the amount of school money to be paid to each, and also, by express allowance, the amount of local tax to be collected. In 1852 a State superintendent was appointed. The census of 1850 gave the number of schools as 2,657; of teachers, 2,750; of pupils, 104,095; the income being $158,564, most of it from local taxes and from public funds. In 1860 there was a slight advance upon these figures as to schools, teachers, and pupils, and an increase of the income to $268,719, the greater part still from taxation in the counties and from the income of the literary fund.

THE SYSTEM SINCE RECONSTRUCTION.

In the reorganization following the war a State board of education came in place of the president and directors of the literary fund. A State superintendent, who was made secretary of the board, had general supervision of the schools assigned him; while county commissioners, who constitute county boards of education, have supervision and control of them in their respective counties, but without the duty of visitation of the schools. County examiners appointed by them examine teachers for the schools. The 3 committeemen for districts have been retained, and also the idea of the distribution of a State fund among the districts, to be met and aided by a local tax. The schools were required by the constitution of 1868 to be kept open for at least 4 months each year, and to be free to all children of school age within the State; but too often they have been kept open for but 3 months or less, and have been sometimes mere unions of free schools with pay schools.

SUPERINTENDENTS.

The Rev. Calvin H. Wiley, as State superintendent of common schools, had charge of the school system from 1852 to the termination of the civil war. On the reconstruction of the system in 1870, under the law of April 12, 1869, the Rev. S. S. Ashley was made State superintendent, continuing such till 1872. His successors have been Alexander McIver, 1873–'75; Stephen D. Pool, 1875–'77; while to succeed him has been chosen at the election in 1876, John C. Scarborough, 1877–'79.

ELEMENTARY INSTRUCTION.

PRESENT CONDITION OF THE SCHOOLS.

A memorial to the general assembly of the State, by Dr. B. Craven, giving a general view of the condition of education in North Carolina, introduced during the session of 1876–'77 and ordered to be printed, sets forth, among other statements, the following in relation to the public school system. Speaking of the free public schools, he says: "They are believed to have practically no common standard; no established relation and succession of studies; no uniformity in books; no tests of efficiency and no form of control competent and able either to discover defects or to correct abuses. To a very large extent change of teachers is at least annual; generally each teacher condemns or repeats the work of his predecessor, with all the disadvantages of different and conflicting plans and with little substantial benefit. The amount of instruction imparted by the public schools is small in proportion to the money expended, and by all available tests the quality is generally very inferior; and these defects seem to result more from want of organization, insufficient administration, and the entire absence of special superintendence than from all other causes combined."

TRAINING OF TEACHERS.

INDEPENDENT NORMAL SCHOOLS.

Bennett Seminary, Greensboro', organized in 1874, has a 3 years' normal course of study, and had 35 normal students, 15 men and 20 women, in 1876. Annual charge for tuition, $3.

The Ellendale Teachers' Institute, Little River, organized in 1872, has not been able to resume operations since its disaster of 1874, in which all its buildings and library were lost by fire. Its principal, however, is still hoping to recommence the work.

Ray's Normal Institute, Kernersville, organized in 1874, reports a 2 years' course of study, and 38 normal students, 34 men and 4 women; annual charge for tuition, $28.

Shaw University, Raleigh, organized in 1865, with a 3 years' normal course of study, reports 180 normal students, of whom 100 were men and 80 women; annual charge for tuition, $16.

Tileston Normal School, Wilmington, organized in 1872, reports a course of study, covering 8 years, and 5 young women pursuing it. Tuition is free, the school being supported by Mrs. Mary Hemenway, of Boston, Mass., who purchased the land, and built the school-house in 1871, at a cost of $30,000.—(Special returns to United States Bureau of Education.)

NEW STATE NORMAL SCHOOLS.

It is pleasant to be able to announce that, recognizing the need of fuller training for the teachers of the public schools, the general assembly has authorized the State board of education to establish a State normal school at Fayetteville for the instruction of colored teachers, and to open a normal department in connection with the State university for the instruction of white teachers, each to have $2,000 a year for 2 years. Fuller information respecting these schools will be given in the report for 1877.—(Note and circulars from State superintendent.)

SECONDARY INSTRUCTION.

PUBLIC HIGH SCHOOLS.

Of academies and high schools, in the memorial of Dr. Craven previously quoted, there are said to be 34 within the State. With the exception of the higher departments of the few graded schools in the large towns, the greater part of these institutions are said to be private enterprises or denominational schools, with no similarity of organization, no unity of work, no organic connection with the schools below them or above them, and no responsibility whatever to any general superintendence. The same resources judiciously organized, with legal relation to other schools, the doctor says, would confer great benefit upon the general culture and scholarship of the State.—(Memorial on Education, pp. 2, 3.)

PRIVATE SECONDARY SCHOOLS.

In 11 schools for boys, 4 schools for girls, and 15 for both sexes, outside of the public school system there have been reported to this Bureau 2,109 pupils under 73 teachers. Of these 463 are in classical studies, 151 in modern languages, 231 preparing for a classical course in college, and 63 for a scientific course. Drawing is taught in 3 of these schools, vocal music in 12, and instrumental music in 11. Chemical laboratories are reported by 4, philosophical apparatus by 10, and libraries of 100 to 2,500 volumes by 14, the aggregate number being 16,620.

PREPARATORY DEPARTMENTS.

Seven preparatory departments of colleges in this State report an aggregate attendance of 784 pupils, of whom 230 were preparing for the classical and 238 for the scientific course.

BUSINESS COLLEGE.

A business college at Wake Forest teaches penmanship, book-keeping, higher mathematics, banking, and life insurance. The number of students is not given.

SUPERIOR INSTRUCTION.

UNIVERSITY OF NORTH CAROLINA.

The university was established in obedience to a clause of the State constitution adopted in 1776. It was chartered in 1789, and opened for students in 1795. The buildings are 7 in number, affording accommodations for 500 students, with ample recitation rooms and public halls. The university had attained a commanding position among the institutions of learning in this country, having nearly 500 pupils, when the civil war dispersed its students and shattered its endowment. In 1872 its doors were closed and they were not reopened until September, 1875. Its friends confidently hope for a rapid restoration of its former prosperity, now that it is again in operation.

According to the law, one student is to be admitted annually from each county in the State free of tuition; the faculty, however, go further and offer to admit gratuitously all worthy young men without means.

The courses of study are classical, philosophical, and scientific, (including "agriculture and the mechanical arts,") each of them covering 4 years. Optional courses are also arranged when it is desirable to have them, though students are earnestly recommended to pursue one of the regular courses. The university also comprises law and normal schools.—(Catalogue, 1876-'77.)

OTHER COLLEGES.

North Carolina College, Mount Pleasant, (Lutheran,) embraces primary, academic, preparatory, and theological departments. Special attention is given to the study of the English language. Aside from the importance given it in the regular collegiate course, an English and scientific course has been provided for such as desire a good business education.—(Catalogue, 1874–'76.)

Rutherford College, Happy Home, (non-sectarian,) embraces 6 regular schools, namely: Latin, Greek, mathematics, English literature and rhetoric, natural science, and mental and moral philosophy. There is a department for young women, in which the course is thorough and does not exclude solid for merely ornamental learning. It requires for admission a good knowledge of French or Latin; also of mathematics through algebra, geometry, and trigonometry.—(Catalogue, 1874–'75.)

Trinity College, Trinity, (Methodist Episcopal South,) embraces 11 schools, viz: Latin, Greek, mathematics, English literature, natural science, mental and moral philosophy, modern languages, theology, engineering and architecture, analytical chemistry, and law. Theology or law may be studied exclusively. In all other departments the student may make his own selection, but he must take at least 3 schools.—(Catalogue, 1874–'75.)

Wake Forest College, Wake Forest College, (Baptist,) comprises in its course of study 6 schools, viz: Latin, Greek, modern languages, mathematics, natural science, and moral philosophy. A commercial department is also included.—(Catalogue, 1875–'76.)

Weaverville College, Weaverville, (non-sectarian,) embraces primary, academic, and collegiate departments, the latter with both classical and scientific courses.—(Catalogue, 1875–'76.)

Wilson College, Wilson, (non-sectarian,) provides primary, preparatory, collegiate, commercial, normal, musical, and ornamental courses of study. The college includes a male institute and a female seminary, situated at opposite ends of the town.—(Catalogue, 1875–'76.)

COLLEGES FOR WOMEN.

Nine colleges for women report a total of 917 pupils under 96 teachers. Of the pupils 138 were engaged in preparatory studies, 354 in regular collegiate, 28 in partial, and 2 in post graduate courses. All but 2 of these colleges are authorized to confer collegiate degrees. Courses of instruction, 3 to 7 years. Vocal and instrumental music is taught in all, French in 8, German in 6, and drawing and painting in 5. Six have chemical laboratories and apparatus for the illustration of natural philosophy, 3 have museums of natural history, and one a gymnasium. Five have libraries ranging in size from 200 to 3,500 volumes, aggregating 5,700.

SCIENTIFIC AND PROFESSIONAL INSTRUCTION.

SCIENCE.

The agricultural and mechanical department of the State university provides a 3 years' course of study, embracing the chemistry, botany, physics, mechanics, and zoology of agriculture, with mathematics, German, French, and such English studies as will fit students to become useful citizens.

The State legislature created in 1876 in connection with the university, an agriculture experiment and fertilizer control station. An experienced chemist is in charge, whose duty it is to analyze such fertilizers and products as may be required by the department of agriculture, to aid in suppressing fraud in the sale of commercial fertilizers, and to carry on experiments on the nutrition and growth of plants, and such other investigations as the department may direct.—(University catalogue, 1876–'77.)

THEOLOGY.

Biddle Memorial Institute, Charlotte, (Presbyterian,) and *Shaw University*, Raleigh, (Baptist,) are schools for the colored race with theological departments. The complete course of instruction covers 3 years in Shaw University, while a shorter course is provided when circumstances demand it.—(Catalogues of institute and university, 1874–'75.)

The Theological Department of North Carolina College (Lutheran) provides a 2 years' course of study, embracing the evidences of Christianity, homiletics, hermeneutics, dogmatics, symbolics, biblical exegesis, and Hebrew.—(Catalogue of college, 1874–'76.)

The School of Biblical Literature of Trinity College, (Methodist Episcopal,) provides a course of instruction lasting from 2 to 3 years, and embracing all those subjects deemed essential to a complete theological education.—(Catalogue of Trinity College, 1874–'75.)

A circular from Bennett Seminary, Greensboro', (Protestant Episcopal,) states that a class is to be formed in that institution for theological study in 1876.

LAW.

The department of law, Trinity College, provides a 2 years' course of instruction, given by "daily lectures, examinations, &c." Notice appears in the catalogue of Rutherford College for 1874–'75 of an intention to organize departments of law and of medicine, but no further information respecting them has as yet been received.

SPECIAL INSTRUCTION.

NORTH CAROLINA INSTITUTION FOR THE DEAF AND DUMB AND THE BLIND, RALEIGH.

In addition to the literary studies, which include the ordinary English branches, a number of mechanical employments are taught, as shoe, broom, and mattress making, and cane seating of chairs. During 1875–'76 there were 148 pupils under instruction, of whom 83 were males and 65 females. The number of instructors was 7, of whom 2 were semi-mutes. It is estimated that not more than one-half the youth of the State who should be in the institution are here. Some are detained at home by a morbid parental sympathy, others by indifference, but most of them by the ignorance of their parents and friends in regard to the character and objects of the institution.—(Catalogue, 1874–'76, and special return, 1876.)

LIST OF SCHOOL OFFICIALS IN NORTH CAROLINA.

Hon. JOHN C. SCARBOROUGH, *State superintendent of public instruction, Raleigh.*

[Term, 1877 to 1879.]

STATE BOARD OF EDUCATION.

[Term, except of superintendent, to January, 1881.]

Members.	Post-office.
His excellency Zebulon B. Vance, governor	Raleigh.
His honor Thomas J. Jarvis, lieutenant governor	Raleigh.
Hon. Joseph A. Englehard, secretary of state	Raleigh.
Hon. John W. Worth, State treasurer	Raleigh.
Hon. Samuel L. Love, State auditor	Raleigh.
Hon. ——— ———, superintendent of public works	Raleigh.
Hon. John C. Scarborough, superintendent of public instruction	Raleigh.
Hon. Thomas L. Kenan, attorney-general	Raleigh.

COUNTY EXAMINERS.

No list of these officers for 1877 has been received.

OHIO.

HISTORICAL SKETCH OF THE STATE SCHOOL SYSTEM.

AUTHORITIES.

History of Education in Ohio, a centennial volume, published by order of the general assembly, Columbus, 1876; Laws of Ohio, 1802-1838; Curwen's Revised Statutes; Swan & Crutchfield's Revised Statutes; Sayler's Statutes of Ohio, in continuation of Curwen; Ohio School Laws, editions of 1865 and 1873.

EARLY LEGISLATION.

An act of Congress, April 30, 1802, having given permission to the people of the region now called Ohio to form a constitution and State government, reserved section 16 in each township for the use of schools. One of March 3, 1803, reserved also for schools certain quarter townships in the United States military tract and in the Western Reserve, with one-thirty-sixth part of the Virginia military reservation. To avail itself of these provisions for the education of the people, the legislature made immediate arrangements for leasing, through special agents, the school lands in various portions of the State, with a view to the application of the profits from them to the support of schools. In 1805 these arrangements were improved by making the boards of township trustees the agents for leasing the lands, and requiring the proceeds to be so impartially applied to the education of youths within the townships that all might be equally partakers of the benefits thereof. In 1806 there was a still further amendment, calling for the election of three trustees and a treasurer in each township for the care and lease of the school lands, these trustees to be authorized to lay off the townships into districts for the purpose of establishing schools, each district to receive a fair and equitable dividend of the profits from the reserved section in its township "according to the number of inhabitants." In 1810 this basis of distribution was altered to be "according to the number of scholars and the time that they were taught," to which was added in 1815 "whether the scholars had gone to school within or without the township."

BEGINNINGS OF A TRUE SCHOOL SYSTEM.
